Economic Assistance Policy Program				
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		($48,462)	($99,126)	($147,588)
Child Support Program				
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		(68,787)	(140,700)	(209,487)
Medical Services Program				
Decrease funding for department travel		(21,830)	(17,306)	(39,13
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		(44,010)	(90,020)	(134,030
Decrease funding added in the executive budget for medically needy to reflect income levels of 75 percent of the federal poverty level (The executive budget included funding of $5,520,859, of which $2,041,614 is from the general fund, to increase medically needy income levels to 83 percent of the federal poverty level.)		(376,947)	(642,379)	(1,019,326)
Decrease funding added in the executive budget for inflation increases for rebased services from 7 percent to 6 percent for the second year of the biennium		(793,420)	(1,389,355)	(2,182,775)
Decrease funding added in the executive budget for rebasing physician payment rates. The House version provides $10,600,000, of which $3,919,880 is from the general fund, for rebasing rates to 20 percent of the amount needed to rebase to 100 percent of cost. The executive budget included funding of $13,250,000, of which $4,899,850 is from the general fund, for rebasing physician payment rates to 25 percent of the amount needed to rebase to 100 percent of cost.		(979,970)	(1,670,030)	(2,650,000)
Decrease funding added in the executive budget for rebasing chiropractor payment rates. The House version provides $312,000, of which $115,377 is from the general fund, for rebasing rates to 75 percent of the cost report. The executive budget included funding of $416,000, of which $153,836 is from the general fund, for rebasing rates to 100 percent of cost.		(38,459)	(65,541)	(104,000)
Decrease funding added in the executive budget for rebasing ambulance payment		(185,927)	(316,851)	(502,77

rates. The House version provides $1,508,336, of which $557,783 is from the general fund, to provide funding equal to 75 percent of the funding provided in the executive budget. The executive budget included funding of $2,011,114, of which $743,710 is from the general fund, to rebase ambulance payment rates to Medicare rates.				
Decrease funding added in the executive budget for rebasing dentist payment rates from a minimum of 75 percent of average billed charges with inflation increases of 7 percent each year to a minimum of 70 percent of average billed charges with inflation increases of 0 percent the first year and 7 percent the second year		(722,547)	(1,233,388)	(1,955,935)
Decrease funding added in the executive budget for inflationary increases for all services except the rebased services to provide 6 percent per year increases		(111,048)	(561,337)	(672,385)
Decrease funding for medical services to reduce projected caseload/utilization rates		(9,600,000)	(16,359,978)	(25,959,978)
Decrease funding for the funeral set-aside for Medicaid recipients by $283,000, of which $103,922 is from the general fund, to provide for an increase in the set-aside from $5,000 to $6,000 as provided for in House Bill No. 1477. The executive budget included funding of $566,000, of which $208,571 is from the general fund, to increase the funeral set-aside for Medicaid recipients from $5,000 to $7,000.		(103,922)	(179,078)	(283,000)
Decrease funding for the state children's health insurance program by $2,809,222, of which $727,025 is from the general fund, including the removal of 1.5 FTE positions. The House version provides funding to increase the state children's health insurance program from 150 percent to 160 percent of the federal poverty level in accordance with provisions of House Bill No. 1478. The executive budget included funding of $4,429,649, of which $1,146,392 is from the general fund, for increasing the eligibility for the state children's health insurance program from 150 percent to 200 percent of the federal poverty level and to add 1.5 new FTE positions.	(1.50)	(727,025)	(2,082,197)	(2,809,222)
Long-Term Care Program				
Add funding to increase the personal needs allowance for individuals in basic care facilities from $60 to $75 per month (funding provided is for a January 1, 2010, effective date)		112,320	0	112,320
Add funding to increase the personal needs allowance for individuals in an ICF/MR facility from $60 per month as recommended in the executive budget to $75 per month (funding provided is for a January 1, 2010, effective date)		57,511	98,009	155,520
Add funding to increase nursing facility bed limits in the formula for nursing home payments from $138,907 to $169,098 for single rooms and $92,604 to $112,732 for double rooms (Of the $877,518, $324,506 is from the health care trust fund and $553,012 is from federal funds.)		0	877,518	877,518
Add funding of $14,739,128, of which $4,950,451 is from the general fund, $1 million is from the health care trust fund, and $8,788,677 is from federal funds, to provide a salary and benefit supplemental payment for individuals employed by basic care and nursing care facilities earning a salary that is less than the 80th percentile of the salary range at each facility		4,950,451	9,788,677	14,739,128
Add funding to provide for a salary and benefit supplemental payment for		7,000,000	11,929,151	18,929,151

developmental disabilities providers currently earning a salary that is less than the 90th percentile of the salary range of each provider				
Remove the new FTE position added in the 2009-11 executive budget relating to the implementation of a home and community-based care waiver to provide support for children who have a diagnosis of autism spectrum disorder	(1.00)	(66,872)	(66,871)	(133,743)
Provide funding for increasing the payment rates for children and adults who are severely medically fragile and behaviorally challenged residing at the Anne Carlsen Center and other developmental disabilities providers experiencing losses		438,900	747,957	1,186,857
Remove funding included in the executive budget for the addition of a third tier of personal care that would allow a maximum of 1,200 units of care per month		(1,021,922)	(1,741,524)	(2,763,446)
Decrease funding added in the executive budget for inflationary increases for all services except the rebased services to provide 6 percent per year increases		(4,544,584)	(7,103,292)	(11,647,876)
Decrease funding for long-term care to reduce projected caseload/utilization rates		(5,600,000)	(9,543,320)	(15,143,320)
Decrease funding for developmental disabilities grants to reduce projected caseload/utilization rates		(2,476,000)	(4,219,511)	(6,695,511)
Aging Services Program				
Remove funding for a pilot aging and disability resource center		(600,000)	0	(600,000)
Decrease funding for department travel		(3,506)	(10,464)	(13,970)
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		(3,350)	(6,852)	(10,20.
Decrease funding added in the executive budget for inflationary increases for all services except the rebased services to provide 6 percent per year increases		(15,200)	0	(15,200)
Children and Family Services Program				
Decrease funding for department travel		(1,054)	(2,652)	(3,706)
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		(7,754)	(15,860)	(23,614)
Decrease funding added in the executive budget for inflationary increases for all services except the rebased services to provide 6 percent per year increases		(436,192)	(823,013)	(1,259,205)
Mental Health and Substance Abuse Program				
Decrease funding for department travel		(15,842)	(45,715)	(61,557)
Reduce funding for salaries and wages for anticipated savings from vacant positions and employee turnover		(7,940)	(16,241)	(24,181)
Decrease funding for compulsive gambling services by $150,000 from the general fund, from $700,000, of which $300,000 is from the general fund and $400,000 is from special funds from lottery proceeds, as provided for in the executive budget to $550,000, of which $150,000 is from the general fund and $400,000 is from special funds from lottery proceeds. The 2007-09 legislative appropriation for compulsive gambling services is $400,000 of special funds from lottery proceeds.		(150,000)	0	(150,000)

Remove funding for Governor's Prevention and Advisory Council grants		(200,000)	0	(200,000)
Decrease funding added in the executive budget for inflationary increases for all services except the rebased services to provide 6 percent per year increases		(21,237)	0	(21,237)
Developmental Disabilities Council				
Decrease funding for department travel		0	(4,446)	(4,446)
Developmental Disabilities Division				
Decrease funding for department travel		(7,536)	(32,975)	(40,511)

north dakota department of human services

Glossary of Terms and Acronyms

January 2009

960 - Refers to the State Form Number 960 (SFN 960) for the reporting of suspected child abuse or neglect.

AASK - Adults Adopting Special Kids is a collaboration involving the department's Children and Family Services Division, Catholic Charities North Dakota, and PATH ND. They work together to promote and facilitate the adoption of children with special needs from the foster care system.

Abuse - Any willful act or omission by a caregiver or other person, which results in physical injury, mental anguish, unreasonable confinement, sexual abuse or exploitation, or financial exploitation of a vulnerable adult.

Abused Child - An individual under the age of 18 years who is suffering from abuse as defined in Subdivision A of Subsection 1 of Section 14-09-22 caused by a person responsible for the child's welfare, and "sexually abused child" means an individual under the age of 18 years who is subjected by a person responsible for the child's welfare to any act in violation of sections 12.1-20-01 through 12.1-20-07, sections 12.1-20-11 through 12.1-20-12.2, or Chapter 12.1-27.2 (sex offenses listed in the criminal code). (14-09-22 "Inflicts, or allows to be inflicted, upon the child, bodily injury, substantial bodily injury, or serious bodily injury as defined by section 12.1-01-04 or mental injury") (12.1-01-04 "Bodily injury" means any impairment of physical condition, including physical pain. "Serious bodily injury" means bodily injury that creates a substantial risk of death or which causes serious permanent disfigurement, unconsciousness, extreme pain, permanent loss or impairment of the function of any bodily member or organ, a bone fracture, or impediment of air flow or blood flow to the brain or lungs. "Substantial bodily injury" means a substantial temporary disfigurement, loss, or impairment of the function of any bodily member or organ.)

Access Services - Services such as transportation, escort/shopping assistance, outreach, and information and assistance, which help people to identify, obtain, and use existing services.

ACJ - Alliance for Children's Justice is a statewide multi-disciplinary coalition of professionals and parents dedicated to quality child protection services in North Dakota.

ACS - Affiliated Computer Services Inc. is the company North Dakota has contracted with for its Medicaid Management Information System replacement project and its Pharmacy Point of Sale system project.

Acute Care Unit - A service unit in the department's Human Service Centers that provides general outpatient mental health services.

ADA - Americans with Disabilities Act of 1990 [Pub. L. 101-336; 104 Stat. 327; 42 U.S.C. § 12101 et seq.]

ADL - Activities of Daily Living refers to daily self-care personal activities that include bathing, dressing and undressing, eating or feeding, toileting, continence, transferring in and out of a bed, or chair, or on and off the toilet; and mobility inside the home.

Administrative Assessment - Process of documenting reports of suspected child abuse or neglect that do not meet the criteria for a Child Protection Services Assessment.

Administrative Referral - Process of documenting the referral of reports of suspected child abuse or neglect that fall outside the jurisdiction of the county where the report is received.

Adoption Assistance - A form of monetary assistance to families adopting children from foster care who have special needs. This assistance can take the form of a monthly payment, Medicaid as a backup to a family's private health insurance, or reimbursement of nonrecurring expenses related to adoption.

Adoption Search/Disclosure - The process whereby an adopted individual, a birth parent, or birth sibling of an adopted individual, or an adult child of a deceased adopted individual can request and receive identifying information related to the adoption.

Adoption Subsidy - See Adoption Assistance.

Adult Day Care - A program of non-residential activities provided at least three (3) hours per day on a regularly scheduled basis one or more days per week and encompassing both health and social services needed to ensure the optimal functioning of the individual.

Adult Education Transition Services (AETS) - Refers to services provided to students 18-21 years of age who are eligible for Developmental Disabilities Case Management Services and can benefit from residential and/or day services provided in the developmental disabilities system while they are still in school. This is a joint initiative between the Department of Public Instruction and the Department of Human Services. Individuals must meet eligibility requirements. Education agencies and Medicaid provide funding.

Adult Family (Foster) Care - Provision of 24-hour room, board, supervision, and extra care to adults who are unable to function independently or who may benefit from a family home environment. Care is provided in a licensed home.

ADRC - Aging and Disability Resource Center is a visible and trusted place at the community-level where people can turn for information and counseling on all available long term support and service options. It functions as a single point of entry to public long term support programs and services. North Dakota does not have an ADRC.

Aging Services - Refers to the Aging Services Division of the N.D. Department of Human Services, which administers programs and services for older persons and vulnerable adults as the designated State and Area Agency on Aging under the Older Americans Act.

Approved Relative - An unlicensed child care provider who is eligible to participate in the Child Care Assistance Program. By federal law, an approved relative must be related to the child by marriage, blood relationship, or court order such as a grandparent, great-grandparent, aunt, uncle, or a sibling age 18 or older who does not live with the child. These providers can care for up to 5 children including their own children under the age of 12. All adults living in the home are checked against the ND Office of Attorney General's sex offender list.

Arrearages - Past-due, unpaid child support owed by the noncustodial parent. Also may be referred to as "arrears."

ASAM - American Society of Addiction Medicine, Patient Placement Criteria, Second Edition-Revised. These are the clinical guidelines used for matching clients to the appropriate level of care for the treatment of substance-related disorders.

ASFA - The Adoption and Safe Families Act of 1997 [Pub. L. 105-89; 111 Stat. 2115; 42 U.S.C. § 1305 et seq.] is federal legislation to shorten the length of time in foster care and to ensure safety and permanency for children.

Assisted Living - An environment that helps people maintain as much independence as possible by providing apartment-like units and individualized support services, which accommodate individual needs and abilities. Assisted living facilities are required to be licensed in the North Dakota.

Assistive Technology (AT) Device - Any item or piece of equipment used to maintain or improve the functional capabilities of individuals with disabilities.

Assistive Technology (AT) Service - Any service that directly assists an individual with a disability in selecting, acquiring or using an assistive technology device. AT services may include: evaluation, purchasing, designing, leasing, training for individuals, family members, and professionals; and coordinating therapies. It also includes services that expand access to electronic and information technology for people with disabilities.

Attendant Care Service (ACS) - Hands-on care, of both a supportive and medical nature, specific to a client who is ventilator-dependent for a minimum of 20 hours per day and includes nursing activities that have been delegated by the Nurse Manager to the ACS provider. ACS is an all-inclusive service that provides direct care to ventilator-dependent individuals to meet their care needs.

Attendant Care Service Provider - Is a Qualified Service Provider (QSP) who is an unlicensed assistive person enrolled and in good standing with the North Dakota Board of Nursing. The attendant care service is provided under the direction of a licensed nurse who is enrolled with the Department of Human Services as a QSP to provide Nurse Management.

Background Check - (See also *Criminal Background Check*) Refers to the check that is currently done on child care provider applicants (licensed and self-certified) to see if a person's name appears on the ND Child Abuse and Neglect Index showing a finding of "services required" for child abuse or neglect and to see if the person is on the ND Office of Attorney General's List of Convicted Sex Offenders and Offenders Against Children.

Basic Care Assistance Program - Supplements room and board payments made by individuals of limited means living in basic care facilities. The Basic Care Assistance Program is funded with state general funds.

Basic Care Facility - A licensed residential facility that provides room and board and services to individuals who need health, social, or personal care services, but do not require extensive medical services.

Benchmark – A specific measurement as it relates to progress toward meeting a standard or goal.

BEST - Basic Employment and Skills Training program provides motivation and job seeking skills to Supplemental Nutrition Assistance Program recipients who are required to register for work. The department contracts with Job Service North Dakota to provide the service in Burleigh County and Cass County.

Best Practice - Practices that incorporate the best objective information currently available from recognized experts regarding effectiveness and acceptability.

BLHSC - Badlands Human Service Center is located in Dickinson. (*See HSC definition.*)

Business Services - Part of Vocational Rehabilitation, *Business Services* is also known as *Rehabilitation Consulting and Services* and provides consultation, technical assistance, and information to businesses so they can resolve disability-related issues and have an available source of qualified employees.

CA/N - Child Abuse and Neglect

Care Coordinator - Describes the comprehensive case manager in a child and family case involving severe emotional disturbance.

CARF - Commission for Accreditation for Rehabilitation Facilities

Case Management - A process in which a professional case manager assesses the needs of the client and arranges, coordinates, monitors and evaluates services, and advocates to meet the specific client's needs in the least restrictive environment.

CCAP - Child Care Assistance Program provides partial payment for child care services provided to children from qualifying low-income families.

CCDBG - Child Care Development Block Grant

CCWIPS - The Comprehensive Child Welfare, Information, and Payment System is a computerized case management and payment system for foster care and adoption services.

CFS - Refers to the Children and Family Services Division of the Department of Human Services. CFS has administrative responsibility for the policies and procedures relating to children and families. The division is responsible for program supervision and technical assistance for the delivery of public child welfare services.

CFSR - Child and Family Services Review is a federal child welfare review conducted in all states. North Dakota uses this same process to conduct child welfare reviews in each region of the state annually.

Child and Family Team - Related to children's mental health services and child welfare services, the Child and Family Team consists of the child, family and persons most pertinent in the life of the child and family, as determined by the family (in most instances). The team meets to identify family strengths, needs, risks, and resources to reduce and/or eliminate the risk of removal from the home, reunification, emotional and educational needs, child abuse and neglect and ensure the safety, permanency and well-being of children and families.

Child Care Provider - A person, group of persons, or agency that is responsible for the education and supervision of the child/children in their care in exchange for money, goods, or services.

Child Care Provider Licensing - County social service offices conduct child care licensing studies, investigate complaints, and issue correction orders. The Department of Human Services' regional child welfare administrators review applications and studies, and issue licenses, denials, revocations, and suspensions. The Department's "State Office," which includes the Children and Family Services Division and the Legal Unit, develops and reviews regulations, policies, and procedures; conducts licensing training; reviews notices before issuance; and provides technical assistance.

Child Care Resource and Referral (CCR&R) – In North Dakota, two CCR&R agencies assist families searching for licensed child care and educate families about what to look for in providers. They also collect and maintain a database of providers, compile supply and demand information, provide and coordinate provider training, provide technical assistance to help providers become licensed and to improve quality, support child care programs in other ways, and work with communities to address child care issues. Established in 1992 by the North Dakota Legislature, the CCR&R programs in the state are supported by public funding (mainly from the ND Department of Human Services) and private funding.

Child Fatality Review Panel - A multi-professional group that meets to review the deaths of all minors in the state and identifies trends or patterns in the deaths of minors.

CHIP - Children's Health Insurance Program. See Healthy Steps and State Children's Health Insurance entries.

Chore Service - These tasks enable a client to remain in the home. Tasks include heavy housework and periodic cleaning, professional extermination, snow removal, and the task must be the responsibility of the client and not the responsibility of the landlord. Emergency Response Systems (ERS), such as electronic devices enabling the client to secure help in an emergency by activating the "help" button, are also available under this service.

CIL - Center for Independent Living. The four CILs in North Dakota provide services to individuals with disabilities so they can live and work more independently in their homes and communities.

Client Assistance Program (CAP) - Designed to inform and advise all Vocational Rehabilitation clients and applicants about the benefits available under the Federal Rehabilitation Act of 1973, and to assist clients in securing those services.

CMHS Block Grant - Community Mental Health Service Block Grant

Congregate Care - Refers to a specialized group residential facility that provides programming for elderly individuals with mental retardation to help them maintain their current level of functioning. The health and medical conditions of the individuals served are stable and do not require continued nursing or medical care.

Continuum of Care - A functional philosophy that seeks to ensure clients receive the right service in the right place at the right time.

Co-occurring Disorders (COD) - Individual has one or more substance-related disorders along with one or more mental disorders.

Corporate Guardianship - A service purchased on behalf of individuals eligible for developmental disabilities case management services when a district court has determined the individual requires a guardian and no one else is available to serve as guardian.

The Council for Quality and Leadership - Often referred to as "The Council" or "CQL," this entity accredits providers of services for mentally retarded/developmentally disabled people.

CP - For child support purposes, the Custodial Parent is the person (generally a parent) who has primary care, custody, and control of a child or, if a court has made a custody determination, the person who has legal custody of a child.

CPS - Child Protection Services protect the health and welfare of children by encouraging the reporting of children known to be or suspected of being abused or neglected; provide services for the protection and treatment of abused and neglected children to protect them from further harm.

CPS Assessment - A fact finding process designed to provide information that enables a determination to be made whether services are required for the protection and treatment of a child. These assessments are completed by County Social Service Board social workers.

CPS Assessment Decision - The result of a CPS assessment, which reflects whether services are required for the protection and treatment of an abused or neglected child.

Criminal Background Check - Fingerprints are taken and sent to the North Dakota Bureau of Criminal Investigation (BCI) and the Federal Bureau of Investigation (FBI) to determine if there is any criminal history record information regarding the person. This type of background check is being proposed for child care providers and is currently in place in North Dakota for foster care and non-relative adoptions, as well as North Dakota's CareCheck Registry – the existing voluntary criminal background check process for child care providers. (See *Background Check entry.*)

CRU - Crisis Residential Units provide generally short-term stabilization and support to individuals diagnosed with mental illness and/or chemical dependence who are experiencing crisis as a result of exacerbation of symptoms.

CSAP - Center for Substance Abuse Prevention is the sole federal organization with responsibility for improving accessibility and quality of substance abuse prevention services.

CSAT - Center for Substance Abuse Treatment is a component of the Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services (DHHS), that works to expand the availability of effective treatment and recovery services for alcohol and drug problems.

CSCC - Children Services Coordinating Committee

CSHCN - Children with Special Health Care Needs. As defined at the federal level, this population of children has or is at increased risk for chronic physical, developmental, behavioral, or emotional conditions requiring health and related services of a type or amount beyond that required by children generally.

CSHS - Children's Special Health Services (formerly Crippled Children's Services) is part of the Department of Health; it provides services directly or through contracts to children with special health care needs and their families.

Day Supports - This is a single day program, which encompasses services previously known as Developmental Day Activity, Developmental Work Activity, Prevocational Work Activity and Adult Day Care. Day supports may include assistance with acquisition, retention or improvement in self-help, socialization and adaptive skills; provision of social, recreational, and therapeutic activities to maintain physical, recreational, personal care, and community integration skills; development of non-job task oriented prevocational skills such as compliance, attendance, task completion, problem solving and safety; and supervision for health and safety. Services are provided in settings appropriate to an individual's needs.

DC - Refers to the Developmental Center. Located in Grafton, N.D., it provides residential and other services to individuals with developmental disabilities.

DD - Refers to the Developmental Disabilities service system, which provides case management, day supports, residential services, and family support services to individuals with mental retardation or developmental disabilities of all ages, and early intervention services to infants and toddlers who are at risk for, or experiencing developmental delays.

DDS - Disability Determination Services makes eligibility decisions for Social Security Disability Insurance and Supplemental Security Income so that eligible individuals can receive disability benefits. This is part of the ND Department of Human Services.

Debit Card - A card that may be used to electronically withdraw account deposits at an Automated Teller Machine (ATM) or a bank teller window, or to use at a point-of-sale (POS) machine to purchase goods, or services, or to obtain cash. Debit cards are used by the Department of Human Services to pay cash assistance under TANF programs and to distribute child support payments to custodial parents. Custodial parents receiving child support payments may also choose "direct deposit" as an alternative.

Determination - The result of an assessment of suspected institutional child abuse or neglect.

Developmental Disability - Refers to a severe chronic condition that constitutes a lifelong mental or physical impairment, which became apparent during childhood and has hampered an individual's ability to participate in mainstream society, either socially or vocationally.

Direct Deposit - For child support purposes, it is a process involving the electronic funds transfer of support payments from the State Disbursement Unit (SDU) into a custodial parent's bank account. This is done only upon the request of the custodial parent. Custodial parents may also choose to receive payments via a debit card.

Disease Management - A system of coordinated healthcare interventions and communications for populations with conditions in which patient self-care efforts are significant (for example, Medicaid recipients). Disease management: (1) supports the physician or practitioner/patient relationship and plan of care, (2) emphasizes prevention of exacerbations and complications using evidence-based practice guidelines and empowerment strategies, and (3) evaluates clinical, quality of life and economic outcomes on an on-going basis with a goal of improving participants overall health.

Diversion Assistance - An alternative to Temporary Assistance for Needy Families (TANF) assistance, Diversion Assistance is available for no more than four months in a year, and is intended to allow individuals to avoid some of the complications of TANF in an effort to quickly achieve self-sufficiency.

DJS - Division of Juvenile Services is a division of the North Dakota Department of Corrections and Rehabilitation. DJS is responsible for the custody of delinquent and unruly children placed in its care by the courts.

DRA - Deficit Reduction Act of 2005 [Pub. L. 109-171; 120 Stat. 4; 42 U.S.C. § 1108, et seq.]

Dual Diagnosed - Diagnosed with two disorders such as those individuals diagnosed with mental illness and chemical dependence or individuals diagnosed with mental illness and developmental disabilities.

Dual Eligibles - Individuals who qualify for both Medicaid (state and federally-funded health coverage for low-income persons) and Medicare (federal health coverage program for persons age 65 and older and other qualifying individuals with disabilities).

DUR Board - Drug Utilization Review Board is a volunteer board whose makeup and duties appear in Code of Federal Regulations and subsequently in state statute. Comprised of pharmacists and physicians, the Board was established to advise the Medicaid program on prior authorization and other pharmacy cost control and utilization matters.

EAP - Economic Assistance Policy is a division of the department that administers policy for and includes the following programs: Child Care Assistance Program, Basic Care Assistance Program, Energy Assistance (also referred to as Low Income Home Energy Assistance, or LIHEAP), Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF), including Diversion Assistance and Job Opportunities and Basic Skills (JOBS). EAP is also responsible for Medicaid Estate Recovery, Quality Control, and System Support and Development.

Early Head Start - A federally funded program that serves income eligible infants, toddlers and expectant parents. Early Head Start provides services that include prenatal development/healthy pregnancy, child development, health, nutrition, parent education/family development and parent leadership opportunities. Early Head Start reserves 10 percent of its enrollment for children with special needs.

Early Intervention Services - Refers to a statewide program for infants and toddlers who range from newborn to three years of age who have a developmental delay, disability, or a condition that could result in substantial limitations if intervention is not provided. Intervention services are designed to help address the physical and developmental needs of children, and to augment the capacity of their families to meet their special needs.

Early Learning Guidelines - These voluntary guidelines are intended as a resource for parents, child care providers, pre-kindergarten and Head Start teachers, and others. They outline the skills, knowledge, and dispositions young children need prior to entering first grade.

EFT - Electronic Funds Transfer is a process by which money is transmitted electronically from one bank to another.

English Language Learners (ELL) - People who are learning the English. Another related term commonly used is English as a Second Language (ESL).

Environmental Modification - Physical adaptions to the home necessary to ensure the health, welfare, and safety of a client or that enable a client to function with greater independence in his/her home.

Expanded SPED Program - Expanded Service Payments to the Elderly and Disabled Program is a companion program to the Basic Care Assistance Program. It pays for services that can be provided in the home and community so that people can avoid having to move to a basic care facility. The Expanded SPED Program is funded with state general funds.

Extended Personal Care - Includes hands-on care of a medical nature that is specific to the needs of an eligible individual and will enable an individual to live at home. This service is provided by a Qualified Service Provider (QSP), and to the extent permitted by State law, is care that would otherwise be provided by a nurse. A nurse licensed to practice in the state will provide training to a QSP approved by the Department to provide the required care and will provide at a minimum, a review of the client's needs every six months to determine if additional training is required. Activities of daily living (ADL) and instrumental activities of daily living (IADL) are not a part of this service.

Extended Services - This refers to long term supports provided by a job coach for individuals with disabilities employed in the community.

FACSES - The Fully Automated Child Support Enforcement System is the statewide automated system that supports the processing of child support cases in North Dakota and supports the State Disbursement Unit (SDU) in processing child support payments.

Family Caregiver Support Program - Federally funded under the Older Americans Act, this Aging Services program offers help to caregivers who are caring for an adult age 60 or older, or who are themselves age 55 or older and are caring for grandchildren or relatives who are age 18 or younger or for an adult child with a disability who is between 19 and 59 years of age. Services include information and referral, assistance from a trained caregiver coordinator to help caregivers assess needs and access support services, individual and family counseling, support groups, training, and respite care for caregivers.

Family Group Decision Making - Relating to the provision of child welfare services, this is defined as a strengths-based collaborative, coordinated decision making process using family, agency and support service resources to ensure the safety, permanency and well-being of children and families.

Family Home Care - The provision of room, board, supervisory care, and personal care service to an eligible elderly or disabled individual by the spouse or by one the following relatives, or the current or former spouse of one of the following relatives of the elderly or disabled person: parent, grandparent, adult child, adult sibling, adult grandchild, adult niece, or adult nephew. The family home care provider does not need to be present in the home on a 24-hour basis if the welfare and safety of the client is maintained.

Family Personal Care -This helps individuals remain with their family members and provides extraordinary care payments to the legal spouse of a recipient for the provision of personal care or similar services.

Family Subsidy - A program that may reimburse a family for excess expenses related to their child's disability. This offers support to enable families to keep their children in their homes when lack of financial support would make it very difficult for families to care for their children at home. A child may be eligible for this program through age 21.

Family Support Services - Refers to services, which are provided for eligible individuals with developmental disabilities to enable them to remain in appropriate home environments. Services are based on the primary caregiver's need for support in meeting the health, safety, developmental and personal care needs of their family member. Personal care needs include activities of daily living such as eating, bathing, dressing, and personal hygiene. When the eligible client is a minor, out-of-home support may also be provided in a licensed family home. This Family Care Option may be appropriate for children who cannot remain in their family home on a full-time basis. It is available only if the child is not considered deprived within the definition of NDCC 27-20-02 (5), and is not considered boarding care according to the definition of the North Dakota Department of Public Instruction.

FFY - Federal Fiscal Year runs from October 1 to September 30.

Fidelity - This is the degree of adherence to essential elements in the implementation of evidence-based clinical practice. Program with high fidelity are expected to have greater effectiveness in achieving desired client outcomes.

FIDM - The Financial Institution Data Match process is operated by the Child Support Enforcement program in coordination with financial institutions and pursuant to federal and state laws. The process provides for a data match system in which account records are matched with child support cases.

FLEP - Family Life Education Program. The department of human services is required by law (NDCC 50-06-06.10) to enter into an agreement with the North Dakota State University extension service for the design of a program to educate and support individuals at all points within the family life cycle. The program must provide support for families and youth with research-based information relating to personal, family, and community concerns and must contain a research component aimed at evaluation of planned methods or programs for prevention of family and social problems. The program must address: 1) child and youth development; 2) parent education with an emphasis on parents as educators; 3) human development; 4) interpersonal relationships; 5) family interaction and family systems; 6) family economics; 7) intergenerational issues; 8) impact of societal changes on the family; 9) coping skills; and 10) community networks and supports for families.

FMAP - Federal Medical Assistance Percentage is the federal matching rate for the Medicaid program. FMAP changes annually on October 1.

Food Stamps - See Supplemental Nutrition Assistance Program or SNAP.

Front End System/FRAME - An added component to the Department's current child welfare computer system that makes intake and data entry more efficient and user-friendly and supports enhanced case management services.

GA - General Assistance is a county program designed to cover emergency needs of low-income individuals or families. The covered needs may include rent, fuel and utilities, medical, and burial expenses.

Good Start, Grow Smart - The federal initiative that encouraged states to develop early learning guidelines, professional development systems, and quality rating systems and required Head Start programs to demonstrate progress in children's learning.

Governor's Prevention Advisory Council (GPAC) on Drugs and Alcohol - Formed by an executive order from the Governor's office, the council is charged with oversight and monitoring of substance abuse prevention activities across state agencies in North Dakota. The Department holds two of the eight council membership positions.

Guardian Ad Litem - A court-appointed child advocate mandated by North Dakota law for all abused and neglected children involved in a Juvenile Court proceeding.

HCBS - Home and Community Based Services refers to the array of services that are essential and appropriate to sustain individuals in their homes and communities, and to delay or prevent institutional care.

Head Start - This is a federally funded program for families with pre-school aged children who meet income eligibility guidelines. Head Start is family-focused and provides early literacy and education, child development, child health services (dental, physical, social-emotional, nutrition) and parent education and support services.

Head Start-State Collaboration Office (HS-SCO) - This office is designed to create a visible presence at the state level to assist in the development of significant, multi-agency and public-private partnerships between Head Start and the state. The following are the federally-identified purposes of the HS-SCO: Build early childhood systems and access to comprehensive services and support for all children of families with low-incomes; Create partnership agreements and initiatives between Head Start and appropriate state programs/agencies and encourage Head Start's capacity to be a partner in State initiatives on behalf of children and their families; and Facilitate the involvement of Head Start in State policies, plans, processes and decisions affecting the Head Start target population and other families with low-incomes.

Health Care Trust Fund - This trust fund was established by the 1999 North Dakota Legislature as a source of funding for grants and loans to pay for legislatively approved projects.

Health Tracks - See North Dakota Health Tracks.

Healthy Steps - Is North Dakota's Children's Health Insurance Program that offers comprehensive health coverage for children 18 years of age and younger. To qualify, a child's family must have a net income that is greater than the Medicaid eligibility level, but not exceeding 150% of the federal poverty level. (Deductions for child care, child support, and taxes are allowed when determining eligible income.) Healthy Steps is a "State Children's Health Insurance Program" (SCHIP).

HIPAA - Health Insurance Portability and Accountability Act of 1996 [Pub. L. 104-191; 110 Stat. 1936; 42 U.S.C. § 1301 et seq.] that among other things standardizes the format of certain health care information that is transmitted electronically and regulates the release of health care information. HIPAA impacts entities (and their computer systems) that handle individual health care information.

Home Delivered Meal - Provides a well-balanced meal to any qualifying individual who lives alone and is unable to prepare an adequate meal, or who lives with another person who is unable or not available to prepare an adequate meal for the recipient.

Homemaker Service - Includes tasks such as housekeeping, laundry, and shopping, this service allows an individual to maintain or develop the independence needed to remain in the home.

HSC – Human Service Centers are part of the Department and provide help to individuals and families with concerns including family and relationship issues, mental illness, addiction, disabilities, and other needs. Centers are located in Bismarck (WCHSC), Devils Lake (LRHSC), Dickinson (Badlands HSC or BLHSC), Fargo (SEHSC), Grand Forks (NEHSC), Jamestown (SCHSC), Minot (NCHSC), and Williston (NWHSC).

IADL - Instrumental Activities of Daily Living means activities requiring cognitive ability or physical ability, or both. Instrumental activities of daily living include meal preparation, shopping, managing money, doing housework, laundry, taking medicine, transportation, using the telephone, and mobility outside the home.

ICAMA - Interstate Compact on Adoption and Medical Assistance

ICFMR - Intermediate Care Facility for the Mentally Retarded is a residential facility operated pursuant to federal regulations and serving people with developmental disabilities and related conditions. The programming provided is for individuals with extensive needs. Each client must receive a continuous active treatment program, which includes an aggressive and consistent program of training, health services, and related services so that the client acquires the ability to function with as much self-determination and independence as possible.

ICPC - Interstate Compact on the Placement of Children relates to the placement of foster children across state lines.

ICWA - **Indian Child Welfare Act** of 1978 [Pub. L. 95-608; 92 Stat. 3069; 25 USCA § 1901 et seq.] recognizes the importance of allowing tribal courts to assume full responsibility for the placement of Indian children in foster care and adoptive homes. Under ICWA, Indian tribes may intervene in such State court proceedings concerning Indian children, and Indian Tribal courts have exclusive jurisdiction over some such proceedings.

IDDT - Integrated Dual Disorder Treatment is an evidence-based practice that improves the quality of life of people with co-occurring mental and substance use disorders by promoting consumer and family involvement in service delivery, stable housing as a necessary condition of recovery, and employment as an expectation for many. The IDDT model integrates mental health and substance abuse services utilizing treatment that combines pharmacological, psychological, educational, and social interventions to address the needs of consumers and their families and other support system members. The implementation of IDDT promotes system change, organizational change, and clinical change.

Individualized Supported Living Arrangement (ISLA) - This residential service is provided to people with developmental disabilities and/or mental retardation in their own homes or apartments. The level of support provided is individualized to the person's need for training and assistance with personal care, laundry, money management, etc. Individuals who receive ISLA typically need a higher level of support than people in a Supported Living Arrangement (SLA).

Infant Development - Home-based, family focused services that provide supports to families of eligible infants and toddlers at high risk for, or with developmental delays or disabilities. An Individual Family Service Plan is developed that identifies services and learning opportunities that support the family in meeting the needs of their child, enhance their child's development, and increase the child's and family's participation in everyday routines and activities within the home and community. An eligible child may receive Infant Development services until he or she is three years of age.

Institutional Child Abuse or Neglect - Situations of known or suspected child abuse or neglect where the institution responsible for the child's welfare is a residential child care facility, a treatment or care center for the mentally retarded, a public or private residential educational facility, a maternity home, or any residential facility owned or managed by the state or a political subdivision of the state.

Integrated Treatment - The skills and techniques used by treatment providers to comprehensively address both mental health and substance abuse issues in people with co-occurring disorders.

Intensive In-Home Services - Services provided under contract with a private agency to families who have at least one child about to be placed in foster care. The program's purpose is to preserve the family, prevent foster care, and assist with family re-unification of children who are placed in foster care.

Intergovernmental Transfer (IGT) – This is a complex funding process that was used by North Dakota and about 20 other states to access extra federal Medicaid dollars. The Health Care Financing Administration approved the IGT as part of North Dakota's Medicaid State Plan Amendment. Funds generated by the IGT were deposited into the Health Care Trust Fund. In a compromise worked out in Congress, this source of extra federal Medicaid funding has been phased out. The final North Dakota payment was in July 2004.

IPAT - Refers to the Interagency Program for Assistive Technology. IPAT's mission is to increase access to assistive technology devices and services for individuals with disabilities regardless of their type of disability, age, or income level in order to positively impact work, independent living, learning, community involvement and recreation.

IV-D - Refers to Title IV-D of the Social Security Act [Pub. L. 93-647; 42 U.S.C. title IV-D]. A Child Support Enforcement program that provides services to locate parents, to establish paternity, to establish child support and medical support obligations, to enforce child support and medical support obligations, and to review and adjust obligations. Services are provided to families receiving public assistance [through Temporary Assistance for Needy Families (TANF) or Medicaid], in cases in which a child has been placed in foster care or upon application for services from either parent.

IPE - Is an Individualized Plan for Employment. It describes the nature and scope of rehabilitation, employment and training services provided to an individual with a disability to help that individual reach his or her employment goal. A Vocational Rehabilitation counselor and the client write the client's IPE.

JCAHO - Joint Commission on Accreditation of Healthcare Organizations

JOBS - Job Opportunities and Basic Skills program provides vocational training and employment for eligible individuals through TANF for the purpose of entering or reentering the job market. The Department of Human Services Program contracts with Job Service North Dakota, Career Options, Spirit Lake Employment and Training, and Turtle Mountain Tribal Employment and Training to provide JOBS program services.

Kinship Care - A Temporary Assistance for Needy Families (TANF) program that allows relatives, with supportive services, to provide care and protection to children who are under the care, custody, and control of County Social Services and who would otherwise be in foster care.

Licensed Child Care Providers – Are required to maintain at least minimum standards related to physical size of the facility, safety features, cleanliness, staff qualifications, and staff-to-child ratios. See the definitions of the licensed child care provider categories: licensed family child care, licensed group child care, licensed child center, licensed preschools, licensed school-age programs, and multiple license facility. (Unlicensed child care provider categories include: self-declared providers, formerly called "self-certified," approved relative providers, and registered providers.)

Licensed Family Child Care - Care for 7 or fewer children in the provider's own home.

Licensed Group Child Care - Care for 8 to 18 children in the home or other type of facility.

Licensed Child Care Center - Care for 19 or more children in public or private buildings, churches or schools; children are often grouped by age.

Licensed Preschools - Part-time educational and socialization experiences for children age 2 years to kindergarten

Licensed School-Age Programs - The care of 19 or more school-age children before and/or after school; some programs provide care during school holidays and summer vacations.

LIHEAP - Low Income Home Energy Assistance Program that is also referred to as the energy assistance program. It provides heating assistance grants and services for qualifying low-income households. Benefits equal each household's estimated cost of heat minus a percentage of the household's income and are usually paid directly to heating fuel suppliers.

Local Child Protection Team - A multidisciplinary team of staff members from public and private community agencies who assist child protection service agencies to make decisions and recommendations for families involved in Child Protection System (CPS) assessments.

Long Term Care Facility - (As defined by North Dakota law) A skilled nursing facility/nursing home, basic care facility, assisted living facility, or swing bed hospital unit. Common usage generally equates it to a nursing facility.

Long Term Care Ombudsman - A person who identifies, investigates, and resolves complaints made by or on behalf of residents of long term care facilities and tenants of assisted living facilities. The ombudsman also works in other ways to protect the health, safety, welfare, and rights of residents.

LRHSC - Lake Region Human Service Center is located in Devils Lake. (*See HSC entry.*)

MA - Medical Assistance, commonly referred to as "Medicaid," provides medical assistance to certain specified groups of needy low-income individuals as defined by federal law.

Managed Care - A system of health care that combines delivery and payment and influences utilization of services by employing management techniques (i.e., case management, referral for specialty services, etc.) designed to promote the delivery of cost-effective health care.

MDS - Minimum Data Set is an assessment used to determine a nursing facility resident's classification for rate setting purposes.

Medicaid - See MA above.

Medicaid Systems Project - Also referred to as "The Project," it is the technology project dealing with the replacement of North Dakota's Medicaid Management Information System (MMIS), Pharmacy Point of Sale (POS) system, and the Medicaid Decision Support System.

Medicaid Waiver for Home and Community Based Services - A program authorized by federal law that funds in-home and community based services to individuals who meet Medicaid eligibility standards and require the level of care provided in a nursing facility. This waiver combines the previously separate waivers for aged and disabled and traumatic brain injury populations. The waiver's goal is to adequately and appropriately sustain individuals in their own homes and communities and to delay or divert institutional care. The waiver provides service options for a continuum of home and community based services in the least restrictive environment.

Medicaid Waiver for Mentally Retarded and Developmentally Disabled - A program authorized by federal law that funds in-home and community based services for individuals with mental retardation and/or developmental disabilities who meet Medicaid eligibility standards and require the level of care provided in an Intermediate Care Facility for Mentally Retarded (ICFMR).

Medicare Part D - The federal Medicare Prescription Drug Program that provides Medicare beneficiaries with access to prescription drug coverage from a host of private plans.

Medicare Savings Programs - Medicaid coverage that pays all or part of the Medicare premiums, deductibles, and co-insurance for Qualified Medicare Beneficiaries, Specified Low income Medicare Beneficiaries and Qualifying Individuals.

