Requesting yes votes
On House Bill 1605

Chairman Ruby and committee members of the House human services committee,

My name is Lanny Kenner and I'm requesting for you to pass house bill 1605 relating to fluoride in our drinking water. Through The years there have been many peer reviewed case studies regarding the detrimental effects of fluoridated water to our health. Here are just some of the possible problems from fluoridated water:

Fluoride in drinking water can cause dental fluorosis, skeletal fluorosis, arthritis, bone damage, osteoporosis, muscular damage, fatigue, and joint-related problems. The NIH and many other health groups have done studies regarding fluoridated water. Fluoride should be removed from our municipal water systems. If someone wants to add their own fluoride no one is stopping them from doing it.

Please pass this bill with a yes vote for our health safety.

Thank you Lanny Kenner
