

CWD has been here since the 60s if its so deadly there shouldnt be a deer left on the landscape, but thats not the case is it. This whole narrative by the NDGF and the AFWA is nothing more than going after property owner rights and money money money!

20 years and only ONE CONFIRMED case ONE!!!!

North Dakota residents are allowed to supplemental feed year round under rule of law. But shooting an animal over that same food source is going to create CWD? This is the dumbest thing ever!

These people to this day have yet to show a picture of a prion under a microscopic image and thats because it doesnt exist, its a hypothesis nothing more. And now with all the federal money, our money! being spent on human demensions (trying to convince everyone its so deadly) just goes to show you its about property rights and money not a disease. I could go on and on but I encourage you to do the right thing and give us our property rights that the NDGF have taken from us and put a stop to this wasteful spending of federal dollars, our money.

Until they actually prove the science behind CWD their is no science, hypothesis is not science.
