PUBLIC AIRPORTS IN NORTH DAKOTA

Greetings and welcome to the skies of North Dakota!

This directory contains aeronautical information for each of our state's 89 public-use airports. Due to information changing over time, this document is meant to be used as an aid and not as the sole use of information when flight planning. We encourage pilots to refer to the current FAA Airman's Information Manual, the FAA's Airport Facility Directory, and up-to-date airport NOTAMS prior to each flight. It is also recommended to contact the airport operator to confirm the current airport conditions and available services.

I also encourage you to take a tour of the North Dakota Aeronautics Commission's website which provides a broad array of aeronautical information and a calendar that tracks in-state aviation related events and opportunities. Additionally, we hope that you consider creating lasting memories of your own by picking up one of our "Fly ND" passport books to collect stamps as you visit our different airports.

From all of us at the North Dakota Aeronautics Commission, we wish you the very best of what our incredible state has to offer.

Stay safe and enjoy,

Kyle C. Wanner

Kyle C. Wanner
Executive Director

Directory Disclaimer

Aeronautical information on this airport directory is up to date through Fall of 2022, and is obtained from the Federal Aviation Administration Chart Supplement and the North Dakota Aeronautics Commission. Printer, publisher, and the North Dakota Aeronautics Commission make no warranty, express or implied, as to accuracy of information expressly disclaim liability for the accuracy thereof. We recommend that you check Airman's Information Manual, Chart Supplement, NOTAMS, and the Safety Bulletins from the Federal Aviation Administration for supplemental data and current information.

FLY North Dakota AIRPORTS!

North Dakota's passport program rewards pilots who fly to North Dakota's publically-owned airports, attend FAA safety seminars, and visit North Dakota's aviation museums. Fly North Dakota airports promotes safety and education, and encourages pilots to practice approaches and landings in many different environments. It's also a great way to support general aviation airports, businesses, and tourism. Just visit one of the places or events listed in our passports, and have your passport stamped in the appropriate box. It's as easy as that!

HOW TO PARTICIPATE.

Get a Fly North Dakota Airports Passport at your local publically-owned airport or by contacting the North Dakota Aeronautics Commission. If you prefer to participate in the passport program using a mobile device, visit our website to learn more about the digital passport option

Fill in the page at the front of your passport with your name and contact information. Each time you visit a North Dakota publically-owned airport, aviation museum, or participating FAA safety seminar, have your passport stamped in the appropriate box. The location of the airport stamp is stated in the passport.

When you have earned the proper number of stamps, submit your passport (they will be returned) to the North Dakota Aeronautics Commission, P.O. Box 5020, Bismarck, ND 58502. Phone: (701) 328-9650. Email: ndaero@nd.gov

Visit a community event or attraction by searching NDtourism.com

*or call 1-800-HELLO-ND on
your legacy flight! Each airport
box in the Passport has an
attraction listed.*

METAR ABBREVIATIONS

ABBREVIATIONS

AOI	Automated Observation without precipitation discriminator (rain/snow)
AO2	Automated Observation with precipitation discriminator (rain/snow)
AMD	Amended Forecast (TAF)
BECMG	Becoming (expected between 2-digit beginning hour and 2-digit ending hour)
BKN	Broken
CLR	Clear at or below 12,000 feet (AWOS/ASOS report)
COB	Correction to the observation
FEW	1 or 2 octas (eighths) cloud coverage
FM	From (4 digit beginning time in hours and minutes)
LDG	Landing
M	In temperature field means "minus" or below zero
M	In RVR listing indicates visibility less than lowest reportable sensor value (e.g. M600)
NO	Not available (e.g. SLPNO, RVRNO)
NSW	No Significant Weather
OVC	Overcast
P	In RVR indicates visibility greater than highest reportable sensor value (e.g. P6000FT)
P6SM	Visibility greater than 6 SM (TAF only)
PROB40	Probability 40 percent
R	Runway (used in RVR measurement)
RMK	Remark
RV/RWY	Runway
SCT	Scattered
SKC	Sky Clear
SLP	Sea Level Pressure (e.g., 1013 reported as 013)
SM	Statute mile(s)
SPECI	Special Report
TEMPO	Temporary changes expected (between 2-digit beginning hour and 2-digit ending hour)
TKOF	Takeoff
T01760158, 10142, 20012 and 401120084	In Remarks-examples of temperature information
V	Varies (wind direction and RVR)
VC	Vicinity
VRB	Variable wind direction when speed is less than or equal to 6 knots
VV	Vertical Visibility
WS	Wind shear (In TAFs, low level and not associated with convective activity)

