

As previously stated in the SB 2408 testimony, this bill does not go hard enough. Businesses often fail compliance checks and mistakes happen; it is vital that the legislators prevent any possibility of an honest mistake. It is important that North Dakota prevents all sales of Kratom in the state to promote health and wellbeing. It's tiring hearing people that do not live in our state testify that they rely on the substance to prevent pain, there are plenty of effect drugs available for prescription under the careful supervision of medical professionals. We wouldn't allow people to self-medicate with morphine, why would we allow adults to self-medicate with Kratom? It is a powerful substance that can and has killed people. Under no circumstances should this dangerous drug be available in our local stores, even for adults.