Mental Retardation - Is a condition diagnosed by age 18 and characterized both by a significantly below-average score on a test of mental ability or intelligence and by limitations in the ability to function in areas of daily life such as communication, self-care, and getting along in social situations and school activities. Mental retardation is sometimes referred to as a cognitive or intellectual disability.

MFP – Money Follows the Person is a federal Real Choice Systems Change Rebalancing grant that supports the transition of qualifying Medicaid-eligible individuals from institutional settings to home and community-based long term services.

MHSAS - Mental Health & Substance Abuse Services is a division of the Department of Human Services.

MHSIP - Mental Health Statistical Improvement Project is the statistical and outcome measurement system for the Department's community based mental health system of care at the regional human service centers.

MMIS - Medicaid Management Information System is the computer system that processes all Medicaid claims. Developed in 1978, it is also used to monitor utilization and to provide information needed to manage the Medicaid program. (*See Medicaid Systems Project.*)

MSLA - Minimally Supervised Living Arrangement is a community waiver group home or community complex setting, which provides training in community integration, social, leisure, and daily living skills.

Multiple License Facility – Entity that has more than one type of child care license such as a Center and Preschool license.

NCHSC - North Central Human Service Center is located in Minot. (See HSC entry.)

NDSH - North Dakota State Hospital

Neglect - The failure of a caregiver to provide essential services necessary to maintain the physical and mental health of another person in the caregiver's care.

Neglected Child - Uses the definition in juvenile law for a "deprived child." A child who is without proper parental care, control, subsistence or education necessary for the child's physical, mental or emotional health or morals. A child who has been placed for care or adoption in violation of law. A child who has been abandoned. A child who is without proper care (as described above) because of the physical, mental, emotional, or other illness, or disability of the parent. A child who is in need of treatment and whose caregiver has refused to participate in treatment, which is court-ordered. A child who was subject to prenatal exposure to chronic or severe use of alcohol or any controlled substance. A child who is present in an environment subjecting the child to exposure to a controlled substance, chemical substance or drug paraphernalia.

NEHSC - Northeast Human Service Center is located in Grand Forks. (*See HSC definition.*)

New Hire Reporting - Under this reporting process mandated by federal and state law, employers must submit new hire information within 20 days of hiring to the State Directory of New Hires, a component of the Child Support Enforcement Division.

NF LOC Determination - Nursing Facility Level of Care Determination is an assessment based on established criteria of an individual's medical needs. A determination must be completed before an individual can receive Medicaid funded nursing facility services or home and community-based services through the Medicaid Waiver for Home and Community Based Services.

Non-Custodial Parent (NCP) - For child support purposes, this is the parent who does not have primary care, custody, and control of the child(ren) or, if a court has made a custody determination, the parent who does not have legal custody of the child(ren).

Non-Medical Transportation - Transportation the enables individuals to access essential community services such as grocery stores, pharmacies, banking, post office, laundromat, utility company, social services, and the social security office, in order to maintain themselves in their home. *Non-Medical Transportation Driver with Vehicle* refers to situations when the driver with the vehicle is considered as solely transporting the client to and from his/her home and points of destination. *Non-Medical Transportation Escort* is solely accompanying the client for the purpose of assisting in boarding and exiting, as well as during transport, in order that the client may complete the activity for which (non-medical) transportation is authorized.

North Dakota Health Tracks - Also known as Early and Periodic Screening, Diagnosis and Treatment (EPSDT), this program provides preventive health care to Medicaid eligible individuals up to age 21. Services include physical exams and screenings, immunizations, and referrals.

No Services Required - A Child Protection Services (CPS) assessment decision, which reflects the belief that a child has not been abused or neglected.

No Services Required, Services Recommended - A CPS assessment decision that reflects the belief that a child has not been abused or neglected, but the family may be in need of preventative services.

NSDUH - National Survey on Drug Use and Health is a survey of the U.S. Department of Health and Human Services' Substance Abuse and Mental Health Services Administration's Office of Applied Studies.

Nurse Management - This is an aspect of Attendant Care Services. Nurse Management is the provision of nursing assessment, care planning, training of skilled nursing tasks to an Attendant Care Services (ACS) provider, and monitoring of delegated tasks, for clients who are ventilator-dependent and receiving Attendant Care Services.

Nursing Facility Level of Care Determination - See NF LOC Determination.

NWHSC - Northwest Human Service Center is located in Williston. (*See HSC definition.*)

Obligee - The person to whom a child support obligation is owed, generally the custodial parent (CP). It may also be an entity to which a child support obligation is owed.

Obligor - The person who is obliged to pay child support. See also noncustodial parent (NCP).

Older Americans Act (OAA) - The Older Americans Act of 1965 [Pub. L. 89-73; 79 Stat. 219; 42 U.S.C. § 3001 et seq.] provides federal funding for services to older persons, especially those who are low income, socially needy, frail, or minority persons. Among the services offered are nutrition services, support services, Long Term Care Ombudsman program, and information and referral.

Olmstead Commission - Established by an executive order of the Governor, the commission monitors services and conducts planning in order to comply with the United States Supreme Court's Olmstead decision related to providing appropriate community-based services for individuals with disabilities, consistent with needs and available resources of the state.

Olmstead Decision - A 1999 U.S. Supreme Court decision, *Olmstead v. L.C. ex rel. Zimring*, 527 U.S. 581, 119 S.Ct. 2176 (1999), in which the Court held that it is a form of discrimination under the Americans With Disabilities Act of 1990 (ADA) if a state fails to find community placements for institutionalized individuals if: 1) the state's treatment professionals have determined that community placement is appropriate, 2) the individual does not oppose the transfer to a community setting, and 3) the placement can be reasonably accommodated taking into account the resources available to the state and the needs of others with disabilities.

Outreach - Actions and communication initiated by an agency or organization for the purpose of identifying potential clients and encouraging their use of existing services and benefits.

PACE - Program of All-inclusive Care for the Elderly involves Northland Healthcare Alliance and Medicaid and began operation in August 2008. It is a managed care program providing patient-centered, coordinated care to frail elderly individuals who are eligible for Medicare and Medicaid and live in the community. The goal is to meet individual health needs through a care team so participants can remain living independently in the community.

PAR - Progress Assessment Review is a written instrument used as the basis of the eligibility process within Developmental Disabilities. The instrument includes an assessment of needs, which helps determine level of care and authorization of services.

Parent Aides - Individuals who, through training and support, work with parents who are at risk of abusing or neglecting their children. County social service boards employ the aides.

Part C - Is a section within the federal law of the Individuals with Disabilities Education Act (IDEA) [Pub. L. 94-142; 84 Stat. 175; 20 U.S.C. § 1400 et seq.] that entitles a child under the age of three years and their family to certain supports, services, and rights, which in North Dakota are known as Early Intervention Services for Infants and Toddlers. Part C provides federal financial assistance to states to develop and implement a collaborative statewide system of services for these children and their families.

Participant Directed Service - Sometimes called Self-Directed Supports, this option gives the individual the most control over his or her services and supports and also the most responsibility.

Partnerships Program - Integrated comprehensive services for children with serious emotional disorders.

PASRR - Pre-Admission Screening and Resident Review is a federal requirement that every person who seeks admission to a nursing facility be screened by the state for evidence of mental retardation or mental illness. If either exists, the screening is intended to determine if nursing facility care is necessary, and if so, to determine if specialized services are needed.

Peer Support Services - These consumer centered services have a rehabilitation and recovery focus and are designed to promote skills for coping with and managing symptoms while facilitating the use of natural resources and the enhancement of community living skills. Support services are provided by a person who has progressed in his or her own mental health or substance abuse recovery and is working to assist other people with those issues. Because of their life experience, peers have expertise that professional training cannot replicate.

Peer Support Specialist - An occupational title for a person who has progressed in his or her own recovery from a mental disorder and is working to assist other people with a mental disorder. Their life experiences give these individuals expertise that cannot be replicated by professional training.

PEPP - Parental Employment Pilot Project. Renamed "PRIDE" (Parental Responsibility Initiative for the Development of Employment) in late 2006. (See PRIDE definition below.)

PERM - Payment Error Rate Measurement is an examination of selected Medicaid and Healthy Steps (SCHIP) provider claims to determine if a service is required and the beneficiary is eligible.

Personal Care Service - A service that provides assistance with bathing, dressing, toileting, continence, transferring, mobility in the home, eating, and personal hygiene, passive range of motion exercises and simple bandage changes. When specified within the plan of care, this service may also include cueing or prompting, housekeeping tasks such as bed making, dusting and vacuuming, which are incidental to the care furnished or which are essential to the health and welfare of the individual, rather than the individual's family.

Pharmacy Point of Sale - This is a computerized point of sale (POS) system that allows pharmacists to enter claims on a real time basis into the payment system. Within seconds, providers receive confirmation that a claim has been processed for payment or denied. If a claim is denied, providers receive immediate information about the reason. The system also prevents payment of duplicate claims, audits claims to ensure the health of Medicaid recipients is maintained by preventing inappropriate drug dispensing, reduces administrative costs and streamlines identification of recipient liability for pharmacy providers.

Portability - An individual can move from one area of the state to another or from one service to another and his/ her individual budget and waiver eligibility can remain the same.

Preschool - Programs that typically serve children age three through entrance into kindergarten.

Prevention Activities - Activities with goals of eliminating or reducing the factors that cause or predispose individuals to increased risk, disease, problems, or disabilities.

PRIDE - Parental Responsibility Initiative for the Development of Employment provides employment-related services to noncustodial parents who are behind in their child support obligations. It is administered through the Child Support Enforcement Division with TANF funding assistance. The goal is to help the parents obtain work in order to increase their incomes so that they can support their children. This may result in better family relationships and improved visitation. The Department has implemented it in Dickinson and Grand Forks. It was formerly referred to as PEPP (Parental Employment Pilot Project).

Prime Time Care - A prevention program designed to provide temporary child care to families at risk of neglecting or abusing their children.

Psychiatric Residential Treatment Facility (PRTF) - (*Formerly called Residential Treatment Center or RTC*) A facility or a distinct part of a facility that provides children and adolescents with a 24-hour, therapeutic environment integrating group living, educational services, and a clinical program based upon a comprehensive, interdisciplinary clinical assessment and an individualized treatment plan that meets the needs of the child and family.

QI - Qualifying Individuals are individuals for whom Medicaid pays their Medicare Part B premium. Income must be between 120 percent and 135 percent of poverty level. They cannot be covered by other Medicaid to receive benefits. *See Medicare Savings Programs.*

QMB - Qualified Medicare Beneficiaries are persons for whom Medicaid pays the Medicare premiums, deductibles, and co-insurance. Income cannot exceed 100% of the poverty level. See Medicare Savings Programs.

Qualified Service Provider (QSP) - An agency or independent contractor that agrees to meet standards for services and operations established by the Department of Human Services to provide home and community based long term care services.

Quality Rating and Improvement System - A method to assess (initially and ongoing), improve, and communicate the level of quality in early childhood care and education settings.

RCCF - Residential Child Care Facility (foster care facility)

RCSEU - There are eight Regional Child Support Enforcement Units in North Dakota. These regional offices provide child support enforcement services.
Recipient Liability - This is the amount an individual who is eligible for Medicaid under the "Medically Needy" coverage group must contribute toward his or her monthly medical expenses before Medicaid pays for services.

Registered Providers - Child care providers who are eligible to participate in the Child Care Assistance Program and who are generally registered by Tribal entities. These child care providers may be licensed by Tribal entities and subject to their licensing criteria, but are not licensed by the state.

Refugee Cash Assistance - A benefit program available for the first eight months that qualifying refugees are living in the United States.

Rehabilitation Consulting and Services (RCS) - Associated with vocational rehabilitation (VR) services, these services are designed to assist business owners and employers in developing short and long term strategies regarding disability-related issues including staffing, education, tapping into financial incentives associated with hiring an individual who has a permanent injury, illness, or impairment; or ensuring accessibility to goods or services.

Rehabilitation Services - Medical, psychological, social, and vocational services, including physical items, which are necessary to assist persons with disabilities to engage in gainful activity.

Rehabilitation Services Administration - The federal oversight agency responsible for the Rehabilitation Act (Vocational Rehabilitation services).

Report of Suspected Child Abuse or Neglect - Information received by child protection services concerning the suspected maltreatment of a child.

Reserved Waiver Capacity - The state may reserve a portion of the participant capacity for specified purposes such as community transition of institutionalized persons or for individuals who may experience a crisis.

Residential Care - Services provided in a facility in which at least five (5) unrelated adults reside, and in which personal care, therapeutic, social, and recreational programming are provided in conjunction with shelter. This service includes 24-hour on-site response staff to meet scheduled and unpredictable needs and to provide supervision, safety, and security.

Respite Care - Temporary relief to a primary caregiver for a specified period of time. The caregiver is relieved of the stress and demands associated with continuous daily care.

Right Track - This Developmental Disabilities program works to identify infants or toddlers who may be at-risk for developmental delays. The program provides developmental screenings in environments natural and familiar to the child, refers families to appropriate supports and shares child development information with them. For this program, at-risk infants and toddlers are defined as children younger than three years of age who have environmental or biological risk factors for developmental delays or parental concern regarding development.

RIS - Regional Intervention Services provide community based intervention for individuals with serious mental health and/or substance abuse needs to determine appropriate level of care. RIS units at the department's human service centers conduct the admission screening for State Hospital admissions.

RMA - Refugee Medical Assistance provides up to eight months of Medical Assistance for qualifying newly arriving refugees. The program is 100 percent federally funded.

ROAP - The Regional Office Automation Project is a technology system that provides a comprehensive and integrated electronic medical records system to manage and support the business functions and requirements of the department's eight regional Human Service Centers and the Central Office.

RSA - Rehabilitation Services Administration is the federal oversight agency responsible for the Rehabilitation Act (Vocational Rehabilitation services).

RTC - Term is no longer used. *See Psychiatric Residential Treatment Facility (PRTF) entry.*

Safety, Strengths, Risk Assessment - Refers to State Form Number (SFN 455) that is used to document the Child Protection Services (CPS) assessment.

SAMHSA - Substance Abuse and Mental Health Services Administration is an agency of the U.S. Department of Health and Human Services (DHHS) that focuses on programs and providing funding to improve the lives of people with or at risk for mental and substance abuse disorders.

SAPT - Substance Abuse Prevention and Treatment block grant

SCHIP - State Children's Health Insurance Program, which is called Healthy Steps in North Dakota. (*See Healthy Steps definition.*)

SCHSC - South Central Human Service Center is located in Jamestown. (*See HSC definition.*)

SDU - The State Disbursement Unit is the unit within the department's Child Support Enforcement Division that receives, records, and distributes all child support payments in North Dakota.

SED - Serious Emotional Disorder (or Disturbance)

SEHSC - Southeast Human Service Center is located in Fargo. (*See HSC definition.*)

Self-Certified/Self-Declared Child Care Providers - Care for 5 or fewer children or 3 infants in the provider's home. These providers are not licensed or monitored; they are eligible to participate in the Child Care Assistance Program.

Senior Community Services Employment Program - Funded under the Older Americans Act, this program provides career counseling, training, and community service work experience to help low-income persons age 55 and older to secure meaningful employment.

Services Required - A Child Protection Services (CPS) assessment decision, which reflects the belief that a child has been abused or neglected and requires contact with the juvenile court.

SFY - State Fiscal Year is the period of time in the state budget cycle from July 1 to June 30.

Single Plan of Care (SPOC) – This is the computerized treatment/service plan that supports the Wraparound Process in the provision of mental health services to children.

SLA - Supported Living Arrangement is a residential service that provides support to people living in their own homes or apartments. Supportive services include help with budgeting, shopping, laundry, etc. and are provided on an intermittent basis, usually less than 20 hours per month. There is a fixed staff to client ratio. People receiving this service generally need less support than people receiving Individualized Supported Living Arrangement services.

Sliding fee scale – A system of cost sharing based on income and number of persons in the household.

SLMB - Specified Low-Income Medicare Beneficiaries are persons for whom Medicaid pays the Medicare Part B premium. Income must be between 100 percent and 120 percent of poverty level. See Medicare Savings Programs.

Slots - The maximum number of individuals who can be enrolled in the waiver at any one point in time. The number of waiver slots is tied to the amount of funding the state legislature has made available for waiver services. One 'slot' usually equals the average amount of money the state expects to spend for an individual for a full year of services.

SMI - Seriously mentally ill

SNAP - See Supplemental Nutrition Assistance Program (Formerly called the Food Stamp program.)

SPARCS- Structured Psychotherapy for Adolescents Responding to Chronic Stress is a group intervention specifically designed to address the needs of chronically traumatized adolescents who may still be living with ongoing stress and are experiencing problems in several areas of functioning. These include difficulties with regulation and impulsivity, self-perception, relationships, dissociation, numbing and avoidance, and struggles with their own purpose and meaning in life, as well as world views that make it difficult for them to see a future for themselves. Program goals include helping teens cope more effectively, enhance self-efficacy, connect with others and establish supportive relationships, cultivate awareness, and create meaning.

Special needs - Refers to the needs of children who have, or are at risk of developing, a developmental, emotional, behavioral, learning or physical condition that requires attention, services, and/or program modifications beyond what is generally needed by other children.

Special Needs Adoption - The classification of adoption for children who have a physical, emotional, and/or psychological disability (or are at risk for such a disability), are older than age seven, part of a sibling group, or are children whose race/ethnicity may be a barrier to placement.

Specialized Equipment and Supplies - Includes devices, controls, or appliances specified in the plan of care, which enable recipients to increase their abilities to perform activities of daily living, or to perceive, control, or communicate with the environment in which they live.

Specialized Placement - Refers to a residence for people who are diagnosed as both mentally retarded and mentally ill and whose individualized programs address residential, psychosocial and psychiatric development prior to entry into less restrictive settings.

SPED - Service Payments for Elderly and Disabled is authorized by state law to provide a number of home and community based services to functionally impaired older individuals and people with physical disabilities who require assistance to continue to live in a home-like setting.

SSA - Social Security Administration

SSBG - Social Service Block Grant

SSDI - Social Security Disability Insurance

SSI - Supplemental Security Income

State Child Protection Team - A multidisciplinary team of staff members from public and private agencies (determined by law) that makes the determination whether child abuse or neglect is indicated in cases of suspected institutional child abuse or neglect.

State Interagency Coordinating Council (ICC) - Is a council appointed by the Governor. Federal law under Part C of the Individuals with Disabilities Education Act (IDEA) requires the ICC to advise and assist the designated lead agency (ND Department of Human Services) in the performance of responsibilities set forth under Part C regarding early intervention services and to advise the Department of Public Instruction (DPI) regarding the transition of toddlers with disabilities to preschool and other appropriate services. The council is comprised of parents of infants and toddlers with disabilities and representatives of providers of early intervention services, the state legislature, the Department of Human Services, preschools, the State Insurance Department, Head Start, child care providers, and other members at large.

Subject - In child welfare terminology, the person who is suspected of abuse or neglect of a child or the person who has abused or neglected a child.

Supplemental Nutrition Assistance Program (SNAP) - Formerly called the Food Stamp program, this federally-funded USDA program is intended to raise levels of nutrition among low-income households by supplementing their food purchasing power with monthly benefits distributed through an electronic benefit card.

Supported Employment - Competitive work, in an integrated work environment, with ongoing support services for individuals with the most severe disabilities.

Swing Bed - A licensed hospital bed in a rural hospital that is used to provide nursing facility level of care services to an individual who is not in need of acute care services.

TANF - Temporary Assistance for Needy Families is a federal block grant program established under Title IV-A of the Social Security Act. It serves many needs, such as meeting some of the costs of Foster Care and Child Care Assistance programs. TANF also provides temporary cash assistance to needy families primarily to facilitate the return to or preparation for work.

TBI - Traumatic Brain Injury

TCC - Transitional Child Care provides partial payment of child care to families who lose TANF assistance eligibility.

TCLF - Transitional Community Living Facility is a community waiver group home that provides training for individuals in community integration, social, leisure, and daily living skills in a group living environment. It is preliminary to entry into a lesser restrictive setting.

TECS - Technical Eligibility Computer System is the computer system currently used by county social service boards to manage Supplemental Nutrition Assistance Program cases and some Medicaid cases.

TPL - Third Party Liability describes potential resources that may be available to offset claims against the Medicaid program. They include health insurance, accident insurance, court settlements, and decrees stemming from accidents of various kinds.

Transitional Living Service - Services that train people to live with greater independence in their own homes. This includes training, supervision, or assistance to the individual with self-care, communication skills, socialization, sensory/motor development, reduction/elimination of maladaptive behavior, community living, and mobility.

Transition Services - Services provided to assist students with disabilities as they move from school to adult services and/or employment.

Transitional Medicaid Benefits - Provides up to 12 months of Medicaid coverage for families who lose eligibility under the Family Coverage group due to earnings.

Tribal NEW - Tribal Native Employment Works program is the tribal equivalent of the Job Opportunities and Basic Skills (JOBS) program. The job placement and education program is available to American Indian TANF recipients.

Tribal TANF - Tribal governments have the option of direct administration of TANF programs. No Tribe in North Dakota has yet exercised this option.

Uniform Interstate Family Support Act (UIFSA) - is a model Act, enacted at the state level, to provide mechanisms for establishing and enforcing child support obligations in interstate cases (cases in which a noncustodial parent lives in a different state than the custodial parent and child).

UPA - Either the Uniform Parentage Act or Unreimbursed Public Assistance. The **Uniform Parentage Act** refers to laws, based on model legislation drafted by the National Conference of Commissioners on Uniform State Laws (NCCUSL), enacted at the state level to provide mechanisms for establishing paternity. **Unreimbursed Public Assistance** refers to money paid in the form of public assistance (for example, Temporary Assistance for Needy Families expenditures), which has not been recovered by retaining assigned child support.

URM - Unaccompanied Refugee Minor is a child between the ages of birth and 18 who enters the United States with refugee immigration status and the parents are deceased or their whereabouts unknown, and the child is without a family connection. URM youth enter a foster care program specifically administered for their care through a voluntary agency with coordination of the Department. URM foster care meets state licensing requirements.

VIPR - The Very Intelligent Payment Recognition system is a computerized check processing system used by the Child Support Enforcement Division to process child support payments quickly and accurately. It interfaces with the Fully Automated Child Support Enforcement System (FACSES) computer system.

Vision - The computer system currently used by county social services to administer Temporary Assistance for Need Families (TANF) benefits and some Medicaid cases.

Vocational Development - A program of vocational preparation prior to competitive or extended employment.

VR - Vocational Rehabilitation provides training and employment services to individuals with disabilities so they can become and/or remain employed. For information about a related service provided by department VR professionals for businesses. See *Rehabilitation Consulting and Services.*

Vulnerable Adult Protective Services - Refers to remedial social, legal, health, mental health, and referral services provided for prevention, correction, or discontinuation of abuse or neglect which are necessary and appropriate under the circumstances to protect an abused or neglected vulnerable adult. Services also ensure that the least restrictive alternatives are provided, prevent further abuse or neglect, and promote self care and independent living. (Reference: North Dakota Century Code Chapter 50-25)

WCHSC - West Central Human Service Center is located in Bismarck. (*See HSC definition.*)

Wraparound - This is a strength-based philosophy of care that includes a definable process involving the child and family that results in a unique set of community services and supports individualized for that child and family. Wraparound is a process. It is not a program. It does not create new programs or services, but is the method of meeting the needs of families through the coordination and identification of natural supports and formal supports, which constitute the Child and Family Team. This process is team driven, focuses on least restrictive methods of care, and uses the family's strengths, preferences, and choices whenever possible. It is a continuum of intensity, which is driven by family needs, complexity, and level of risk.

YRBS - Youth Risk Behavioral Survey is conducted by the North Dakota Department of Health and the North Dakota Department of Public Instruction and monitors health-risk behaviors among youth and young adults including behaviors that contribute to injuries, tobacco use, alcohol and other drug use, sexual behaviors, dietary behaviors, and physical activity.

DHS Overview

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Committee
Representative Ken Svedjan, Chairman
January 9, 2009

Chairman Svedjan, members of the House Appropriations Committee, I am Carol K. Olson, Executive Director of the North Dakota Department of Human Services. Thank you for this opportunity to introduce the Department's budget request for the 2009-2011 biennium and to provide you with background about the Department and how human service related needs have been identified and incorporated into this budget.

The Department is an umbrella agency that serves vulnerable individuals by providing and funding health and human services. The Department's clients primarily include low-income and at-risk infants and children, pregnant low-income women, single-parent families, the elderly, and people with disabilities of all ages. When child support services are factored in, it has been estimated that the Department serves as many as one in five North Dakotans.

Our mission is to provide quality, efficient, and effective human services, which improve the lives of people.

To build the Department's budget, we actively seek out information about health and human service needs at the local level by hosting stakeholder meetings statewide each biennium. These public meetings are held in non-session years and participants include clients, providers, advocates, legislators, Tribal program representatives, interested members of the public, Department and county employees, and others. The Department

also receives, reviews, and considers written comments and requests submitted by many of these same entities. Based upon the comments and information received, plus numerous meetings with various groups and associations, we begin to set priorities and to develop the budget.

MAJOR PROGRAM CHANGES AND INITIATIVES

Behavioral Health Needs

During the public stakeholder meetings, we heard repeated concerns expressed about the state's capacity to serve individuals with behavioral health needs – which are those individuals with substance abuse or mental health needs. The State Hospital has been at capacity for some time, and there is a concerted effort nationally and in the state to serve all people with disabilities in the least restrictive setting.

Stakeholders told us that there were not sufficient resources at the community level to address the needs of those who need more structured and supervised care. Private hospitals that contract with the Department's regional human service centers were concerned about reimbursement levels and their costs for providing inpatient crisis stabilization services and care. Some hospitals closed or limited admissions to their behavioral health units, putting even more pressure on others and on the State Hospital.

In building the budget, we used consistent methods to set hospital reimbursement rates across all regions rather than negotiate different contracts, and we increased those rates to the same level as the inpatient hospital rebasing to encourage hospitals to continue to serve clients

locally. Rates for other providers are increased as well (seven percent inflationary increase each year of the biennium).

This budget also includes funding to increase the number of residential beds in Minot and Dickinson. It also provides for more client service hours in the Grand Forks region and extra staffing in Fargo as a result of the Cooper House project. Supported residential services help people with chronic serious mental illness or addictions break the cycle of evictions, crisis bed admissions, emergency room visits, jail, and inpatient hospitalization.

There is also funding for additional staff at the State Hospital. In short, this budget allows us to address capacity concerns and to provide behavioral health service in a variety of settings to meet individual needs.

In regard to other capacity issues in the mental and behavioral health arena – the Department is aware of the needs of returning National Guard soldiers and their families - especially those affected by traumatic brain injuries. We are working with other providers and organizations to address needs in a coordinated manner.

At the community level, the Department continues to support the implementation of the recovery model and evidence-based treatment methods shown to produce better outcomes such as the Matrix model of addiction treatment, integrated dual disorder treatment for people diagnosed with both mental illness and addiction, and peer support. The Department will continue to promote the use of effective treatment models, and to support training opportunities for both public and private treatment professionals.

Impact of Aging Population

The needs of North Dakota's aging population are already impacting service capacity. By the year 2020, it is projected that about one in four North Dakotans will be age 60 and older, and three in 100 will be age 85 and older – the group most likely to need services.

We know from AARP data that older adults prefer to receive services in their homes as long as possible. We need to be responsive to that by providing home and community based services along with a strong continuum of long term care options.

The Executive Budget for the Department provides a 52 percent increase for home and community based long term care services funded through the Service Payments for the Elderly and Disabled (or SPED) program, the Expanded SPED program, and Medicaid waivers, personal care, and hospice services. This increase of more than $21.5 million will help elderly individuals and people with disabilities in North Dakota maintain their independence.

In addition, this budget doubles funding for training in-home care providers known as Qualified Services Providers (QSP). It also includes $900,000 to address cost increases experienced by the Older Americans Act service providers who provide senior meals, outreach, and health maintenance services, and contains $600,000 to fund an Aging and Disability Resource Center that will help people locate and access needed long term care services.

This budget provides important inflationary increases to all long term care service providers. Qualified Service Providers (QSP) will also receive the seven percent inflationary increase.

Statewide, participants in our stakeholder meetings told us the state needs to raise the income levels for the Medicaid Medically Needy coverage group, which includes low-income children, people who are older, blind, disabled, and families with deprived children who do not have enough income to meet their medical needs. The Medicaid program requires them to pay for their medical costs until they reach the "Medically Needy Income Level." At that point, Medicaid pays their medical costs. This "income level" is supposed to be enough to cover food, shelter, utilities, and clothing needs. The Medically Needy income level was last changed in 2003. This budget includes funding to raise the income limit to 83 percent of the federal poverty level, and this will significantly help these Medicaid recipients.

Senior citizens and people with disabilities also need transportation to enjoy a higher quality of life. The Department continues to collaborate with the Department of Transportation to develop an effective and efficient transportation infrastructure to meet the needs of individuals served by our Medicaid and Aging Services Divisions.

Services for Children

To address the health needs of uninsured children, this budget increases the income eligibility level for the State Children's Health Insurance Program (SCHIP) to 200 percent of the poverty level (uses net income).

This will allow North Dakota to cover an average of 6,021 children per month who would otherwise be uninsured.

Many working parents also struggle with the cost of child care. This budget increases child care assistance for low-income working families. It also funds child care provider training and other quality initiatives, which along with mandatory criminal background checks for child care workers, will help working families find safe and accessible child care.

This budget also increases Family Foster Care payments to the nationally recommended level. Other than inflationary increases supported by the Legislature, rates for these important caregivers have not been adjusted since 1999.

Children often come into the foster care system as a result of abuse or neglect. Establishing whether abuse occurred requires special expertise, and Child Advocacy Centers also receive important continued financial support in this budget. These centers work to reduce additional trauma to children while ensuring that those involved in investigating, providing services, and enforcing the law, can effectively address the physical and sexual abuse of children.

During our stakeholder meetings, we also heard about the need to be more effective serving young people transitioning from foster care or other services into adulthood and adult services. Often these young people do not have a place to live and are not ready to live on their own. In response to this identified need, the Department's budget includes funding for youth facilities in Bismarck and Fargo, each providing eight residential beds for youth in transition. In addition to shelter,

participating youth will have access to counseling, case management, and other services through the regional human service centers.

Effectively serving youth involves collaboration. We are working with other agencies including the Department of Public Instruction, Juvenile Services, and other organizations at the state and local level to identify services provided through the different agencies, to reduce duplication, and to address gaps in service so that together we can foster independence and promote leadership among youth.

Efficiency and Effectiveness

The Department utilizes a management team known as the Cabinet, which includes representatives of the eight regional human service centers, the State Hospital and Developmental Center, program and policy divisions, economic assistance programs, Medicaid and medical services, and administrative support services.

Our management team and our Department's culture support innovation. I have already mentioned our efforts to provide effective evidence-based treatment services.

Our Child Support Enforcement Division continues to identify and find efficiencies following the change to state administration of the regional enforcement offices. The program has earned national recognition as a top-performing program, and has also been recognized for innovation and innovative partnerships along with other Department divisions.

Our Children and Family Services Division continues to collaborate on training and coordination with the court system to ensure that the children and families involved in the child welfare system receive quality services.

Through contracts with public and private providers, North Dakota is exceeding the work participation rate goals for parents involved in the state's Temporary Assistance for Needy Families program.

The Department has a history of working effectively with other organizations to address shared concerns and will continue to do so. The Department and its staff are responsive to changing needs and emerging opportunities.

Long term, we intend to continue hosting stakeholder meetings and other public meetings and to communicate with and be accessible to clients, their family members, legislators, advocates, providers, and other stakeholders in order to identify needs and concerns and effectively address them.

Overview of Department Budget Changes

The Department's 2009-2011 budget request totals $2.26 billion – an increase of $352.8 million in total funds. The state general fund increase is $125.8 million. This general fund increase is due to the inflationary and other increases to providers, the Governor's salary and benefit package for state employees, and the decrease in the Federal Medical Assistance Percentage (FMAP).

In closing, this budget meets the needs identified in communities across the state. It sustains important existing services, increases Medicaid payments for hospitals, doctors, dentists, chiropractors, and ambulance service providers, and provides an inflationary increase for all providers. It also allows North Dakota to provide important health coverage for uninsured children that is comparable to other states. It truly does improve the quality of life of our citizens.

Thank you for your time. Allow me now to introduce the Department's Chief Financial Officer Brenda Weisz who will be providing a detailed overview of the Department's 2009-2011 budget.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Raymond Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Carol K. Olson, Executive Director of the North Dakota Department of Human Services. Thank you for this opportunity to introduce the Department's budget, after House amendments for the 2009-2011 biennium and to provide you with background about the Department and how human service related needs were identified and incorporated into the Executive Budget.

The Department is an umbrella agency that serves vulnerable individuals by providing and funding health and human services. The Department's clients primarily include low-income and at-risk infants and children, pregnant low-income women, single-parent families, the elderly, and people with disabilities of all ages.

Our mission is to provide quality, efficient, and effective human services, which improve the lives of people.

To build the Department's budget, we actively seek out information about health and human service needs at the local level by hosting stakeholder meetings statewide each biennium. These public meetings are held in non-session years and participants include clients, providers, advocates, legislators, Tribal program representatives, interested members of the public, Department and county employees, and others. The Department also receives, reviews, and considers written comments and requests submitted by many of these same entities. Based upon the comments

and information received, plus numerous meetings with various groups and associations, we begin to set priorities and to develop the budget.

Behavioral Health Needs

During the public stakeholder meetings, we heard repeated concerns expressed about the state's capacity to serve individuals with behavioral health needs – which are those individuals with substance abuse or mental health needs. The State Hospital has been at capacity for some time, and there is a concerted effort nationally and in the state to serve all people with disabilities in the least restrictive setting.

Stakeholders told us that there were not sufficient resources at the community level to address the needs of those who need more structured and supervised care. Private hospitals that contract with the Department's regional human service centers were concerned about reimbursement levels and their costs for providing inpatient crisis stabilization services and care. Some hospitals closed or limited admissions to their behavioral health units, putting even more pressure on others and on the State Hospital.

In building the budget, we used consistent methods to set hospital reimbursement rates across all regions rather than negotiate different contracts, and we increased those rates to the same level as the inpatient hospital rebasing in the Medicaid budget to encourage hospitals to continue to serve clients locally. Rates for other providers are increased as well. The Executive Budget recommended a seven percent inflationary increase each year of the biennium. The House changed that to six percent.

The Executive Budget also included funding to increase the number of residential beds in Minot and Dickinson. It also provided for more client service hours in the Grand Forks region and extra staffing in Fargo as a result of the Cooper House project. Supported residential services help people with chronic serious mental illness or addictions break the cycle of evictions, crisis bed admissions, emergency room visits, jail, and inpatient hospitalization. The House removed all funds associated with these capacity needs except for the 24/7 contract program assistant at the Cooper House project.

There was also funding for additional staff at the State Hospital, which was removed by the House as well. In short, the Executive Budget would have allowed us to address capacity concerns and to provide behavioral health services in a variety of settings to meet individual needs.

Impact of Aging Population

The needs of North Dakota's aging population are already impacting service capacity. By the year 2020, it is projected that about one in four North Dakotans will be age 60 and older, and three in 100 will be age 85 and older – the group most likely to need services.

The budget funds training in-home care providers known as Qualified Services Providers (QSP). It also includes $900,000 to address cost increases experienced by the Older Americans Act service providers who provide senior meals, outreach, and health maintenance services, and contained $600,000 to fund an Aging and Disability Resource LINK that will help people locate and access needed long term care services

(Attachment A), which was removed by the House. The budget also provides important inflationary increases to all long term care service providers. Qualified Service Providers (QSP) were recommended to receive a seven percent inflationary increase proposed by the Executive Budget. As the budget stands, this is now at six percent.

Statewide, participants in our stakeholder meetings told us the state needs to raise the income levels for the Medicaid Medically Needy coverage group, which includes low-income children, people who are older, blind, disabled, and families with deprived children who do not have enough income to meet their medical needs. The Medicaid program requires them to pay for their medical costs until they reach the "Medically Needy Income Level." At that point, Medicaid pays their medical costs. This "income level" is supposed to be enough to cover food, shelter, utilities, and clothing needs. The Medically Needy Income Level was last changed in 2003. The Executive Budget included funding to raise the income limit to 83 percent of the federal poverty level in order to significantly help these Medicaid recipients. The House modified this to 75 percent of the federal poverty level.

Services for Children

To address the health needs of uninsured children, this budget increases the income eligibility level for the State Children's Health Insurance Program (SCHIP) to 200 percent of the poverty level (uses net income). The House amended the Governor's recommendation to 160 percent.

The Department continues to support the Executive Budget request to increase the income level to 200% of the poverty level. As part of the

Department's monitoring of the trend change that Maggie Anderson will cover in more detail, we have reprojected the SCHIP enrollment expectations for 2009-2011. Because of the decline in SCHIP enrollment that we are experiencing, our estimates now indicate:

Executive Budget (with SCHIP at 200%)	$35.2 million
Reprojected Cost to increase SCHIP to 200%	$25.7 million
Funds currently in HB 1012 to increase to 160%	$32.6 million

Summary: Increasing SCHIP back to the Governor's recommendation at 200%, based on the reprojected enrollment, compared to the current funding in HB 1012 to increase SCHIP to 160% will be a decrease of $6.9 million, of which $1.7 million are general funds.

During our stakeholder meetings, we also heard about the need to be more effective serving young people transitioning from foster care or other services into adulthood and adult services. Often these young people do not have a place to live and are not ready to live on their own. In response to this identified need, the Executive Budget included funding for youth facilities in Bismarck and Fargo, each providing eight residential beds for youth in transition. In addition to shelter, participating youth will have access to counseling, case management, and other services through the regional human service centers. These facilities were removed by House amendments.

Overview of Department Budget Changes

The House modified the Executive Budget by a net decrease of $60.8 million in total with $29.2 million from the general fund. This results in a budget of $2.2 billion in total funds. This budget before you retains inflationary and other increases to providers, the Governor's salary and benefit package for state employees, along with the priorities of the House.

In closing, the Executive Budget was developed to meet the needs identified in communities across the state. It sustains important existing services, increases Medicaid payments for hospitals, doctors, dentists, chiropractors, and ambulance service providers, and provides an inflationary increase for all providers. It also allowed North Dakota to provide important health coverage for uninsured children that would have been comparable to other states. It truly was developed to improve the quality of life of our citizens.

Thank you for your time. Allow me now to introduce the Department's Chief Financial Officer Brenda Weisz who will be providing a detailed overview of the Department's 2009-2011 budget.

1-9-09
(B)

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Committee
Representative Svedjan, Chairman
January 9, 2009

Chairman Svedjan, members of the House Appropriations Committee, I am Brenda M. Weisz, Chief Financial Officer for the Department of Human Services. I will be providing an overview of the Department's 2009 – 2011 budget request included in HB 1012 along with related fiscal information.

2007 – 2009 One-time Funding

The Department's 2007 – 2009 budget includes one-time funding of $11.9 million with $3.6 million devoted to the Medicaid Management Information System (MMIS) and $8.3 million for Capital Improvements and Extraordinary Repairs at the State Hospital and the Developmental Center. The Department anticipates utilizing the entire $3.6 million appropriated to complete the MMIS project. Regarding the funding for the projects at the Institutions, all funding will be utilized except for the $3.1 million appropriated for a fifth addition to the Sex Offender Treatment Program. As reported at the September 25, 2008 Budget Section meeting, the fifth unit will not be constructed. After approval of alternate projects, only $1.75 million of the $3.1 million will be spent this biennium.

2007 – 2009 - Current Estimates of Overall Expenditures as Compared to General Fund Appropriation Authority (Turnback)

When comparing the current biennium expenditures in the major program areas to the amount of general fund appropriated, as very recent as

December 23, the Department is estimating unexpended general fund or turnback of $22.4 million. The breakdown is as follows:

- Areas we have been aware of for a good part of the biennium:
  - Human Service Centers - estimated turnback of $2.0 million as a result of staff turnover and difficulty in filling psychology and psychiatry positions;
  - State Hospital - estimated turnback of $2.7 million when including the $1.3 million unspent one-time capital project funds as discussed above;
  - Long Term Care – estimated turnback of $4 million - primarily from Nursing Facilities as the bed utilization has been down the entire biennium compared to the beds budgeted;
  - Medicare Drug Clawback – estimated turnback of $1.6 million; and
  - Healthy Steps Program shortfall of just over $500,000 offsets the above amounts.
- Areas we have most recently been able to identify - Medicaid Traditional grants – estimated turnback of $12.6 million. In November reports generated from the old MMIS indicated utilization and cost data that needed further analysis. This analysis work was completed in December, and the remaining turnback can be attributed to three areas:
  - Drug Costs – when we prepared the budget for the current 2007 – 2009 biennium, we had decreased the drug budget in consideration of the implementation Medicare Part D. However, we had limited information on the impact of Medicare Part D when that budget was prepared. We now know the impact is greater than anticipated. Also there is a much higher usage of generic drugs than anticipated.

- Medicare premiums – the federal government sets these premiums and the federal increases were not at the level anticipated when the budget was developed.
- Inpatient Hospital / Physician Services – our antiquated MMIS plus two federally required changes – 1) the implementation of the National Provider Identification (NPI) and 2) the implementation of Coordination of Benefit Administration (COBA), essentially the crossover of Medicare claims, resulted in a high backlog of claims and cashflow problems for providers. The Department paid claims to alleviate the cashflow problems through a process known as a "payout." These payments started to be made at the end of the 2005 – 2007 biennium and continued through December 2007. These payouts covered all claims that had been submitted from providers where normally there is often a 30 day or more lag in processing claims. Essentially, what resulted were claims being paid in 2005 – 2007 as they were legitimate expenditures for that time frame, with the budget for those payments located in the 2007 – 2009 biennium. The delay in determining this impact on our "general fund need" is a result of the actual processing of those claims. When processing those claims, the system needs to consider what has already been paid as a payout. This process is called a "recoupment." This constant payout and recoupment situation then impacted our ability to properly track cost and utilization information. We continue to analyze and watch this situation.