GUIDE FOR AIRFIELD SIGNS

SIGN and LOCATION

PILOT ACTION or SIGN PURPOSE

 On Taxiways at Intersection with a Runway	Controlled Airport - Hold unless ATC Clearance has been received. Uncontrolled Airport - Proceed when no traffic conflict exists.
 Runway / Runway Intersection	Taxiing - Same action as above. Taking Off or Landing - Disregard unless a "Land, Hold Short" clearance has been accepted.
 Taxiway in Runway Approach of Departure Area	Controlled Airport - Hold when instructed by ATC. Uncontrolled Airport - Proceed when no traffic conflict exists.
 ILS Critical Area	Hold when approaches are being made with visibility less than 2 miles or ceiling less than 800 feet.
 Areas where Aircraft are Forbidden to Enter	Do not enter.
 Taxiway	Identifies taxiway on which aircraft is positioned.
 Runway	Identifies runway on which aircraft is positioned.
 Edge of Protected Airway for Runway	These signs are used on controlled airports to identify the boundary of the runway protected area. It is intended that pilots exiting this area would use this sign as a guide to judge when the aircraft is clear of the protected area.
 Edge of ILS Critical Area	These signs are used on controlled airports to identify the boundary of the LS critical area. It is intended that pilots exiting this area would use this sign as a guide to judge when the aircraft is clear of the ILS critical area.
 Taxiways and Runway	On Taxiways - Provides direction to turn at next intersection to maneuver aircraft onto named runway.

GUIDE FOR AIRFIELD SIGNS

SIGN and LOCATION

PILOT ACTION or SIGN PURPOSE

 Taxiways	Provides general taxiing direction to named runway.
 Taxiways and Runways	Provides general taxiing direction to identified destination.
 Runway	Provides remaining runway length in 1,000 feet increments.

ARRANGEMENT OF SIGNS AT INTERSECTION

Note: Orientation of signs is from left to right in a clockwise manner. Left Turn Signs are on the left of the Location Sign and Right Turn Signs are on the right side of the Location Sign.

Alternate array of signs shown to illustrate sign orientation when Location Sign not installed.

TEMPERATURE CONVERSION

INTERCEPTING SIGNALS

Signals initiated by intercepting aircraft and responses
by intercepted aircraft (as set forth in ICAO Annex 2-Appendix A, 2.1)

Series	Intercepting Aircraft Signals	Meaning	Intercepted Aircraft Responds	Meaning
1	<p>Day - Rocking wings from a position slightly above and ahead of, and normally to the left of, the intercepted aircraft and, after acknowledgement, a slow level turn, normally to the left, on to the desired heading.</p> <p>Night - Same and, in addition, flashing navigational lights at irregular intervals.</p> <p>Note 1 - Meteorological conditions or terrain may require the intercepting aircraft to take up a position slightly above and ahead of, and to the right of, the intercepted aircraft and to make the subsequent turn to the right.</p> <p>Note 2 - If the intercept aircraft is not able to keep pace with the intercepting aircraft, the latter is expected to fly a series of race-track patterns and to rock its wings each time it passes the intercepted aircraft.</p>	You have been intercepted! Follow me.	<p>Aeroplanes: Day - Rocking wings and following.</p> <p>Night - Same and, in addition, flashing navigational lights at regular intervals.</p> <p>Helicopters: Day or Night-Rocking Aircraft, flashing navigational lights at irregular intervals and following.</p>	Understood, will comply.
2	Day or Night - An abrupt break-away maneuver from the intercepted aircraft consisting of a climbing turn of 90 degrees or more without crossing the line of flight of the intercepted aircraft.	You may proceed.	<p>Aeroplanes: Day or Night - Rocking Wings.</p> <p>Helicopters: Day or Night - Rocking Aircraft.</p>	Understood, will comply.
3	<p>Day - Circling aerodrome, lowering landing gear and over-flying runway in direction of landing or, if the intercepted aircraft is a helicopter, over-flying the helicopter landing area.</p> <p>Night - Same and, in addition, showing steady landing lights.</p>	Land at this aerodrome.	<p>Aeroplanes: Day - Lowering landing gear, following the intercepting aircraft and, if after over-flying the runway landing is considered safe, proceed to land. Night - Same and, in addition, showing steady lights (if carried).</p> <p>Helicopters: Day or Night - Follow the intercepted aircraft and proceed to land, showing a steady landing light (if carried).</p>	Understood, will comply.
4	Day or Night - Raising landing gear (if fitted) and flashing landing lights while passing over runway in use or helicopter landing area at a height exceeding 2,000 ft (in case of helicopter, at a height exceeding 170 ft, but not exceeding 330 ft) above the aerodrome level, and continuing to circle runway in use or helicopter landing area. If unable to flash landing lights, flash any other lights available.	Aerodrome you have designated is inadequate.	<p>Day or Night - If it is desired that the intercepted aircraft follow the intercepting aircraft to an alternate aerodrome, the intercepting aircraft raises its landing gear (if fitted) and uses the Series 1 signals prescribed for intercepting aircraft.</p> <p>It is decided to release the intercepted craft, the intercepting aircraft uses the Series 2 signals prescribed for intercepting aircraft.</p>	Understood, follow me. Understood, you may proceed.
5	Day or Nights - Regular switching on and off of all available lights but in such a manner as to be distinct from flashing lights.	Cannot comply.	Day or Night - Use Series 2 signals prescribed for intercepting aircraft.	Understood
6	Day or Nights - Irregular flashing of all available lights.	In distress.	Day or Night - Use Series 2 signals prescribed for intercepting aircraft.	Understood

