I support prohibiting agencies from entering into non-disclosure agreements concerning data centers and industrial projects because such NDAs are antithetical to and destructive of the transparency necessary for the health of livestock, crops, water, the United States human citizenry and of democracy itself. When the effects of building, maintaining, and running such enormous scale endeavors are opaque, the vast majority of the local community suffers while a few well-placed and selfish people become obscenely wealthy without accountability. Thank you for receiving my comment.