As point of comparison the turnback for the 2005 – 2007 biennium was $5.6 million. The general fund appropriation was $484.7 million.

Major Policy Changes in Developing 2009 – 2011 Budget

The 2009 – 2011 Executive Budget includes the following program changes:

- Increasing the allowed funeral set-aside under the Medicaid Program from the current level of $5,000 to $7,000. Section 6 of the Department's appropriation bill provides the statutory changes to implement this increase.

- Increasing eligibility for the Healthy Steps Program from 150% net of poverty to 200% net of poverty. This change is included in Section 7 of the Department's appropriation bill.

- Increases the foster care payment made to family foster care homes. This increase will bring North Dakota rates to a level of payment known nationally as the MARC (Minimum Adequate Rates for Children). This change is expected to assist in the recruitment and retention of family foster homes.

- Changes the administrative payment structure to Providers of services for those with Developmental Disabilities (DD). The Department's budget provides for administrative reimbursement based on the level of capability of the client (Progress Assessment Review [PAR] level) rather than two flat levels of reimbursement for the Individualized Supported Living Arrangements (ISLA) and the Family Care Option III programs.

Current Budget / Budget Request

The 2009 – 2011 Executive Budget request compared to the current 2007 – 2009 biennial budget is as follows:

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	50,741,266	63,968,091	13,226,825
Operating	153,961,819	119,790,606	(34,171,213)
Capital Assets	1,837,987	13,000	(1,824,987)
Grants	343,699,648	456,965,308	113,265,660
HSCs / Institutions	241,868,720	276,528,142	34,659,422
Grants - Medical Assistance	1,117,187,821	1,344,821,814	227,633,993
Total	1,909,297,261	2,262,086,961	352,789,700
General Funds	595,736,533	721,512,545	125,776,012
Federal Funds	1,212,943,782	1,434,591,720	221,647,938
Other Funds	100,616,946	105,982,696	5,365,750
Total	1,909,297,261	2,262,086,961	352,789,700
FTE	2,223.38	2,237.38	14.00

Explanation of Major Budget Changes

As noted above, the **general fund increase** is **$125.8** million and can be explained as follows:

$38.9 million – Net cost changes in the grant programs of the Department including traditional Medicaid grants, nursing facilities, Developmental Disability grants, Home and Community Based Services, and child welfare grants. Changes are the result of several factors such as rate setting rules, federal mandates, continuation of the year two 5% inflationary increase granted during the current biennium, along with

costs which cannot be controlled by the Department (drugs, premiums - Medicare, Healthy Steps premium).

($13.9) million – net decrease in caseload / utilization. The largest impact of change in this area is a decrease in the utilization in the Medicaid Program and in the Nursing Home budget along with a decrease in the Foster Care caseload. These decreases are offset by increases primarily in Home and Community Based Services and the Healthy Steps Program.

$21.9 million – increase attributed to the Governor's salary and benefit package.

$37.1 million – increase to fund a 7% inflationary increase to most providers in each year of the biennium. Hospitals, Physicians, Chiropractors, and Ambulance providers will see a 7% increase in year two only as a result of the changes reflected in adopting a version of the rebasing reports completed during the interim.

$14.8 million – increase related to rebasing Hospitals, Physicians, Chiropractors, and Ambulance providers. Also included in this amount is an increase in Dental rates to pay at an average of 75% of average billed charges. This action was a result of legislation included in the Department's current appropriation bill where the rates paid to these providers were to be studied.

$10.2 million – increase in state funds as a result of the decrease in the Federal Medical Assistance Percentage (FMAP). This percentage is based

on per capita income of North Dakota in relation to other states. The FMAP rates for the upcoming biennium are as follows:

- FFY 2009 – 63.15% Final – in effect now
- FFY 2010 – 63.01% Final
- FFY 2011 - 63.01% Estimated (preliminary number usually issued in April)

($15.0) million – decrease in one-time capital projects, extraordinary repairs, and bond payments ($11.4 million) along with the decrease for one-time funding for the Medicaid system project - ($3.6 million).

$5.2 million – to fund bond payments, capital projects, extraordinary repairs and major equipment needs at the Institutions for repair and maintenance of infrastructure and operations. ($3.9 million - State Hospital and $1.3 million – Developmental Center)

$4.0 million – increased Information Technology costs in both the rates charged by the Information Technology Department and to support ongoing operational costs of the new MMIS, Point of Sale, and Decision Support systems often referred to as the Medicaid system project.

$7.0 million – Funding Changes – see **Attachment A** for additional detail.

$4.4 million – Changes in Home and Community Based Services – see **Attachment A** for additional detail.

$1.4 million – Select changes at the Human Service Centers – see **Attachment A** for additional detail.

$1.0 million – Changes in the grants for those with Developmental Disabilities. See **Attachment A** for additional detail.

$4.3 million – increase to address capacity issues at the Human Service Centers and the State Hospital which we have come to refer to as "global behavioral health" capacity issues. This reflects a consistent fee paid to the psychiatric hospitals in the regions for our clients that are indigent, enhanced residential services in the Minot, Grand Forks, and Dickinson regions, four FTE and a contracted program assistant as a result of the Cooper House Residential Unit in the Fargo region, an addiction case manager in the Jamestown region, and six additional FTE at the State Hospital as they are currently staffed to handle a capacity of 85%. During the biennium, capacity at the State Hospital has often been at 100%.

$2.0 million – increase to move the medically needy income level to 83% of the poverty level. Medically Needy is an eligibility category under the Medicaid program. This change will allow those eligible to retain more of their income to meet such expenses as food, shelter, utilities, and clothing. Currently a household size of one is able to retain $500 per month, while this change will increase that amount to $720 per month.

$1.1 million – increase needed to cover children under the Healthy Steps Program at 200% net poverty level.

$0.6 million – increase needed to provide a rate increase to Child Care providers and to complete mandatory background checks.

The remaining **$0.8** million or 0.6% of the general fund increase - is tied to miscellaneous net increases throughout the Department, which will be addressed by each division in the upcoming days.

FTE CHANGES

The net increase of 14 FTE in the Department's budget is attributed to the following:

- 11 FTE in the area of Global Behavioral Health discussed previously.
- 6 additional FTE at the Human Service Centers (HSCs). 1.0 FTE to address capacity needs in the Partnership Program at Southeast HSC, 1.0 FTE to address the aging population and additional need for staff regarding vulnerable adult protective services at South Central HSC, and 4.0 FTE for DD case managers (one each at North Central HSC, Northeast HSC, Southeast HSC and West Central HSC). The addition of these DD case managers is a result of federal requirements.
- 1.5 FTE to handle the increased eligibility in the Healthy Steps program.
- 1.0 FTE in response to the efforts related to the implementation of an Autism waiver.
- 1.0 FTE to implement the Statement on Auditing Standards (SAS) 112 which was issued in response to Enron and other such activities found in other companies.
- Two .5 or half-time FTE (1.0 in total) to address the efforts related to mandatory background checks for Child Care Providers.
- Offsetting the additional FTE is the reduction of 7.5 FTE in the Child Support area.

Key Points in Developing the Budget

Traditional Medicaid grants – The traditional Medicaid grants budget was built using utilization and cost data by services. The number of estimated eligibles for the 2009 – 2011 budget is 51,308, which is down from the estimate of 52,308 for the current budget.

Healthy Steps Program – The budget is based on an average caseload of 6,021 children along with a premium increase of 20.52%. This is the largest premium increase since the 2003 – 2005 biennium. (Last biennium – 11.39% increase; 2005 – 2007 biennium – 17.76% increase.)

Foster Care grants – The first time in at least five budget cycles, the Foster Care caseload included in the 2009 – 2011 budget for Family and Residential care is estimated to be lower than the budget for the current biennium.

Home and Community Based Services – When considering the cost and caseload changes, along with the other program changes, the Executive Budget reflects a 52% increase in this area of the budget. See **Attachment B and C** for a breakdown among Long Term Care services for the upcoming biennium.

Institutions – The budget request for the State Hospital is based on 222 beds for the traditional population, which includes 90 beds for the Tompkins program. Additionally, the budget includes 85 beds for the civilly committed sex offender program. The budget request for the Developmental Center is based on a population of 115.

Finally, I would like to direct your attention to **Attachment D**, which indicates "Where the Money Goes" in the Department. 83% of the budget goes directly "out the door" to providers or grant recipients. This compares to 80% of the budget for the 2007 -2009 biennium. Another 11% is expended on direct client services at the Human Services Centers and the Institutions, which remains the same as the 2007 – 2009 budget. Finally 6% of the budget is dedicated to the administrative costs, which has also remained unchanged from the current budget.

The budget before you is a strong budget for the most vulnerable citizens of the State of North Dakota for which this budget is designated to serve. In the upcoming days and weeks, we will be ready to answer your questions as we work through the details of this budget.

This concludes my testimony. At this time I would be willing to address your remaining questions and will also be available for any budget questions that may come to mind in the upcoming months.

Thank you.

Attachment D

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Brenda M. Weisz, Chief Financial Officer for the Department of Human Services. I will be providing an overview of the Department's 2009 – 2011 budget request included in HB 1012 along with related fiscal information and then finally the changes made by the House Appropriations Committee.

2007 – 2009 General Fund (Turnback)

When comparing the current biennium expenditures in the major program areas to the amount of general fund appropriated, the turnback as included in OMB's Revised Revenue Forecast could be as much as approximately $22 million. The estimated breakdown is as follows:

- Areas we have been aware of for a good part of the biennium:
  - Human Service Centers - estimated turnback of $2.0 million as a result of staff turnover and difficulty in filling psychology and psychiatry positions;
  - State Hospital - estimated turnback of $2.7 million, which includes $1.3 million of unspent one-time capital project funds;
  - Long Term Care – estimated turnback of $4.6 million - primarily from Nursing Facilities as the bed utilization has been down the entire biennium compared to the beds budgeted;

- Areas most recently identified - Medicaid Traditional grants – estimated turnback of $12.6 million. In November reports generated from the old MMIS indicated utilization and cost data that needed further analysis. This analysis work was completed in December, and the remaining turnback can be attributed to three areas:
    - Drug Costs – ($6.7 million) when we prepared the budget for the current 2007 – 2009 biennium, we had decreased the drug budget in consideration of the implementation of Medicare Part D, which occurred in January 2006. However, we had limited information on the impact of Medicare Part D when that budget was prepared (beginning in April 2006). We now know the impact is greater than initially projected. Also there is an increased usage of generic drugs than had been anticipated. Finally, there was a change in the method used to claim drug rebates. This federal change resulted in our ability to claim drug rebates from prior periods. This will not continue into the future. Drug rebates offset our drug expenditures. The Executive Budget reflects a request for drugs at a lower level than the budget for 2007 – 2009.
    - Medicare premiums – ($1.6 million) the federal government sets these premiums and the federal increases were not at the level anticipated when the budget was developed.
    - Inpatient Hospital / Physician Services – ($4.3 million) our antiquated MMIS plus two federally required changes – 1) the implementation of the National Provider Identified (NPI) and 2) the implementation of Coordination of Benefit Agreement (COBA), essentially the crossover of Medicare claims, resulted in a high backlog of claims and cashflow problems for

providers. The Department paid claims to alleviate the cashflow problems through a process known as a "payout." These payments started to be made at the end of the 2005 – 2007 biennium and continued through December 2007. These payouts covered all claims that had been submitted from providers where normally there is often a 30 day or more lag in processing claims. Essentially, what resulted were claims being paid in 2005 – 2007 as they were legitimate expenditures for that time frame, with the budget for those payments located in the 2007 – 2009 biennium. This too is a one-time situation that will not continue.

When you exclude the unique circumstances with the Medicaid program this biennium, the turnback is only 1.6%. With Medicaid Traditional grants that percentage increases to 3.8%, which means we are estimated to be 96% on target. As point of comparison the turnback for the 2005 – 2007 biennium was $5.6 million or 1.2%. The general fund appropriation was $484.7 million.

Major Policy Changes in Developing 2009 – 2011 Budget

The 2009 – 2011 Executive Budget included the following program changes:

- Increased the allowed funeral set-aside under the Medicaid Program from the current level of $5,000 to $7,000. The House passed HB 1477 which set the level at $6,000.

- Increased eligibility for the Healthy Steps Program from 150% net of poverty to 200% net of poverty. The House passed HB 1478 which set eligibility at 160% net of poverty.

- Increases the foster care payment made to family foster care homes. This increase will bring North Dakota rates to a level of payment known nationally as the MARC (Minimum Adequate Rates for Children). This change is expected to assist in the recruitment and retention of family foster homes.

- Changes the administrative payment structure to Providers of services for those with Developmental Disabilities (DD). The Department's budget provides for administrative reimbursement based on the level of capability of the client (Progress Assessment Review [PAR] level) rather than two flat levels of reimbursement for the Individualized Supported Living Arrangements (ISLA) and the Family Care Option III programs.

Current Budget / Budget Request / House Changes

The 2009 – 2011 Executive Budget request compared to the current 2007 – 2009 biennial budget along with the changes made by the House is as follows:

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	50,741,266	13,226,825	63,968,091	(6,479,666)	57,488,425
Operating	153,961,819	(34,171,213)	119,790,606	(1,086,455)	118,704,151

Total	1,909,297,261	352,789,700	2,262,086,961	(60,751,716)	2,201,335,245
FTE	2,223.38	14.00	2,237.38	(20.50)	2,216.88

Explanation of Major Budget Changes in the Executive Budget

As noted above, the Executive Budget included a **general fund increase** of **$125.8** million and can be explained as follows:

$38.9 million – Net cost changes in the grant programs of the Department including traditional Medicaid grants, nursing facilities, Developmental Disability grants, Home and Community Based Services, and child welfare grants. Changes are the result of several factors such as rate setting rules, federal mandates, continuation of the year two 5% inflationary increase granted during the current biennium, along with

costs which cannot be controlled by the Department (drugs, premiums - Medicare, Healthy Steps premium).

($13.9) million – net decrease in caseload / utilization. The largest impact of change in this area is a decrease in the utilization in the Medicaid Program and in the Nursing Home budget along with a decrease in the Foster Care caseload. These decreases are offset by increases primarily in Home and Community Based Services and the Healthy Steps Program. The House further reduced funding in this area.

$21.9 million – increase attributed to the Governor's salary and benefit package, the cost to continue this biennium's year two salary increases along with the equity funding initially included in the Executive Budget. The House removed the equity funding from all agency budgets and underfunded salaries department-wide by $6.1 million. In the Executive Budget we had already included $1.3 million of underfunding. The House amendment brings that number to $7.4 million.

$37.1 million – increase to fund a 7% inflationary increase to most providers in each year of the biennium. Hospitals, Physicians, Chiropractors, and Ambulance providers will see a 7% increase in year two only as a result of the changes reflected in adopting a version of the rebasing reports completed during the interim. The House modified this to 6% inflationary increases.

$14.8 million – increase related to rebasing Hospitals, Physicians, Chiropractors, and Ambulance providers. Also included in this amount is an increase in Dental rates to pay at an average of 75% of average billed charges. This action was a result of legislation included in the

Department's current appropriation bill where the rates paid to these providers were to be studied. The House modified the rebasing for all groups except the Hospitals.

$10.2 million – increase in state funds as a result of the decrease in the Federal Medical Assistance Percentage (FMAP). This percentage is based on per capita income of North Dakota in relation to other states. The FMAP rates for the upcoming biennium are as follows:

- FFY 2009 – 63.15% Final – in effect now
- FFY 2010 – 63.01% Final
- FFY 2011 - 63.01% Estimated (preliminary number usually issued in April)

($15.0) million – decrease in one-time capital projects, extraordinary repairs, and bond payments ($11.4 million) along with the decrease for one-time funding for the Medicaid system project - ($3.6 million).

$5.2 million – to fund bond payments, capital projects, extraordinary repairs and major equipment needs at the Institutions for repair and maintenance of infrastructure and operations. ($3.9 million - State Hospital and $1.3 million – Developmental Center)

$4.0 million – increased Information Technology costs in both the rates charged by the Information Technology Department and to support ongoing operational costs of the new MMIS, Point of Sale, and Decision Support systems often referred to as the Medicaid system project.

$7.0 million – Funding Changes – see **Attachment A** for additional detail.

$4.4 million – Changes in Home and Community Based Services – see **Attachment A** for additional detail.

$1.4 million – Select changes at the Human Service Centers – see **Attachment A** for additional detail.

$1.0 million – Changes in the grants for those with Developmental Disabilities. See **Attachment A** for additional detail.

$4.3 million – increase to address capacity issues at the Human Service Centers and the State Hospital which we have come to refer to as "global behavioral health" capacity issues. This reflects a consistent payment methodology for the psychiatric hospitals in the regions for our clients that are indigent and was based on the same payment rates included in the rebasing amount for hospitals in the Medicaid budget, enhanced residential services in the Minot, Grand Forks, and Dickinson regions, four FTE plus a contracted program assistant as a result of the Cooper House Residential Unit in the Fargo region, an addiction case manager in the Jamestown region, and six additional FTE at the State Hospital as they are currently staffed to handle a capacity of 85%. During the biennium, capacity at the State Hospital has often been at 100%. The House removed all costs except for the contracted program assistant for the Cooper House Residential Unit. This will result in psychiatric hospitals in Minot, Grand Forks, Fargo and Bismarck receiving one level of payment if the Human Service Center client is Medicaid eligible as compared to the rate they will receive if the Human Service Center client does not have insurance and is not Medicaid eligible.

$2.0 million – increase to move the medically needy income level to 83% of the poverty level. Medically Needy is an eligibility category under the Medicaid program. This change will allow those eligible to retain more of their income to meet such expenses as food, shelter, utilities, and clothing. Currently a household size of one is able to retain $500 per month, while this change would have increased that amount to $720 per month. For a household size of two, currently the amount that can be retained is $516. 83% of poverty equates to a monthly amount of $969. The House amended this level to 75% of the poverty level which results in a household size of one being able to retain $650 per month and a household size of two being able to retain $875 per month.

$1.1 million – increase needed to cover children under the Healthy Steps Program at 200% net poverty level. The House reduced this level to 160% net of poverty.

$0.6 million – increase needed to provide a rate increase to Child Care providers and to complete mandatory background checks.

The remaining **$0.8** million or 0.6% of the general fund increase - is tied to miscellaneous net increases throughout the Department, which will be addressed by each division in the upcoming days.

FTE CHANGES

The Executive Budget included a net increase of 14 FTE in the following areas (all added FTE have been removed by the House amendments except for the FTEs attributed to the child care background checks):

- 11 FTE in the area of Global Behavioral Health discussed previously.

- 6 additional FTE at the Human Service Centers (HSCs). 1.0 FTE to address capacity needs in the Partnership Program at Southeast HSC, 1.0 FTE to address the aging population and additional need for staff regarding vulnerable adult protective services at South Central HSC, and 4.0 FTE for DD case managers (one each at North Central HSC, Northeast HSC, Southeast HSC and West Central HSC). The addition of these DD case managers is a result of federal requirements.
- 1.5 FTE to handle the increased eligibility in the Healthy Steps program.
- 1.0 FTE in response to the efforts related to the implementation of an Autism waiver.
- 1.0 FTE to implement the Statement on Auditing Standards (SAS) 115 which was issued in response to Enron and other such activities found in other companies.
- Two .5 or half-time FTE (1.0 in total) to address the efforts related to mandatory background checks for Child Care Providers.
- Offsetting the additional FTE is the reduction of 7.5 FTE in the Child Support area.

Key Points in Developing the Budget

Traditional Medicaid grants – The traditional Medicaid grants budget was built using utilization and cost data by services. The number of estimated eligibles for the 2009 – 2011 budget is 51,308, which is down from the estimate of 52,308 for the current budget.

Healthy Steps Program – The premium increase this biennium is 20.52%. This is the largest premium increase since the 2003 – 2005 biennium. (Last biennium – 11.39% increase; 2005 – 2007 biennium – 17.76% increase.) Maggie Anderson's testimony this afternoon will address more specifically the impact of the changes made by the House.

Foster Care grants – The first time in at least five budget cycles, the Foster Care caseload included in the 2009 – 2011 budget for Family and Residential care is estimated to be lower than the budget for the current biennium.

Home and Community Based Services – When considering the cost and caseload changes, along with the other program changes, the Executive Budget initially reflected a 52% increase in this area of the budget. The House dropped this increase by almost 10% with the amendments they passed before considering the reduction they made for utilization/caseload. See **Attachment B and C** for a breakdown among Long Term Care services for the upcoming biennium.

Institutions – The budget request for the State Hospital is based on 222 beds for the traditional population, which includes 90 beds for the Tompkins program. Additionally, the budget includes 85 beds for the civilly committed sex offender program for a total of 307 beds. The budget request for the Developmental Center is based on a population of 115.

Attachment D includes a summary of the House amendments.

Finally, I would like to direct your attention to **Attachment E**, which indicates "Where the Money Goes" in the Department. 83% of the budget goes directly "out the door" to providers or grant recipients. This compares to 80% of the budget for the 2007 -2009 biennium. Another 11% is expended on direct client services at the Human Services Centers and the Institutions, which remains the same as the 2007 – 2009 budget. Finally 6% of the budget is dedicated to the administrative costs, which has also remained unchanged from the current budget.

The Executive Budget was a strong budget for the most vulnerable citizens of the State of North Dakota for which this budget is designated to serve. The House amendments will primarily impact our clients directly and present challenges for the Department. In the upcoming days, we will be ready to explain in detail the impact of the House changes and answer your questions as we work through the details of this budget.

This concludes my testimony. At this time I would be willing to address your remaining questions and will also be available for any budget questions that may come to mind in the upcoming months.

Thank you.

Department of Human Services
2009 - 2011 Budget to Senate

NORTH DAKOTA DEPARTMENT OF HUMAN SERVICES

QUARTERLY BUDGET INSIGHT

BIENNIUM TO DATE INFORMATION ON SELECTED DEPARTMENT PROGRAMS

JULY 2007 - SEPTEMBER 2008

Section 1: TEMPORARY ASSISTANCE FOR NEEDY FAMILIES (TANF)

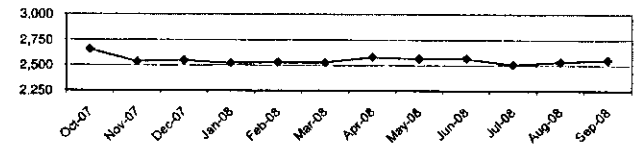
APPROPRIATION 2007-2009 BIENNIUM $25,337,350

BUDGET (7/07-9/08)		ACTUAL (7/07-9/08)			
Monthly Avg Cases	Monthly Avg Cost per Case	Monthly Avg Cases	Monthly Avg Cost per Case	Spent to Date	Percent of Appropriation Used*
2,959	$ 356	2,579	$ 332	$ 12,839,705	50.7%

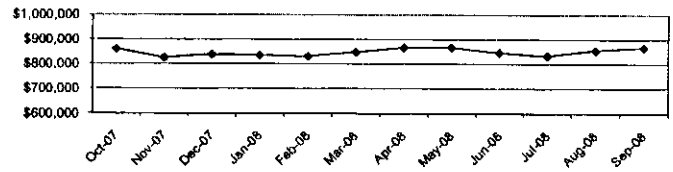
PROGRAM NOTES:

Average monthly TANF recipients:	6,806
Average number of children receiving TANF benefits:	4,818
Average number of child only cases:	660
Average number of individuals participating in work activities:	Not Aavailable
Amount of Child Support Collections used to pay TANF grants (see section 6):	$2,194,731

TANF Caseload for Last 12 Months



TANF Expenditures for Last 12 Months



Section 2: CHILD CARE ASSISTANCE (CCA)

APPROPRIATION 2007-2009 BIENNIUM $19,730,448

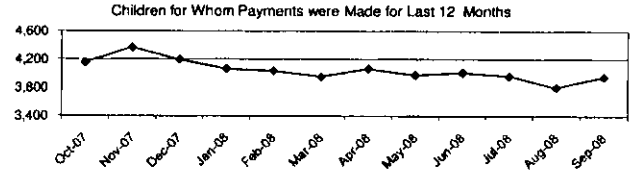
BUDGET (8/07-9/08)		ACTUAL (8/07-9/08)			
Monthly Avg Children for whom CCA paid	Monthly Avg Cost per Child	Monthly Avg Children for whom CCA paid	Monthly Avg Cost per Child	Spent to Date	Percent of Appropriation Used**
4,116	$ 199	4,028	$ 212	$ 11,972,214	60.7%

PROGRAM NOTES:

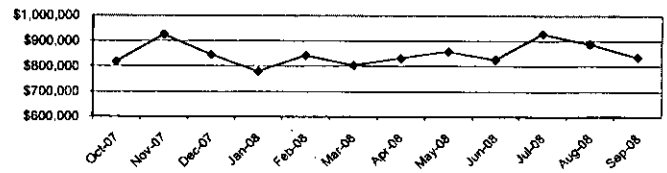
Average number of Non-TANF children:	3,150
Average number of TANF children:	792
Average number of families receiving payments:	2,502
Average payment per family:	$342

The certificate process started in June 2007 and allows a client to participate in the program for three to six months, with limited reporting requirements. All clients had to be on the certificate process for services incurred in October 2007.

Children for Whom Payments were Made for Last 12 Months



Child Care Expenditures Paid for Last 12 Months



Section 3: SUPPLEMENTAL NUTRITION ASSISTANCE PROGRAM (SNAP)

APPROPRIATION 2007-2009 BIENNIUM $107,017,992

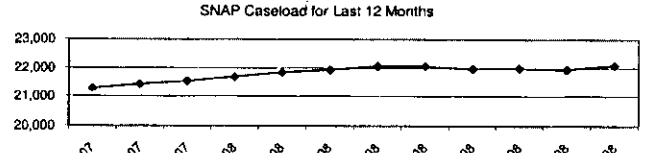
BUDGET (7/07-9/08)		ACTUAL (7/07-9/08)			
Monthly Avg Cases	Monthly Avg Cost per Case	Monthly Avg Cases	Monthly Avg Cost per Case	Spent to Date	Percent of Appropriation Used*
20,351	$ 214	21,661	$ 224	$ 72,654,189	67.9%

PROGRAM NOTES:

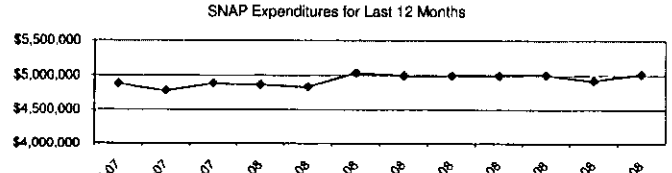
Average number of individuals receiving SNAP:	48,086
Average number of children under 18 receiving SNAP:	21,822
Average number of cases with an elderly person (60 or older) :	3,837
Average number of cases with earned income:	9,115

Simplified reporting began on November 1, 2006 which allows a household to be approved to participate in the program for 12 months, with limited reporting requirements.

SNAP Caseload for Last 12 Months



SNAP Expenditures for Last 12 Months



*Percent of Biennium Expired 62.5% - Payments for TANF, Food Stamps, and Adoption are made at the beginning of the month for the current month. Payments for Foster Care are made the last day of the month for the current month. Therefore 15 months of payments have been made or 62.5% (15/24) of the biennium has expired.

**Percent of Biennium Expired 58.3% - Payments for Child Care, Developmental Disabilities, Long Term Care, Medical Assistance and Medicare Clawback are made when a billing for the previous month's services have been received. Therefore, approximately 14 months of payments have been made or 58.3% (14/24) of the biennium has expired.

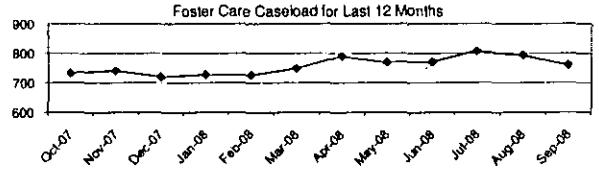
BIENNIUM TO DATE INFORMATION ON SELECTED DEPARTMENT PROGRAMS
JULY 2007 - SEPTEMBER 2008 (continued)

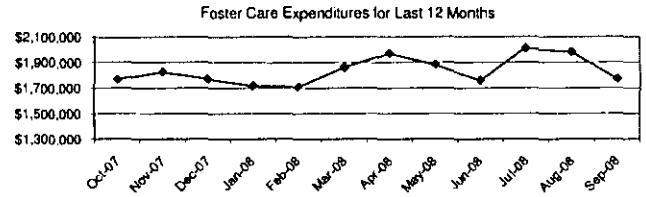
Section 4: FOSTER CARE (MAINTENANCE AND REHAB)
APPROPRIATION 2007-2009 BIENNIUM $60,897,869

BUDGET (7/07-9/08)		ACTUAL (7/07-9/08)			
Monthly Avg Cases	Monthly Avg Cost	Monthly Avg Cases	Monthly Avg Cost	Spent to Date	Percent of Appropriation Used *
1,082	*Varied by placement*	$ 766	*See program notes*	$ 32,513,420	53.4%

PROGRAM NOTES:

Average monthly cost foster care family homes (41% of caseload):	$759
Average monthly cost therapeutic family foster care (26% of caseload):	$3,319
Average monthly cost Residential Child Care Facilities/Group Homes (33% of caseload):	$4,643
Amount of Child Support Collections used to pay Foster Care grants (see section 6):	$2,456,232



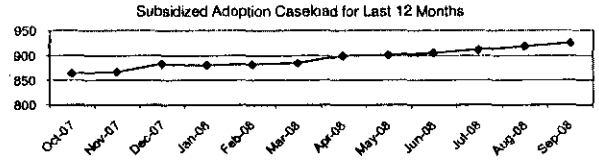


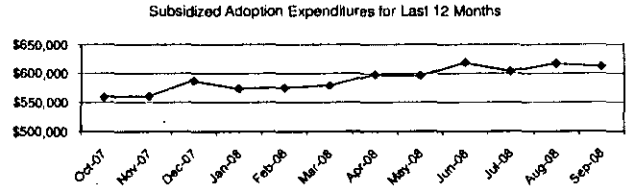
Section 5: SUBSIDIZED ADOPTION FOR SPECIAL NEEDS CHILDREN
APPROPRIATION 2007-2009 BIENNIUM $13,894,075

BUDGET (7/07-9/08)		ACTUAL (7/07-9/08)			
Monthly Avg Cases	Monthly Avg Cost	Monthly Avg Cases	Monthly Avg Cost	Spent to Date	Percent of Appropriation Used*
883	$ 636	886	$ 656	$ 8,720,784	62.8%

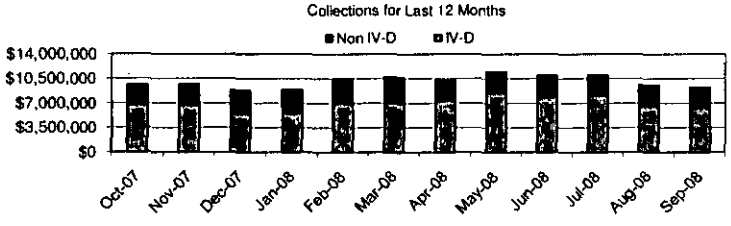
PROGRAM NOTES:

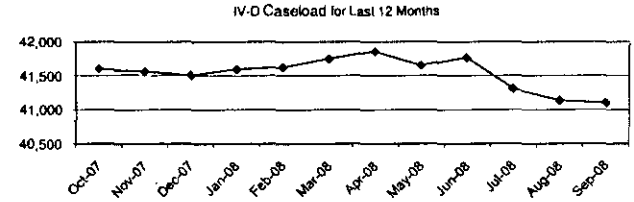
A special needs child is a child legally available for adoptive placement and who is seven years of age or older; under eighteen years of age with a physical, emotional, or mental disability or has been ...sed to be a high risk for such a disability; a member of a minority; or a member of a sibling





Section 6 - CHILD SUPPORT ENFORCEMENT





Total Collections for Last 12 Months	$121,831,435
% of Collections Received from	
-IV-D clients	68.3%
-Non-IV-D clients	31.7%
	100.0%
Collections Distributed to	
-TANF Grant Program (see section 1)	1.6%
-Foster Care Program (see section 4)	1.7%
-Federal government reimbursement	3.2%
-IV-D Familes	57.0%
-Non-IV-D Families	31.7%
-Other States	5.8%
-Other	-1.0%
	100.0%

PROGRAM NOTES:

A IV-D case is any case in which the custodial parent has assigned their rights to receive support payments to the State as a condition of receiving public assistance or has filed as application for services provided by the Child Support Enforcement Agency

A Non-IV-D case is any case in which the custodial parent has neither assigned their right to receive support over to the State nor has filed an application for services provided by the Child Support Enforcement Agency or once had a IV-D case which was subsequently closed.

*Percent of Biennium Expired 62.5% - Payments for TANF, Food Stamps, and Adoption are made at the beginning of the month for the current month. Payments for Foster Care are made the last day of the month for the current month. Therefore 15 months of payments have been made or 62.5% (15/24) of the biennium has expired.

Fully funded in Governor's budget.

Partially funded in Governor's budget.

Funded at a level different than OAR.

Prepared by the North Dakota Legislative Council
staff for Senator Mathern
March 2009

LISTING OF PROPOSED CHANGES TO ENGROSSED HOUSE BILL NO. 1012

Department - Department of Human Services (325)

Proposed funding changes:

Description	FTE	General Fund	Special Funds	Total
1 Change the funding source for Medicaid, foster care, and adoption payments due to the enhanced FMAP included in the federal American Recovery and Reinvestment Act of 2009		($66,500,000)	$66,500,000	$0
2 Option A - Replace a portion of the $900,000 general fund increases included in the executive budget for funding for senior service providers to supplement Older Americans Act fund with federal funds received through the American Recovery and Reinvestment Act of 2009 for elderly nutrition services		(500,000)	500,000	0
Option B - Provide for increased funding for elderly nutrition services to reflect federal funds received through the American Recovery and Reinvestment Act of 2009			500,000	500,000
3 Change the funding source for increased funding for child support enforcement activities to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		(3,200,000)	3,200,000	0
4 Provide for increased funding for vocational rehabilitation services to reflect federal funds received through the American Recovery and Reinvestment Act of 2009			1,800,000	1,800,000
5 Option A - Replace a portion of the $800,000 general fund increase included in the executive budget for centers for independent living with federal funds received through the American Recovery and Reinvestment Act of 2009 for independent living		(243,000)	243,000	0
Option B - Provide for increased funding for independent living to reflect federal funds received through the American Recovery and Reinvestment Act of 2009			243,000	243,000
6 Provide for increased funding for developmentally delayed infants aged 0 to 3 to reflect federal funds received through the American Recovery and Reinvestment Act of 2009 for Individuals With Disabilities Education Act - Part C		0	2,140,000	2,140,000
7 Provide for increased funding for Supplemental Nutrition Assistance Program benefits and related additional administrative expenses to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	7,304,747	7,304,747
8 Provide for increased funding for child care assistance to reflect federal funds received through the American Recovery and Reinvestment Act of 2009 for the child care development block grant		0	3,644,000	3,644,000
9 Provide funding for senior employment program to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	143,288	143,288
10 Provide funding for older blind services to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	3,170	3,170

3-25-09

[redacted]proposed funding changes	0.00	($70,443,000)	$86,221,205	[redacted]78,205

Other proposed changes:

1 Add a section to the bill to recognize additional general fund turnback of $30.3 million from the 2007-09 biennium.

99798

Prepared by the North Dakota Legislative Council staff for Senator Mathern

LISTING OF PROPOSED CHANGES TO ENGROSSED HOUSE BILL NO. 1012

Department of Human Services

Proposed changes to restore House reductions:

	Description	FTE	General Fund	Special Funds	Total
1	Departmentwide - Restore funding removed by the House for anticipated savings from vacant positions and employee turnover		$2,000,000	$4,090,893	$6,090,893
2	Departmentwide - Restore funding removed by the House for travel costs		153,344	232,913	386,257
3	Departmentwide - Restore funding for inflationary increases to the level recommended in the executive budget of 7 percent for the second year of the biennium for rebased services and 7 percent annual increases for all other services		6,277,888	9,930,864	16,208,752
4	Administration support - Restore new full-time equivalent (FTE) position added in the executive budget and removed by the House to perform additional duties required by Statement on Auditing Standards No. 115 regarding communicating internal control matters, including $126,265 for salaries and wages and $2,790 for operating expenses	1.00	56,724	72,331	129,055
5	Administration support - Restore funding removed by the House for state employee salary equity adjustments		3,458,506	1,575,064	5,033,570
6	Medical services - Restore funding for medically needy to reflect income levels of 83 percent of the federal poverty level as recommended in the executive budget (The House decreased funding for medically needy to reflect income levels of 75 percent of the federal poverty level.)		376,947	642,379	1,019,326
7	Medical services - Restore funding for rebasing physician payment rates to 25 percent of the amount needed to rebase to 100 percent of cost as recommended in the executive budget (The House decreased funding for rebasing rates to 20 percent of the amount needed to rebase to 100 percent of cost.)		979,970	1,670,030	2,650,000
8	Medical services - Restore funding for rebasing chiropractor payment rates to 100 percent of cost as recommended in the executive budget (The House decreased funding for rebasing rates to 75 percent of the cost report.)		38,459	65,541	104,000
9	Medical services - Restore funding for rebasing ambulance payment rates to Medicare rates as recommended in the executive budget (The House decreased funding to provide funding equal to 75 percent of the funding provided in the executive budget.)		185,927	316,851	502,778
10	Medical services - Restore funding for rebasing dentist payment rates to 75 percent of average billed charges with inflation increases of 7 percent each year as recommended in the executive budget (The House decreased funding to provide a minimum of 70 percent of average billed charges with inflation increases of 0 percent for the first year and 7 percent the second year.)		722,547	1,233,388	1,955,935
11	Medical services - Restore funding for medical services (The House reduced funding to reduce projected caseload/utilization rates.)		9,600,000	16,359,978	25,959,978

12	[redacted]cal services - Restore funding for the funeral set-aside for Medicaid [redacted]ts to provide [redacted]an increase in the set-aside from $5,000 to $7,000 as recommended [redacted] the executive budget (The House decreased funding to provide for an increase in the set-aside from $5,000 to $6,000.)		103,922	179,078	[redacted],000
13	Medical services - Provide funding for the state children's health insurance program to increase the eligibility for the program from 150 percent to 200 percent of the federal poverty level and to add 1.5 new FTE positions as recommended in the executive budget (The House decreased funding to provide for increasing the eligibility of the program from 150 percent to 160 percent of the federal poverty level and removed 1.5 new FTE positions.) (Due to a decline in enrollment, the department estimates the total amount of funding needed to increase the eligibility for the program from 150 percent to 200 percent of the federal poverty level to be $6.9 million less than the amount provided by the House for the program.)	1.50	(2,187,383)	(6,263,826)	(8,451,209)
14	Long-term care - Restore funding for a new FTE position added in the executive budget relating to implementation of a home and community-based care waiver to provide support for children who have a diagnosis of autism spectrum disorder	1.00	66,872	66,871	133,743
15	Long-term care - Restore funding for the addition of a third tier of personal care that would allow a maximum of 1,200 units of care per month		1,021,922	1,741,524	2,763,446
16	Long-term care - Restore funding for long-term care (The House decreased funding to reduce projected caseload/utilization rates.)		5,600,000	9,543,320	15,143,320
17	Long-term care - Restore funding for developmental disabilities grants (The House decreased funding to reduce projected caseload/utilization rates.)		2,476,000	4,219,511	6,695,511
18	Aging services - Restore funding removed by the House for pilot aged and disabled resource centers		600,000	0	600,000
19	Mental health and substance abuse - Restore funding for compulsive gambling services to $700,000, of which $400,000 is from special funds and $300,000 is from the general fund (The House decreased funding for compulsive gambling services by $150,000 from the general fund.)		150,000	0	150,000
20	Mental health and substance abuse - Restore funding removed by the House for Governor's Prevention and Advisory Council grants		200,000	0	200,000
21	Vocational rehabilitation - Restore funding for centers for independent living to $1,744,539, of which $930,948 is from the general fund as recommended in the executive budget (The House decreased funding for centers for independent living by $400,000 from the general fund.)		400,000	0	400,000
22	State Hospital - Restore funding removed by the House for extraordinary repairs		1,000,000	0	1,000,000
23	State Hospital - Restore funding and 5 of the 6 FTE positions removed by the House for the global health initiative	5.00	424,084	0	424,084
24	Developmental Center - Restore funding removed by the House for extraordinary repairs		150,000	0	150,000
25	Human service centers - Restore funding removed by the House for the global health initiative	5.00	3,664,789	426,106	4,090,895
26	Human service centers - Restore funding and FTE positions added in the executive budget for providing additional oversight and monitoring of developmental disabilities cases	4.00	235,172	209,416	444,588

27	[redacted]ervice centers - Restore funding removed by the House for you[redacted]nsition [redacted]ntial services		834,622	342,222	[redacted]009
28	Human service centers - Restore funding removed by the House for vulnerable adult protection services	1.00	73,128	0	73,128
29	Human service centers - Restore funding removed by the House for an FTE position for the partnership program	1.00	61,490	40,440	101,930
	Total proposed changes to restore House reductions	19.50	$38,724,930	$46,694,894	$85,419,824

Proposed changes relating to federal fiscal stimulus funds

	Description	FTE	General Fund	Special Funds	Total
1	Change the funding source for Medicaid, foster care, and adoption payments due to the enhanced federal medical assistance percentage (FMAP) included in the American Recovery and Reinvestment Act of 2009		($66,500,000)	$66,500,000	$0
2	Replace a portion of the $900,000 general fund increases included in the executive budget for funding for senior service providers to supplement Older Americans Act funds with federal funds received through the American Recovery and Reinvestment Act of 2009 for elderly nutrition services		(485,000)	485,000	0
3	Change the funding source for increased funding for child support enforcement activities to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		(3,200,000)	3,200,000	0
4	Provide for increased funding for vocational rehabilitation services to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	1,800,000	1,800,000
5	Replace a portion of the $800,000 general fund increase included in the executive budget for centers for independent living with federal funds received through the American Recovery and Reinvestment Act of 2009 for independent living		(243,000)	243,000	0
6	Provide for increased funding for developmentally delayed infants aged 0 to 3 to reflect federal funds received through the American Recovery and Reinvestment Act of 2009 for Individuals With Disabilities Education Act - Part C		0	2,140,000	2,140,000
7	Provide for increased funding for supplemental nutrition assistance program benefits and related additional administrative expenses to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	9,874,747	9,874,747
8	Provide for increased funding for child care assistance to reflect federal funds received through the American Recovery and Reinvestment Act of 2009 for the child care development block grant (This funding is currently appropriated in House Bill No. 1418.)		0	3,644,000	3,644,000
9	Provide funding for the senior employment program to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	143,288	143,288
10	Provide funding for older blind services to reflect federal funds received through the American Recovery and Reinvestment Act of 2009		0	3,170	3,170

11	[redacted]nguage to provide that the department may seek Emergency Comm[redacted]and Budget S[redacted]n approval to spend any additional federal funds received under the American Recovery and Reinvestment Act of 2009 (A copy of the recommended language is attached as Appendix A.)		0	0	0
12	Add language to provide that federal fiscal stimulus funds are not to be included in the department's 2011-13 base budget (A copy of the recommended language is attached as Appendix A.)		0	0	0
Total proposed changes relating to federal fiscal stimulus funds		0.00	($70,428,000)	$88,033,205	$17,605,205
	Adjustment to recognize additional general fund turnback of $30.3 million from the 2007-09 biennium		$30,300,000	$0	($30,300,000)
	Restated total proposed changes relating to federal fiscal stimulus funds	0.00	($100,728,000)	$88,033,205	($12,694,795)

Other proposed funding enhancements:

	Description	FTE	General Fund	Special Funds	Total
1	Long-term care - Increase funding for a salary and benefit supplemental payment for individuals employed by a basic care and nursing home facility added by the House to provide a $2 per hour increase to all employees		$11,664,974	$18,539,682	$30,204,656
2	Long-term care - Increase funding for a salary and benefit supplemental payment for individuals employed by developmental disabilities providers added by the House to provide a $2 per hour increase to all employees		9,930,186	15,218,506	25,148,692
3	Children and family services - Provide additional funding for adoption services contract funding		200,000	0	200,000
4	Children and family services - Provide additional funding for a family group conferencing initiative		2,342,810	256,372	2,599,182
5	Vocational rehabilitation - Provide additional funding of $1,090,000 from the general fund for centers for independent living		1,090,000	0	1,090,000
6	Children and family services - Increase funding for the Healthy Families program by $200,000 from the general fund, from $300,000 from the general fund as provided for the 2007-09 biennium to $500,000 from the general fund for the 2009-11 biennium		200,000	0	200,000
7	Long-term care - Provide additional funding for developmental disabilities providers who are serving severely medically fragile and behaviorally challenged individuals and include a statement of legislative intent that the funding is to be provided directly to the Anne Carlsen Center and other like private providers serving individuals with developmental disabilities in proportion to the respective severity of the critical medical and behavioral needs of each individual served and that the funding is to become part of each providers annual base budget and shall not reduce a provider's entitlement to additional critical needs staffing in future ratesetting by the department		1,897,465	3,233,594	5,131,059
8	Long-term care - Provide funding for increasing payment rates for all qualified service providers to provide a $2 per hour increase		1,825,206	1,807,384	3,632,590

9	[redacted]n technology program - Provide funding for eligibility system re[redacted]project planning, including $100,000 for temporary salaries, $85,000 for assistance from county staff, and $500,000 for contract services	342,500	342,500	[redacted]0
10	Aging services - Increase funding for Older Americans Act meal service providers. The executive budget included additional funding of $900,000 from the general fund for senior service providers to supplement Older Americans Act funds.	1,900,000	0	1,900,000
11	Children and family services - Provide funding for parent aide services provided by county social services staff	934,742	0	934,742
12	Long-term care - Provide funding for assisted living room and board subsidies	2,160,000	0	2,160,000
13	Medical services - Increase funding for rebasing physician payment rates to 100 percent of cost	14,699,550	25,050,450	39,750,000
14	Medical services - Provide a contingent appropriation to expand medical assistance benefits for pregnant women if approved by the federal government (165 percent of poverty)	964,031	1,582,480	2,546,511
15	Mental health and substance abuse - Provide additional funding for the peer support program	600,000	0	600,000
16	Mental health and substance abuse - Provide additional funding for guardianship services	350,000	0	350,000
Total proposed funding enhancements		0.00 $51,101,464	$66,030,968	$117,132,432

Other proposed changes:

1 Amend Sections 8 and 9 of the engrossed bill relating to supplemental payments to basic care and nursing home facilities and developmental disabilities providers for salary and benefit increases to:

Revise the restrictions regarding which employees are eligible for the supplemental payment by removing the percentile restrictions and providing that basic care and nursing facilities may not use any money received for providing salary increases to administrators, contracted employees, or directors of nursing.