Light Gun Signals

Color and Type of Signal	Movement of Vehicles, Equipment and Personnel	Aircraft on the Ground	Aircraft in Flight
Steady Green 	Cleared to Cross, Proceed or Go	Cleared for Take-off	Cleared to Land
Flashing Green 	Not Applicable	Cleared for Taxi	Return for Landing, to be Followed by Steady Green at the Proper Time
Steady Red 	STOP	STOP	Give Way to Other Aircraft and Continue Circling
Flashing Red 	Clear the Taxiway/Runway	Taxi Clear of the Runway in Use.	Airport Unsafe, Do not Land
Flashing White 	Return to Starting Point on Airport	Return to Starting Point on Airport	Not Applicable
Alternating Red and Green 	Exercise Extreme Caution	Exercise Extreme Caution	Exercise Extreme Caution

10 Ways To Help Prevent Runway Incursions

1 See The “Big Picture”

Monitor both ground and tower communications when possible.

2 Transmit Clearly

Make your instructions and read-backs complete and easy to understand.

3 Listen Carefully

Listen to your clearance. Listen to what you read back. Do not let communications become automatic.

4 Copy Clearances

Clearances can change. Keep a note pad and copy your clearance. If needed, refer to your notes.

5 Situational Awareness

Know your location. If unfamiliar with an airport keep a current airport diagram available for easy reference.

6 Admit When Lost

If you get lost on an airport, ask ATC for help. Better to damage your pride than your airplane.

7 Sterile Cockpit

Maintain a sterile cockpit until reaching cruising altitude. Explain to your passengers that talking should be kept to a minimum.

8 Understand Signs, Lights And Markings

Keep current with airport signs, lights and markings. Know what they mean and what action to take.

9 Never Assume

Do not take clearances for granted. Look both ways before entering or crossing taxiways and runways.

10 Follow Procedures

Establish safe procedures for airport operations. Then follow them.

For more information see the following:
www.faa.gov/airports/runway-safety

Automated Weather Observation System

The Automated Weather Observation System (AWOS) enhances safety by providing critical airport weather information to pilots to be used for flight planning and in-flight decision-making. The system provides real-time weather observations including wind, visibility, current weather, sky conditions, temperature, dew point, altimeter setting, and remarks, such as density altitude and local airport conditions.

AWOS information can be accessed in a variety of ways, including radio frequency, telephone and weather terminals at airports with AWOS. It can also be accessed from a variety of Web sites, most AWOS information is disseminated nationwide through a system called NADIN, making it available to sources like Flight Service Stations, the National Weather Service and Weather Channel.

What every pilot should know about AWOS

Wind

- taken every second and a running 2-minute average is updated every 5 seconds
- wind speeds of less than 3 knots are reported as calm
- if the difference between the highest 5-second average and 2-minute average exceeds 5 knots, gusts are reported
- wind direction is reported from the nearest 10 degree magnetic heading

Visibility

- readings are taken every 15 seconds and are averaged over a 10-minute period

Present weather

- a precipitation sensor samples every 15 seconds
- temperature and visibility measurements are used to determine precipitation type

Sky conditions (ceilings)

- readings are taken every 30 seconds and averaged over a 30-minute period
- ceiling measurements are rounded as follows:
 - nearest 100' up to 5000' AGL
 - nearest 500' from 5000'-10,000' AGL
 - nearest 1000' above 10,000'

