Hello, my name is Jamie Zins. I am a small business owner in the town of McKenzie ND. A little over a year ago, I invested in a solar panel project for my business, to capture the suns free energy and help subsidize my usage of electricity from the grid. This investment is expected to yeild a 100% return in 8-10 years. My investment will lighten the load on the electrical grid by utilizing our suns free energy. If this can benifit me

from a business perspective, I feel solar energy can be an asset for the residents of ND in more ways than one. To help in these efforts and be a voice for the solar energy industry, I feel it would be a great benifit for our state to have a person representing the solar industry on the Em Power commission. I am in support of the senate bill in question Thank you.