Provide that the Department of Human Services increases rates to provide for increases beginning July 1, 2009.

2 Add the following section to provide for a Legislative Council study regarding returning veterans and their families:

LEGISLATIVE COUNCIL STUDY - RETURNING VETERANS AND THEIR FAMILIES. During the 2009-10 interim, the legislative council shall consider studying the impact of veterans who are returning from the Iraq and Afghanistan wars and their families on the state's human services system. The study must include an analysis of the estimated cost of providing human service-related services to the returning veterans and their families, including treatment for traumatic head injury and mental illness. The legislative council shall report its findings and recommendations, together with any legislation required to implement the recommendations, to the sixty-second legislative assembly.

3 Add the following section relating to Medicaid provider payments:

STUDY - MEDICAID PROVIDER PAYMENTS. During the 2009-10 interim, the department of human services shall study the changes necessary to establish a common reimbursement system for medicaid provider payments. The department of human services shall incorporate the funding required to implement the reimbursement system in the department's budget request for the 2011-13 biennium.

4 Add the following section of legislative intent relating to a grant to the Family HealthCare Center:

LEGISLATIVE INTENT - GRANT - FAMILY HEALTHCARE CENTER. It is the intent of the sixty-first legislative assembly that the department of human services consider providing a grant to the family healthcare center for costs associated with the construction and renovation of additional space for the center from federal funds available to the department from the American Recovery and Reinvestment Act of 2009 during the biennium beginning July 1, 2009, and ending June 30, 2011. The department of human services may provide a grant to the extent that the family healthcare center has secured matching funds for the construction and renovation of additional space for the center from nonstate sources on a dollar-for-dollar basis. This section does not preclude the family healthcare center from applying for or receiving any federal stimulus money available directly from the federal government.

5 [redacted]e following section relating to salaries and wages for employees at [redacted]are and nursing home facilities, employees of developmental disabilities providers, and home health care providers:

STUDY - SALARIES AND WAGES. During the 2009-10 interim, the department of human services shall study salaries and related benefit levels provided in the state for employees of basic care and nursing home facilities, employees of developmental disabilities providers, and qualified service providers and shall consider the changes necessary to establish consistent salaries and wages among the groups. The department of human services shall incorporate the funding required to implement the changes necessary in the department's budget request for the 2011-13 biennium.

6 Revise Section 10 of the engrossed bill relating to screening required prior to admission or readmission at the Developmental Center. (A copy of the recommended revisions is attached as Appendix B.)

7 Add the following section of legislative intent to provide that the Department of Human Services consider the changes necessary to reimburse home health agencies for home telemonitoring services under the Medicaid program at the same rates as skilled nurse visits provided in person:

LEGISLATIVE INTENT - HOME TELEMONITORING SERVICES. It is the intent of the sixty-first legislative assembly that the department of human services consider the changes necessary to reimburse home telemonitoring services under the medicaid program at the same rate as skilled nurse visits provided in person.

8 Add the following section to provide for reports to the Budget Section regarding the status of the Developmental Center's transition plan:

DEVELOPMENTAL CENTER TRANSITION PLAN - REPORT TO THE BUDGET SECTION. The department of human services shall report to the budget section during the 2009-10 interim on the status of the developmental center's transition plan.

9 Consider adding funding of approximately $9.5 million from the general fund to account for the preliminary FMAP for federal fiscal year 2011 of 60.69 percent compared to the previ9ous estimate of 63.01 percent.

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 12, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Brenda M. Weisz, Chief Financial Officer for the Department of Human Services. I am here today to provide you an overview of the Administration / Support area.

Programs

This area of the budget includes the Executive Office, Legal Advisory Unit, Human Resources, and Fiscal Administration. Each of these areas provides the needed support for the divisions within the Department to carry out their programs. This budget area includes centralized costs for department-wide expenditures such as program appeals, audit fees charged by the State Auditor's Office, and legal work provided by the Attorney General's Office. Also included are the centralized costs for the Central Office divisions such as motor pool expenses, postage for routine mailings such as federally required client TANF notices, along with the telephone services provided by the Information Technology Department.

Major Program Changes

There have not been any program changes in this area.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	7,987,063	14,259,277	6,272,214
Operating	4,413,840	4,972,061	558,221
Total	12,400,903	19,231,338	6,830,435
General Funds	6,117,034	10,213,494	4,096,460
Federal Funds	5,498,938	7,953,224	2,454,286
Other Funds	784,931	1,064,620	279,689
Total	12,400,903	19,231,338	6,830,435

FTE	72.60	73.60	1.0

The Salary and Wages line item increased by $6,272,214 and can be attributed to the following:

- $843,921 in total funds of which $579,207 is general fund for the Governor's salary package for state employees.
- $5,033,569 in total funds of which $3,445,888 is general fund to address existing equity issues for employees throughout the Department including the Human Service Centers and Institutions.
- $186,905 in total funds of which $137,160 is general fund needed to fund the second year employee increase for 24 months versus the 12 months that are contained in the current budget.
- $114,660 in total funds of which $48,707 is general fund for the addition of 1.0 FTE in Fiscal Administration to address the requirements of SAS 112. This Statement of Audit Standard (SAS) is a response to Enron and other such activities found in other companies. Required under this standard is the emphasis on adequate internal controls and the requirement for detailed risk assessment analysis work. The implementation of SAS 112 was a

recommendation made by the State Auditor's Office during their last audit of the agency.

- $64,696 total funds with $49,602 from the general fund to provide funding for a .50 FTE position in the Executive Office that would focus on grant writing. With many of the federal grant sources moving toward a more competitive award process, the Department lacks a dedicated resource in this area.
- The remaining $28,463 decrease is a combination of increases and decreases needed to sustain the salary of the 73.6 FTE in this area of the budget.

The Operating line item increased by $558,221 and is a combination of increases and decreases expected next biennium. Outlined below are the significant areas of change:

- $354,425 increase in Professional Fees. $236,208 is a result of increased utilization of the services provided by the Attorney General's office coupled with their rate increase of 31% - $56.34 per hour to $73.81 per hour. $62,515 is attributed to services provided by the Office of Administrative Hearings. Our utilization in this area has increased along with a rate increase of 5% - $93.29 per hour to $97.95 per hour. The remainder of the increase, is essentially attributed to the expected increase in audit fees of $55,752.
- $147,445 increase in the operating fees and services area. $125,000 is due to additional centralized accounting costs being billed to the agency. These are all federal / other funds. The remainder of the increase in this area is a result of additional consultation and monitoring needs.

- $96,586 net increase in Building Rents / Leases. As a result of an oversight, our current budget did not include two years of rent expense to be paid to Facilities Management. This amounts to an additional $112,602 to be paid to Facilities Management which is federal/other funds and contains no general fund. This increase is offset by decreases amounting to $16,016.
- $64,732 increase in the IT Communications area of the budget to cover the costs of blackberries for 16 individuals along with an increase in phone utilization.
- $60,040 is attributed to the increase in the Travel category of the budget. $42,000 is related to state fleet usage and the rate increase established by DOT - $0.37 per mile to $0.40 per mile. The remainder of the increase is related to additional travel required by staff related to training in various areas.
- $29,379 for increases in Professional Development attributed to the FTE in this area of the budget.
- $17,981 increase in Printing costs as a result of a rate increase by OMB of 9% each year of the biennium.
- A decrease of $171,747 in the Postage budget is a combination of the postage increases anticipated for 2007 - 2009 which did not materialize along with negotiating lower rates with our shipping vendors.
- A decrease of $35,649 in the area of Equipment Rents / Leases as the result of statewide negotiated copier contracts completed by OMB.

The general fund request increased by $4,096,640 with 98% of the increase is associated with the salary changes indicated above. The remainder is a result of the changes in the operating line.

Likewise the majority of the increase or 87% in the federal and other funds is a result of the salary changes indicated above, while the remainder is a result of the changes in the operating line.

This concludes my testimony on the 2009 – 2011 budget request for Administration / Support area of the Department. I would be happy to answer any questions.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Brenda M. Weisz, Chief Financial Officer for the Department of Human Services. I am here today to provide you an overview of the Administration / Support area.

Budget Changes from Current Budget to Executive Budget:

The Salary and Wages line item increased by $6,272,214 and can be attributed to the following:

- $843,921 in total funds of which $566,589 is general fund for the Governor's salary package for state employees.
- $5,033,569 in total funds of which $3,458,506 is general fund to address existing equity issues for employees throughout the Department including the Human Service Centers and Institutions.
- $186,905 in total funds of which $137,160 is general fund needed to fund the second year employee increase for 24 months versus the 12 months that are contained in the current budget.

- $114,660 in total funds of which $48,707 is general fund for the addition of 1.0 FTE in Fiscal Administration to address the requirements of SAS 115. This Statement of Audit Standard (SAS) is a response to Enron and other such activities found in other companies. Required under this standard is the emphasis on adequate internal controls and the requirement for detailed risk assessment analysis work. The implementation of SAS 115 was a recommendation made by the State Auditor's Office during their last audit of the agency.
- $64,696 total funds with $49,602 from the general fund to provide funding for a .50 FTE position in the Executive Office that would focus on grant writing. With many of the federal grant sources moving toward a more competitive award process, the Department lacks a dedicated resource in this area.
- The remaining $28,463 decrease is a combination of increases and decreases needed to sustain the salary of the 73.6 FTE in this area of the budget.

The Operating line item increased by $558,221 and is a combination of increases and decreases expected next biennium. Outlined below are the significant areas of change:

- $354,425 increase in Professional Fees. $236,208 is a result of increased utilization of the services provided by the Attorney General's office coupled with their rate increase of 31% - $56.34 per hour to $73.81 per hour. $62,515 is attributed to services provided by the Office of Administrative Hearings. Our utilization in this area has increased along with a rate increase of 5% - $93.29 per hour to $97.95 per hour. The remainder of the increase, is

essentially attributed to the expected increase in audit fees of $55,752.

- $147,445 increase in the operating fees and services area. $125,000 is due to additional centralized accounting costs being billed to the agency. These are all federal / other funds. The remainder of the increase in this area is a result of additional consultation and monitoring needs.
- $96,586 net increase in Building Rents / Leases. As a result of an oversight, our current budget did not include two years of rent expense to be paid to Facilities Management. This amounts to an additional $112,602 to be paid to Facilities Management which is federal/other funds and contains no general fund. This increase is offset by decreases amounting to $16,016.
- $64,732 increase in the IT Communications area of the budget to cover an increase in phone and communication utilization.
- $60,040 is attributed to the increase in the Travel category of the budget. $42,000 is related to state fleet usage and the rate increase established by DOT - $0.37 per mile to $0.40 per mile. The remainder of the increase is related to additional travel required by staff related to training in various areas.
- $29,379 for increases in Professional Development attributed to the FTE in this area of the budget.
- $17,981 increase in Printing costs as a result of a rate increase by OMB of 9% each year of the biennium.
- A decrease of $171,747 in the Postage budget is a combination of the postage increases anticipated for 2007 - 2009 which did not materialize along with negotiating lower rates with our shipping vendors.

- A decrease of $35,649 in the area of Equipment Rents / Leases as the result of statewide negotiated copier contracts completed by OMB.

The general fund request increased by $4,096,640 with 98% of the increase is associated with the salary changes indicated above. The remainder is a result of the changes in the operating line.

Likewise the majority of the increase or 87% in the federal and other funds is a result of the salary changes indicated above, while the remainder is a result of the changes in the operating line.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $131,076 general fund and $268,110 federal funds for a total of $399,186.

The House reduced 50% of the department-wide travel increase. Administration / Support's share of this decrease is $29,440 total funds; $14,256 – general fund.

The salary equity funds were removed from the Department budgets. The amount reduced was $5,033,570 total funds with $3,458,506 from the general fund.

The House removed the new FTE added in the Executive Budget to address the requirements of SAS 115. This reduction was $129,055 total funds and $56,724 from the general fund after including the Governor's salary package and operating costs.

The House did add $20,776 all general fund for the expenses related to the newly created early childhood services advisory board outlined in House Bill 1472.

This concludes my testimony on the 2009 – 2011 budget request for Administration / Support area of the Department. I would be happy to answer any questions.

Department of Human Services
HB 1012
2009 - 2011 Budget

Current Biennium

		Monthly salary	Annual Cost
Beginning Salary June 30, 2007		1,000	
Year 1 increase 4% - July 1, 2007	$1,000 x 104%	1,040	12,480
Year 2 increase 4% - July 1, 2008	$1,040 x 104%	1,082	12,984
Salary Expense for 24 months - fully funded			$ 25,464

New Biennium	Monthly salary	Annual Cost
Beginning Salary July 1, 2009	1,082	12,984
Year 2 - no increase	1,082	12,984
Salary Expense for 24 months		$ 25,968

Difference $ 504

$1,082 - 1,040 = $42 / month

$42 / month x 12 months = cost to continue the year 2 increase

North Dakota Department of Human Services
Wage Comparison - (Benefits are not included)
2009-2011 Biennium

	Hourly Rate		
	Certified Nursing Assistant or Equivalent	Individual Qualified Service Provider	Agency Qualified Service Provider
Nursing Facilities	12.59 ^		
Developmental Disability Group Home/ICFMR	11.58 *		
Developmental Disability Other Waivered Services	11.73 *		
Home & Community Based Services		13.80 #	19.64 #

^ Based upon information contained in the 2008 Cost Reports, plus 5% inflation added by the 2007 Legislature.

* Based upon budgeted FTEs for SFY 2009

Based upon Medicaid Fee Schedule for SFY 2009. QSPs are paid based upon a 15 minute unit, for actual time spent providing services to a client. (Ex: They are not paid for their "windshield" time, or the time driving to and from a client's residence, completeing paperwork or etc.) In addition, Individual QSPs are self employed and must pay FICA accordingly.

*Explanation of usage increases:

Motor Pool is for all Central Office divisions. The increase is a result of additional monitoring and licensure occurring within the Central Office divisions including Mental Health / Substance Abuse, Vocational Rehabilitation and others.

In-State Trips increased primarily due to 1) a change in the billing practices by the AG's office where we pay for the travel of their staff (change made in 2007 - 09 but no budget existed to accommodate the change) and 2) centralized Human Service Center Accounts Receivable staff for "hands on" training of new functions released in their computer system (ROAP) along with site visits to assist in maximizing revenue collections.

Out of state trips increased by three to allow Fiscal Administration staff training opportunities based on new federal regulations for the programs administered by the Central Office.

Total		114.33						$6,107,722	$7,012,098	$13,119,820

NOTE: 40 Positions have been filled. The amount budgeted for those positions is $1,715,148 general fund; $2,243,844 federal fund; and $3,958,992 Total funds.
The Institutions Executive Budget recommendation already includes $1,356,774 of general fund salary underfunding.
The Child Support Division will need to manage salary dollars in order to fill the positions without funding.

B

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 12, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Jennifer Witham, Director of Information Technology Services of the Department of Human Services. I am here today to provide you an overview of Information Technology Services Division for the Department of Human Services.

Programs

The Department's Information Technology Services Division staff is responsible for information technology strategic planning and budgeting, business analysis, project management, procurement, software development and maintenance, technology standards and policy enforcement, and data entry services.

Customer Base

The Department's Information Technology Services Division (ITS) provides technology services to support the business needs of the central office divisions, the eight Human Service Centers, the State Hospital, the Developmental Center, and the county social service boards across North Dakota.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	4,215,801	5,043,855	828,054
Operating	82,308,602	41,567,463	(40,741,139)
Capital Payments	17,285	0	(17,285)
Total	86,541,688	46,611,318	(39,930,370)
General Funds	18,999,178	19,601,324	602,146
Federal Funds	63,199,145	25,404,513	(37,794,632)
Other Funds	4,343,365	1,605,481	(2,737,884)
Total	86,541,688	46,611,318	(39,930,370)
FTE	34.75	34.75	-

The Salary and Wages line item increased by $828,054 and can be attributed to the following:

- $426,737 in total funds of which $331,528 is general fund to fund the Governor's salary package for state employees.
- $101,725 in total funds of which $78,442 is general fund to fund the cost to continue raises from last biennium.
- $81,207 in total funds of which $59,189 is general fund to fund the salary underfunding from last legislative session.
- $42,850 in total funds of which $30,235 is general fund to fund a temporary administrative support position.
- $25,000 in total funds of which $17,640 is general fund to fund overtime for claims data entry staff.
- $13,958 in total funds of which $9,849 is general fund to provide for the annual and sick leave lump sum payouts for one FTE expected to retire.

- The remaining $136,577 in total funds of which ($18,033) is general fund represents a combination of increases and decreases needed to sustain the salary of the 34.75 FTE in this area of the budget.

The Operating line item decreased by ($40,741,139) and is a combination of increases and decreases expected next biennium. Major changes include:

- ($53,739,587) decrease in total funds of which ($3,643,133) is general fund provided in 2007-2009 to support the Medicaid Systems Project.
- $9,256,512 increase in total funds of which $2,295,133 is general fund to support vendor contracts for the ongoing operations of the new Medicaid Management Information System, the Pharmacy Point of Sale system and the Medicaid Decision Support system.
- $4,005,878 increase in total funds of which $1,320,881 is general fund to support Information Technology Department services as follows:
    - Increases in hardware and software hosting fees.
    - Increase in costs associated with moving from a device fee based on access points to a technology fee based on the number of FTEs.
    - Increase in rates for senior development and project management staff.
- ($299,722) decrease in total funds with a corresponding increase in general fund of $116,573 associated with increases in central

printing costs and other desktop hardware and software license fees and maintenance.

The general fund request increased by $602,146 with 55% of that increase ($331,528) related to the Governor's salary package for state employees. The remaining increase of $270,618 in general fund, as well as net decrease in federal and other funds, is associated with the changes described above.

This concludes my testimony on the 2009 – 2011 budget request for the Information Technology Services Division of the Department. I would be happy to answer any questions.

General Funds	18,999,178	602,146	19,601,324	(27,323)	19,574,001
Federal Funds	63,199,145	(37,794,632)	25,404,513	(55,565)	25,348,948
Other Funds	4,343,365	(2,737,884)	1,605,481	(323)	1,605,158
Total	86,541,688	(39,930,370)	46,611,318	(83,211)	46,528,107

FTE	34.75	-	34.75	-	34.75

Budget Changes from Current Budget to Executive Budget:

The Salary and Wages line item increased by $828,054 and can be attributed to the following:

- $426,737 in total funds of which $331,528 is general fund to fund the Governor's salary package for state employees.
- $101,725 in total funds of which $78,442 is general fund to fund the cost to continue raises from last biennium.
- $81,207 in total funds of which $59,189 is general fund to fund the salary underfunding from last legislative session.
- $42,850 in total funds of which $30,235 is general fund to fund a temporary administrative support position.

- $25,000 in total funds of which $17,640 is general fund to fund overtime for claims data entry staff.
- $13,958 in total funds of which $9,849 is general fund to provide for the annual and sick leave lump sum payouts for one FTE expected to retire.
- The remaining $136,577 in total funds of which ($18,033) is general fund represents a combination of increases and decreases needed to sustain the salary of the 34.75 FTE in this area of the budget.

The Operating line item decreased by ($40,741,139) and is a combination of increases and decreases expected next biennium. Major changes include:

- ($53,739,587) decrease in total funds of which ($3,643,133) is general fund provided in 2007-2009 to support the Medicaid Systems Project.
- $9,256,512 increase in total funds of which $2,295,133 is general fund to support vendor contracts for the ongoing operations of the new Medicaid Management Information System, the Pharmacy Point of Sale system and the Medicaid Decision Support system.
- $4,005,878 increase in total funds of which $1,320,881 is general fund to support Information Technology Department services as follows:
    - Increases in hardware and software hosting fees.
    - Increase in costs associated with moving from a device fee based on access points to a technology fee based on the number of FTEs.

    - Increase in rates for senior development and project management staff.
- ($299,722) decrease in total funds with a corresponding increase in general fund of $116,573 associated with increases in central printing costs and other desktop hardware and software license fees and maintenance.

The general fund request increased by $602,146 with 55% of that increase ($331,528) related to the Governor's salary package for state employees. The remaining increase of $270,618 in general fund, as well as net decrease in federal and other funds, is associated with the changes described above.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $27,323 - general fund, $55,565 - federal funds and - $323 other funds for a total of $83,211.

This concludes my testimony on the 2009 – 2011 budget request for the Information Technology Services Division of the Department. I would be happy to answer any questions.

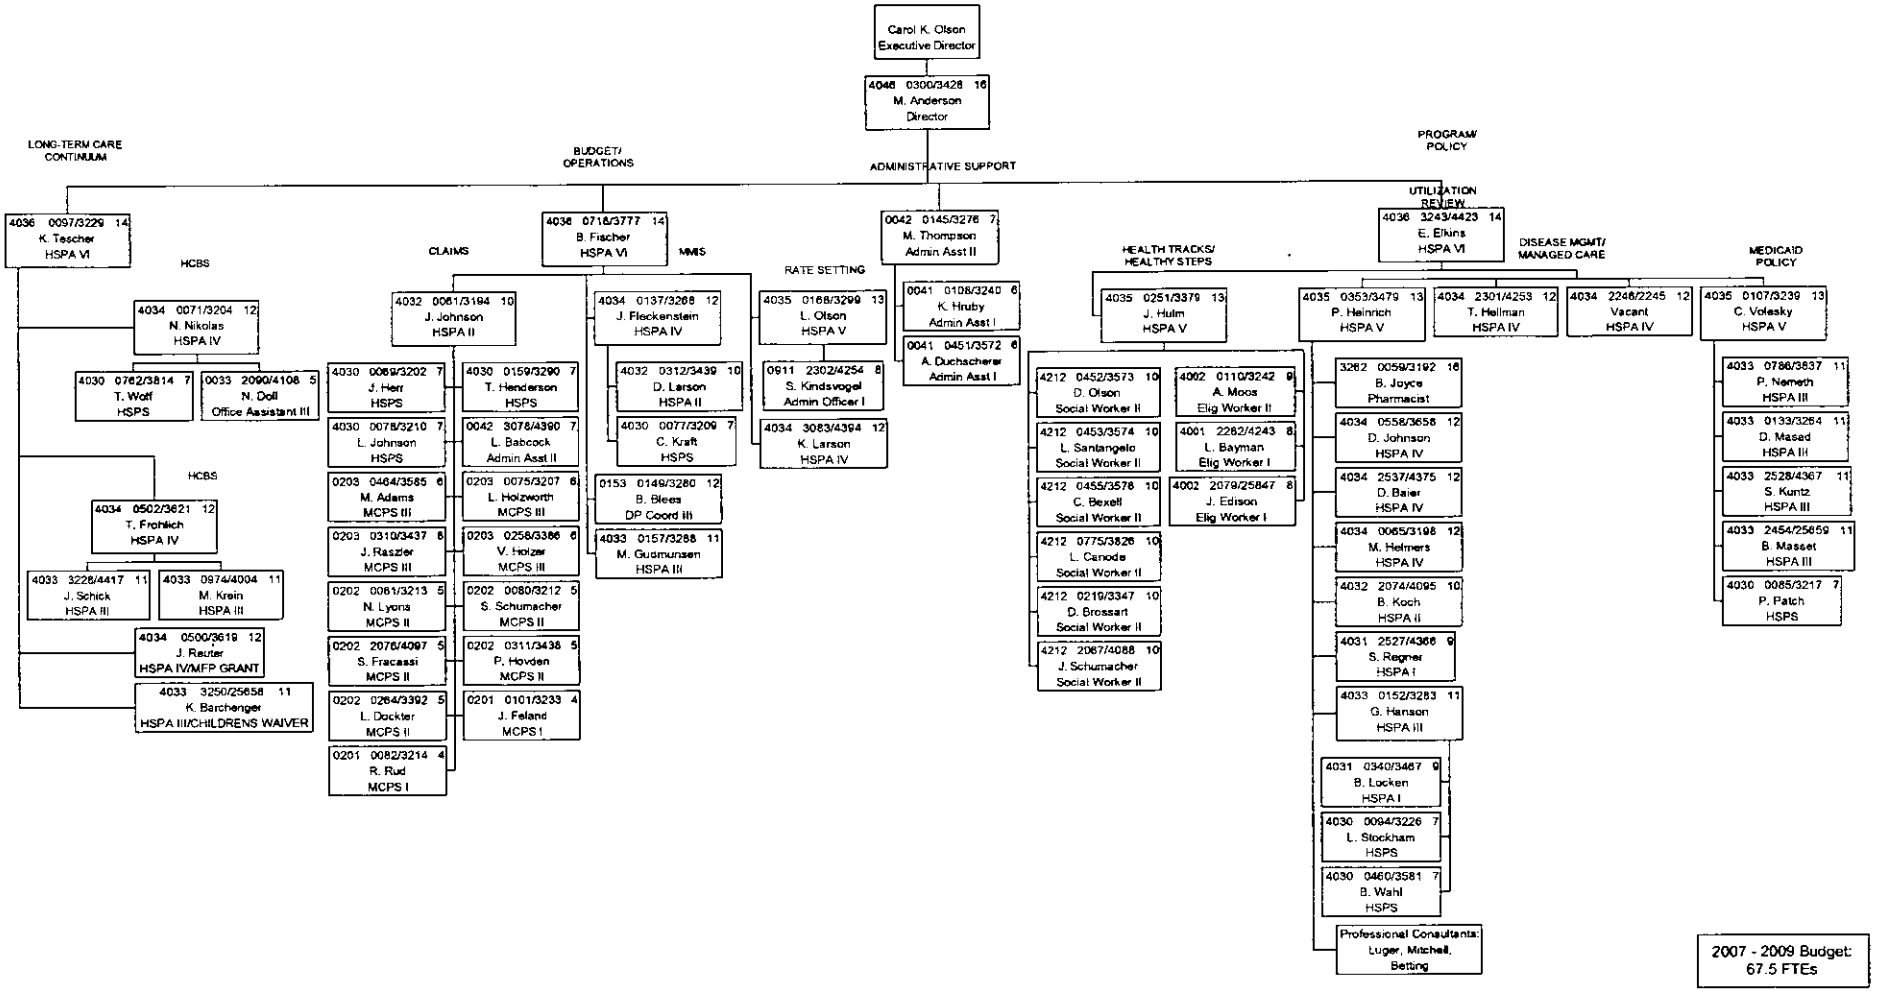
North Dakota Department of Human Services
Medical Services Division



Revised 1/7/09

A

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Committee – Human Resources Division
Representative Pollert, Chairman
January 12, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Maggie Anderson, Director of Medical Services, for the Department of Human Services. I am here today to provide you with an overview of the Traditional Medicaid and the State Children's Health Insurance Programs, as well as the administrative costs of the Medical Services Division. The Long-Term Care Continuum overview will be provided separately.

Programs

The Medical Services Division currently administers two programs; they are Medicaid and the State Children's Health Insurance Program (Healthy Steps). This area of the budget for Medicaid and Healthy Steps provides health care coverage for families and children, pregnant women, the elderly, and the disabled citizens of North Dakota. Attachment A shows the Medicaid Mandatory and Optional Services, and Attachment B shows the current services that have a limit or a co-payment.

Caseload

Attachment C shows the Medicaid Enrollment (eligibles) and the unduplicated count of recipients for each month of the current biennium.

During the current biennium (effective October 1, 2008), the income level for Healthy Steps was increased to 150 percent (net). For the Executive

Budget, Healthy Steps was built on an average caseload of 6,021 children, which includes the growth expected as a result of increasing the income level to 200 percent (net). Attachment D shows the number of children enrolled each month in Healthy Steps since the beginning of the current biennium, and also provides the number of children enrolled in Medicaid for the same time period. Clearly, we are experiencing an enrollment trend change, which appears to be directly related to the implementation of 12-month continuous eligibility for Medicaid children. You can see from the chart that the Healthy Steps enrollment declined a bit between June and July. This decline has increased at a higher rate in the past two months. The chart also shows that enrollment of children in Medicaid, starting in June 2008, has significantly increased. The Department continues to explore the details of this trend change to ensure we can appropriately project expenditures for the current biennium and for 2009-2011.

The statute change needed (NDCC 50-29-04) to increase the income level for Healthy Steps is included in Section 7 of 2009 House Bill 1012. The Healthy Steps increase to 200 percent (net) is also contingent upon Congressional action regarding the reauthorization of, and increased appropriations for, the State Children's Health Insurance Program. In addition, any increase to the income level will require federal (Centers for Medicare and Medicaid) approval.

Program Trends / Program Changes

Federal Medical Assistance Percentage (FMAP)

The Federal Medical Assistance Percentage (FMAP) is calculated based on per capita income over a three-year period. The overall economy in

North Dakota continues to see improvement a bit faster than other states; therefore, the FMAP for North Dakota will continue to fall through Federal Fiscal Year 2010. The current FMAP (through September 2009) is 63.15 percent. The percentage will drop to 63.01 percent for Federal Fiscal Year 2010 (October 1, 2009 - September 30, 2010) and we estimated it to be 63.01 percent for Federal Fiscal Year 2011 (October 1, 2010 – September 30, 2011).

The estimated FMAP impact for this portion of the budget will be provided later in my testimony.

Medicaid Medical Advisory Committee

The Medicaid Medical Advisory Committee continues to meet quarterly to provide input, review and direction to the Department with regard to the Medicaid program. In addition, this committee has been exploring the "modernizing" of the Medicaid program. Three areas of specific focus have been identified; they are: Care Coordination, Dental Access, and Telehealth/Telemonitoring. The committee has been receiving and reviewing a variety of presentations and proposals regarding the identified areas. We expect to move forward with these efforts in 2009, following the Legislative Session. A list of the committee members during the current interim is included as Attachment E.

Medicare Savings Programs

The Medicare Improvements for Patients and Providers Act of 2008, which was signed into law on July 15, 2008, increases the federal asset allowance for individuals who apply for coverage under the Medicare Savings Programs (QMBs, SLMBs, and QIs), to be equal to the asset allowance for LIS (low income subsidy) recipients of Medicare Part D.

These new asset levels are effective January 1, 2010. We do not know the exact levels yet as they are increased each year by the Consumer Price Index (CPI). Based on the 2008 amounts, the asset allowance level for a one person household is anticipated to increase from $4,000 to $7,790 (+ CPI for 2009 and 2010); and from $6,000 for a couple to $12,440 (+ CPI for 2009 and 2010). This will allow current recipients to save more assets (the impact for current recipients would be minimal), and will allow additional individuals to qualify for coverage. The above act also prohibits estate recovery collections for Medicare Savings Programs costs paid by Medicaid. The estate recovery will have to end for all recipients who die after January 1, 2010, even for periods they were eligible prior to that date. This will reduce estate recovery cases; however, the impact is unknown at this time. To the extent possible, the affects of this federal legislation have been included in the Executive Budget request.

Critical Access Hospitals

2007 Senate Bill 2012 provided funding to increase the Medicaid reimbursement rate for Critical Access Hospitals to 100 percent of cost. This change was implemented July 1, 2007. During the interim, the Department has been very involved in meetings with the Centers for Medicare and Medicaid Services (CMS) and the North Dakota Healthcare Association about the limitations in federal statute and regulations regarding payment for Medicaid services at cost. Medicare and Medicaid are two different programs; and while there are many similarities, there are differences in the federal reimbursement rules that govern each program. For example, federal laws and regulations do not allow Medicaid to reimburse 100 percent of cost for lab services (Section 1903(i)(7) of the Social Security Act) or for the services of certified registered nurse

anesthetists (42 CFR 440.20 - Final Rule Published November 7, 2008 in Federal Register).

Medicaid Buy-In for Children with Disabilities

During the 2007 Legislative Assembly, Senate Bill 2326 authorized the Department of Human Services to develop and implement a Medicaid Buy-In for Children with Disabilities. This program is for families who have a child who is disabled (as defined by Social Security) and have a net income of 200 percent or less of the federal poverty level. This program became effective April 1, 2008 and as of December 1, 2008 has 10 children enrolled.

Twelve-month Continuous Eligibility for Children

Twelve-month continuous eligibility for Medicaid-eligible children was implemented June 1, 2008. This allows all Medicaid-eligible children 12-months of eligibility, during which there is no income reporting needed to retain benefits. As noted earlier, the preliminary enrollment numbers of children in Medicaid appear to indicate a significant trend change resulting from continuous eligibility. While the number of children in SCHIP has declined recently, when comparing enrollment numbers of both SCHIP and Medicaid from one year ago (November 2007 = 31,457) to current (November 2008 = 36,047) an additional **4,590** children are receiving health care coverage. The Executive Budget request retains continuous eligibility for 2009-2011.

Optometric Service Limits Changes

On January 1, 2004, the Medical Services Division implemented several new service limits and changed other, existing service limits (Reference: Attachment B). At that time, the limit imposed on eye exams and eye

glasses for individuals 21 years of age and older was changed from once every two years to once every three years. During the current interim, the North Dakota Optometric Association presented information to the Department on the Optometric Practice Guidelines (from the American Optometric Association). The Medicaid service limits conflict with the Optometric Practice Guidelines for eye care. Recognizing the importance of proper eye care, the Executive Budget contains funding to reduce the eye exam and eye glasses limit from once every three years to once every two years. The cost for changing the optometric service limits for adult eye exams and glasses is $128,987 of which $47,531 are general funds.

Funeral Set Aside

The current Funeral Set Aside for Medicaid-eligible individuals is $5,000 and was last increased on July 1, 2005. During the current interim, the North Dakota Funeral Directors Association provided information that demonstrates the average cost for a funeral is $9,314; they also requested the funeral set aside be increased to $7,000. The Executive Budget contains the funding ($566,000 in total funds, of which $209,297 are general funds) to increase the Funeral Set Aside from $5,000 to $7,000.

Section 6 of 2009 House Bill 1012 provides the language necessary to amend Section 50-24.1-02.3 of Century Code to authorize this change.

Durable Medical Equipment Reimbursement Changes

At the request of the Durable Medical Equipment Providers, the Executive Budget includes an increase to the fee schedule for certain wheelchair accessories, sit-to-standers and labor for repairs and adjustments to

wheelchairs. The funding to implement these changes ($69,726 total and $25,695 general) is included in the Executive Budget request.

Increase Medically Needy Income Levels

The medically needy income levels are intended to allow an individual, couple, or family enough money to meet their expenses for shelter, food, utilities, and clothing as well as other maintenance needs. Income above the "Medically Needy Income Level" is considered "recipient liability" and must be applied toward medical expenses before the individual becomes eligible for Medicaid. The current level for a one-person household is $500 per month and for two persons it is $516 per month. These levels have been frozen since 2003 and are lower than what is allowed for SSI recipients, who are Medicaid eligible with no recipient liability. The Executive Budget funds an increase in the medically needy income levels to 83 percent of poverty. According to the 2008 Poverty Levels, at 83 percent of poverty, the income levels would be $720 and $969 for one and two-person households, respectively. It is expected that this increase would benefit around 3,200 individuals. Please see Attachment F for a Fact Sheet on Medicaid Medically Needy Coverage.

Immunization Administration Fees for Children

The Executive Budget includes funding to increase the Medicaid fee schedule for immunization administrations for children. The increased funding is based on the number of Medicaid immunizations, as recorded by the North Dakota Department of Health. The fee schedule for immunizations would be increased to $13.90 for initial immunizations, which is the Regional Maximum set by the Federal Government for immunization administration. The fee schedule for subsequent

immunizations received during the same visit would be increased by $4.69 each.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	7,111,808	8,372,238	1,260,430
Operating	23,778,877	23,803,330	24,453
Grants	417,381,648	519,779,299	102,397,651
Total	448,272,333	551,954,867	103,682,534
General Funds	140,880,119	170,852,118	29,971,999
Federal Funds	284,324,572	351,621,948	67,297,376
Other Funds	23,067,642	29,480,801	6,413,159
Total	448,272,333	551,954,867	103,682,534

FTE	67.50	70.00	2.50

The Salaries line item increased by $1,260,430 and can be attributed to the following changes:

- $776,828 in total funds, of which $348,586 are general funds, is due to the Governor's salary package for state employees.
- $116,184 in total funds, of which $62,170 are general funds, is needed to fund the second year employee increase for 24 months versus the 12 months that are contained in the current budget.
- $117,476 in total funds, of which $30,402 are general funds, is related to the additional 1.5 FTE funded in the Executive Budget related to increasing Healthy Steps to 200 percent of net income.

Currently 33 percent of Healthy Steps applications are processed by the Healthy Steps eligibility staff in the Medical Services Division. If the income level for SCHIP is increased to 200 percent (net), we would expect a greater percentage of the applications to be processed in Medical Services. This is because, as the income threshold is increased, a lower number of applicants will also qualify for other economic assistance programs. The Medical Services Division will monitor the need to fill these positions, as we track Healthy Steps enrollment and program operations.

- $121,630 in total funds, of which $60,818 are general funds - related to the addition of one FTE funded in the Executive Budget related to the planning, development, implementation and management of a Medicaid Autism waiver. This work would not be able to be managed by the existing staff in the Medical Services or Developmental Disabilities Divisions.
- The remaining $128,312 is a combination of increases and decreases needed to sustain the salary of the 70 FTE in this area of the budget.

The Executive Budget for Operating Expenses is $23.8 million, which is a hold even budget for this area.

