

To whom it may concern:

I would like to share our experience with Swanson Hyperbarics in Fargo and. Our oldest son was in a freak accident in October of 2024. He was helping fight fires with a small tanker we hav to put out equipment fires when we are haying or harvesting. A pressurized cap came of the unit and hit him right in the temple. Long story short, this could have went a completely different route. Tel had brain surgery within the next 4 hours to remove the skull pieces. He was in ICU overnight and was in the hospital for about 4 more days. He was doing ok with long term memory but had some difficult time with short term memory. We were home for a week when our friend got us hooked up with Swanson Hyperbarics. Tel and I made the 6 hour trip to Fargo to meet up with amazing doctors and staff at swanson's. They were very professional and sincere. They want to see you succeed and get better. They decided to do a concussion test and start diving Tel. He did two dives a day for 30 minutes. By the end of the week Tel's scar looked amazing. We felt like he slept better and got some color back.

We believe the hyperbaric chambers are a wonderful tool to help patients. This office was highly educated and trained! We are so thankful for them in Tel's journey!

Thank you

Kadie Sorenson
