

I strongly support SB 2408. I am in favor of a state ban on all synthetic products because they pose a risk to public health and safety. Products like 7oh are highly addictive. These have been falsely marketed as kratom. They are not. Because they come in small tablet form and small bottles there is a danger of them getting into the hands of children. Traditional botanical leaf kratom has a distinctive appearance. It is a powder that comes in a bag. The taste is very bitter and it would be nearly impossible to consume enough of it to pose a medical emergency. Whole leaf kratom benefits many who take it responsibly. It helps with my arthritis pain and with mental clarity and focus. Thank you.