- The Medicare Part D Clawback payment is the most significant portion of this budget area. The Clawback is estimated at $19.4 million for 2009-2011. This is an increase of $.25 million over the current budget of $19.15 million, and was built based on an average of 9,450 individuals at $85.61 per month. The Clawback payment is funded with 95.9 percent general funds and 4.1 percent estate collections.
- Operating expenses also include contracts for services, such as: medical consultants; utilization review and prior authorization; drug

pricing; Medicaid Identification cards; nursing facility screenings; actuary services; and third party liability identification.

The Executive Budget for the Grants in this area reflects an increase of $102.4 million in total funds, of which $30.3 million are general funds, and $5.9 million are other funds. The $102.4 million increase is a combination of the following: cost changes $52.2 million increase; utilization changes $20.9 million decrease, funding to increase reimbursement for hospitals, physicians, chiropractors, ambulance services and dental providers ($40.1 million); the seven percent/seven percent inflationary increase* ($21.0 million); funding for the increase to the Medically Needy Income Levels ($5.5 million); funding to increase the Medicaid reimbursement for immunizations for children ($182,701); and funding to increase the income level for the Healthy Steps program to 200 percent (net) ($4.3 million).

*Inflationary increases are not provided for the first year of the Biennium for hospitals, physicians, chiropractors and ambulance service providers.

The impact to the Traditional Medicaid Grants as a result of the FMAP reductions is $3.2 million.

The Executive Budget includes funding for the following rebasing and other program/service changes:

- 2007 Senate Bill 2012 included funding and a directive for the Department of Human Services to hire a health care consultant to determine the cost of rebasing payment rates under the medical

assistance program for hospital, physician, dental, ambulance and chiropractic services to the actual cost of providing these services.

Service	Total	General	Federal/Other
Hospitals			
Rebase Funding	22,013,114	8,140,450	13,872,664
Inflation 0% / 7%	9,072,276	3,285,225	5,787,051

Physician			
Rebase @25%	13,250,000	4,899,850	8,350,150
Inflation 0% / 7%	2,430,643	882,558	1,548,085
Total Rebase & Inflation	15,680,643	5,782,408	9,898,235
Chiropractor			
Rebase Funding	416,000	153,836	262,164
Inflation 0% / 7%	32,886	12,140	20,746
Total Rebase & Inflation	448,886	165,976	282,910
Ambulance			
Rebase @ Medicare Rates	2,011,114	743,710	1,267,404
Inflation 0% / 7%	187,814	69,427	118,387
Total Rebase & Inflation	2,198,928	813,137	1,385,791
Dentists			
Rebase Fee Schedule @ a Minimum of 75% of Avg. Billed Charges	2,445,138	904,167	1,540,971
Inflation 7% / 7%	1,738,698	641,918	1,096,780
Total Rebase & Inflation	4,183,836	1,546,085	2,637,751

- The funding included for hospital services covers inpatient, outpatient, inpatient psychiatric, inpatient rehabilitation and long-term care hospitals. It does not include Critical Access Hospitals, Indian Health Services, or Out-of-State Hospitals. The per diem

rates for inpatient psychiatric and inpatient rehabilitative services are limited to one standard deviation from the mean.

- The funding included for physician services is twenty-five (25) percent of the results of the rebasing report.
- The funding provided for ambulance services is to increase the ambulance fee schedule to the Medicare rates on July 1, 2009.
- The funding provided for dental services would allow the Department to "rebase" the Medicaid dental fees (for both children and adults) to a minimum of 75 percent of the average billed charges. Medicaid dental fees that are currently above the 75 percent level would remain at their current level (plus inflation) and the dental fees that are below the 75 percent level would be raised to 75 percent of the average billed charges. Currently many of the children's Medicaid dental services are reimbursed more than 75 percent of the average billed charges.
- The Executive Budget includes $5.5 million ($2.0 million general funds) to increase the Medically Needy Income Levels to 83 percent of the federal poverty level.
- To implement the immunization administration fee change discussed under Program Changes, the Executive Budget request includes $182,701 of general funds; however, the federal funds available for this service were overlooked during the budget preparation process.
- The Executive Budget includes $566,000 ($209,297 general funds) to increase the funeral set aside to $7,000, effective July 1, 2009.
- The Executive Budget requests $142.3 million for Inpatient Hospital Services, of which $51.2 million are general funds. The current budget is $106.5 million. In addition to the utilization and cost trends, the increase includes funds for rebasing hospital services to

cost ($22 million) and seven percent inflation for year two of the biennium ($6.1million)

- The Executive Budget request for Outpatient Hospital Services is $63.4 million, of which $23.1 are general funds. The current 2007-2009 projected expenditures for Outpatient Hospital Services is $53.8 million. The increase requested includes the funding for the inflationary increase in year two of the biennium ($3 million) and to fund the expected cost and utilization changes.
- For Prescription Drugs, the Executive Budget requests $50.2 million, of which $.8 million are general funds, and $17.3 million are retained funds. The prescription drug inflation is estimated at four percent per year for brand name drugs and two percent per year for generics. The generic/brand split is estimated to be 68 percent/32 percent respectively. The Executive Budget reflects a $14.8 million decrease over the current appropriation. The current appropriation was estimated too high, which is primarily a result of (1) having very little "post Part D" data when the 2007-2009 Budget was prepared, (2) a different generic/brand split than was budgeted (60/40 - 2007-2009 budget) vs. (68/32 - 2007-2009 actual), and (3) increased rebates over what was budgeted for 2007-2009.
- The Executive Budget requests $74.3 million for Physician Services, of which $27 million are general funds. The request includes an increase toward the rebasing of the physician fee schedule ($13.3 million) and a seven percent inflationary increase for year two of the biennium ($2.4 million). The budget request for physicians would have been higher; however, the Department has implemented a clarification of category of service reporting on the Medicaid budget documents. This clarification is part of some

preliminary work done this interim to prepare for the implementation of the new MMIS. Previously some codes within several service categories (such as Health Tracks Screenings, Psychological Services, Physical Therapy, and Optometric Services) were reported under Physicians, when, more appropriately, they should have been reported in the categories noted below: These clarifications are a portion of the cost and utilization increases in the following service lines. These include Health Tracks ($2.7 million increase); Occupational Therapy ($.6 million increase); Optometric Services ($1.2 million increase); Physical Therapy ($1.1 million increase); and Psychological Services ($3.0 million increase).

- The Executive Budget Request for Psychiatric Residential Treatment Facilities is $25.9 million, of which $9.6 million are general funds. The increase in this area ($5.1 million) includes the cost and utilization increases as noted from the trends when preparing the budget and $1.8 million to fund a seven percent increase in both years of the biennium.
- The Healthy Steps request is based on increasing the income eligibility level to 200 percent (net). It is expected this increase to expand coverage to enroll an average of 6,021 children per month, at an average premium of $243.93 per child. This premium reflects an increase of 20.52 percent over the average premium paid for the current biennium. The total Healthy Steps request is $35.2 million of which $9.1 million are general funds.
- The Indian Health Services request is for $27.2 million, all of which are federal funds. The request in this area represents an $11.3 million increase. The increase results from cost and utilization changes and from the way the units of service and cost per unit are

presented, which are additional changes made as preliminary steps in implementing the new MMIS.

- The Executive Budget request for Dental Services is $18.1 million (of which $6.7 million are general funds). This is a $4.8 million increase over the 2007-2009 Budget. The increase includes $2.4 million for "rebasing" the Dental fee schedule to a minimum of an average of 75 percent of billed charges and $1.7 million for the seven percent inflation for both years of the biennium. The remaining $.7 million increase is to cover the utilization and cost trends used in preparing the budget.
- The Executive Budget Request for Premiums is $24.5 million, of which $8.7 million are general funds. This request represents a $.8 million increase over the 2007-2009 Budget. This area includes Premiums for cost-effective health insurance and the Medicare Savings Programs.
- The Executive Budget Request for Ambulance Services is $5.7 million of which $2.1 million are general funds. This increase includes $2 million for rebasing the Ambulance reimbursement rates to those paid by Medicare and a seven percent inflationary increase in year two of the biennium ($187,814).
- The request for Chiropractic Services is $987,572, of which $.4 million are general funds. This increase includes the rebasing of $416,000 and seven percent inflation ($32,886) for the second year of the biennium.
- The Executive Budget request for Durable Medical Equipment is $6.8 million (of which $2.5 million are general funds). This is a $1.5 million increase over the 2007-2009 Budget which includes the funding for the seven/seven percent inflationary increase ($.7

million) and the utilization and cost trends, including the reimbursement changes noted earlier ($69,726).

- The remaining changes are in the other services such as: Lab and Radiology Services ($.2 million increase), Speech and Hearing Services ($.2 million increase), Targeted Case Management – Pregnant Women and Division of Juvenile Services ($1.2 million decrease), Disease Management ($ 1.1 million increase), Federally Qualified Health Centers and Rural Health Clinics ($.6 million increase), Transportation Services ($.7 million increase), and Special Education Services ($.3 million decrease – all federal funds).

Attachment G shows each Traditional Medicaid Service comparing the 2007-2009 Budget, 2007-2009 Projected Need, and the 2009-2011 Executive Budget request.

Nurse Aide Registry and Nursing Facility Survey

The Medical Services Budget no longer contains the general funds for the Nurse Aide Registry and Nursing Facility Survey costs. The general funds are budgeted in the Department of Health's budget for 2009-2011. The federal funds are in Medical Services Budget; and are $2,170,377 for Nursing Facility Surveys and $137,034 for Nurse Aide Registry for 2009-2011.

I would be happy to address any questions that you may have.

Fact Sheet

October 2008

North Dakota Department of Human Services
600 E Boulevard Avenue, Bismarck, ND 58505-0250 www.nd.gov/dhs

Medicaid Medically Needy Coverage

Medically needy coverage is available for Medicaid recipients whose incomes are too high to qualify for Supplemental Security Income (SSI) from Social Security, or Temporary Assistance for Needy Families (TANF), but who do not have enough income to meet their medical expenses. It is also available for recipients with lower incomes who do not meet technical requirements (such as age, or because they are not living with a caretaker, are not deprived of a parent's care, or if disabled – have a disability but have not applied for SSI).

Medically needy coverage requires recipients to spend down their excess income on medical expenses; then Medicaid pays the remainder of the recipient's medical costs for the future month. This spend down is known as "recipient liability." The amount of recipient liability that recipients are responsible to pay before they receive Medicaid assistance leaves these recipients with minimal income to meet their other needs. Concerns over this issue have been raised the past two interims during the Department of Human Services' Stakeholder meetings. In addition, providers have expressed concerns about the income levels, as clients are often unable to pay their recipient liability to the providers.

History

Medically needy coverage has been available in North Dakota for aged, blind, and disabled individuals, and families with deprived children since 1966. It was expanded to include children (under age 21) from intact families in January 1978.

The medically needy income level was last changed effective January 2003.

Medically Needy Income Levels

The medically needy income levels are intended to allow an individual, couple, or family enough money to meet their expenses for shelter, food, utilities, and clothing, as well as other maintenance needs (such as gas, auto maintenance, auto or property insurance, etc.). Some recipients may also receive Supplemental Nutrition Assistance (formally known as Food Stamps) or Low-Income Home Energy assistance benefits to help with these costs.

Aged and disabled individuals who have worked and paid enough into Social Security to receive retirement or disability benefits are currently allowed a medically needy income level of $500 per month for a single person, and $516 per month for a couple. Any income above these amounts becomes recipient liability that must be applied toward medical expenses before the individual or couple can become eligible for Medicaid coverage.

Aged and disabled individuals who have not paid enough into Social Security to receive retirement or disability benefits can qualify for SSI. Single recipients of SSI receive $637 (2008) per month and couples receive $956 (2008) per month to meet their maintenance needs. SSI recipients are allowed an income level equal to their SSI payment and receive full Medicaid benefits with no recipient liability.

The following scenarios identify the discrepancies between medically needy and SSI recipients, and indicate the extreme financial limitations in which medically needy recipients are placed. The last column shows the results if increased to 83% of the Federal Poverty Level.

Scenario 1	**Single SSI recipient**	**Single medically needy recipient at current level**	**Single medically needy recipient at 83% of poverty**
Monthly Income	SSI benefits $637**	Social Security benefits $728**	Social Security benefits $728**
Rent	$300	$300	$300
Telephone	$ 45	$ 45	$ 45
Recipient Liability	$ 0	$208 *	$ 0
Remaining income for food, clothing, and other expenses	$292	$175	$383

* Recipient liability amount after allowing $20 income disregard.
** Income is low enough to qualify for coverage of Medicare premium by Medicaid.

Scenario 2	**SSI couple**	**Medically needy couple at current level**	**Medically needy couple at 83% of poverty**
Monthly Income	SSI benefits $956	Social Security benefits $725 + $700 = $1425**	Social Security benefits $725 + $700 = $1425**
Rent	$300	$300	$300
Telephone	$ 45	$ 45	$ 45
Medicare Premium(s)	Covered by Medicaid	$ 96.40 $ 96.40	$ 96.40 $ 96.40
Recipient Liability	$ 0	$696.20*	$ 243.20*
Remaining income for food, clothing, and other expenses	$611	$191	$ 624

* Recipient liability amount after allowing $20 income disregard.
** Income is over the limit to qualify for payment of Medicare premium by Medicaid.

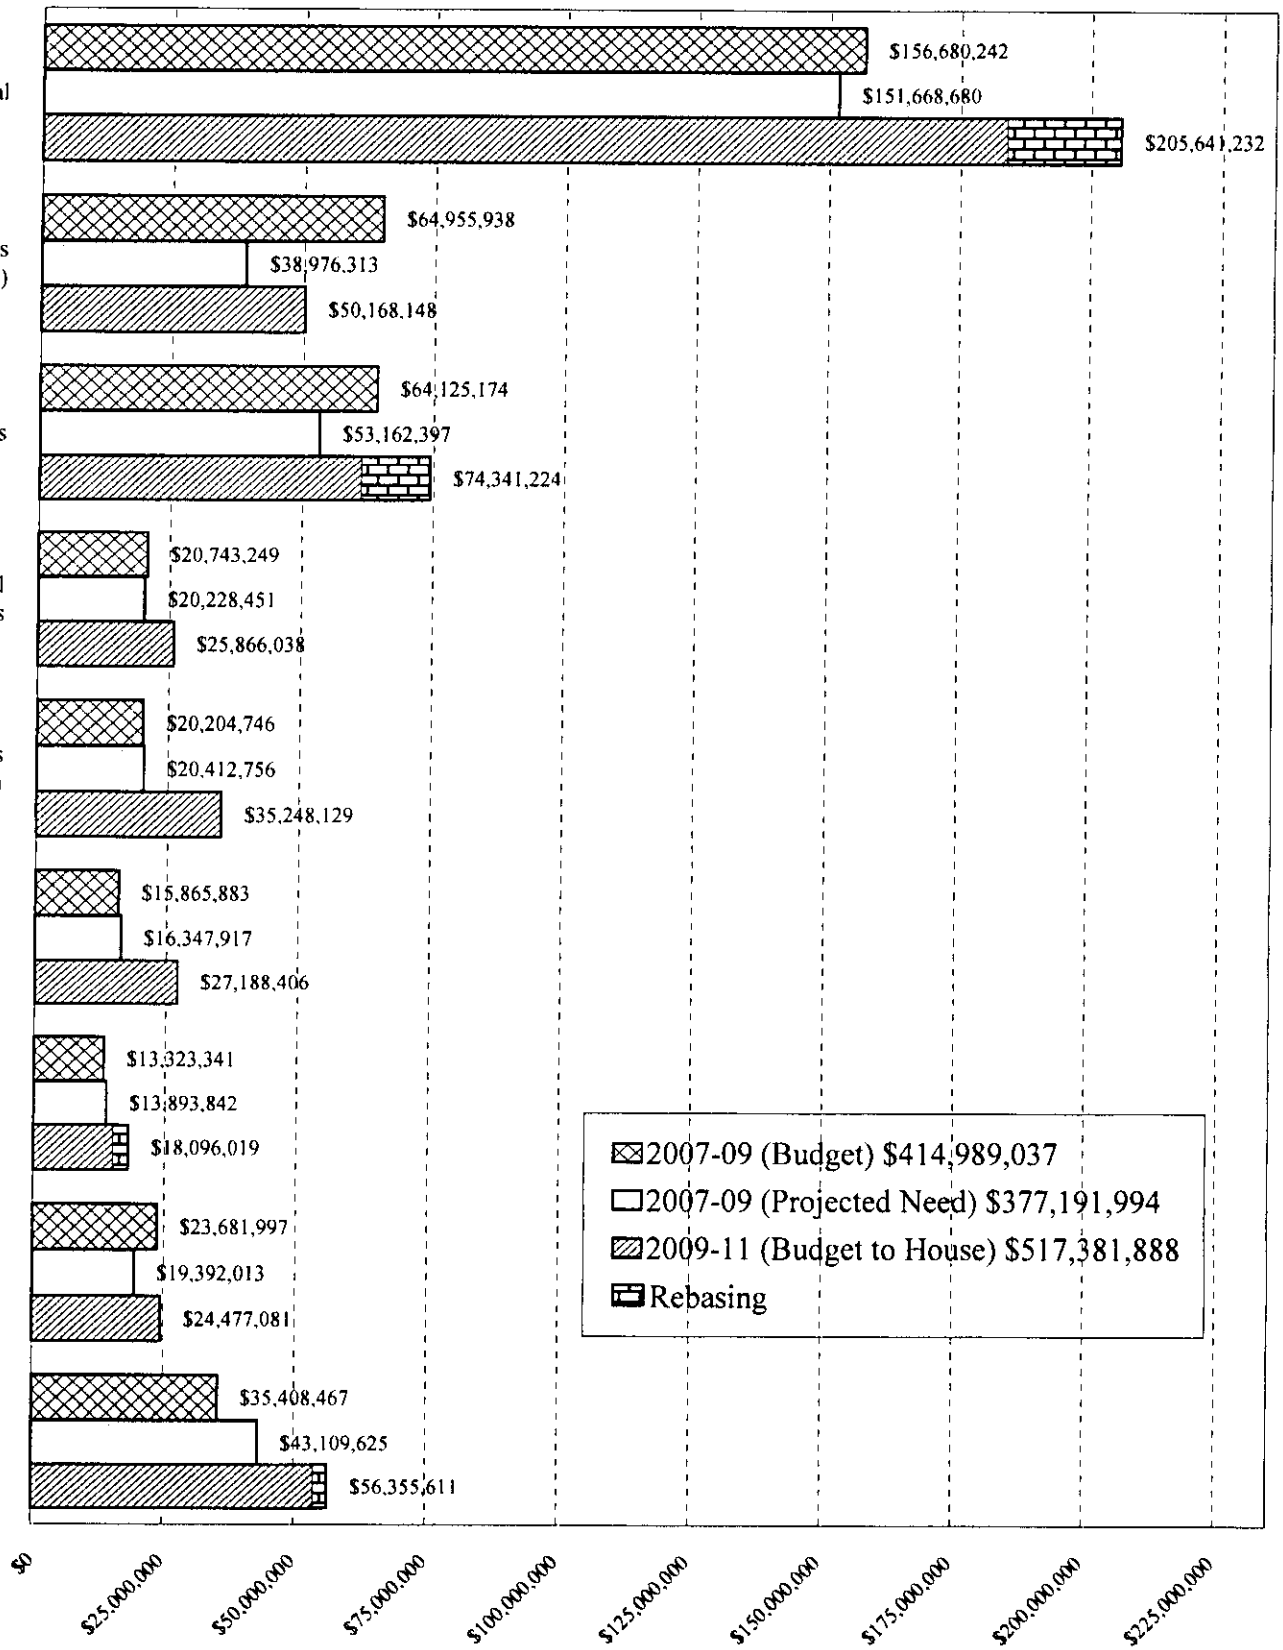
Medical Services

2007-09 and 2009-11 Biennium Comparisons

House Bill 1012

2009 - 2011 Biennium



Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Maggie Anderson, Director of Medical Services, for the Department of Human Services. I am here today to provide you with an overview of the Traditional Medicaid and the State Children's Health Insurance Programs, as well as the administrative costs of the Medical Services Division. The Long-Term Care Continuum overview will be provided separately.

Programs

The Medical Services Division currently administers two programs; they are Medicaid and the State Children's Health Insurance Program (Healthy Steps). This area of the budget for Medicaid and Healthy Steps provides health care coverage for families and children, pregnant women, the elderly, and the disabled citizens of North Dakota. Attachment A shows the Medicaid Mandatory and Optional Services, and Attachment B shows the current services that have a limit or a co-payment.

Caseload

Attachment C shows the Medicaid Enrollment (eligibles) and the unduplicated count of recipients for each month of the current biennium.

During the current biennium (effective October 1, 2008), the income level for Healthy Steps was increased to 150 percent (net). For the Executive Budget, Healthy Steps was built on an average caseload of 6,021

children, which includes the growth expected as a result of increasing the income level to 200 percent (net). Attachment D shows the number of children enrolled each month in Healthy Steps since the beginning of the current biennium, and also provides the number of children enrolled in Medicaid for the same time period. Clearly, we are experiencing an enrollment trend change, which appears to be related to the implementation of 12-month continuous eligibility for Medicaid children. The Department continues to explore the details of this trend change to ensure we can appropriately project expenditures for the current biennium and for 2009-2011.

The statute change needed (NDCC 50-29-04) to increase the income level for Healthy Steps was removed from House Bill 1012 and was placed in House Bill 1478. As amended, House Bill 1478 would increase Healthy Steps to 160 percent (net) of the federal poverty level. The Department continues to support the Executive Budget request to increase the income level to 200% of the poverty level. Later in my testimony as I review the grants I will provide details about the reprojected cost of increasing the income level to 200%.

Any increase to the Healthy Steps income level will require federal (Centers for Medicare and Medicaid) approval.

Program Trends / Program Changes

Federal Medical Assistance Percentage (FMAP)

The Federal Medical Assistance Percentage (FMAP) is calculated based on per capita income over a three-year period. The overall economy in North Dakota continues to see improvement a bit faster than other

states; therefore, the FMAP for North Dakota will continue to fall through Federal Fiscal Year 2010. The current FMAP (through September 2009) is 63.15 percent. The percentage will drop to 63.01 percent for Federal Fiscal Year 2010 (October 1, 2009 - September 30, 2010) and we estimated it to be 63.01 percent for Federal Fiscal Year 2011 (October 1, 2010 – September 30, 2011).

The estimated FMAP impact for this portion of the budget will be provided later in my testimony.

Medicaid Medical Advisory Committee

The Medicaid Medical Advisory Committee continues to meet quarterly to provide input, review and direction to the Department with regard to the Medicaid program. In addition, this committee has been exploring the "modernizing" of the Medicaid program. Three areas of specific focus have been identified; they are: Care Coordination, Dental Access, and Telehealth/Telemonitoring. The committee has been receiving and reviewing a variety of presentations and proposals regarding the identified areas. We expect to move forward with these efforts in 2009, following the Legislative Session. A list of the committee members during the current interim is included as Attachment E.

Medicare Savings Programs

The Medicare Improvements for Patients and Providers Act of 2008, which was signed into law on July 15, 2008, increases the federal asset allowance for individuals who apply for coverage under the Medicare Savings Programs (QMBs, SLMBs, and QIs), to be equal to the asset allowance for LIS (low income subsidy) recipients of Medicare Part D. These new asset levels are effective January 1, 2010. We do not know

the exact levels yet as they are increased each year by the Consumer Price Index (CPI). Based on the 2008 amounts, the asset allowance level for a one person household is anticipated to increase from $4,000 to $7,790 (+ CPI for 2009 and 2010); and from $6,000 for a couple to $12,440 (+ CPI for 2009 and 2010). This will allow current recipients to save more assets (the impact for current recipients would be minimal), and will allow additional individuals to qualify for coverage. The above act also prohibits estate recovery collections for Medicare Savings Programs costs paid by Medicaid. The estate recovery will have to end for all recipients who die after January 1, 2010, even for periods they were eligible prior to that date. This will reduce estate recovery cases; however, the impact is unknown at this time. To the extent possible, the affects of this federal legislation have been included in the Executive Budget request.

Critical Access Hospitals

2007 Senate Bill 2012 provided funding to increase the Medicaid reimbursement rate for Critical Access Hospitals to 100 percent of cost. This change was implemented July 1, 2007. During the interim, the Department has been very involved in meetings with the Centers for Medicare and Medicaid Services (CMS) and the North Dakota Healthcare Association about the limitations in federal statute and regulations regarding payment for Medicaid services at cost. Medicare and Medicaid are two different programs; and while there are many similarities, there are differences in the federal reimbursement rules that govern each program. For example, federal laws and regulations do not allow Medicaid to reimburse 100 percent of cost for lab services (Section 1903(i)(7) of the Social Security Act) or for the services of certified registered nurse anesthetists (42 CFR 440.20 - Final Rule Published November 7, 2008 in

Federal Register). Note: As part of The American Recovery and Reinvestment Act, the November 7, 2008 Final Rule was placed on moratorium until June 30, 2009.

Medicaid Buy-In for Children with Disabilities

During the 2007 Legislative Assembly, Senate Bill 2326 authorized the Department of Human Services to develop and implement a Medicaid Buy-In for Children with Disabilities. This program is for families who have a child who is disabled (as defined by Social Security) and have a net income of 200 percent or less of the federal poverty level. This program became effective April 1, 2008 and as of December 1, 2008 has 10 children enrolled.

Twelve-month Continuous Eligibility for Children

Twelve-month continuous eligibility for Medicaid-eligible children was implemented June 1, 2008. This allows all Medicaid-eligible children 12-months of eligibility, during which there is no income reporting needed to retain benefits. As noted earlier, the preliminary enrollment numbers of children in Medicaid appear to indicate a trend change resulting from continuous eligibility. While the number of children in SCHIP has declined recently, when comparing enrollment numbers of both SCHIP and Medicaid from one year ago (January 2008 = 32,985) to current (January 2009 = 37,194) an additional **4,209** children are receiving health care coverage. The Executive Budget request retains continuous eligibility for 2009-2011.

Optometric Service Limits Changes

On January 1, 2004, the Medical Services Division implemented several new service limits and changed other, existing service limits (Reference:

Attachment B). At that time, the limit imposed on eye exams and eye glasses for individuals 21 years of age and older was changed from once every two years to once every three years. During the current interim, the North Dakota Optometric Association presented information to the Department on the Optometric Practice Guidelines (from the American Optometric Association). The Medicaid service limits conflict with the Optometric Practice Guidelines for eye care. Recognizing the importance of proper eye care, the Executive Budget contains funding to reduce the eye exam and eye glasses limit from once every three years to once every two years. The cost for changing the optometric service limits for adult eye exams and glasses is $128,987 of which $47,531 are general funds.

Funeral Set Aside

The current Funeral Set Aside for Medicaid-eligible individuals is $5,000 and was last increased on July 1, 2005. During the current interim, the North Dakota Funeral Directors Association provided information that demonstrates the average cost for a funeral is $9,314; they also requested the funeral set aside be increased to $7,000. The Executive Budget contained the funding ($566,000 in total funds, of which $209,297 are general funds) to increase the Funeral Set Aside from $5,000 to $7,000.

The language needed for this change was removed from House Bill 1012 and placed in House Bill 1477. The House amended House Bill 1477 to increase the Funeral Set Aside to $6,000, rather than $7,000.

Durable Medical Equipment Reimbursement Changes

At the request of the Durable Medical Equipment Providers, the Executive Budget includes an increase to the fee schedule for certain wheelchair accessories, sit-to-standers and labor for repairs and adjustments to wheelchairs. The funding to implement these changes ($69,726 total and $25,695 general) is included in the Executive Budget request.

Increase Medically Needy Income Levels

The medically needy income levels are intended to allow an individual, couple, or family enough money to meet their expenses for shelter, food, utilities, and clothing as well as other maintenance needs. Income above the "Medically Needy Income Level" is considered "recipient liability" and must be applied toward medical expenses before the individual becomes eligible for Medicaid. The current level for a one-person household is $500 per month and for two persons it is $516 per month. These levels have been frozen since 2003 and are lower than what is allowed for SSI recipients, who are Medicaid eligible with no recipient liability. The Executive Budget funds an increase in the medically needy income levels to 83 percent of poverty. According to the 2008 Poverty Levels, at 83 percent of poverty, the income levels would be $720 and $969 for one and two-person households, respectively. It is expected that this increase would benefit around 3,200 individuals. Please see Attachment F for a Fact Sheet on Medicaid Medically Needy Coverage.

The House amended the Medically Needy Coverage to 75 percent of poverty.

Immunization Administration Fees for Children

The Executive Budget includes funding to increase the Medicaid fee schedule for immunization administrations for children. The increased funding is based on the number of Medicaid immunizations, as recorded by the North Dakota Department of Health. The fee schedule for immunizations would be increased to $13.90 for initial immunizations, which is the Regional Maximum set by the Federal Government for immunization administration. The fee schedule for subsequent immunizations received during the same visit would be increased by $4.69 each.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	7,111,808	1,260,430	8,372,238	(403,721)	7,968,517
Operating	23,778,877	24,453	23,803,330	(39,136)	23,764,194
Grants	417,381,648	102,397,651	519,779,299	(38,003,451)	481,775,848
Total	448,272,333	103,682,534	551,954,867	(38,446,308)	513,508,559
General Funds	140,880,119	29,971,999	170,852,118	(13,771,977)	157,080,141
Federal Funds	284,324,572	67,297,376	351,621,948	(24,661,997)	326,959,951
Other Funds	23,067,642	6,413,159	29,480,801	(12,334)	29,468,467
Total	448,272,333	103,682,534	551,954,867	(38,446,308)	513,508,559

FTE	67.50	2.50	70.00	(2.50)	67.50

Budget Changes from Current Budget to Executive Budget:

The Salaries line item increased by $1,260,430 and can be attributed to the following changes:

- $776,828 in total funds, of which $348,586 are general funds, is due to the Governor's salary package for state employees.
- $116,184 in total funds, of which $62,170 are general funds, is needed to fund the second year employee increase for 24 months versus the 12 months that are contained in the current budget.
- $117,476 in total funds, of which $30,402 are general funds, is related to the additional 1.5 FTE funded in the Executive Budget related to increasing Healthy Steps to 200 percent of net income. Currently 33 percent of Healthy Steps applications are processed by the Healthy Steps eligibility staff in the Medical Services Division. If the income level for SCHIP is increased to 200 percent (net), we would expect a greater percentage of the applications to be processed in Medical Services. This is because, as the income threshold is increased, a lower number of applicants will also qualify for other economic assistance programs. The Medical Services Division will monitor the need to fill these positions, as we track Healthy Steps enrollment and program operations. The House removed the 1.5 FTE and changed the income level to 160 percent.
- $121,630 in total funds, of which $60,818 are general funds - related to the addition of one FTE funded in the Executive Budget related to the planning, development, implementation and management of a Medicaid Autism waiver. This work would not be able to be managed by the existing staff in the Medical Services or Developmental Disabilities Divisions. The House removed the FTE.

- The remaining $128,312 is a combination of increases and decreases needed to sustain the salary of the 70 FTE in this area of the budget.

The Executive Budget for Operating Expenses is $23.8 million, which is a hold even budget for this area.

- The Medicare Part D Clawback payment is the most significant portion of this budget area. The Clawback is estimated at $19.4 million for 2009-2011. This is an increase of $.25 million over the current budget of $19.15 million, and was built based on an average of 9,450 individuals at $85.61 per month. The Clawback payment is funded with 95.9 percent general funds and 4.1 percent estate collections.
- Operating expenses also include contracts for services, such as: medical consultants; utilization review and prior authorization; drug pricing; Medicaid Identification cards; nursing facility screenings; actuary services; and third party liability identification.

The Executive Budget for the Grants in this area reflects an increase of $102.4 million in total funds, of which $30.3 million are general funds, and $5.9 million are other funds. The $102.4 million increase is a combination of the following: cost changes $52.2 million increase; utilization changes $20.9 million decrease, funding to increase reimbursement for hospitals, physicians, chiropractors, ambulance services and dental providers ($40.1 million); the seven percent/seven percent inflationary increase* ($21.0 million); funding for the increase to the Medically Needy Income Levels ($5.5 million); funding to increase the Medicaid reimbursement for immunizations for children ($182,701); and funding to increase the income level for the Healthy Steps program to 200 percent (net) ($4.3 million).

*Inflationary increases are not provided for the first year of the Biennium for hospitals, physicians, chiropractors and ambulance service providers.

The impact to the Traditional Medicaid Grants as a result of the FMAP reductions is $3.2 million.

The Executive Budget includes funding for the following rebasing changes:

- 2007 Senate Bill 2012 included funding and a directive for the Department of Human Services to hire a health care consultant to determine the cost of rebasing payment rates under the medical assistance program for hospital, physician, dental, ambulance and chiropractic services to the actual cost of providing these services.

Ambulance			
Rebase @ Medicare Rates	2,011,114	743,710	1,267,404
Inflation 0% / 7%	187,814	69,427	118,387
Total Rebase & Inflation	2,198,928	813,137	1,385,791
Dentists			
Rebase Fee Schedule @ a Minimum of 75% of Avg. Billed Charges	2,445,138	904,167	1,540,971
Inflation 7% / 7%	1,738,698	641,918	1,096,780
Total Rebase & Inflation	4,183,836	1,546,085	2,637,751

- The funding included for hospital services covers inpatient, outpatient, inpatient psychiatric, inpatient rehabilitation and long-term care hospitals. It does not include Critical Access Hospitals, Indian Health Services, or Out-of-State Hospitals. The per diem rates for inpatient psychiatric and inpatient rehabilitative services are limited to one standard deviation from the mean.

- The funding included for physician services is twenty-five (25) percent of the results of the rebasing report.
- The funding provided for ambulance services is to increase the ambulance fee schedule to the Medicare rates on July 1, 2009.
- The funding provided for dental services would allow the Department to "rebase" the Medicaid dental fees (for both children and adults) to a minimum of 75 percent of the average billed charges. Medicaid dental fees that are currently above the 75 percent level would remain at their current level (plus inflation) and the dental fees that are below the 75 percent level would be raised to 75 percent of the average billed charges. Currently many of the children's Medicaid dental services are reimbursed more than 75 percent of the average billed charges.
- The House modified the rebasing for all provider groups, except hospitals.

The Executive Budget contains funding for the following program and service changes:

- The Executive Budget includes $5.5 million ($2.0 million general funds) to increase the Medically Needy Income Levels to 83 percent of the federal poverty level.
- To implement the immunization administration fee change discussed under Program Changes, the Executive Budget request includes $182,701 of general funds; however, the federal funds available for this service were overlooked during the budget preparation process.
- The Executive Budget includes $566,000 ($209,297 general funds) to increase the funeral set aside to $7,000, effective July 1, 2009.

- The Executive Budget requests $142.3 million for Inpatient Hospital Services, of which $51.2 million are general funds. The current budget is $106.5 million. In addition to the utilization and cost trends, the increase includes funds for rebasing hospital services to cost ($22 million) and seven percent inflation for year two of the biennium ($6.1million)
- The Executive Budget request for Outpatient Hospital Services is $63.4 million, of which $23.1 are general funds. The current 2007-2009 projected expenditures for Outpatient Hospital Services is $53.8 million. The increase requested includes the funding for the inflationary increase in year two of the biennium ($3 million) and to fund the expected cost and utilization changes.
- For Prescription Drugs, the Executive Budget requests $50.2 million, of which $.8 million are general funds, and $17.3 million are retained funds. The prescription drug inflation is estimated at four percent per year for brand name drugs and two percent per year for generics. The generic/brand split is estimated to be 68 percent/32 percent respectively. The Executive Budget reflects a $14.8 million decrease over the current appropriation. The current appropriation was estimated too high, which is primarily a result of (1) having very little "post Part D" data when the 2007-2009 Budget was prepared, (2) a different generic/brand split than was budgeted (60/40 - 2007-2009 budget) vs. (68/32 - 2007-2009 actual), and (3) increased rebates over what was budgeted for 2007-2009.
- The Executive Budget requests $74.3 million for Physician Services, of which $27 million are general funds. The request includes an increase toward the rebasing of the physician fee schedule ($13.3 million) and a seven percent inflationary increase for year two of

the biennium ($2.4 million). The budget request for physicians would have been higher; however, the Department has implemented a clarification of category of service reporting on the Medicaid budget documents. This clarification is part of some preliminary work done this interim to prepare for the implementation of the new MMIS. Previously some codes within several service categories (such as Health Tracks Screenings, Psychological Services, Physical Therapy, and Optometric Services) were reported under Physicians, when, more appropriately, they should have been reported in the categories noted below: These clarifications are a portion of the cost and utilization increases in the following service lines. These include Health Tracks ($2.7 million increase); Occupational Therapy ($.6 million increase); Optometric Services ($1.2 million increase); Physical Therapy ($1.1 million increase); and Psychological Services ($3.0 million increase).

- The Executive Budget Request for Psychiatric Residential Treatment Facilities is $25.9 million, of which $9.6 million are general funds. The increase in this area ($5.1 million) includes the cost and utilization increases as noted from the trends when preparing the budget and $1.8 million to fund a seven percent increase in both years of the biennium.
- The Healthy Steps request is based on increasing the income eligibility level to 200 percent (net). It is expected this increase to expand coverage to enroll an average of 6,021 children per month, at an average premium of $243.93 per child. This premium reflects an increase of 20.52 percent over the average premium paid for the current biennium. The total Healthy Steps request is $35.2 million of which $9.1 million are general funds.

- The Indian Health Services request is for $27.2 million, all of which are federal funds. The request in this area represents an $11.3 million increase. The increase results from cost and utilization changes and from the way the units of service and cost per unit are presented, which are additional changes made as preliminary steps in implementing the new MMIS.
- The Executive Budget request for Dental Services is $18.1 million (of which $6.7 million are general funds). This is a $4.8 million increase over the 2007-2009 Budget. The increase includes $2.4 million for "rebasing" the Dental fee schedule to a minimum of an average of 75 percent of billed charges and $1.7 million for the seven percent inflation for both years of the biennium. The remaining $.7 million increase is to cover the utilization and cost trends used in preparing the budget.
- The Executive Budget Request for Premiums is $24.5 million, of which $8.7 million are general funds. This request represents a $.8 million increase over the 2007-2009 Budget. This area includes Premiums for cost-effective health insurance and the Medicare Savings Programs.
- The Executive Budget Request for Ambulance Services is $5.7 million of which $2.1 million are general funds. This increase includes $2 million for rebasing the Ambulance reimbursement rates to those paid by Medicare and a seven percent inflationary increase in year two of the biennium ($187,814).
- The request for Chiropractic Services is $987,572, of which $.4 million are general funds. This increase includes the rebasing of $416,000 and seven percent inflation ($32,886) for the second year of the biennium.

- The Executive Budget request for Durable Medical Equipment is $6.8 million (of which $2.5 million are general funds). This is a $1.5 million increase over the 2007-2009 Budget which includes the funding for the seven/seven percent inflationary increase ($.7 million) and the utilization and cost trends, including the reimbursement changes noted earlier ($69,726).
- The remaining changes are in the other services such as: Lab and Radiology Services ($.2 million increase), Speech and Hearing Services ($.2 million increase), Targeted Case Management – Pregnant Women and Division of Juvenile Services ($1.2 million decrease), Disease Management ($1.1 million increase), Federally Qualified Health Centers and Rural Health Clinics ($.6 million increase), Transportation Services ($.7 million increase), and Special Education Services ($.3 million decrease – all federal funds).

Attachment G shows each Traditional Medicaid Service comparing the 2007-2009 Budget, 2007-2009 Projected Need, and the 2009-2011 Executive Budget request.

Nurse Aide Registry and Nursing Facility Survey

The Medical Services Budget no longer contains the general funds for the Nurse Aide Registry and Nursing Facility Survey costs. The general funds are budgeted in the Department of Health's budget for 2009-2011. The federal funds are in Medical Services Budget; and are $2,170,377 for Nursing Facility Surveys and $137,034 for Nurse Aide Registry for 2009-2011.

House Changes

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $44,010 - general fund and $90,020 - federal funds for at total of $134,030.

- $133,743 in total funds, of which $66,873 are general funds - related to the addition of one FTE to develop, implement and manage the Medicaid Autism waiver were removed by the House.

- Removed $135,948 in total funds, of which $35,183 are general funds, for the additional 1.5 FTE funded in the Executive Budget related to increasing Healthy Steps to 200 percent of net income.

- The House reduced 50% of the department-wide travel increase. Medical Services' share of this decrease is $39,136 total funds; $21,830 – general fund.

- The House amended the Medically Needy Income Levels from 83 percent of the poverty level in the Executive Budget to 75 percent of the poverty level. This is a reduction from the Executive Budget of $1 million in total funds of which $.4 million are general funds, and $.6 million are federal funds. Attachment H provides a comparison of the Medically Needy levels at 75 percent compared to 85 percent in the Executive Budget.

- As noted on page 6 of my testimony, the House reduced the funding for the Funeral Set Aside by $.3 million, of which $.1 million are general funds. The funding level in the Engrossed version of

House Bill 1012 would allow an increase from $5,000 to $6,000, rather than the $7,000 contained in the Executive Budget.

The House reduced the funding for the increase in Healthy Steps income level. This reduction correlated to the decision made on House Bill 1478 to increase the income level to 160%, rather than 200% of the federal poverty level. The Department continues to support the Executive Budget request to increase the income level to 200% of the poverty level. As part of the Department's monitoring of the trend change noted earlier in my testimony, we have reprojected the SCHIP enrollment expectations for 2009-2011. Because of the decline in SCHIP enrollment that we are experiencing, our estimates now indicate:

Executive Budget (with SCHIP at 200%)	$35.2 million
Reprojected Cost to increase SCHIP to 200%	$25.7 million
Funds currently in HB 1012 to increase to 160%	$32.6 million

Summary: Increasing SCHIP to 200%, based on the reprojected enrollment, compared to the current funding in HB 1012 to increase SCHIP to 160% will be a decrease of $6.9 million, of which $1.7 million are general funds.