Temperature and dew point

- four, 1-minute averages are used to determine the temperature

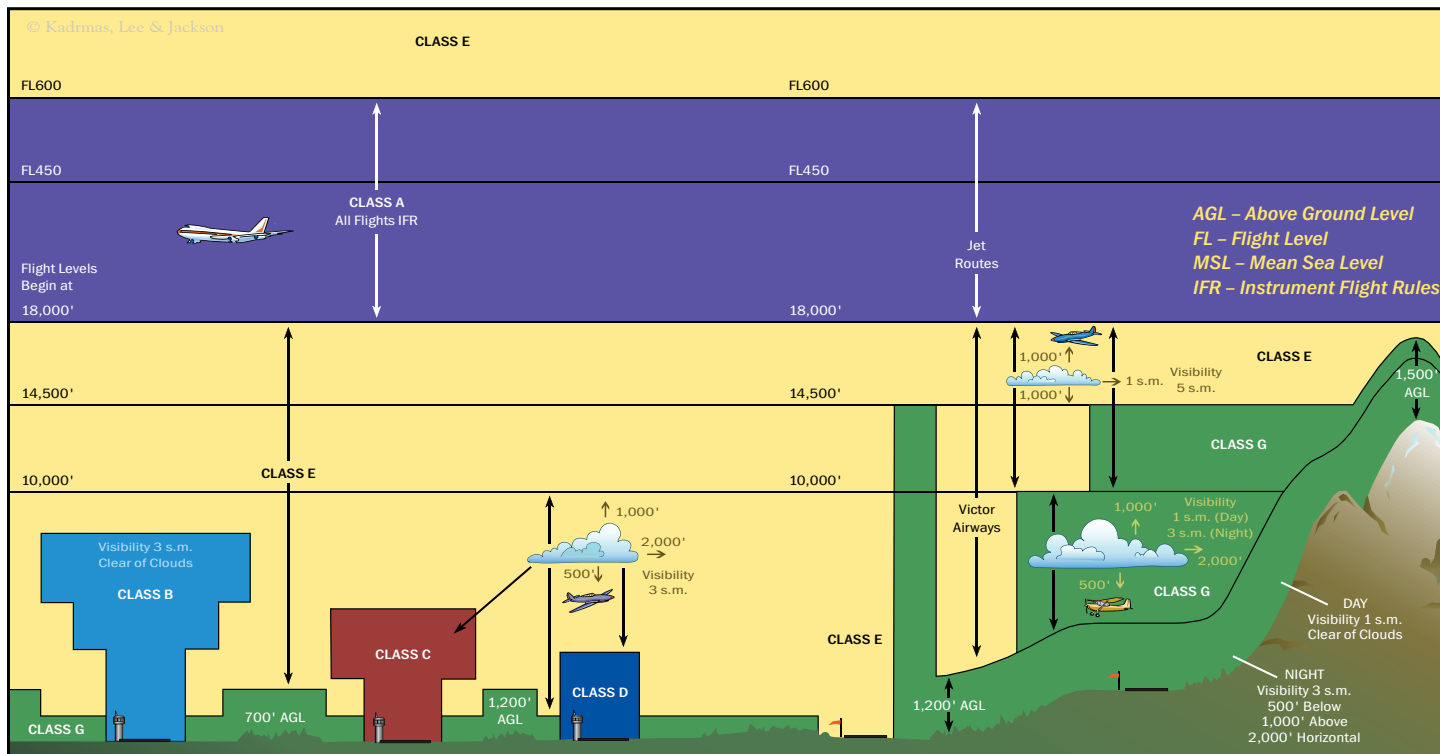

Altimeter (barometric pressure)

- pressure sensors take readings every 10 seconds and a 1-minute average is calculated

Remarks

- a calculated density altitude report is provided, if density altitude is greater than 1000' above the airport's field elevation
- Occasionally, airport managers will provide recorded remarks regarding NOTAM's or local airport conditions.

AWOS is maintained by the airport in North Dakota and is continuously monitored to ensure its operational status. Individual sites are also maintained and calibrated on a regular basis to ensure reliability and accuracy. As with any electronic device, care must be used when interpreting data. By knowing how AWOS data is collected, a pilot can better understand the information they are receiving.

