I am in support of a ban on NDAs for data center development and other industrial operations.

I am quite honestly perplexed why this isn't an immediate and unanimous proposition; to stop corporations from dominating our precious resources.

So much potentially lost, for what gain?
Endless reliance on questionable technology?

Please do better, and stop protecting and lining the pockets of corporations who show no regard for the land, people and resources immediately affected by the pollution, noise, and cost.

Thank you.