The Department respectively requests that the 200% income threshold for Healthy Steps, requested in the Executive Budget, be restored at the reprojected amounts.

The House made the following changes related to Medicaid provider rebasing:

- Physicians – Funded at 25% of rebasing report in the Executive Budget. The House amendment reduced this to 20%. This reduction is $2.7 million of total funds of which $1 million are general funds.

- Chiropractors – Funded at 100% of the rebasing results in the Executive Budget. The House amended this to 75%, which is a reduction of $104,000 in total funds and $38,459 are general funds.
- Ambulance Services – Funded to rebase to the Medicare rates in the Executive Budget. The House amendment provided 75% of the funding in the Executive Budget. This is a reduction of $.5 million in total funds, and $.2 million in general funds.
- Dental Services – Funded at a minimum of 75 percent of the average billed charges in the Executive Budget. The House amendment dropped this to a minimum of 70 percent of the average billed charges. This is a reduction of $.8 million in total funds, and $.3 million in general funds.
- Inflationary Increases – The Executive Budget provided a 7 percent inflationary increase each year of the biennium, for all providers (including dentists), except: hospitals, physicians, chiropractors and ambulance services. The House amended the inflationary increase to 6 percent each year; except for the hospitals, physicians, chiropractors, ambulance services, and dentists, which would be zero for year one and 6 percent for year two. This is a reduction of $4.1 million of which $1.3 million are general funds.
- The House also removed $9.6 million in general funds, related to caseload and utilization. This reduction also removed $16.4 million in federal funds; totaling $26 million.

I would be happy to address any questions that you may have.

Medically Needy Income Levels (As amended by House at 75% of poverty)

The medically needy income levels are the amount of income an individual, couple, or family are allowed to keep to meet their expenses for shelter, food, utilities, and clothing, as well as other maintenance needs (such as gas, auto maintenance, auto or property insurance, etc.). Some recipients may also receive Supplemental Nutrition Assistance (formally known as Food Stamps) or Low-Income Home Energy assistance benefits to help with these costs.

The following chart compares the current medically needy income levels; and the proposed medically needy income level as amended by the House (75% of poverty), with the levels for SSI, the Supplemental Nutrition Assistance, and the Low-Income Home Energy Assistance programs. The income levels identify the amounts each program allows to meet basic maintenance needs.

INCOME LEVELS (Monthly)
Effective April 2008 through March 2009

Family Size	Current Medically Needy	Medically Needy at 75% of PL	SSI	Food Assistance (SNAP) *	Fuel Assistance (LIHEAP) **
1	$500	$650	$637	$ 867	$1,757
2	$516	$875	$956	$1,167	$2,297
3	$666	$1,100		$1,467	$2,838
4	$800	$1,325		$1,767	$3,378

*The Supplemental Nutrition Assistance program has a gross and a net income test. This is the net income level.
** The Fuel Assistance Income Levels are in effect from October 1, 2008 thru September 30, 2009.

A July 1, 2009 increase in the medically needy income level to 75% of poverty (as amended by the House), and the corresponding decrease in recipient liability, is estimated to increase Medicaid expenditures by $4.5 million, of which $1.7 million would be state general funds for the 2009 -2011 biennium.

The following chart compares the medically needy income level at 75% of the poverty level to 83% of the poverty level (from the Executive Budget), and to the SSI income levels.

Family Size	75% of Poverty*	83% of Poverty*	SSI
1	$650	$ 720	$637
2	$875	$ 969	$956
3	$1,100	$1,218	
4	$1,325	$1,467	

*Based on 2008 Federal Poverty Level

Impacts on Recipients

The requirement to spend down to the current medically needy income levels makes medically needy recipients the very poorest to qualify for Medicaid, and affects approximately 3,500 recipients. Many of these recipients cannot afford to pay their full recipient liability each month, which results in medical providers not being able to collect for services they provide, or recipients not receiving the services they need. These losses to providers also affect access to services.

The following scenarios identify the discrepancies between medically needy and SSI recipients, and indicate the extreme financial limitations in which medically needy recipients are placed. The last column shows the results if increased to 75% of the Federal Poverty Level.

Scenario 1	**Single SSI recipient**	**Single medically needy recipient at current level**	**Single medically needy recipient at 75% of poverty**
Monthly Income	SSI benefits $637**	Social Security benefits $728**	Social Security benefits $728**
Rent	$300	$300	$300
Telephone	$ 45	$ 45	$ 45
Recipient Liability	$ 0	$208 *	$ 58
Remaining income for food, clothing, and other expenses	$292	$175	$325

* Recipient liability amount after allowing $20 income disregard.
** Income is low enough to qualify for coverage of Medicare premium by Medicaid.

Scenario 2	**SSI couple**	**Medically needy couple at current level**	**Medically needy couple at 75% of poverty**
Monthly Income	SSI benefits $956	Social Security benefits $725 + $700 = $1425**	Social Security benefits $725 + $700 = $1425**
Rent	$300	$300	$300
Telephone	$ 45	$ 45	$ 45
Medicare Premium(s)	Covered by Medicaid	$ 96.40 $ 96.40	$ 96.40 $ 96.40
Recipient Liability	$ 0	$696.20*	$ 337.20*
Remaining income for food, clothing, and other expenses	$611	$191	$ 550

* Recipient liability amount after allowing $20 income disregard.
** Income is over the limit to qualify for payment of Medicare premium by Medicaid.

	07-09		09-11		Breakdown of Rate Increases			Rate	Utilization	Total
	Trips	Budget	Trips	Budget	Lodging	Mileage	Airfare	Increase	Increase*	
Total Non-Employee Trips	-	$ -	80	$ 10,732				$ -	$ 10,732	$ 10,732
Total In-State Trips	402	$ 31,590	684	$ 64,204	$ 2,412			$ 2,412	$ 30,202	$ 32,614
Total Out-of-State Trips	53	$ 74,880	74	$ 110,028			$ 10,600	$ 10,600	$ 24,548	$ 35,148
Total		$ 106,470		$ 184,964	$ 2,412	$ -	$ 10,600	$ 13,012	$ 65,482	$ 78,494

*Explanation of usage increases:
Non-Employee travel consists of Money Follows the Person Stakeholder Committee and Medicaid Advisory Board, which was not budgeted for in 2007-2009.

In-State Trips increased due to Money Follows the Person grant and MMIS training.

Out of state trips increased due to extra trips to CMS Regional Office on policy issues and additional training needed to manage the increasing complexity of the Medicaid and SCHIP Programs.

This area is affected by the payouts and offsets, resulting from the claims backlog. This impacts both the units and cost per unit (See earlier handout). In addition, with the new reporting system discussed in the Medical Services overview (Pages 13-14), this area contains different payment methodologies and units that are used to calculate the overall Inpatient Hospital estimates.

5% Inflation & cost increase for CAHs		$1.29	See Note
7/7 Inflation		$0.92	
2009-2001 To House	**137,401**	**$19.24**	See Note

The $1.29 of inflation will not exactly total a 5% increase. This is because this area contains a variety of Outpatient hospital reimbursement methodologies.

Outpatient includes Non-Critical Access, Critical Access, and Out of State Facilities. The average utlization for the Biennium to date in September 2008 was 127,670 for Non-Critical Access and 22,205 for Critical Access. The utliziation for Non-Critical Access was not increased; however, the utliziation for Critical Access was increased because of the expected switch of Jamestown and Williston to Critical Access. The 22,205 was increased by 6% to total an average monthly utlization of 23,348 for Critical Access. When these utilizations are weighted in the overall Outpatient tables, which includes the expected out of state Outpatient Services (average of 3,406 units per month), the average monthly utilization is 137,401.

Inflation to the end of the biennium and loss of pre-2008 J-Code Rebates		$4.08
4% Inflation		$1.65
4% Inflation		$1.72
2009-2011 To House	**46,800**	**$44.69**

Inflation is not 7/7 for drugs, as this service is impacted by the actual cost of prescriptions. As noted on page 13 of the overview testimony, we used 4/4 inflation for brand and 2/2 for generic. Even though the generic/brand split is 68/32, the average cost of brand name is $149.13 vs. $22.23 for generics. Therefore, we used the 4% inflation to project the increased expenditures.

Mission
The North Dakota Healthcare Association exists to advance the health status of persons served by the membership.

Testimony on House Bill 1012
House Appropriations
Human Resources Division
January 30, 2009

Chairman Pollert, Members of the House Appropriations Sub-Committee on Health and Human Services. I am Terry Hoff, President of Trinity Health, Minot, North Dakota. I am here today speaking on behalf of my own organization as well as on behalf the North Dakota Healthcare Association.

I am here today in support of the Governors Medical Services budget recommendation. Adoption of the Governors budget for Medical services will complete the rebasing initiative you begun last session. The amount requested, 8.1million in general funds, is the result of a study commissioned by the Department of Human Services to identify the general funds needed to complete rebasing of hospital payments.

Among our reasons for requesting your support of the Governors budget recommendations:

- The hospital Medicaid fee schedule has not been rebased for at least seventeen years.
- The study shows that the current fee schedule for hospitals is approximately 30% less than the hospital cost to deliver the services.
- The current Medicaid payment schedule does not cover hospital uncontrollable costs such supplies, utilities, insurance, equipment, and drugs, and is inadequate to manpower recruitment and retention challenges.
- Hospitals never recovered the lost ground created by a Medicaid hospital payment freeze in 2002, even though there were federal funds available to the state for relief.

PO Box 7340 Bismarck, ND 58507-7340 Phone 701-224-9732 Fax 701-224-9529

- On measures of efficiency and effectiveness, ND hospitals rank among the top five states in the nation with respect to quality of medical care (effectiveness) and low cost (efficiency). (Figure 1)

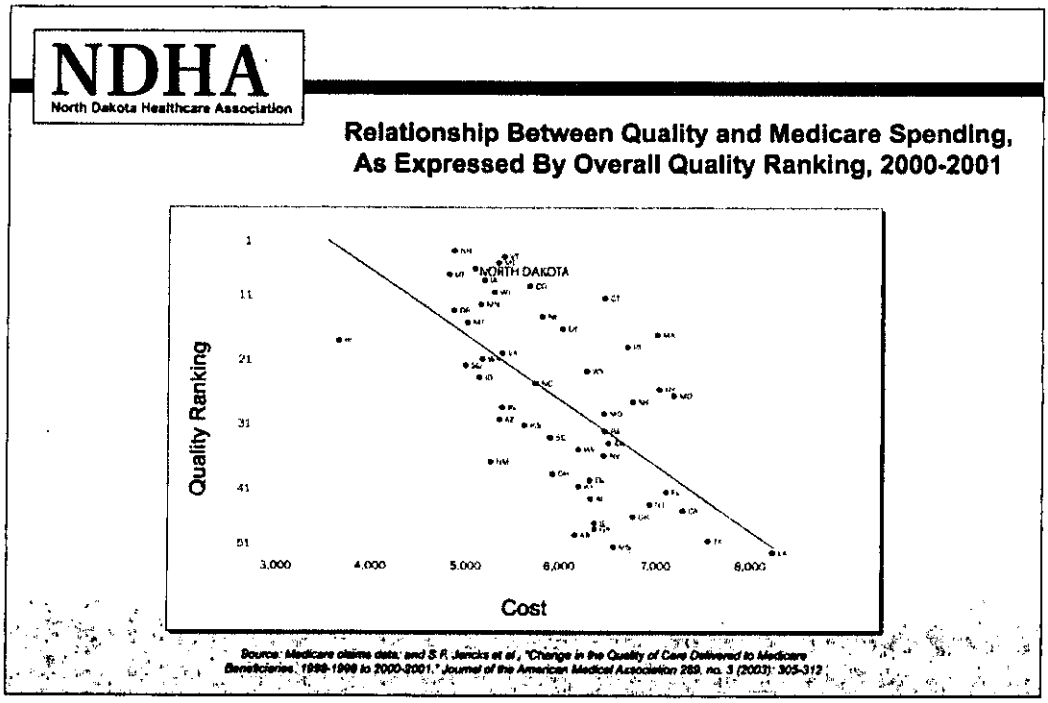

Figure 1

- Compared to other states, ND ranks lowest among all states in terms of percentage of dollars spent on acute care services. (Figure 2)

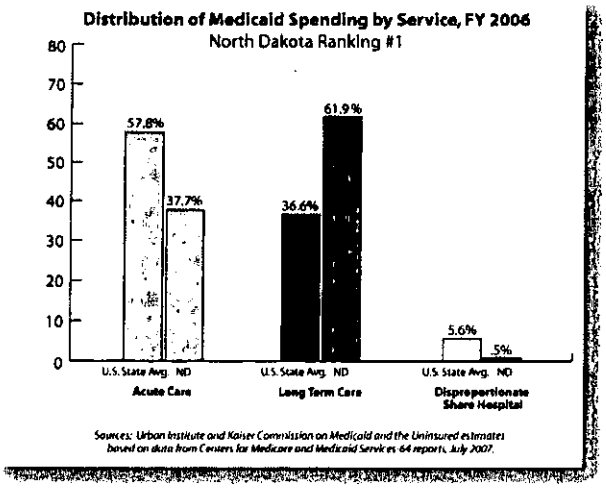

Figure 2

- ND ranks 37th among the states in percentage of general funds spent on Medicaid. (Figure 3)

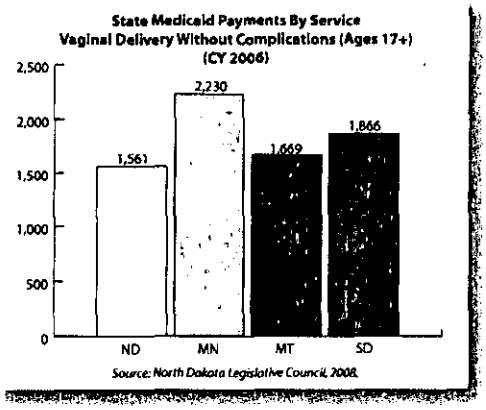

Figure 3

- ND Medicaid payments to hospitals are generally the lowest in the region. (Figure 4a, 4b, 4c)

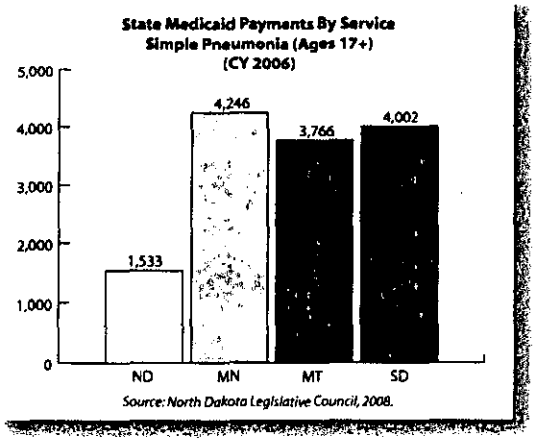

Figure 4a

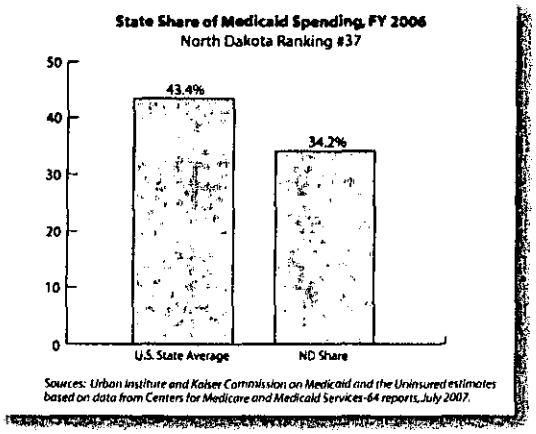

Figure 4b

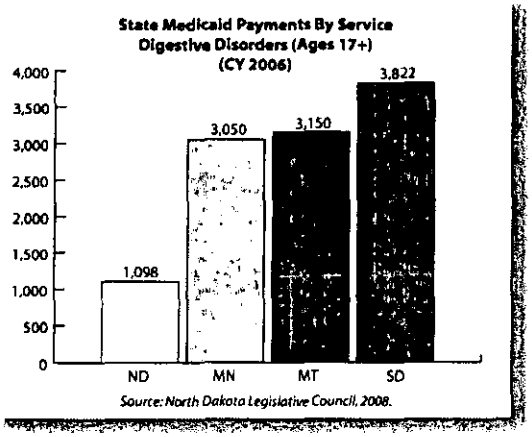

Figure 4c

- With an average age of 11.1 years in 2007, compared to Standard and Poors recommendation of 9.5 years, hospitals in ND are among the oldest in the nation.
- ND hospital margins—whether total (1.8 % in 2007) or operating (-.3 % in 2007)—are among the lowest in the nation and insufficient to meet operating and capital needs.

Chairman Pollert, members of the Appropriations Sub Committee, rebasing hospitals fee schedule is long overdue. The Governors budget addresses this long over remedy. We ask you to support the Governors budget for hospital rebasing.

I would be pleased to respond to questions you or the committee may have.

A

Testimony for HB 1012

Chairman Pollert and Members of the Appropriations Health and Human Services Sub-Committee:

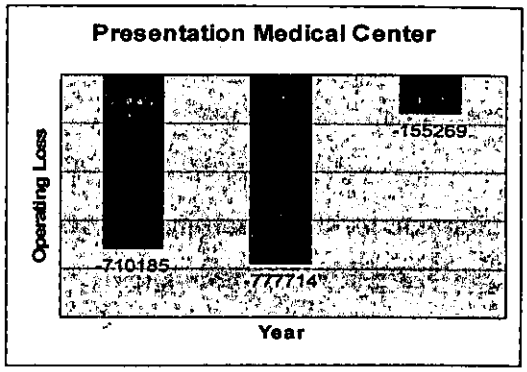
Thank you for the opportunity to speak with you today in support of the Medicaid budget. I am Kimber Wraalstad, Administrator of Presentation Medical Center, located in Rolla. I am here today speaking on behalf of the North Dakota Healthcare Association in support of the Medical Services budget recommended by the Governor.

Presentation Medical Center is a 25-bed Critical Access Hospital providing medical services to the citizens in Rolette and Towner Counties. As you may recall from my testimony last session, Presentation Medical Center provides medical services to a very high percentage of Medicaid beneficiaries. During 2008, 49.53% of the patients who came through our front door had Medicaid as their primary insurance. Our ability to continue meeting the medical needs of the people in my area is contingent upon Medicaid payments covering the costs of services provided.

In 2007, I described to you the impact Medicaid reimbursement had on Presentation Medical Center and supported the Associations recommendation that hospitals be reimbursed in a manner that covered our costs. **Thank you** for your positive actions to this request last session. You provided funding that allowed North Dakota's Critical Access Hospitals to be reimbursed on a cost basis. I would like to note, however, there is still work to be done on reimbursement for anesthesia and outpatient laboratory services. These conversations are ongoing. Because estimates for bringing the remaining hospitals to a rebased cost rate were not readily available, you deferred completion of rebasing for these hospitals, pending the completion of an analysis by an outside consultant and their projection of the dollars needed to complete the rebasing effort.

The proposed budget includes the funds to continue to pay Critical Access Hospitals at cost. Equally important, the budget includes funds to provide rebasing to costs for those hospitals not included in the actions of the 2007 session.

How important was the action you took last session? Let me tell you what it has meant to Presentation Medical Center. In our 2006 fiscal year, Presentation Medical Center had an operating loss of $710,185. In our 2007 fiscal year, Presentation Medical Center had an operating loss of $777,714 and in our recently completed 2008 fiscal year, our operating loss was $155,269. What was the difference? The 2008 fiscal year was the first full year that Presentation Medical Center's Medicaid payments were cost based. I believe we would have not had an operating loss had our costs been recognized for anesthesia and outpatient lab services.



You are aware of the many ways in which North Dakota hospitals are disadvantaged in reimbursements when compared to surrounding states. No hospital, large or small, can continue to provide services to meet the medical needs of our communities if the reimbursements we receive do not cover the cost of care provided. I am very privileged to be part of a faith based mission focused health care organization. Presentation Medical Center is a primary point of access for medical care in our region. To continue to fulfill our important mission, we need reimbursement that covers our costs. HB 1012 meets this objective, not only for Presentation Medical Center, but for all hospitals.

I appreciate your attention and I would be happy to address your questions. Thank you.

North Dakota Department of Human Services
2009-2011 Biennium
HB 1012
Comparison of Dental Services Budget with Rebasing to Minimum of 75% of Average Billed Charges VS. No Rebasing

	2007-2009 Appropriation*	Cost/Caseload Changes	Rebasing of Dental Services Fee Schedule to a Minimum of 75% of Average Billed Charges	7/7 Inflation	Total
2009-2011 Executive Budget	13,323,341	588,842	2,445,138	1,738,698	18,096,019
No Rebasing with 7/7	13,323,341	588,842	-	1,484,315	15,396,498
Difference	-	-	2,445,138	254,383	2,699,521

* Includes $444,198 from 2007 HB 1246, which provided funds to increase the Medicaid dental fee schedule for children.

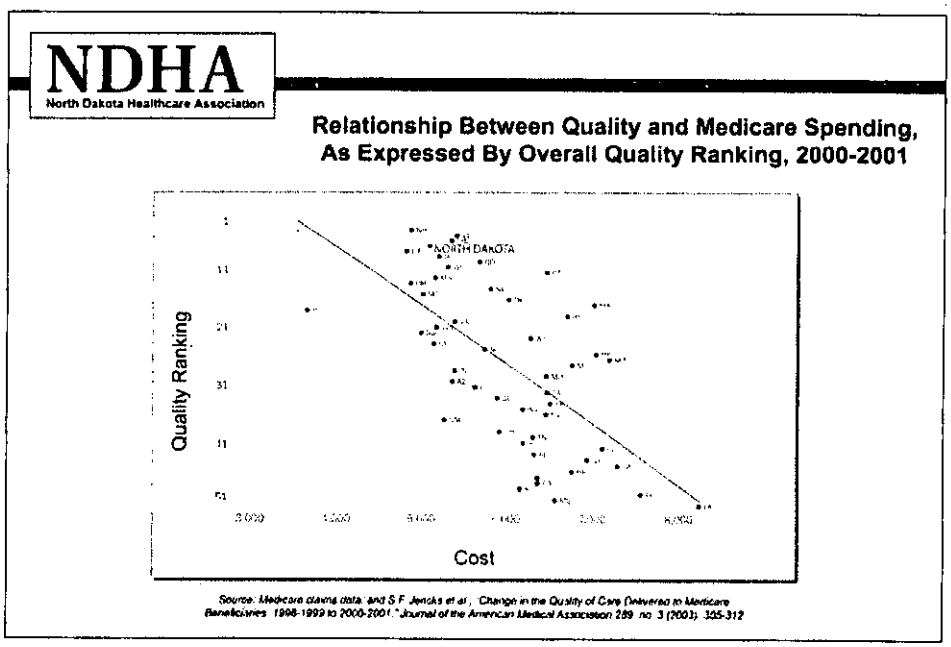
Testimony on House Bill 1012
Senate Appropriations
March 3, 2009

Chairman Holmberg, Members of the Senate Appropriations Committee. I am Arnold Thomas, President of the North Dakota Healthcare Association. I am here today asking your support for the Governors Medical Services budget recommendation. Adoption of the Governors recommendation for Medical services will complete the hospital rebasing initiative you began last session. The amount requested in the Governors budget to complete hospital rebasing is 8.1 million in general funds. This figure is based on the study funded by the Legislature and commissioned by the Department of Human Services to identify the general funds needed to complete last sessions hospital payment rebasing initiative.

Among our reasons for requesting your support:

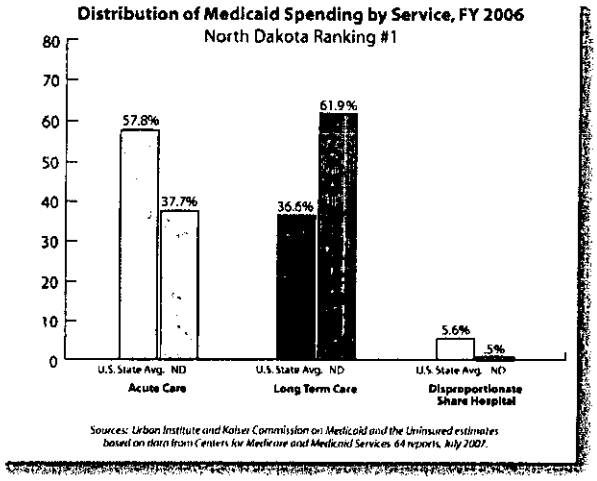
- The hospital Medicaid fee schedule has not been rebased for at least seventeen years.
- The study shows that the current fee schedule for hospitals is approximately 30% less than the hospital cost to deliver the services.
- The current Medicaid payment schedule does not cover hospital uncontrollable costs such as supplies, utilities, insurance, equipment, and drugs, and is inadequate for address of manpower recruitment and retention challenges.
- Hospitals never recovered the lost ground created by a Medicaid hospital payment freeze in 2002, even though there were federal funds available to the state for relief.
- On measures of efficiency and effectiveness, ND hospitals rank among the top five states in the nation with respect to quality of medical care (effectiveness) and low cost (efficiency). (Figure 1)

Figure 1



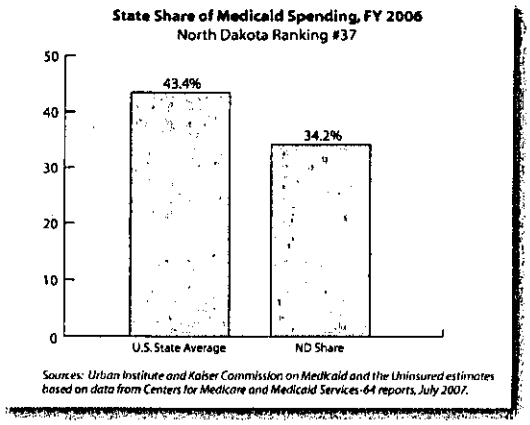
- Compared to other states, ND ranks lowest among all states in terms of percentage of dollars spent on acute care services. (Figure 2)

Figure 2



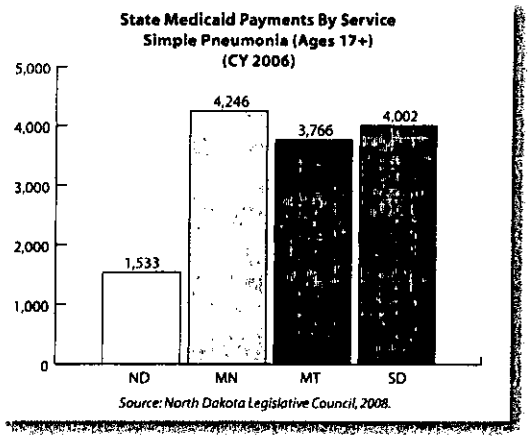
- ND ranks 37th among the states in percentage of general funds spent on Medicaid. (Figure 3)

Figure 3



- ND Medicaid payments to hospitals are generally the lowest in the region. (Figure 4a, 4b, 4c)

Figure 4a



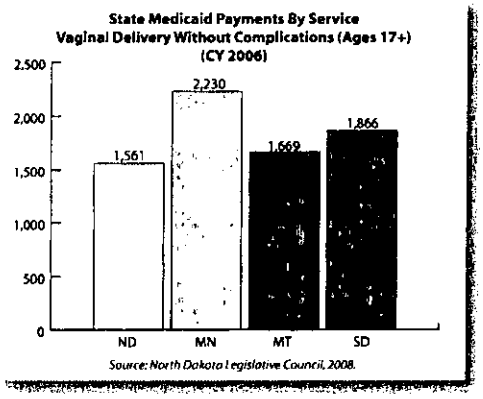


Figure 4b

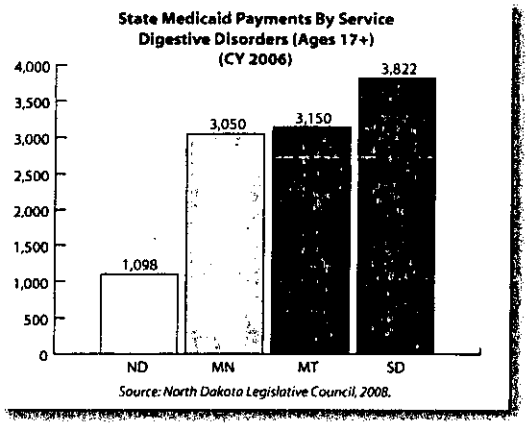

Figure 4c

- With an average age of facility of 11.1 years in 2007, compared to Standard and Poor's recommendation of 9.5 years, hospitals in ND are among the oldest in the nation.
- ND hospital margins—whether total (1.8 % in 2007) or operating (-.3 % in 2007) - are among the lowest in the nation and insufficient to meet operating and capital needs.

Chairman Holmberg, members of the Appropriations Committee, rebasing hospitals fee schedule is long overdue. The Governors budget addresses this long over remedy. We ask you to appropriate the general funds necessary to complete hospital rebasing for all of the state's hospitals.

I would be pleased to respond to questions you or the Committee may have.

Altru Health System | Medcenter One medcenterone.com | MeritCare | Trinity Health

North Dakota 2009 Legislative Session

House Appropriations - Human Services Division Committee

Testimony on House Bill 1012

January 26, 2009

Chairman Pollert and Members of the House Appropriations Subcommittee - Human Resources Division:

My name is Beverley Adams and I am the Executive Administrator for the Health Policy Consortium (HPC). The Health Policy Consortium is comprised of Altru Health System in Grand Forks, MedCenter One Health System in Bismarck, MeritCare Health System in Fargo and Trinity Health System in Minot.

The four health systems that I represent, are integrated health systems they are not simply hospitals. They are hospitals, clinics, labs, physicians, all working under one system. This means that the physicians are employees of the hospital. Traditionally physicians owned their own businesses and had privileges to practice in the hospitals. The four health systems that comprise the HPC realized that having a healthcare system where the physicians are employed by the hospitals provides a more cost efficient and patient focused model of care, despite the reimbursement systems not rewarding quality and efficiency. As a result of the hospitals employing the physicians, these organizations are

affected by both the rebasing of Medicaid on the hospital side and the rebasing on the physician side. The integrated systems are affected by the Medicaid reimbursement on the hospital and the physician side.

These organizations provide specialty and sub-specialty care as well as a significant amount of high quality primary care in the most rural of communities, such as New Town, Cavalier and Wahpeton. In 2007/2008 the HPC health systems provided over $120 million of uncompensated care in either the form of bad debt and charity care services for the patients we serve. This is reflective of the substantial amount of care provided to the more than 80,000 under-insured and uninsured North Dakotans. These numbers will be rising significantly as the economy declines.

Your decisions relating to appropriations for reimbursement for Medicaid recipients has a profound impact on our ability to provide care to North Dakotans and the future viability of health care services within the State of North Dakota.

We would like to discuss the current reimbursement status from all payers in order to explain in detail the delicate healthcare reimbursement ecosystem in North Dakota. The current system is not sustainable and threatens the future viability of healthcare in North Dakota including MeritCare, Altru, MedCenter and Trinity. These healthcare systems are a safety net to the healthcare providers in rural North Dakota. As a safety net, these facilities provide specialty health care services to more than 80% of the citizens of North

Dakota. As a safety net these facilities provide specialized services in areas such as cardiology, children's specialty services, trauma, orthopedics, etc.

Altru, MedCenter, MeritCare and Trinity have gone from showing a small profit margin in 2004 to negative margins in 2007. **Exhibit 1** is a slide showing the total operating margin for Trinity, MeritCare, MedCenter and Altru from 2004 to 2007. They also are losing ground with regard to their debt service coverage. **Exhibit 2**. Their average age of plant is also increasing. **Exhibit 3**. Also, in comparison to surrounding States, Missouri, Kansas, Minnesota, Iowa, Montana, Nebraska and South Dakota, the average operating margin was 6.9%, while North Dakota's state wide average is 1.8% in 2007. **Exhibit 4**.

The current financial crises is caused by the healthcare systems having no control over reimbursement rates and no control over rising costs. We are told what we are going to get paid and little if any consideration is given to the actual cost of providing the care. The current fee schedule for Medicaid for hospitals is approximately 30% less than cost to deliver the service. Commercial private payers are 37% below surrounding states and Medicare reimbursement is 30 to 40% below cost and Medicare consists of approximately 38% of the revenue generated by MeritCare alone.

The Medicare system also has built-in mechanisms to geographically adjust the payments in each area of the country. Significant portions of hospital payments are adjusted for the healthcare provider's relative wage index to the national average. The wage index for

North Dakota is 82%, resulting in payments of $17 Million (for MeritCare alone) annually below the national average for the same services. Likewise, physician payments are geographically adjusted and in North Dakota are 91% of the national average. For MeritCare alone, this equates to an additional $8 Million annually below the national average.

Nationally, Medicare payments are insufficient to cover hospital costs for Medicare patients. As a result, those losses must be covered through higher payment from commercial payers. In North Dakota, the BCBSND premiums are approximately 15% below surrounding states, such as Kansas, Missouri, Iowa, Nebraska, Minnesota and South Dakota. **Exhibit 5.** This results in lower reimbursement payments from commercial payers to healthcare providers. This results in North Dakota being unable to cover the losses and offset the inadequate government payers from the higher private commercial payers like the rest of the nation. However, the cost of providing care is not cheaper in North Dakota than surrounding States.

I want to briefly talk about the different payer sources and provide you with some detail on reimbursement in North Dakota, so we can better explain the financial difficulties that the healthcare systems in North Dakota are experiencing.

Medicaid has not been rebased to cost for approximately 17 years. Additionally, since the 1980's the amount of the annual increase in payments to hospitals and physicians has consistently been less than the increase in inflationary costs experienced by hospitals and

physicians. In 2007 the legislature had the foresight to commission a study to determine what the actual cost of care is compared to reimbursement rates in order to determine fair and equitable reimbursement rates for hospitals in North Dakota in the 2009 legislative session. The study showed that to get the inpatient, psych, rehab, outpatient and physician components to cost, it would require $29 Million of State General Funds for the biennium. **Exhibit 6.**

Based on this information it is clear that Medicaid has been historically under funded. The physician component of the rebasing study had the most significant adjustment as historically, it has been the most underpaid. This has caused the healthcare systems to provide services to Medicaid patients at a loss for the past 17 years.

The second payer I would like to discuss is Medicare. The Medicare Trust Fund is predicted to go bankrupt in the near future. Therefore, Medicare is taking significant steps to cut payments and is actively looking at payment system reform. Based on a Milliman Study prepared for Altru, Trinity, MedCenter One, MeritCare and Innovis analyzing Medicare reimbursement for North Dakota compared to surrounding states, North Dakota's reimbursement is 91% less than Kansas, Iowa, South Dakota, Montana, Missouri, Nebraska and Minnesota. **Exhibit 7.** Therefore, Medicare reimbursement to healthcare facilities in North Dakota is 9% lower than surrounding states. Although 9% does not appear significant, if MeritCare alone was reimbursed at the average of the surrounding States, this would equate to an additional $25 Million annually.

The last groups of payers we are going to discuss is the commercial payer. As you know, BCBS has over 84% of the market share of the commercial healthcare coverage in North Dakota. As a result, there has not been equal bargaining footing between the parties when reimbursement contracts are negotiated. As a result, BCBS has set reimbursement rates and terms and they do not negotiate provider contracts. The choices for hospitals are either to accept the unilateral terms which are subject to change with little notice throughout the year or go without a contract. If the hospitals do not have a contract this means that patients will be billed directly for hospital services and they would be financially responsible to the hospitals for the cost of care and would have to negotiate with BCBS what portion of their bill would be covered by insurance. Since there is no free market system in North Dakota with commercial insurance carriers, North Dakota is reimbursed approximately 37% less than surrounding States including Kansas, Missouri, Iowa, Minnesota, Montana, South Dakota and Nebraska by commercial payers in North Dakota for the same level of care. **Exhibit 8.** If MeritCare was paid the average of the surrounding States on private commercial payers alone, this would mean an additional $30 Million dollars per year.

The information on the comparisons for Medicare and the private commercial payers was obtained through two separate studies completed by Milliman. Milliman is among the world's largest independent actuarial and consulting firms. They are similar to the consultants hired to complete the rebasing study for Medicaid. These studies provide credibility to the data contained in this testimony.

With North Dakota receiving lower reimbursement rates from all payers in comparison to surrounding States and lower rates in comparison to costs, it sheds light on the current financial crises North Dakota healthcare systems are facing. It is important to note that the surrounding States are not the highest paid States relating to Medicare and private payer reimbursement, in the United States. We are not comparing ourselves with the highest reimbursed States in the Nation; we are comparing ourselves with States that are similarly situated to ourselves.

Throughout the nation, healthcare systems in other States, are compensated by higher private reimbursement when the government payers are paying less than cost. This is clearly demonstrated by **Exhibit 9** which is a graph which shows the national average comparison of cost to reimbursement by Medicare, Medicaid and private payers. As you can see when the government payers lower reimbursement, the private payer reimbursement increases and the converse of that statement is also true. When government payers increase reimbursement, private payers' reimbursement lowers. However this has not happened in North Dakota. Over the years, the government payers are reimbursing below cost and BCBS which has 84% of the market for private insurers has not increased their reimbursement to cover the losses on the government payer side. North Dakota has continued to keep premiums to individuals low and this has caused lower reimbursement rates on the private commercial payer side to the healthcare providers, while the costs of providing the care have continued to rise.

The current reimbursement system in North Dakota undermines our ability to invest in modern technology and to make needed improvements and repairs to facilities. It also reduces our ability to subsidize charity care. If the situation continues, North Dakota providers will become unattractive to physicians and to patients and out migration to other states for health care will snowball, causing the State's healthcare system to collapse.

North Dakota hospitals have been recognized nationally for providing high quality and cost-effective healthcare. **Exhibit 10**. North Dakota is not wasting medical resources which cause the cost of care to rise. In fact in North Dakota it is just the opposite. Therefore the rising costs and current financial instability of the healthcare facilities in North Dakota is not attributable to financial mismanagement and wasting of resources.

A major contributor to rising costs in health care in North Dakota is the cost of recruiting physicians to North Dakota when they can live in other areas of the country that pay significantly more. North Dakota hospitals have to pay these physicians more money in order to recruit them to North Dakota than they would receive if they worked in New York, Florida, California and Texas. The government payers and the private payers do not take this into consideration when deciding what reimbursement rates will be to hospitals. In addition, technology and the cost of supplies continue to rise which creates additional contributors to rising health care costs, while reimbursement declines.

The current payment policy of increasing payments for hospital and physician services at an amount that is **consistently less than actual inflationary costs**, coupled with an inability to shift this un-funded cost of Medicaid services to other third party payers like Blue Cross Blue Shield of North Dakota, will ultimately **jeopardize the hospital system and the delivery of care in North Dakota. Healthcare systems will be unable to provide the high quality, efficient healthcare services that patients in North Dakota have become accustom to.**

The financial crises for healthcare facilities will have a broad impact to the citizens of North Dakota and will affect the economy, and jobs in addition to the inability to attract individuals to North Dakota. It is essential that North Dakota continue to be recognized for its high quality and efficient manner that it provides healthcare. It is essential to have a viable healthcare system as it contributes to North Dakota's economy.

In 2002 a study was completed by NDHA to evaluate the healthcare industries' contribution to the economy in North Dakota. In 2002 Health services represented one of the State's largest employment sectors. In 2002 roughly 10.5% of all workers in North Dakota were employed by a healthcare organization and about 5.5% were employed by community hospitals. In 2002 - 8 of the top 12 largest employers in the state were health care providers. In 2002 hospitals generated over a billion dollars in total revenue each year, and much of the revenue represents new wealth to the State. In 2000 hospitals spent $1 Billion, 21 million, with the largest expense being payroll which on average was 43% of each hospital's total annual expense budget. The 43% only included salaries and not

other employee benefits. A large majority of the hospitals expenses are spent in North Dakota. On average 83.6% of the dollars remain in the State. Of the 16.4% of the dollars going out of state the majority is spent on supplies. Clearly, it is important to the economic stability of North Dakota for the healthcare systems to continue as strong economic engines.

In summary, it is imperative that the healthcare reimbursement ecosystem is balanced. Hospitals cannot survive under the current reimbursement system and each payer needs to evaluate and reimburse the hospitals equitably for their use of the valuable healthcare resources in this community. Hospitals are large economic drivers in the State with many North Dakotans relying on jobs in healthcare systems. In order to keep young people and business from migrating from the State and attract them to the State of North Dakota, we need to have financially viable, stable and comprehensive healthcare systems.

MeritCare, Altru, MedCenter and Trinity, are very appreciative and support the Governor's Budget and the proposed increase that brings payment for physician services closer to cost (64% of cost) as well as the positions of NDHA and NDMA. However to rebase physicians at less than cost, simply perpetuates the inequitable payment system that contributes to the overall financial strains on healthcare systems. We respectfully request that this committee accept the Governor's proposed budget with respect to Medicaid funding for both the hospital and the physician component in addition to considering rebasing the physician component to cost. This would require an additional $14,699,550.00 in general funds for the

biennium, in addition to the $4,899,850 for the physician component which has already budgeted. At this level, physician payments would rebase from 51% to about 100% of cost.

Mr. Chairman and members of the Committee, thank you for the opportunity to address you this morning. I am willing to respond to your questions.

Altru Health System | Medcenter One medcenterone.com | MeritCare | Trinity Health

North Dakota 2009 Legislative Session

Senate Appropriations Committee – Chairman Ray Holmberg

Testimony on House Bill 1012

March 2, 2009

Chairman Holmberg and Members of the Senate Appropriations Subcommittee:

My name is Beverley Adams and I am the Executive Administrator for the Health Policy Consortium (HPC). The Health Policy Consortium is comprised of Altru Health System in Grand Forks, MedCenter One Health System in Bismarck, MeritCare Health System in Fargo and Trinity Health System in Minot.

