

As a North Dakota resident and a licensed Master Cosmetologist, I oppose HB 1426.

Salon sanitation has a great impact on the health of both the client and the professional. We must be educated about proper sanitation in order to prevent the transmission of any communicable disease. Each client or employee has the potential of carrying a type of bacterial, fungal, parasite, or viral infection. It is necessary to correctly take the proper steps to disinfect implements, linens, products and surfaces in a salon. Proper training and sanitation isn't just a concern, it is a responsibility to the public.