Classification	Definition
 CLASS A	Generally airspace above 18,000 feet MSL up to and including FL 600.
 CLASS B	Generally multi-layered airspace from the surface up to 10,000 feet MSL surrounding the nation's busiest airports.
 CLASS C	Generally airspace from the surface to 4,000 feet AGL surrounding towered airports with service by radar approach control.

Classification	Definition
 CLASS D	Generally airspace from the surface to 2,500 feet AGL surrounding towered airports.
 CLASS E	Generally controlled airspace that is not Class A, Class B, Class C, or Class D.
 CLASS G	Generally uncontrolled airspace that is not Class A, Class B, Class C, Class D, or Class E.

Code 7700 – Emergency

MODIFIED KOCH CHART FOR ALTITUDE AND TEMPERATURE EFFECTS

TO FIND the effect of altitude and temperature
CONNECT the temperature and airport altitude
by a straight line.

READ the increase in take-off distance and
the decrease in rate of climb from standard sea
level values here

EXAMPLE: The diagonal line shows that 230% must be added for a temperature of 100 and a pressure altitude of 6,000 feet. Therefore, if your standard temperature sea level take-off distance, in order to climb to 50 feet, normally requires 1,000 feet of runway, it would become 3,300 feet under the conditions shown. In addition, the rate of climb would be decreased 76%. Also, if your normal sea level rate of climb is 500 feet per minute, it would become 120 feet per minute.

This chart indicates typical representative values for “personal” airplanes.

For exact values, consult your airplane flight manual.

The chart may be conservative for airplanes with supercharged engines.

Also, remember that long grass, sand, mud or deep snow can easily double your take-off distance.

WIND CHART FOR TAKEOFF

INSTRUCTIONS

1. Determine maximum 90° Cross Wind that you can handle. (Suggest 20% X Stall Speed). Place dot on 90° line at this value.
2. Determine maximum 45° Cross Wind that you can handle. (Suggest 30% X Stall Speed). Place dot on 45° line at this value.
3. Determine maximum Head Wind that you can handle. (Suggest 60% X Stall Speed). Place dot on 0° line at this value.
4. Connect dots with red line. Values to left of line are go wind velocities and directions.

Temporary Flight Restrictions

FAA NOTAMS 1-877-487-6867
<https://pilotweb.nas.faa.gov>

While TFR's may be triggered by different events, it is important that pilots familiarize themselves with each type of restriction, and how it may impact a pilot's proposed flight. Of equal importance, pilots must know how best to gain information concerning TFR's before each flight. Inadvertent flight into a TFR not only places a pilot's certificate at risk; it also increases the chances of being intercepted by military or law enforcement aircraft. Straying into TFR airspace may also increase the risk of a mid-air collision.

For further information on TFR's, you may visit FAA's website at <http://tfr.faa.gov> While flying in the vicinity of the Grand Forks Airport (KGFK), please familiarize yourself with the TFR located to the west of the airport.

— State of —
North Dakota
Office of the Governor

Kelly Armstrong
Governor

Welcome to the Legendary Skies of North Dakota

Our state is home to breathtaking landscapes, abundant recreational opportunities and a welcoming spirit that make it an exceptional destination to include in your travels. Whether you're a resident or visitor, planning your flight for business or vacation, we encourage you to take a scenic journey through North Dakota and experience our unforgettable adventures, natural wonders and exciting events.

North Dakota is a global leader in aviation and aerospace innovation. The John D. Odegard School of Aerospace Sciences at the University of North Dakota in Grand Forks operates one of the largest fleets of civilian aircraft in North America, with faculty and students world-renowned for their research. The Northern Plains UAS Test Site and Grand Sky public-private UAS campus remain at the forefront of unmanned aircraft systems research and development. These facilities are key to advancing UAS technology and integrating it into the national airspace, including the continued rollout of Vantis, our groundbreaking beyond visual line of sight (BVLOS) network.

We remain deeply committed to fostering an environment where innovation thrives and entrepreneurial ideas soar – building on North Dakota's well-earned reputation as an aerospace industry leader.

We are thrilled to welcome you to our skies and our state. Whether you are traveling for business or leisure, we hope you enjoy your time exploring all that North Dakota has to offer and leave with lasting memories of your journey.

Safe travels,

Governor Kelly Armstrong

Commissioners

Dr. Kim Kenville, Chair, Grand Forks
Rodney Schaaf, Vice Chair, Bowman
Steve Blazek, Fargo
Kyle Humann, Bismarck
Warren Pietsch, Minot

Mission

To serve the public by providing economic and technical assistance for the aviation community while ensuring the safe and cost-effective advancement of aviation in North Dakota.