The four health systems that I represent, are integrated health systems they are not simply hospitals. They are hospitals, clinics, labs, physicians, all working under one system. This means that the physicians are employees of the hospital. Traditionally physicians owned their own businesses and had privileges to practice in the hospitals. The four health systems that comprise the HPC realized that having a healthcare system where the physicians are employed by the hospitals provides a more cost efficient and patient focused model of care, despite the reimbursement systems not rewarding quality and efficiency. As a result of the hospitals employing the physicians, these organizations are affected by both the rebasing of Medicaid on the hospital side and the rebasing on the

physician side. The integrated systems are affected by the Medicaid reimbursement on the hospital and the physician side.

These organizations provide specialty and sub-specialty care as well as a significant amount of high quality primary care in the most rural of communities, such as New Town, Cavalier and Wahpeton. In 2007/2008 the HPC health systems provided over $120 million of uncompensated care in either the form of bad debt and charity care services for the patients we serve. This is reflective of the substantial amount of care provided to the more than 80,000 under-insured and uninsured North Dakotans. These numbers will be rising significantly as the economy declines.

Your decisions relating to appropriations for reimbursement for Medicaid recipients has a profound impact on our ability to provide care to North Dakotans and the future viability of health care services within the State of North Dakota.

We would like to discuss the current reimbursement status from all payers in order to explain in detail the delicate healthcare reimbursement ecosystem in North Dakota. The current system is not sustainable and threatens the future viability of healthcare in North Dakota including MeritCare, Altru, MedCenter and Trinity. These healthcare systems are a safety net to the healthcare providers in rural North Dakota. As a safety net, these facilities provide specialty health care services to more than 80% of the citizens of North Dakota. As a safety net these facilities provide specialized services in areas such as cardiology, children's specialty services, trauma, orthopedics, oncology and dialysis.

Altru, MedCenter, MeritCare and Trinity have gone from showing a small profit margin in 2004 to negative margins in 2007. **Exhibit 1** is a slide showing the total operating margin for Trinity, MeritCare, MedCenter and Altru from 2004 to 2007. They also are losing ground with regard to their debt service coverage. **Exhibit 2.** Their average age of plant is also increasing. **Exhibit 3.** Also, in comparison to surrounding States, Missouri, Kansas, Minnesota, Iowa, Montana, Nebraska and South Dakota, the average operating margin was 6.9%, while North Dakota's state wide average is 1.8% in 2007. **Exhibit 4.**

The current financial crises is caused by the healthcare systems having no control over reimbursement rates and no control over rising costs. We are told what we are going to get paid and little if any consideration is given to the actual cost of providing the care. The current fee schedule for Medicaid for hospitals is approximately 30% less than cost to deliver the service. Commercial private payers are 19% below surrounding states and Medicare reimbursement is 30% to 40% below cost and Medicare consists of approximately 38% of the revenue generated by MeritCare alone.

The Medicare system also has built-in mechanisms to geographically adjust the payments in each area of the country. Significant portions of hospital payments are adjusted for the healthcare provider's relative wage index to the national average. The wage index for North Dakota is 82%, resulting in payments of $17 Million (for MeritCare alone) annually below the national average for the same services. Likewise, physician payments

are geographically adjusted and in North Dakota are 91% of the national average. For MeritCare alone, this equates to an additional $8 Million annually below the national average.

Nationally, Medicare payments are insufficient to cover hospital costs for Medicare patients. As a result, those losses must be covered through higher payment from commercial payers. In North Dakota, the BCBSND premiums are approximately 17% below surrounding states, such as Kansas, Missouri, Iowa, Nebraska, Minnesota and South Dakota. **Exhibit 5**. This results in lower reimbursement payments from commercial payers to healthcare providers. This results in North Dakota being unable to cover the losses and offset the inadequate government payers from the higher private commercial payers like the rest of the nation. However, the cost of providing care is not cheaper in North Dakota than surrounding States.

I want to briefly talk about the different payer sources and provide you with some detail on reimbursement in North Dakota, so we can better explain the financial difficulties that the healthcare systems in North Dakota are experiencing.

Medicaid has not been rebased to cost for approximately 17 years. Additionally, since the 1980's the amount of the annual increase in payments to hospitals and physicians has consistently been less than the increase in inflationary costs experienced by hospitals and physicians. In 2007 the legislature had the foresight to commission a study to determine what the actual cost of care is compared to reimbursement rates in order to determine fair

and equitable reimbursement rates for hospitals in North Dakota in the 2009 legislative session. The rebasing study showed that to get the inpatient, psych, rehab, outpatient and physician components to cost, it would require $29 Million of State General Funds for the biennium. **Exhibit 6.**

Based on this information it is clear that Medicaid has been historically under funded. The physician component of the rebasing study had the most significant adjustment as historically, it has been the most underpaid. This has caused the healthcare systems to provide services to Medicaid patients at a loss for the past 17 years.

The second payer I would like to discuss is Medicare. The Medicare Trust Fund is predicted to go bankrupt in 2014. Therefore, Medicare is taking significant steps to cut payments and is actively looking at payment system reform. Based on a Milliman Study prepared for Altru, Trinity, MedCenter One, MeritCare and Innovis analyzing Medicare reimbursement for North Dakota compared to surrounding states, North Dakota's reimbursement is 9% less than Kansas, Iowa, South Dakota, Montana, Missouri, Nebraska and Minnesota. **Exhibit 7.** Although 9% does not appear significant, if MeritCare alone was reimbursed at the average of the surrounding States, this would equate to an additional $25 to $30 Million annually.

The last groups of payers we are going to discuss is the commercial payer. As you know, BCBS has over 84% of the market share of the commercial healthcare coverage in North Dakota. As a result, there has not been equal bargaining footing between the parties

when reimbursement contracts are negotiated. As a result, BCBS has set reimbursement rates and terms and they do not negotiate provider contracts. The choices for hospitals are either to accept the unilateral terms which are subject to change with little notice throughout the year or go without a contract. If the hospitals do not have a contract this means that patients will be billed directly for hospital services and they would be financially responsible to the hospitals for the cost of care and would have to negotiate with BCBS what portion of their bill would be covered by insurance. Since there is no free market system in North Dakota with commercial insurance carriers, North Dakota is reimbursed approximately 19% less than surrounding States including Kansas, Missouri, Iowa, Minnesota, Montana, South Dakota and Nebraska by commercial payers in North Dakota for the same level of care. **Exhibit 8.** If MeritCare was paid the average of the surrounding States on private commercial payers alone, this would mean an additional $30 Million dollars per year.

The information on the comparisons for Medicare and the private commercial payers was obtained through two separate studies completed by Milliman. Milliman is among the world's largest independent actuarial and consulting firms. They are similar to the consultants hired to complete the rebasing study for Medicaid. These studies provide credibility to the data contained in this testimony.

With North Dakota receiving lower reimbursement rates from all payers in comparison to surrounding States and lower rates in comparison to costs, it sheds light on the current financial crises North Dakota healthcare systems are facing. It is important to note that

the surrounding States are not the highest paid States relating to Medicare and private payer reimbursement, in the United States. We are not comparing ourselves with the highest reimbursed States in the Nation; we are comparing ourselves with States that are similarly situated to ourselves.

Throughout the nation, healthcare systems in other States, are compensated by higher private reimbursement when the government payers are paying less than cost. This is clearly demonstrated by **Exhibit 9** which is a graph which shows the national average comparison of cost to reimbursement by Medicare, Medicaid and private payers. As you can see when the government payers lower reimbursement, the private payer reimbursement increases and the converse of that statement is also true. When government payers increase reimbursement, private payers' reimbursement lowers. However this has not happened in North Dakota. Over the years, the government payers are reimbursing below cost and BCBS which has 84% of the market for private insurers has not increased their reimbursement to cover the losses on the government payer side. North Dakota has continued to keep premiums to individuals low and this has caused lower reimbursement rates on the private commercial payer side to the healthcare providers, while the costs of providing the care have continued to rise.

The current reimbursement system in North Dakota undermines our ability to invest in modern technology and to make needed improvements and repairs to facilities. It also reduces our ability to subsidize charity care. If the situation continues, North Dakota providers will become unattractive to physicians and to patients and out migration to

other states for health care will snowball, causing the State's healthcare system to collapse.

North Dakota hospitals have been recognized nationally for providing high quality and cost-effective healthcare. **Exhibit 10.** North Dakota is not wasting medical resources which cause the cost of care to rise. In fact in North Dakota it is just the opposite. Therefore the rising costs and current financial instability of the healthcare facilities in North Dakota is not attributable to financial mismanagement and wasting of resources.

A major contributor to rising costs in health care in North Dakota is the cost of recruiting physicians to North Dakota when they can live in other areas of the country that pay significantly more. North Dakota hospitals have to pay these physicians more money in order to recruit them to North Dakota than they would receive if they worked in New York, Florida, California and Texas. Currently for MeritCare alone, annually $18 Million additional funds are expended over and above the national compensation average for physicians in certain specialty practice areas. The government payers and the private payers do not take this into consideration when deciding what reimbursement rates will be to hospitals. In addition, technology and the cost of supplies continue to rise which creates additional contributors to rising health care costs, while reimbursement declines.

The current payment policy of increasing payments for hospital and physician services at an amount that is **consistently less than actual inflationary costs**, coupled with an inability to shift this un-funded cost of Medicaid services to other third party payers like

Blue Cross Blue Shield of North Dakota, will ultimately **jeopardize the hospital system and the delivery of care in North Dakota. Healthcare systems will be unable to provide the high quality, efficient healthcare services that patients in North Dakota have become accustom to.**

The financial crises for healthcare facilities will have a broad impact to the citizens of North Dakota and will affect the economy, and jobs in addition to the inability to attract individuals to North Dakota. It is essential that North Dakota continue to be recognized for its high quality and efficient manner that it provides healthcare. It is essential to have a viable healthcare system as it contributes to North Dakota's economy.

In 2002 a study was completed by NDHA to evaluate the healthcare industries' contribution to the economy in North Dakota. In 2002 Health services represented one of the State's largest employment sectors. In 2002 roughly 10.5% of all workers in North Dakota were employed by a healthcare organization and about 5.5% were employed by community hospitals. In 2002 - 8 of the top 12 largest employers in the state were health care providers. In 2002 hospitals generated over a billion dollars in total revenue each year, and much of the revenue represents new wealth to the State. In 2000 hospitals spent $1 Billion, 21 million, with the largest expense being payroll which on average was 43% of each hospital's total annual expense budget. The 43% only included salaries and not other employee benefits. A large majority of the hospitals' expenses are spent in North Dakota. On average 83.6% of the dollars remain in the State. Of the 16.4% of the dollars going out of state the majority is spent on supplies. Clearly, it is important to the

economic stability of North Dakota for the healthcare systems to continue as strong economic engines. Also, it is essential have a strong comprehensive healthcare system if you want to encourage economic development. North Dakota is moving towards a place of economic opportunity. Our wind power, oil and our financial surplus has helped us move in that direction. We need to maintain the infrastructure to continue to move in that direction. Your influence and decision making can assist us in staying out of the deep abyss that the rest of the nation is experiencing.

In summary, it is imperative that the healthcare reimbursement ecosystem is balanced. Hospitals cannot survive under the current reimbursement system and each payer needs to evaluate and reimburse the hospitals equitably for their use of the valuable healthcare resources in this community. Hospitals are large economic drivers in the State with many North Dakotans relying on jobs in healthcare systems. In order to keep young people and business from migrating from the State and attract them to the State of North Dakota, we need to have financially viable, stable and comprehensive healthcare systems.

MeritCare, Altru, MedCenter and Trinity, are very appreciative and support the Governor's Budget and the proposed increase that brings payment for physician services closer to cost (64% of cost) as well as the positions of NDHA and NDMA. However to rebase physicians at less than cost, simply perpetuates the inequitable payment system that contributes to the overall financial strains on healthcare systems. We respectfully request that this committee accept the Governor's proposed budget with respect to Medicaid funding for both the hospital and the

physician component in addition to considering rebasing the physician component to cost. This would require an additional $14,699,550.00 in general funds for the biennium, in addition to the $4,899,850 for the physician component which has already budgeted. At this level, physician payments would rebase from 51% to about 100% of cost.

Mr. Chairman and members of the Committee, thank you for the opportunity to address you this morning. I am willing to respond to your questions.

Medicare Comparison Study

Exhibit 8

EXECUTIVE SUMMARY

At the request of the North Dakota Medical Association (NDMA), Milliman has prepared a report comparing health insurance premiums and provider reimbursement levels in North Dakota against other nearby states. We were originally tasked with a comparison against other states in CMS' West North Central Region (Iowa, Kansas, Minnesota, Missouri, Nebraska and South Dakota). We have also added data for Montana, where available, due to similarities in the health care markets in Montana and North Dakota.

The analysis consists of five separate components each comparing North Dakota to the comparison states:

- Section I – health insurance premiums
- Section II – private payer hospital reimbursement
- Section III – private payer physician reimbursement
- Section IV – hospital operating costs
- Section V – hospital operating margins.

In general, North Dakota has lower premiums, provider costs and provider reimbursement levels than the benchmark comparison states. Table A below summarizes the key results for North Dakota and the benchmark states.

Table A
SUMMARY OF KEY RESULTS

Measure	North Dakota	Comparison States' Average	North Dakota vs Other States
I. Average Premium	$332	$399	83%
II. Private Payer Hospital Reimbursement per RVU - Geog. Adjusted	$66	$96	69%
III. Private Payer Physician Reimbursement as % of Medicare - Geog. Adjusted	152%	164%	93%
IV. Hospital Costs per RVU - Geog. Adjusted	$44	$49	91%
V. FY 2007 Total Hospital Operating Margin	1.8%	6.9%	-5.1%

The premium comparison is not adjusted for the relative costs in North Dakota, however the other measures were geographically adjusted for wage and capital cost differences using Medicare geographic adjustments.

The rest of this report presents our methodology, assumptions and additional details comparing North Dakota to the comparison states.

Testimony on House Bill No. 1012
House Human Resources Division
House Appropriations Committee
January 26, 2009

Good morning Chairman Pollert and Committee Members. I'm Robert Thompson. I'm a physician from Grand Forks and practice as an allergist/immunologist and also have administrative duties as executive medical director through which I oversee Altru's care management team and medical specialty and clinical support divisions, including imaging and laboratory services. I was raised in Velva, ND and earned my medical degree from the UND School of Medicine & Health Sciences.

I also serve as the current president of the North Dakota Medical Association. The North Dakota Medical Association is the professional membership organization for North Dakota physicians, residents and medical students.

First of all, I want to thank you for your efforts last legislative session. You provided the first significant update in payments (5% -- 4%) in recent memory. You also put into motion the studies undertaken this past interim by consultants hired by the Department of Human Services to determine what it would take to bring reimbursement for physician and hospital services in line with what it actually costs to provide those services.

Since 2002, the NDMA has expressed the concern of North Dakota's medical community that the Medicaid payment methodology has resulted in payments being substantially less than the actual cost of providing medical services to our Medicaid patients. The ramifications of this are very significant, and that is what I hope to talk with you about this morning.

Our physicians provide the safety net medical services for the most vulnerable of our population – a population of Medicaid patients who present unique, and often some of most difficult, challenges. Our Medicaid patients benefit from

the services we are able to provide them – from a North Dakota health care system that is recognized nationally as a high-quality, efficient health care system. However, we have unique healthcare workforce recruitment and retention challenges occurring in our state that are driven by our demographics, payor reimbursement policies and other practice issues. Our capital needs continue to grow, with aging facilities, technology and equipment – we have the oldest age of plant in the country. Our costs for medical equipment, new technology and supplies continue to increase.

One of our challenges is that, across the board, we are a "poor payor state." According to the methodology developed by the Department's consultant, The Public Consulting Group, physician services in the Medicaid program are reimbursed at about 51% of the cost to provide those services. The commercial market through BlueCross BlueShield of North Dakota pays for medical and hospital services at levels considerably less in North Dakota than by commercial insurers in other states in our region. In Medicare, there is substantial *geographic disparity* in patient services and physician reimbursement levels which is having an increasingly negative impact on patient care and access in North Dakota.

As physicians, we are very concerned that this continuing trend of poor payment does not bode well for the future of health care in North Dakota, and in time the access and quality in health care enjoyed in the state will deteriorate rapidly as health care resources become increasingly scarce and health care workforce and capital needs are not met. We are working on all these avenues that provide resources to sustain our health care system. We suggest that the Medicaid program must do its part to ensure fair payment for the actual cost of medical care received by its Medicaid patients, just as commercial insurers and the federal government must do their part.

Physicians are ethically bound to support access to medical care for all people, and we have been very much involved in efforts to ensure the long-term sustainability of the Medicaid program in North Dakota. We have always hoped that this focus would lead to a fair and equitable payment system that funds medical services to appropriate levels, helping to ensure that there is continued access to quality care for Medicaid patients.

We appreciate the efforts of the 2007 Legislative Assembly in appropriating funds to the Department for hiring consultants to determine what it would take financially to bring physician and hospital payments to a level that matches what it actually costs to provide services to our Medicaid patients.

We also appreciate the efforts of the Department's staff in including us in discussions with the consultant, The Public Consulting Group, which studied and determined that physician payments currently reimburse physician services at about 51% of what it costs to provide those services.

We appreciate the recognition by Governor Hoeven in the executive budget of the need to rebase physician payments. As you know, the executive budget would appropriate 25% of the amount it would take to reimburse for physician services at actual cost. This limited "rebase" would increase physician payments from 51% to about 64% of the actual cost to provide physician services, using the methodology of the consultant. Other Medicaid service providers are being rebased at much higher levels. You were provided by the Department with a schedule that identifies various funding levels to provide 50%, 75% or 100% of the amount it would take to rebase physician services to 100% of cost, which is attached to my written testimony.

Under the scenarios you received from the Department, a rebase at 50% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $4,899,850 in general funds for the biennium, in addition to the $4,899,850 already budgeted. At this level, physician payments would rebase from 51% to about 75% of cost. A rebase at 75% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $9,799,700 in general funds for the biennium, in addition to the $4,899,850 already budgeted. At this level, physician payments would rebase from 51% to about 89% of cost. A rebase at 100% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $14,699,550 in general funds for the biennium, in addition to the $4,899,850 already budgeted. At this level, physician payments would rebase from 51% to about 100% of cost.

The North Dakota Medical Association supports the Governor's budget and the proposed increase that brings payment for physician services closer to cost (64% of cost). However, to rebase at less than cost only continues a pattern of inequitable payment that will continue to hinder our ability to maintain a health care system in our state that provides higher quality at less cost than most other states in the country. We encourage you to consider further investments that would better reflect the intent to rebase to cost, and a legislative commitment to ensuring future access to care for Medicaid patients.

Physicians in North Dakota do their part in providing good access to quality medical care for Medicaid beneficiaries while receiving reimbursement well below the cost for that care. Our Medical Association and individual physicians are committed to the long-term sustainability of the Medicaid program. We continue to participate in the Department's prescription drug cost containment and disease management initiatives, as well as discussions about future Medicaid reform options. We also help to resolve service issues for Medicaid providers and patients as they arise. Our concern is that low reimbursement rates and administrative burdens not continue to create any more difficulty for physicians in treating Medicaid patients.

We look forward to working with your Human Resources Division, Chairman Pollert, in addressing the need for equitable payment for Medicaid medical services. Thank you.

I

Resolution

Introduced By: **NDMA Council (Commission on Socio Economics)**
Subject: **Support Rebase of Medicaid Physician Payments to Actual Cost**

A resolution urging the Governor and the 2009 North Dakota Legislative Assembly to support steps to rebase Medicaid physician payments to actual cost based on the findings and conclusions of the state's consultant.

WHEREAS, in 2007, 2005 and 2003, the NDMA House of Delegates adopted resolutions urging the Governor and North Dakota Legislative Assembly to take steps to address the unfairness of state Medicaid rates that do not cover practice costs for physicians and hospitals; and

WHEREAS, in the 2007 North Dakota Legislative Assembly NDMA advocated successfully for an appropriation to the ND Department of Human Services to hire a health care consultant during the 2007-08 interim to develop a method for rebasing hospital, physician, and ambulance services payment rates under the Medicaid program to actual cost and to develop cost estimates for the 2009-11 biennium on this actual cost basis and report its findings directly to the 2009 appropriations committees; and

WHEREAS, the consultant, The Public Consulting Group, determined that the biennial budget for Medicaid physician fee schedule would need to nearly double to pay physicians for the actual cost of providing medical care to their Medicaid patients and that the weighted average cost per RVU calculated by the consultant is $77.15, as compared to the current $39.13 conversion factor; and

WHEREAS, according to the ND Department of Human Services, it will take an increase of $19.5 million in general funds ($53 million total state and federal) to rebase Medicaid physician payments to actual cost; and

WHEREAS, NDMA has participated actively within forums established by the Governor and Department of Human Services since 2002 in efforts to rebase Medicaid physician payments to ensure continued good access to medical care for Medicaid beneficiaries and initiate other reforms to the Medicaid program to ensure the program's long-term sustainability;

THEREFORE, BE IT RESOLVED BY THE 2008 HOUSE OF DELEGATES OF THE NORTH DAKOTA MEDICAL ASSOCIATION urging the Governor and the 2009 North Dakota Legislative Assembly to support steps to rebase Medicaid physician payments to actual

cost based on the findings and conclusions of the state's consultant; and

BE IT FURTHER RESOLVED, that these steps include consideration of developing a mechanism for periodic rebasing by the ND Department of Human Services of Medicaid physician and hospital payments; and

BE IT FURTHER RESOLVED that copies of this resolution be forwarded to Governor John Hoeven and the Appropriations Committee Chairs of the North Dakota Senate and House of Representatives.

Adopted September 19, 2008

Steven P. Strinden, Speaker of the House
North Dakota Medical Association

Testimony on Engrossed HB No. 1012
Senate Appropriations Committee
March 9, 2009

Chairman Holmberg and Committee Members, I'm Bruce Levi and I serve as executive director of the North Dakota Medical Association. The North Dakota Medical Association is the professional membership organization for North Dakota physicians, residents and medical students.

First of all, I want to thank you for your efforts last legislative session. You provided a significant update in payments (5% -- 4%) and also put into motion the studies undertaken this past interim by consultants hired by the Department of Human Services to determine what it would take to bring reimbursement for physician and hospital services in line with what it actually costs to provide those services.

Since 2002, the NDMA has expressed the concern of North Dakota's medical community that the Medicaid payment methodology has resulted in payments being substantially less than the actual cost of providing medical services to our Medicaid patients.

Our physicians provide the safety net medical services for the most vulnerable of our population – a population of Medicaid patients who present unique, and often some of most difficult, challenges. Our Medicaid patients benefit from the services physicians are able to provide them – from a North Dakota health care system that is recognized nationally as a high-quality, efficient health care system. However, we have unique healthcare workforce recruitment and retention challenges occurring in our state that are driven by our demographics, payor reimbursement policies and other practice issues. Our capital needs continue to grow, with aging facilities, technology and equipment – we have the oldest age of plant in the country. Our costs for medical equipment, new technology and supplies continue to increase.

One of our challenges is that, across the board, we are a "poor payor state." According to the methodology developed by the Department's consultant, The Public Consulting Group, physician services in the Medicaid program are reimbursed at about 51% of the cost to provide those services. The commercial market through BlueCross BlueShield of North Dakota pays for medical and hospital services at levels considerably less in North Dakota than by commercial insurers in other states in our region. In Medicare, there is substantial *geographic disparity* in patient services and physician reimbursement levels which is having an increasingly negative impact on patient care and access in North Dakota.

As physicians, we are very concerned that this continuing trend of poor payment does not bode well for the future of health care in North Dakota, and in time the access and quality in health care enjoyed in the state will deteriorate rapidly as health care resources become increasingly scarce and health care workforce and capital needs are not met. We are working on all these avenues that provide resources to sustain our health care system. We suggest that the Medicaid program must do its part to ensure fair payment for the actual cost of medical care received by its Medicaid patients, just as commercial insurers and the federal government must do their part.

Physicians are ethically bound to support access to medical care for all people, and we have been very much involved in efforts to ensure the long-term sustainability of the Medicaid program in North Dakota. We have always hoped that this focus would lead to a fair and equitable payment system that funds medical services to appropriate levels, helping to ensure that there is continued access to quality care for Medicaid patients.

We appreciate the recognition by Governor Hoeven in the executive budget of the need to rebase physician payments. As you know, the executive budget would appropriate 25% of the amount it would take to reimburse for physician services at actual cost. This limited "rebase" would increase physician payments from 51% to about 64% of the actual cost to provide physician services, using the methodology of the consultant. Other Medicaid service providers are being rebased at much higher levels. The House was provided a schedule by the Department that identifies various funding levels to provide 50%, 75% or 100% of the amount it would take to rebase physician services to 100% of cost. *In the House, the*

appropriation for Medicaid physician payments was decreased from 25% to 20% of the amount it would take to reimburse for physician services at actual cost. After the House action, this limited "rebase" would increase physician payments from 51% to about 60% (rather than 64% under the executive budget) of amount it would take to rebase physician services to 100% of cost, using the methodology of the consultant. The House also decreased the second year "inflator" from 7% to 6% for physician payments.

Under the scenarios received from the Department, a rebase at 50% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $4,899,850 in general funds for the biennium, in addition to the $4,899,850 in the executive budget. At this level, physician payments would rebase from 51% to about 75% of cost. A rebase at 75% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $9,799,700 in general funds for the biennium, in addition to the $4,899,850 in the executive budget. At this level, physician payments would rebase from 51% to about 89% of cost. A rebase at 100% of what the consultant said it would take to bring physician payments to actual cost would cost an additional $14,699,550 in general funds for the biennium, in addition to the $4,899,850 in the executive budget. At this level, physician payments would rebase from 51% to about 100% of cost.

The North Dakota Medical Association supports the executive budget and the proposed increase that brings payment for physician services closer to cost (64% of cost). However, to rebase at less than 100% of cost only continues a pattern of inequitable payment that will continue to hinder our ability to maintain a health care system in our state that provides higher quality at less cost than most other states in the country. We encourage you to consider further investments that would better reflect the intent to rebase to 100% of cost, and a legislative commitment to ensuring future access to physician services for Medicaid patients.

Physicians in North Dakota do their part in providing good access to quality medical care for Medicaid beneficiaries while receiving reimbursement well below the cost for that care. Our Medical Association and individual physicians are committed to the long-term sustainability of the Medicaid program. We continue to participate in the Department's prescription drug

cost containment and disease management initiatives, as well as discussions about future Medicaid reform options. We also help to resolve service issues for Medicaid providers and patients as they arise. Our concern is that low reimbursement rates and administrative burdens not continue to create any more difficulty for physicians in treating Medicaid patients.

We look forward to working with the Committee in addressing the need for equitable payment for Medicaid medical services. Thank you.

Human Services Budget

January 26, 2009

Testimony – Human Services Appropriations Committee
North Dakota EMS Association
Mark Weber, NDEMSA President

Good Morning Chairman Pollert and members of the committee. My name is Mark Weber, I am the President of the North Dakota Emergency Medical Services (EMS) Association and the EMS Director at the Heart of America Medical Center in Rugby. I thank you for the opportunity to testify in support of the Ambulance Medicaid Rebasing.

Currently Medicaid reimbursement for ambulance services is well below the cost of providing service especially in the rural areas. For the last few years we have been working closely with the Department of Human Services toward a fair reimbursement rate for ambulance services. We were involved with the ambulance rebasing study and appreciate being allowed to assist the department. We believe the 2009-2011 budget reflects a increase that is long overdue. This increase will put the reimbursement rate close to the Medicare reimbursement levels. Which in most rural areas of ND is less than half of the actual costs of providing service?

Obviously there are many issues facing ND Ambulance Services, funding is a primary concern. By increasing the Medicaid reimbursement rates for ambulance services you will help keep services available.

Chairman Pollert, thank you for this opportunity to testify and I would be happy to answer questions the committee may have.

North Dakota Department of Human Services
HB 1012 – Traditional Medicaid Services
Ambulance Codes - Billed to Paid Percentage

Code	Procedure Code Description	Amount Billed	Amount Paid	% of Paid to Billed Amount
A0425	GROUND MILEAGE	$1,154,636.25	$501,468.46	43.43%
A0426	ALS, NON-EMERGENCY TRANSPORT	$120,028.84	$40,127.00	33.43%
A0427	ALS, EMERGENCY TRANSPORT	$1,580,720.50	$479,199.16	30.32%
A0428	BLS, NON-EMERGENCY TRANSPORT	$117,683.93	$24,399.82	20.73%
A0429	BLS, EMERGENCY TRANSPORT	$701,085.06	$208,717.63	29.77%
A0430	TRANSPORT (FIXED WING)	$289,300.48	$66,759.04	23.08%
A0431	TRANSPORT (ROTARY WING)	$355,681.20	$57,561.12	16.18%
A0435	FIXED WING AIR MILEAGE	$349,262.27	$195,574.51	56.00%
A0436	ROTARY WING AIR MILEAGE	$246,221.85	$57,804.27	23.48%
A0998	AMBULANCE RESPONSE/TREATMENT	$67,171.24	$20,205.00	30.08%

In 2007 SB2012, appropriation for ambulance providers was given for general funds of $125,000 (federal match at $222,029) for a total of $347,029 along with the 4% + 5% inflationary increase. With input from the NDEMSA, the additional appropriation was allocated to Ground Mileage Rates, BLS Non-Emergency Transport, & BLS Emergency Transport.

Human Services Budget HB1012

March 4th, 2009

Testimony – Senate Appropriations Committee
North Dakota EMS Association
Mark Weber, NDEMSA President

Good Morning Chairman Holmberg and members of the committee. My name is Mark Weber, I am the President of the North Dakota Emergency Medical Services (EMS) Association and the EMS Director at the Heart of America Medical Center in Rugby. I thank you for the opportunity to testify in support of the Ambulance Medicaid Rebasing.

Currently Medicaid reimbursement for ambulance services is well below the cost of providing service, especially in the rural areas. The 2007 legislative body provided funding for a rebasing study of ambulance service Medicaid reimbursement. The study found that the cost to provide an ambulance transport in rural ND is $830.32 per transport. ND Medicaid reimburses $207.15 for a BLS base rate and $5.41/mile so in Rugby we would receive $212.56 when we transport a patient that has Medicaid as their payer, which is a $617.76 shortfall.

For the last few years we have been working closely with the Department of Human Services toward a fair reimbursement rate for ambulance services. We were involved with the ambulance rebasing study and appreciate being allowed to assist the department. We believe the 2009-2011 budget reflects an increase that is long overdue. This increase will put the reimbursement rate close to the Medicare reimbursement levels $307.77 per run which in most rural areas of ND is still less than half of the actual costs of providing service?

You will notice that the rebasing study recommends a 67.85% increase in ambulance reimbursement. That sounds like a large increase unless you look at what we have been receiving for the service we provide. (see: Ambulance Codes-Billed to Paid Percentage)

The House Human Appropriations Committee decreased the rebasing to 75% of the Governors recommendation. We believe this is a significant increase however it still does not cover even half of what it costs us to provide the service.

Obviously there are many issues facing ND Ambulance Services, funding is a primary concern. By increasing the Medicaid reimbursement rates for ambulance services you will help keep services available.

Chairman Holmberg, thank you for this opportunity to testify and I would be happy to answer questions the committee may have.

- Summary

Guiding Principle

Commercial business is an important source of profits and profits generated on this business must more than compensate for non-allowable "costs"

Issue

One major third party payer in North Dakota with limited competition

- Market power or market responsibility
- Payer cost of providing care in urban areas vs. rural areas

Reported that standard contract exists for all ND CAHs

- Inpatient – DRG based system; Outpatient – Fee schedule

For CAHs that have analyzed allowed amounts relative to fully allocated costs, generally breakeven to losses

So how do they compare to other Blue Cross Plans across the Country?

J

North Dakota Department of Human Services
HB 1012 – Traditional Medicaid Services
Critical Access Hospital Detail
To the House

At the end of the 2007 Legislative Session (April 2007), there were 31 Critical Access Hospitals (CAHs) in North Dakota.

Since that time the following hospitals have received designation as Critical Access:

Towner County Medical Center (Cando)	July 2007
Heart of America Medical Center (Rugby)	September 2007
Mercy Hospital (Devils Lake)	January 2008
Mercy Hospital (Williston)	September 2008

This brings the total of Critical Access Hospitals to 35.

There are two additional hospitals that plan to convert to critical access:

- Jamestown in progress
- Dickinson contingent on Richardton transitioning to a Skilled Nursing Facility.

2007 SB 2012 (DHS Appropriation) contained 4.3 million (total) to increase the reimbursement for CAHs (for inpatient and outpatient hospital services) to 100% of cost. This change was implemented July 1, 2007. (The $4.3 million was calculated by a vendor under contract with the ND Healthcare Association.)

By analyzing the increases paid to CAHs during the first year of the biennium, the Department is estimating to spend $2.7 million (total).

North Dakota
Chiropractic
Association

Good afternoon Chairman Holmberg and members of the Senate Appropriations Committee.

My name is Rob Hasse. I am a chiropractic physician from West Fargo, ND and the president of the ND Chiropractic Association.

I would like to thank the committee for allowing public testimony on the issues that are before you. I would like to address the topic of rebasing chiropractic services payment rates.

We feel that we provide a much needed service to the people of North Dakota in a very cost effective, efficient manner. The one population that is underserved by chiropractic in this state is the Medicaid population. Many chiropractors cannot afford to provide this service to the Medicaid population. That is the main reason that during the 2007 legislative session we asked the legislature to consider increasing reimbursement for chiropractic services because the reimbursement was less than 50% of the cost to provide the service. We were grateful for the consideration of this legislature supporting an increase that brought our reimbursement up to the 50% level of cost. However, this was still significantly less than the cost to provide this service. The total 2007-09 budget for chiropractic is $455,167. We also had the opportunity to participate in the Medicaid services study this past interim where the cost of chiropractic services was analyzed. This resulted in rebasing of chiropractic services to 100% of the cost determined by the study, resulting in an increased budget to $987,572). The House reduced the rebasing amount to 75% of the cost determined by the study.

We were grateful to be considered in the study with PCG (Public Consulting Group). We did find the initial information difficult to deal with and I made a few phone calls to PCG and DHS and made trip to Bismarck to meet with DHS and the PCG group to discuss our concerns. We were able to work out the details that made it workable for the chiropractors so that we could provide you with the most accurate information that we could.

We believe that the information gathered during this study justified the rebasing. Most MA chiropractic services provided are for manipulative codes. (98940-98941). There are a number of studies that have shown chiropractic care to be more cost effective than traditional medical care for neuromusculoskeletal problems. We also believe that there will be more of a cost shift to DHS and not a cost increase due to providers more willing to see patients that are better served by seeing chiropractors.

NDCA appreciates the Legislature's consideration to rebase MA services for chiropractic care and we would request that you consider restoring MA reimbursement for services to 100% of the cost as included in the governor's budget for chiropractors that service the Medicaid population of ND.

Chairman Holmberg and members of the committee, thank you for your time this afternoon. I will answer any questions the committee may have.

P.O. Box 2144 • Bismarck, ND 58502-2144 • 701-530-2141

H

Testimony – January 26, 2009
HB 1012
House Appropriations – Human Resources Division
Chairman Pollert

Good morning Chairman Pollert and members of the House Appropriations Committee, Human Resources Division.

My name is Eric Froehling. I am a chiropractic physician from Wishek, ND. Today I am representing the North Dakota Chiropractic Association.

First of all I would like to thank the committee for allowing me the time to speak about the topic of rebasing chiropractic services payment rates.

We feel chiropractic care in North Dakota is of great quality and is very efficient and effective. Unfortunately, we feel the Medicaid population in need of chiropractic care in ND has been underserved because many chiropractors could not afford to provide this service. During the 2007 Legislative Session, we asked the Legislature to consider increasing reimbursement for chiropractic services because reimbursement was less than 50% of the cost to provide the services. We appreciated the consideration of this committee and the Legislature supporting an increase that brought reimbursement up to around the 50% level, however it was still significantly below cost to provide the service. The total 2007-09 budget for chiropractic is $455,167. Additionally, we participated in the Medicaid services study this past interim where cost of chiropractic services was analyzed, resulting in a rebasing of chiropractic services as determined by the study and included in the DHS budget ($987,572).

We are grateful the legislature included us in the cost study for the various provider groups and we believe the cost study shows that rebasing is justified. Nearly all the MA chiropractic services provided are for codes 940 and 941 for manipulation services. A number of studies have shown chiropractic care to be more cost effective for musculoskeletal problems than traditional medical care. Maintaining and adding chiropractic access (by doctors continuing and more willing to treat Medicaid patients) by rebasing reimbursement to cover the cost of providing services may actually turn out to be more of a cost shift, not a cost increase to DHS.

Chairman Pollert and members of the committee, thank you for your time today. The NDCA supports HB 1012, and we ask for your favorable consideration of the proposed rebasing of providers, including chiropractic services, to maintain and provide medical care for the Medicaid population in ND.

A

Testimony before the House Appropriations Committee **January 26, 2009**

HB 1012 as it relates to Dental Medical Assistance Reimbursement

Chairman Pollert and members of the Committee: My name is Dr. Dennis Sommers. I am a practicing dentist in Minot and serve as President of the North Dakota Dental Association (NDDA). I present this testimony in support of HB 1012 with regard to Governor Hoeven's dental Medicaid budget proposal.

The 2000 Surgeon General's report "Oral Health Care in America" noted that dental decay is the most common chronic childhood disease and that low income children suffer twice as much tooth decay as more affluent children. By and large, the segment of North Dakota's population for which Medicaid services are provided does not engage itself in this legislative process. Children, the primary beneficiary of dental Medicaid services in North Dakota, are not equipped to voice their needs. The NDDA is here to speak for them. The NDDA supports the state's efforts to address shortcomings in providing dental services to low income families.

Governor Hoeven's budget proposes funding dental Medicaid at a level similar to that which was passed by the ND House and Senate two years ago. Although such funding was approved by both chambers during the 2007 legislature, the appropriation was cut by 87% in the final hours by conference committee when different starting dates appeared in each chamber's bill. Governor Hoeven's budget reaffirms efforts of the 2007 legislature funding dental Medicaid based on 75% of billed charges – a target shown in other states to be successful to increase unmet treatment needs, provider participation and geographic access while stabilizing per-enrollee costs and increasing both provider and enrollee satisfaction.

The Centers for Medicare & Medicaid Services (CMS) 2008 NATIONAL DENTAL SUMMARY points out:

> "...a State must adhere to certain federal requirements. ... for most individuals under the age of 21, dental services are a mandatory benefit as part of the Early and Periodic Screening, Diagnostic and Treatment (EPSDT) service as defined in section 1905(r) of the Social Security Act."

Such statutory requirements are intended to ensure all eligible Medicaid beneficiaries under 21 are both informed of ***and have access to*** dental services. How are we doing? Measurements by CMS ranked North Dakota dead last in 2006 with only 19% of eligible Medicaid enrollees accessing dental care. With a national average of 50 to 55 percent of adults and children seen by dentists annually, North Dakota's Medicaid access to care falls woefully short. We should all recognize the need to improve dental access for North Dakota's low-income families – especially children.

The CMS 2008 Summary further reports dental Medicaid program improvements can be expected to yield significant savings in treatment costs on an individual level since on average, ongoing treatment costs to maintain oral health per individual will decrease over time. Further substantial savings will be seen since care provided in dental office settings reduces the frequency of emergency room visits by Medicaid enrollees where treatment is primary palliative and recurring rather than definitive and corrective. This is particularly likely for very young children with catastrophic treatment needs that often require costly hospital services in addition to significant dental treatment. These costs can account for approximately 30% of typical Medicaid dental program expenditures. Savings for high-needs children also could be achieved with the aid of sedation, when appropriate for some children, rather than general anesthesia in a hospital setting. However, North Dakota does not yet reimburse adequately for such sedation services. Engaging the capacity of private-sector dentists with adequate Medicaid funding will maximize use of taxpayer dollars in providing dental care to the state's low-income population while at the same time reducing the need for investments in "safety-net" clinic capacity such as those clinics now operating in Bismarck, Fargo and Grand Forks.

Next week, dentists in communities across North Dakota will be working to improve access for North Dakota's less fortunate population through Give Kids a Smile projects, an American Dental Association (ADA) nationwide event where dentists volunteer care for children. Since 2000, North Dakota dentists have also given time and resources through the Donated Dental Services Program, providing just under a million dollars of free dentistry for disabled and elderly North Dakotans. Dentists in many communities voluntarily provide yearly dental screenings for Head Start kids. Through these projects and more, dentists demonstrate their generosity on a daily basis. While 90% of North Dakota dentists are scheduled providers of Medicaid dentistry, services cost more to deliver

than dentists are reimbursed through Medicaid. As small business operators dentists are unable to open their doors to all Medicaid patients. With the majority of dentists forced to limit the numbers of Medicaid patients they see, 20% of dentists now provide 80% of the state's Medicaid services.

The governor's budget is an extremely important step in achieving the access to dental care North Dakota is mandated by the Social Security Act to provide. During other testimony on this subject Committee members have often asked, "What guarantee can you offer that funding will improve access to care?" The ADA's report found at http://www.prnewswire.com/mnr/ada/20973/ answers this question. The report states that experience in states like Georgia, Indiana, Michigan, Tennessee and South Carolina shows that raising reimbursement to levels that approximate the 75th percentile of prevailing fees can significantly increase access and utilization of dental services by the Medicaid-eligible and participation by dentists, especially when such initiatives are actively promoted by state dental organizations and commercial intermediaries. We have every reason to believe similar results can and will be achieved in North Dakota with adoption of the dental Medicaid funding proposals in Governor Hoeven's budget.

A "Dental Medicaid in North Dakota Fact Sheet" is included for your review with this testimony. The North Dakota Dental Association urges your support of Governor Hoeven's dental Medicaid budget proposals as a way to:

- Fulfill the intent of the 2007 legislature's vote
- Enable the state to meet access requirements mandated by the Social Security Act
- Reduce costs connected to dental related emergency room visits
- Improve overall health and well being of North Dakota's Medicaid recipients

Thank you.

Dr. Dennis Sommers
President
North Dakota Dental Association.

