

As a mother and American citizen I believe that it is of upmost importance that we pass this bill in order to promote the medical industry to be honest and forthcoming in its information regarding vaccination and their associated health risks. I believe that pharmaceutical companies should be held accountable for any lack in transparency regarding vaccinations or other drugs. Whether a citizen is for or against a vaccination, it is a God-given right to maintain the liberty to make medical treatment decisions for yourself and children. I oppose any legislation that inhibits this Constitutional right and believe that withholding any information that may prevent an individual from making a said sound medical treatment decision is an infringement on this right.
