

Thank you Mr Chairman and members of the committee. For the record I am Rep Bernie Satrom and I am honored to serve the great people of District 12 in Jamestown.

HB1229 was requested by my local sheriff and has to do with the level of window tinting.

Our current law requires light transmittance of no less than 75% on windshields and transmittance of less than 50 percent on side windows and no restriction on shading of windows behind the operator. Including the rear window.

Today I bring an amendment to line 21 which would set the level of windows other than the windows at 35% This would allow more darkening on driver windows and not allow blacking out of the rear windows. I think that this is a nice compromise which allows people to have a cool look while maintaining safety.

I would stand for any questions