DENTAL MEDICAID IN NORTH DAKOTA
FACT SHEET-2009

- Oral health is essential to overall health, especially for children, developmentally-delayed patients, elderly, and medically-compromised individuals.

- The North Dakota Oral Health Coalition has adopted Medicaid reimbursement as a prime issue and urges the ND Legislature to improve access to care for Medicaid eligible by increasing reimbursement.

- As access to care deteriorates, Medicaid patients increasingly show up at Emergency Rooms for dental problems. No definitive treatment can be provided. However the costs are significantly higher than if provided in a dental office.

- Low Medicaid fee reimbursement is the number one reason that dentists limit their participation in Medicaid. Poor patient compliance, failed appointments, and limitations in allowed treatment are other reasons that dentists limit participation.

- Federal courts have determined that adequate access exists for Medicaid patients when at least 50% of dentists see any and all Medicaid patients presenting for treatment. In ND, only 20% of dentists see any and all Medicaid patients that present for treatment (UND Center for Rural Health). This percentage was 49% in 1992.

- ND Dental Medicaid reimburses dentists below the cost of providing dental services to Medicaid patients (ND Department of Human Services).

- The majority of participating dentists can afford to do relatively little Medicaid. Only 20% of the participating dentists perform the majority of the Medicaid services provided in the state.

- Other states have increased fees significantly and subsequently saw significant increases in dentist participation.

- Adequate dentist reimbursement, along with efficient claims submission and payment, will improve access to care for North Dakota's most vulnerable citizens, reduce costly and inappropriate Emergency Room treatment, and prevent more expensive specialty care for this population. Care for the most vulnerable population must be a shared responsibility between dentists and the state of North Dakota.

- Oral Health is integral to the healthy physical, social-emotional and intellectual development of every child. Unfortunately, many children across America suffer from poor oral health and a lack of access to oral health care.

- The 2000 Surgeon General's Report, "Oral Health in America," noted that not only is dental caries the most common chronic disease of childhood, but that low-income children suffer from twice as much tooth decay as more affluent children.

B

TESTIMONY BEFORE THE HOUSE APPROPIRATIONS
HUMAN RESOURSES DIVISION
REGARDING HOUSE BILL 1012
JANUARY 26, 2009

Chairman Pollert, members of the committee, my name is David Zentner and I am a member of the North Dakota Oral Health Coalition.

The coalition was formed in 2005 and is a collaborative, statewide group comprised of a diverse number of public and private agencies, organizations and individuals dedicated to improving dental care in our state. The mission of the Coalition is to develop and promote innovative strategies to achieve optimal oral health for all North Dakotans.

Oral health care is an important component of overall primary health care for both children and adults. A statewide needs assessment of low-income individuals sponsored by the North Dakota Community Action Agency in 2006 reported that oral health care was a major unmet need. Forty percent of respondents ranked dental health care among the top three unmet needs along with food and utilities.

According to the U.S. Surgeon General's Report on Oral Health, tooth decay, although preventable, is a chronic disease that affects children's ability to concentrate and learn, as well as their speech development, eating habits, activity levels and self-esteem. It is the most common chronic disease of childhood and in the U.S. tooth decay is five times more common than asthma and seven times more common than hay fever in our children. Tooth decay, left untreated can cause pain and tooth loss.

The North Dakota Department of Health 2004-2005 Oral Health Survey of School Children disclosed that 56% of third grade children had cavities and/or fillings which is substantially higher than the Healthy People 2010 of 42 percent. Children in pain cannot learn, eat properly and can suffer failure to thrive.

Many children and adults do not have access to appropriate dental care because they are unable to find a dentist who is willing to provide services to eligible Medicaid recipients. Only about 20% of the dentists in North Dakota provide about 80% of the dental care that is currently delivered to Medicaid recipients. Dentists indicate that the number one reason they do

not serve Medicaid patients is the low pay rates they receive from the Department of Human Services.

We believe that increased Medicaid payments to dentists will result in an increase in the number of dental providers willing to serve Medicaid recipients. It is imperative that the state experiences an improvement in access to dental care for our low-income citizens. Increased payments to dentists are an important component in reaching that goal.

The coalition is also supportive of the expansion of the Healthy Steps program to 200% of the federal poverty level. This expansion will result in increased access to dental services for the children of our state.

The Dental Coalition urges you to include the increase in payments to dentists and the expansion of the Healthy Steps program as proposed by Governor Hoeven in the appropriation for the Department of Human Services.

I would be happy to respond to any questions you may have.

C

Testimony presented by Brad King DDS
Before the House Appropriations Subcommittee
January 26, 2009
Regarding House Bill 1012 (Dental Medicaid)

Adult Medicaid Statistics

The average dental clinic runs an overhead of 60-65% so any services paid at less than that is provided at a loss. At 60- 65% the dentist is working for free with no compensation.

Procedure	Blue Cross UCR	Medicaid Fee	Percentage
2 surf silver filling	$135	$61.10	45%
2 surf white filling	$161	$72.17	44.8%
Crown	$849	$255.39	30%
Root Canal	$610	$248.64	40.8%
Full Upper Denture	$1440	$575.70	40%
Tooth Extraction	$135	$44.42	32.8%

Between July 1 and Dec. 31 2008 Prairie Rose Family Dentists in Bismarck provided $121,313 in Medicaid services and was reimbursed $42,185 during that time. We run an overhead of about 55%. So over the last 6 months we paid approximately $24,500 out of our own pockets over to treat Medicaid patients

D

Good Morning, I am Linda Kleinjan. I am the practice administrator of Face and Jaw Surgeons. This is a group practice for the specialty of Oral and Maxillofacial Surgery with clinics in Bismarck, Fargo, Grand Forks and Minot. The practice has six surgeons and approximately 45 employees in the locations in North Dakota.

Oral and Maxillofacial Surgery is a specialty of Dentistry with emphasis on tooth removal, correction of deformities and malformations of the jaws, pathology

of the face and neck, treatment of facial trauma, facial and dental infections etc.

Today I wish to relay to you the ongoing difficulties that our surgeons have with the North Dakota Medicaid system. Medicaid is a necessary support system for the non-insured, underinsured, disabled and poor within our state. Its policies and fee structure also cover the incarcerated, both adult and juvenile within the control of the North Dakota Department of Corrections,

as well as certain other institutionalized individuals.

From its inception the Medicaid system has been under-funded for the dental needs of its recipients. Currently, our practice sees Medicaid patients on a daily basis both in our clinics, as well as, in the hospitals that our surgeons serve. These patients often require comprehensive evaluation, medical consultation before treatment, and extensive and complicated surgical care. Under the current system, reimbursement

covers only 2/3 of the costs of delivering care. That is, our overhead which excludes all compensation to the surgeons is over 64% of billed charges, while state reimbursement is only 45% of billed charges. This means that for every Medicaid patient treated by our practice we suffer an actual out of pocket expense greater than the revenue received for that patients care. For just one of our surgeons in Bismarck in 2008 this resulted in a expense loss of over $44,450. With six

surgeons and 4 clinics the total expense losses are very significant to the practice. In an era in which government has or will mandate electronic medical record keeping (estimated at $150-200,000 for our practice) and electronic prescriptions ($3,000 per surgeon) without any method of recouping this costs, Medicaid losses have forced us to consider discontinuation of service to Medicaid recipients. The very concept of such a decision is abhorrent to our surgeons, who strongly believe that health care to relieve pain and suffering is

the right and expectation of all the residents of our state.

The Medicaid system over the past decade has had difficulties with claims processing, computer coding, pre-determination of recipient liability after treatment, payment delays and limited personnel to service the professional dental community. These issues make the current system difficult for providers and their staffs to efficiently deliver care in a timely and cost effective manner. Delays in acute surgical care

usually cause the care to become more complicated and therefore more costly.

Our practice does not wish to discontinue care to any patient group, especially the most vulnerable group within our communities, however if relief is not forthcoming, the financial stability of our practice will dictate such a discontinuation. We hope that you will consider the needs of the Medicaid patient population and adequately fund the system so that we may continue to serve our

patients in the future as we have for over thirty years.

Thank you for allowing me to make these comments today, and I will be happy to answer your questions.

For Want of a Dentist

Pr. George's Boy Dies After Bacteria From Tooth Spread to Brain

By Mary Otto
Washington Post Staff Writer
Wednesday, February 28, 2007; B01

Twelve-year-old Deamonte Driver died of a toothache Sunday.

A routine, $80 tooth extraction might have saved him.

If his mother had been insured.

If his family had not lost its Medicaid.

If Medicaid dentists weren't so hard to find.

If his mother hadn't been focused on getting a dentist for his brother, who had six rotted teeth.

By the time Deamonte's own aching tooth got any attention, the bacteria from the abscess had spread to his brain, doctors said. After two operations and more than six weeks of hospital care, the Prince George's County boy died.

Deamonte's death and the ultimate cost of his care, which could total more than $250,000, underscore an often-overlooked concern in the debate over universal health coverage: dental care.

Some poor children have no dental coverage at all. Others travel three hours to find a dentist willing to take Medicaid patients and accept the incumbent paperwork. And some, including Deamonte's brother, get in for a tooth cleaning but have trouble securing an oral surgeon to fix deeper problems.

In spite of efforts to change the system, fewer than one in three children in Maryland's Medicaid program received any dental service at all in 2005, the latest year for which figures are available from the federal Centers for Medicare and Medicaid Services.

The figures were worse elsewhere in the region. In the District, 29.3 percent got treatment, and in Virginia, 24.3 percent were treated, although all three jurisdictions say they have done a better job reaching children in recent years.

"I certainly hope the state agencies responsible for making sure these children have dental care take note so that Deamonte didn't die in vain," said Laurie Norris, a lawyer for the Baltimore-based Public Justice Center who tried to help the Driver family. "They know there is a problem, and they have not devoted adequate resources to solving it."

Maryland officials emphasize that the delivery of basic care has improved greatly since 1997, when the

state instituted a managed care program, and 1998, when legislation that provided more money and set standards for access to dental care for poor children was enacted.

About 900 of the state's 5,500 dentists accept Medicaid patients, said Arthur Fridley, last year's president of the Maryland State Dental Association. Referring patients to specialists can be particularly difficult.

Fewer than 16 percent of Maryland's Medicaid children received restorative services -- such as filling cavities -- in 2005, the most recent year for which figures are available.

For families such as the Drivers, the systemic problems are often compounded by personal obstacles: lack of transportation, bouts of homelessness and erratic telephone and mail service.

The Driver children have never received routine dental attention, said their mother, Alyce Driver. The bakery, construction and home health-care jobs she has held have not provided insurance. The children's Medicaid coverage had temporarily lapsed at the time Deamonte was hospitalized. And even with Medicaid's promise of dental care, the problem, she said, was finding it.

When Deamonte got sick, his mother had not realized that his tooth had been bothering him. Instead, she was focusing on his younger brother, 10-year-old DaShawn, who "complains about his teeth all the time," she said.

DaShawn saw a dentist a couple of years ago, but the dentist discontinued the treatments, she said, after the boy squirmed too much in the chair. Then the family went through a crisis and spent some time in an Adelphi homeless shelter. From there, three of Driver's sons went to stay with their grandparents in a two-bedroom mobile home in Clinton.

By September, several of DaShawn's teeth had become abscessed. Driver began making calls about the boy's coverage but grew frustrated. She turned to Norris, who was working with homeless families in Prince George's.

Norris and her staff also ran into barriers: They said they made more than two dozen calls before reaching an official at the Driver family's Medicaid provider and a state supervising nurse who helped them find a dentist.

On Oct. 5, DaShawn saw Arthur Fridley, who cleaned the boy's teeth, took an X-ray and referred him to an oral surgeon. But the surgeon could not see him until Nov. 21, and that would be only for a consultation. Driver said she learned that DaShawn would need six teeth extracted and made an appointment for the earliest date available: Jan. 16.

But she had to cancel after learning Jan. 8 that the children had lost their Medicaid coverage a month earlier. She suspects that the paperwork to confirm their eligibility was mailed to the shelter in Adelphi, where they no longer live.

It was on Jan. 11 that Deamonte came home from school complaining of a headache. At Southern Maryland Hospital Center, his mother said, he got medicine for a headache, sinusitis and a dental abscess. But the next day, he was much sicker.

Eventually, he was rushed to Children's Hospital, where he underwent emergency brain surgery. He began to have seizures and had a second operation. The problem tooth was extracted.

After more than two weeks of care at Children's Hospital, the Clinton seventh-grader began undergoing six weeks of additional medical treatment as well as physical and occupational therapy at another hospital. He seemed to be mending slowly, doing math problems and enjoying visits with his brothers and teachers from his school, the Foundation School in Largo.

On Saturday, their last day together, Deamonte refused to eat but otherwise appeared happy, his mother said. They played cards and watched a show on television, lying together in his hospital bed. But after she left him that evening, he called her.

"Make sure you pray before you go to sleep," he told her.

The next morning at about 6, she got another call, this time from the boy's grandmother. Deamonte was unresponsive. She rushed back to the hospital.

"When I got there, my baby was gone," recounted his mother.

She said doctors are still not sure what happened to her son. His death certificate listed two conditions associated with brain infections: "meningoencephalitis" and "subdural empyema."

In spite of such modern innovations as the fluoridation of drinking water, tooth decay is still the single most common childhood disease nationwide, five times as common as asthma, experts say. Poor children are more than twice as likely to have cavities as their more affluent peers, research shows, but far less likely to get treatment.

Serious and costly medical consequences are "not uncommon," said Norman Tinanoff, chief of pediatric dentistry at the University of Maryland Dental School in Baltimore. For instance, Deamonte's bill for two weeks at Children's alone was expected to be between $200,000 and $250,000.

The federal government requires states to provide oral health services to children through Medicaid programs, but the shortage of dentists who will treat indigent patients remains a major barrier to care, according to the National Conference of State Legislatures.

Access is worst in rural areas, where some families travel hours for dental care, Tinanoff said. In the Maryland General Assembly this year, lawmakers are considering a bill that would set aside $2 million a year for the next three years to expand public clinics where dental care remains a rarity for the poor.

Providing such access, Tinanoff and others said, eventually pays for itself, sparing children the pain and expense of a medical crisis.

Reimbursement rates for dentists remain low nationally, although Maryland, Virginia and the District have increased their rates in recent years.

Dentists also cite administrative frustrations dealing with the Medicaid bureaucracy and the difficulties of serving poor, often transient patients, a study by the state legislatures conference found.

"Whatever we've got is broke," Fridley said. "It has nothing to do with access to care for these children."

Children	22,896	45,792	16,934	28,858
Adults	267,483	534,966	197,830	337,136
Biennial Cost to Set the Dentist Fee Schedule to a Minimum of 60% of Average Billed Charges:		**580,758**	**214,764**	**365,994**

NOTE:
The total percentage to be paid is greater than 60%, as a number of dental procedures, predominantly children's procedures, are currently paid at a percentage greater than 60% of average billed charges.

I

North Dakota Dental Cost Survey

Background

Public Consulting Group, Inc. is assisting the North Dakota Department of Human Services to complete an analysis of the current Medicaid rates for Dental services. In order to complete this effort, the attached cost survey has been developed and reviewed by the Department of Human Services, Medical Services Division to ensure adequate cost data is obtained for rate setting purposes. The purpose of this tool is to capture the total costs, total revenue, and number of encounters rendered by your practice. Report data from your fiscal year 2007.

Please submit all data to Public Consulting Group. We will supply only aggregate or de-identified data in our report. However, if the Department receives a request for the data under the North Dakota open records law; they may have to disclose the data and source. If you are concerned about disclosure of your data, we encourage you to request that the data be designated "trade secret" information when you submit it. If we receive a request to disclose data, as a private company we will deny it. If the Department receives a request for data, they will engage the Attorney General's office to determine whether the data is public or not. Telling us that you would like the data designated "trade secret" may help in the release of only aggregate information.

The following instructions should serve as a guide in completing the cost survey spreadsheet entitled ***ND Dental Cost Survey***. If questions arise at any point in completing the survey please do not hesitate to contact the following individual:

Joe Weber
Public Consulting Group
1-800-210-6113 x 1476
jweber@pcgus.com

Options for Completing the Cost Survey

The cost survey form can completed in a number of ways, specifically there are three methods in which the form can be completed. The options include the following: 1) paper based form 2) an electronic form, and 3) an online form. However, PCG prefers to receive all responses electronically when possible.

1) Paper Based Form
Enclosed is a paper copy of the cost reporting form. If you choose to utilize the paper form, please return the completed cost survey to PCG either by email, mail, or by fax.

Cost Surveys returned by mail should be sent to:

Joe Weber
Public Consulting Group
148 State Street, 10th Floor
Boston, MA 02109

Providers wishing to return their completed cost surveys via fax should send them to **Joe Weber at (617) 426-4069.**

If you wish to return the completed cost surveys via email, please email the completed form to: jweber@pcgus.com.

2) Electronic Cost Survey Form
If you prefer to complete the cost survey electronically in a Microsoft Excel form, please request a copy of the form electronically from PCG by sending an email to jweber@pcgus.com. Once you have completed the form, please email them to jweber@pcgus.com.

3) Online Cost Survey Form
Instead of emailing PCG to obtain an electronic copy of the cost survey form, you can also access the file by downloading the form through our File Transfer Protocol (FTP) site. To access the form, please click on the following link, https://secureftp.pcgus.com/. When prompted, enter the username and password provided below:

User Name: Nddentists
Password: dQP5x3
* USER NAME AND PASSWORD IS CASE SENSITIVE

Once in the site, you should see a hyperlink that states "inbox", click on this hyperlink. Next you should see an excel file entitled, ***"ND Dental Cost Survey"***. Please download the template to your computer by clicking on the hyperlink. Before any changes are made to the form, please **click file save as and rename the file and save it to your hard drive**. For example, rename the form from "ND Dental Cost Survey", by adding your practice name at the end of the file, such as ***"ND Dental Cost Survey_Smith & Associates"***

Once the form has been completed the form will need to be emailed to the following address: jweber@pcgus.com.

PLEASE DO NOT REPOST YOUR COMPLETED FORM TO THE FTP SITE, AS THIS WILL ALLOW OTHER CLINICIANS TO SEE YOUR FINANCIAL DATA. Should you inadvertently post your information to the FTP site, please contact Joe Weber at PCG at 1-800-210-6113 x 1476 as soon as possible for deletion of data. All completed forms, should be sent via email to the address outlined above.

Cost Report Survey Completion Instructions

Step #1: Contact information

Fill out the contact information on the right side of the survey with name, Medicaid Provider Number, phone number, and email address. Finally please indicate the end of your fiscal year end for 2007, i.e. 12/31/2007, 6/30/2007, etc.

Step #2: Total Expenses

Complete this section by reporting the expenses by category for the cost centers described in Line #1-5. Expenses should be reported as dollar amounts. Expenses should be classified into the following categories:

Salary Expenses: Report total annual salary paid to personnel in each cost center.

Purchased Services: Report total expenses incurred by purchasing services through a contractual agreement with a third party.

Supplies and Other Expenses: Report expenses here that cannot be classified as Salary or Purchased Services.

FTE's: Report full-time equivalent for each cost center where personnel is employed in rows in terms of hours worked per year (i.e. 2080 hours = 1 FTE).

Cost Center Definitions:

Line #1: Fringe Benefits – Report any fringe benefits expense incurred by the practice for all employees. This may include Employee Insurance, Paid Time Off, Employee Retirement Contribution, Unemployment Benefit Plans, FICA, Medicare, or Other Fringe Benefits.

Line #2: Dentist – Report the expenses incurred for all Dental professionals exclusive of Fringe Benefits or Administrative Support. This should include expenses incurred for activities related to the provision of treatment services, receiving supervision and/or consultation.

Line #3: Administrative Support - Report administrative support costs incurred by the practice. This may include the costs for receptionist(s), any business office functions such as Bookkeeping, Accounting, and Billing, or any Legal services utilized by the practice.

Line #4: Facility Operations and Maintenance – Report expenses related to the operations and maintenance of your office include utilities, janitorial services, etc.

Line #5: Other Costs – Report any additional expenses that cannot be classified in cost centers listed. Please provide a brief description of the items.

Step #3: Net Revenue

Complete this section by reporting the net revenue by the payer sources identified in the survey, i.e. Medicare, Medicaid, Self Pay, etc. Please report revenue not related to direct billable services in the line labeled "Other Revenue". Revenue should be reported as dollar amounts.

Step #4: Service Encounters

The second page of our cost survey tool includes space for providing service encounter information. If you are completing the form electronically, please use the tab called "Utilization" to enter the service information. Please complete this section by reporting the total number of services provided during your fiscal year 2007 by CDT (Code on Dental Procedures and Nomenclature) Code. Again, services should be reported as the total number of units provided by CDT Code (please provide all services not just services provided to Medicaid recipients). We understand the list of codes available for dentists is extensive. With that said, please enter only those CDT codes in which services were rendered during your 2007 fiscal year end period. Please omit any codes for which no service volume occurred during the 2007 fiscal year.

Providers completing the paper form of this survey may make additional copies of this schedule as needed to account for every service provided. Providers completing the electronic version of the survey may add additional lines in the document as is necessary to account for all services. Again, PCG strongly prefers to receive all documentation electronically when possible.

M E M O R A N D U M

To: House Appropriation Committee

From: Joe Cichy, Exec. Director

Date: February 3, 2009

RE: **HB 1012**

Attached is documentation showing Medicaid financing improvements and recorded results from the American Dental Association that clearly show that increases in dental Medicaid reimbursement increase access to care for the Medicaid population. We have every reason to believe that dentists in North Dakota will significantly increase their participation providing Medicaid services as has happened in other states which have enacted similar measures. We can expect even more in North Dakota because of the nature of our people and the fact that they want to help these folks who experience financial difficulty.

Last session House Bill 1246 was voted out of both the House and Senate by a significant majority of the legislators. However, because the final appropriation was reduced by 87% of that which the original bill proposed it failed to provide the impact needed to solve access problems in the state.. However, the Governor has now included in his budget a reimbursement level which will provide the participation necessary to meet the needs of our Medicaid population. The rebasing at 75% of 2007 billed charges plus the 7% and 7% is necessary to set the DHS fee scheduled at a level that will increase access. The 75% of average billed charges may mistakenly seem generous. In contrast to the medical community where reimbursement "at cost" includes compensation for the physician, dentists evaluate costs of providing services without factoring in anything for their professional services. When considering the additional expenses related to no shows and recipient liability (not calculated into the department's numbers), the reimbursement for most dentists as proposed will still remain at or below overhead costs to provide services excluding any dentist compensation.

The survey prepared by the consultant to DHS intended to identify overhead costs in the dental office had many significant flaws. There was no proto-type to follow. This was the first time this attempt to establish dental costs had been made in the country. First, confidentiality could not be assured. We are dealing with many single practitioner practices where personal information could be easily tracked to that practitioner along with pay scales for their employees and pay schedules for their procedures. This could have created significant problems. Also, most offices do not have the computer equipment to easily provide this information, particularly with the number of codes that needed to be included. The survey was burdensomely long and complicated and had very poor explanations and directions for the practitioner to follow. The NDDA attempted to work with the consultant, but the various proposals we presented were dismissed out of hand. It would be unfair to use the failure of the consultant as a reason to deny Dental Medicaid reimbursement at a level that improves access to care for the Medicaid population.

Medicaid Financing Improvements and Reported Results

Extrapolated data from *State Innovations to Improve Access to Oral Health Care for Low-Income Children: A Compendium Update*

Financing and Reimbursement	Reported Results
ALABAMA	
March 2000: Medicaid dental reimbursements were increased in March 2000, to the same level as BC/BS of Alabama, i.e., 100% of Blue Cross/Blue Shield (BC/BS) rates (for all but nine dental procedure codes).	**December 2001:** Medicaid reported results of fee increase These results showed: • 18.6% increase in providers, • enrollment of 150+ new dentists to the Medicaid program, and • a decrease from 19 to 11 counties with one or no Medicaid enrolled dentists. At the end of two years: • A 38.7% increase in the number of dentists in Medicaid and an increase of 40.2% in the number of children receiving dental services. By July 2004: • Number of enrolled dental providers totaled 673, an increase of 363 new providers since October 2000. As of February 2004, there has been a 54% increase in the number of beneficiaries receiving at least one dental service since the increase in Medicaid dental reimbursement rates and implementation of the wider array of other initiatives comprising the Smile Alabama! initiative.

211 East Chicago Avenue Chicago, Illinois 60611-2678
p 312-440-2500 f 312-440-7494

DELAWARE	
January 1998: Initiated in January 1, 1998, Medicaid reimburses 85% of each dentist's submitted charges (e.g., if a dentist charges $100 for a dental exam, the program pays $85).	**January 1998:** The number of dentists participating in Medicaid increased initially from one to 75. As of August 2004, 130 of approximately 378 license dentists in the state were enrolled in the Medicaid program. The number of children treated in private dental offices has increased from 2,000 in 1998, to approximately 11,686 in state fiscal year 2003.

GEORGIA	
July 2000: Fifty-six of the most-used dental procedures were increased to between 75% and 80% of the average customary fees charged by Georgia dentists.	**2000 Forward:** As of October 2001, after the major reimbursement increase of July 2000 and other administrative program changes, the number of private dentists accepting Medicaid patients increased to more than 1,355 of the state's approximate 4,000 dentists (34%), up from only 259 enrolled dentists before July 2000. As of August 2004, of the 3,992 licensed dentists in the state, there were about 3,552 actively providing care. Data provided by the Department of Community Health indicated that dental provider enrollment in Medicaid for the fiscal year 2004 was 2,138, compared to 1,897 for the fiscal year 2003 (a 13% increase).

INDIANA	
In 1995 and 1997, the Office of Medicaid Policy and Planning implemented dental rate increases of approximately 10% and 11%, respectively. When access to care did not increase significantly, the state implemented a 147% increase, effective May 1998. This increase resulted in marketplace-level reimbursement equivalent to the 75th percentile of the rates reported by the 1995 ADA Survey of Dental Fees for the East North Central Region.	Based on Office of Medicaid Policy and Planning quarterly monitoring reports, in May 2001, more children were receiving dental services. The combined effects of several improvements including increased fees resulted in the following statistics, as of January 2003: • Provider participation increased from 916 dentists in 1997 to 1,443 dentists in 2002, and • children's annual dental visit rates increased from 15% in 1997 to 31% in 2002.

SOUTH CAROLINA	
In January 2000, fees were increased to the 75th percentile of private-sector fees. Once the 2000 fee increase was implemented, the South Carolina Dental Association began a recruitment campaign to increase dentist participation in the Medicaid program, sending information packets to licensed dentists and calling each individual dentist.	The number of Medicaid participating dentists increased from 619 in 1999—prior to the 2000 reimbursement rate increase and implementation of other innovations—to 886 by June 2001. As of February 2003, there were 1,071 enrolled dental providers. As of July 1, 2004, there were 1,165 individual enrolled providers.

MICHIGAN	
On May 1, 2000, Michigan established a demonstration program known as *Healthy Kids Dental* (HKD) in 22 of Michigan's 83 counties. Dental reimbursements for the services provided through the Health Kids Dental demonstration program are *identical to those in the commercial dental plan* contracted to administer the children's dental plans. Covered dental procedures under the program are paid at competitive market rates, with no patient co-payment requirements.	During HKD's first 12 months, 183 additional dentists who previously did not participate in the Medicaid program signed up to participate in HKD. Additionally, in the DeltaPremier counties, 85 % of dentists who already participated in a private Delta program also began to treat Medicaid-enrolled children through HKD. The increase in locally available dentists also reduced the distance that HKD children had to travel for care, and as a result, the proportion of Medicaid-enrolled children who received dental care in their county of residence nearly doubled under HKD. Within a relatively short period of time, for children enrolled for 12 months, the data shows a 39 % increase in the number of children seen under HKD; and for children enrolled for part of the year, there was a 55% increase of those seen under HKD. A study of dentists' attitudes toward the Healthy Kids Dental program indicates that dentists have high levels of satisfaction, are more likely to accept Medicaid children as patients, and believe they can spend more time on oral hygiene education with patients.

TENNESSEE	
October 2002: It was estimated that, before October 2002, dentists were paid on average about 40% of their cost for each dental procedure. Effective October 1, 2002, the reimbursement level for dentists was increased. Participating dentists are now reimbursed at the lesser of billed charges or the 75th percentile of the fees published in the 1999 American Dental Association (ADA) Survey of Fees for the East South Central region.	The dental provider network has grown by 81% since inception of the dental improvements. Approximately 25% of licensed and practicing dentists actively participate in the TennCare program. Eighty-six percent of participating dentists are accepting new TennCare patients into their practices, indicating additional capacity in the existing dental network to treat TennCare enrollees. Based on continuing review of GeoAccess status, it was determined in August 2004 that TennCare children in urban areas have good access to pediatric and general dental providers. While no provider network deficiencies are noted in rural areas, recruitment remains active, and dentists continue to join the network.

UTAH	
In July 1997, all dentists in rural counties and those in the urban counties of Davis, Weber, Salt Lake, and Utah who agreed to treat 100 Medicaid patients for the year became eligible to receive a payment incentive. The incentive program is ongoing as of July 2004. The incentive pays 120% of the established Medicaid fee—a 20% increase over fee-for-service reimbursement rates.	The dental reimbursement incentive program that began in 1997 increased by approximately 16% the number of patients receiving a dental visit in the following year. During the subsequent three years following implementation of the incentive program, 10% more dentists began treating Medicaid patients.

MEDICAID COMPENDIUM

To assist members and other dental stakeholders in advocating for improvements to their dental Medicaid programs, the ADA has published a series of policy briefs highlighting state innovations to help state legislators understand the necessity of establishing market-based reimbursement for dental Medicaid services. In addition, these briefs offer ways to improve the administration of the Medicaid program and expand efforts to encourage patient compliance with dental appointments and improve public awareness about the importance of oral health. These briefs, based on information published in the September 2003 ADA report "State Innovations to Improve Access to Oral Health Care for Low-Income Children: A Compendium," will be released this month at the Washington Leadership Conference.

Testimony before the Senate Appropriations Committee
HB 1012 as it relates to Dental Medical Assistance Reimbursement

Chairman Holmberg and members of the Committee: My name is Dr. Dennis Sommers. I am a practicing dentist in Minot, North Dakota and serve as President of the North Dakota Dental Association. This testimony is presented in support of HB 1012 with regard to Governor Hoeven's dental Medicaid budget proposal.

The 2000 Surgeon General's report "Oral Health Care in America" noted that dental decay is the most common chronic childhood disease and that low income children suffer twice as much tooth decay as more affluent children. By and large, the segment of North Dakota's population for which Medicaid services are provided does not engage itself in this legislative process. Children, the primary beneficiary of dental Medicaid services in North Dakota, are not equipped to voice their needs. The North Dakota Dental Association is here to speak for them. The NDDA supports the state's efforts to address shortcomings in providing dental services to low income families.

Governor Hoeven's budget proposes dental Medicaid funding at a level similar to that which was passed by the ND House and Senate two years ago. Although such funding was approved by both chambers during the 2007 legislature, the appropriation was cut by 87% in the final hours by conference committee when different starting dates appeared in each chamber's bill. Governor Hoeven's budget reaffirms efforts of the 2007 legislature funding dental Medicaid based on 75% of billed charges – a target shown in other states to be successful to increase unmet treatment needs, provider participation and geographic access while stabilizing per-enrollee costs and increasing both provider and enrollee satisfaction.

It is essential to recognize that the Governor's budget proposal funding dental Medicaid at a level of 75% of average fiscal 2008 billed charges was not decided upon arbitrarily nor was it plucked from thin air. This proposal does not represent "guesswork" or just "hopeful optimism" that through this level of funding the existing crisis in delivery of dental Medicaid services in the state *might* be

addressed. Instead, **seventy-five percent is a figure that when used in other states has been demonstrated to be effective in jump-starting access to care for dental Medicaid.** State budgetary changes in amounts less than 75% have been notably less effective. The ND House Appropriations subcommittee – with no rationale or stated assurance of success in doing so – arbitrarily turned back the voltage on the defibrillator needed to resuscitate the nearly breathless dental Medicaid system by reducing Governor Hoeven's funding proposal. They did this knowing the monetary requirements needed for a successful Medicaid program. There is no shortage of fiscal power in our state's surplus. There exists the fiscal ability to solve this crisis. Failure to fund dental Medicaid at a level shown to be effective and as proposed by Governor Hoeven risks perpetuation of the dental access problems which keep basic dental care out of the reach of many of our state's developmentally disabled, indigent children, elderly and otherwise disadvantaged citizens. **Please work to reinstate funding including inflationary factors of the dental Medicaid portion of HB 1012 at levels proposed by Governor Hoeven.**

The Centers for Medicare & Medicaid Services (CMMS) 2008 NATIONAL DENTAL SUMMARY points out:

> "...a State must adhere to certain federal requirements. ... for most individuals under the age of 21, dental services are a mandatory benefit as part of the Early and Periodic Screening, Diagnostic and Treatment (EPSDT) service as defined in section 1905(r) of the Social Security Act."

Such statutory requirements are intended to ensure all eligible Medicaid beneficiaries under 21 are both informed of ***and have access to*** dental services. How are we doing? Measurements by CMMS ranked North Dakota dead last in 2006 with only 19% of eligible Medicaid enrollees accessing dental care. With a national average between 50 and 55 percent of adults and children seen by dentists annually, North Dakota's Medicaid access to care falls woefully short. We should all recognize the need to improve dental access for North Dakota's low-income families – especially children.

According to the American Dental Association, individual dentists give away an average of $35,000 to $40,000 in charitable dental care (free and discounted care for low-income individuals) per year. North Dakota's dentists are extremely generous donating time and talents to help ND's less fortunate population through Give Kids a Smile projects, an American Dental Association (ADA) nationwide

event where dentists volunteer care for children. Since 2000, North Dakota dentists have also provided care through the Donated Dental Services Program with just under a million dollars in free dentistry provided for disabled and elderly North Dakotans. Dentists in ND communities voluntarily provide yearly dental screenings for Head Start kids. Included with such generosity, 90% of North Dakota dentists are providers of Medicaid services; services that cost more to deliver than dentists are paid through Medicaid reimbursement. Although dentists are very generous, they operate as small businesses and are unable to open doors wide to subsidize the state's Medicaid system. With the majority of dentists forced to limit numbers of Medicaid patients they see, 20% of dentists now provide 80% of the state's dental Medicaid services.

The governor's budget is an extremely important step in achieving the access to dental care North Dakota is mandated by the Social Security Act to provide. During other testimony on this subject Committee members have often asked, "What guarantee can you offer that funding will improve access to care?" The ADA's report found at http://www.prnewswire.com/mnr/ada/20973/ answers this question. The report states that **experience in states like Georgia, Tennessee, Indiana, Michigan and South Carolina shows that raising reimbursement to levels that approximate the 75th percentile of prevailing fees can significantly increase access and utilization of dental services by the Medicaid-eligible** and participation by dentists, especially when such initiatives are actively promoted by state dental organizations and commercial intermediaries. We have every reason to believe similar results can and will be accomplished in North Dakota with adoption of the dental Medicaid funding proposals in Governor Hoeven's budget.

The CMMS 2008 Summary further reports dental Medicaid **program improvements can be expected to yield significant savings in treatment costs** on an individual level since on average, ongoing treatment costs to maintain oral health per individual will be less over time. This is particularly likely for very young children, with catastrophic treatment needs that often require costly hospital services in addition to significant dental treatment. These costs can account for approximately 30% of typical Medicaid dental program expenditures. Engaging the capacity of private-sector dentists with adequate Medicaid funding will maximize use of taxpayer dollars in providing dental care to the state's low-income population. Further, substantial savings will be seen since **dental care provided in dental office settings reduces the frequency of emergency room**

visits by Medicaid enrollees where treatment is primarily palliative and recurring rather than definitive and corrective.

A "Dental Medicaid in North Dakota Fact Sheet" is included for your review with this testimony. The North Dakota Dental Association urges your support of Governor Hoeven's dental Medicaid budget proposals in order to:

- Fulfill the intent of the 2007 legislature's vote
- Enable the state to meet access requirements mandated by the Social Security Act
- Reduce costs related to dental related emergency room visits
- Improve overall health and well being of Medicaid recipients

Thank you.

Dr. Dennis Sommers, President

North Dakota Dental Association

NORTH DAKOTA
Optometric Association

HB 1012

Good Afternoon Mr. Chairman and Members of the Committee,

For the record, my name is Nancy Kopp. I represent the North Dakota Optometric Association.

I appear before you in support of the portion of HB 1012 that provides funding, as included in the Governor's proposal, for optometric services, eye exams and eyeglasses for children and adults.

Early detection of vision conditions is important, in that 80% of learning is visual.

We ask for your support of the current proposal of an annual eye exam and eyewear for children and once every 2 years, for adults.

As you may know, optometric services was not part of the rebasing process for providers in the interim. Current reimbursement for optometric services, is at the SCHIP level and medical services, is at the physician rate.

95% of optometrists are participating providers.

In closing, I would like to remind you that NDOA optometrists provide eye exams and glasses at no charge to the uninsured, through our Vision USA-ND Project, in conjunction with ND Lions Clubs and the Dakota Medical Foundation. Last year we had 293 applications.

I would be happy to answer any questions.

G

HOUSE BILL 1012 – Medical Services
Appropriations – Human Resources Division Committee

Testimony by Mathew C. Schwarz
January 26, 2009

same given to Senate

Good Morning Chairman Pollert and Members of the Committee.

My name is Matt Schwarz. I am here as a parent to speak in support of the funding in the Governor's budget ~~for the OAR~~ providing $644,330 for Intense Medical Needs In Family Homes.

This directly impacts our family.

My wife Marcia and our daughter Jessica have Myotonic Muscular Dystrophy. Jessica is 30 years of age and lives in our home because of her intense medical needs. Jessica is on life support and gets Family Support Services through Community Options, her human service provider. She goes out into the community and generally does well but needs close monitoring and line-of-sight supervision for her medical needs 24/7. I personally take a night shift each week to care for her in addition to gaps in services and coordinating all of her needs with medical providers and support staff.

Jessica's intense medical needs require staff at Community Options to have an incredible amount of knowledge about her delicate medical needs including suctioning through a tracheotomy tube, sterile technique, an understanding of all the medical equipment including ventilator, oxygen, pulse oximeters, medications, etc. It also requires an understanding of vital signs that show if Jessica is on the verge of distress such as her disposition, skin color, amounts and color sputum suctioned out, monitoring her food intake and her daily output, etc. to mention just a few.

We have been fortunate with caregivers that do an excellent job of caring for our daughter. We feel Community Options screens their staff very carefully to give us their best personnel. However, there is a pay discrepancy for the caregivers that provide support in a setting involving intense medical needs for recipients like our daughter Jessica. Because of their responsibilities, capabilities, and learned skills they should receive a higher wage than workers with less responsibility and skills.

Without adequate compensation these caregivers often find better paying jobs. Aside from the extra stress and risks to our daughter getting the services by new personnel, the cost of re-training is costly. It is difficult to maintain a quality continuum of care when good and knowledgeable caregivers leave to take better paying jobs. When Jessica gets ill and ends up in the hospital the costs for everyone (including the Medicaid program) skyrocket instantly! Years ago our goal was to keep Jessica out of the hospital for at least a one year interval. Now we have intervals that sometimes go 2-3 years with very short hospital stays. High quality services provided by our caregivers are directly related to this outcome.

Additionally, service providers like Community Options not only need the additional funding the DHS and Governor included in the budget to reward those individuals who provide this higher level of care with better wages, but also for better training and improved quality assurance programs. Service providers need this additional funding for healthcare professionals to better train and monitor caregivers at appropriate intervals in family homes where more intense medical services are provided .

This concludes my written testimony. I will be happy to answer any questions you may have.

The home tele-monitoring program utilized in our agency has shown that tele-monitored patients score higher on fourteen out of sixteen health outcomes compared to the program's non-monitored patients.

Home tele-monitoring strives to encourage shared decision making between providers and patients. The patient can take a more active role in their health care and feel more confident making decisions related to their care thus empowering the patient to be more accountable for their own health which assists in reducing costs across the continuum of care.

The medical cost of treating chronic disease accounts for more than 75% of the nation's $1.4 trillion medical care costs. Home tele-monitoring will provide interventions to the patient in the least costly setting, at the right time, and in the right place. Tele-monitoring reduces the overall number of visits a nurse must make thus reducing the cost of providing the care.

The goals and objectives of the program relate directly to the need for accessible, quality driven, and affordable management of chronic disease. We want our patients to improve with interventions that are provided. As the demographics change and the population ages, people want involvement in their care and a sense of control regarding their health care options.

These services are not reimbursed by ND Medicaid. NDAHC is requesting that ND Medicaid reimburse Home Health Agencies for home tele-monitoring visits at the same rate as a skilled nursing visit. Minnesota Medicaid's reimbursement structure includes reimbursement of tele-monitored visits at the same rate as skilled nursing visits. NDAHC would advocate for similar reimbursement by ND Medicaid, but would recommend that the definition of home tele-monitoring visits be broad enough to account for changing technology.

The reimbursement of home tele-monitoring visits by certified Home Health Agencies would enable a greater number of agencies to provide this important technology. This will provide greater efficiencies in the delivery of patient care no matter where the patient might reside.

Enhancements and new technology will launch the program beyond its current capabilities expanding its value to customers for many years to come.

Chairman Pollert and members of the committee, thank you for the opportunity to testify before you today - I urge your favorable recommendation for reimbursement of home tele-monitoring by the State of North Dakota.

Thank you for your time and attention. I'd be happy to answer any questions the committee may have.

North Dakota Department of Human Services

Medicaid and SCHIP Income Disregards and Deductions

(As of December 2008)

Disregarded Income - ***disregards are not considered an income source***

The following types of income are disregarded in determining eligibility for Medicaid/SCHIP:

1. State or tribal money payments for foster care, subsidized guardianship, or the subsidized adoption program;
2. Temporary Assistance for Needy Families (TANF) benefit and support services payments;
3. Benefits received through the Low Income Home Energy Assistance Program;
4. Refugee cash assistance payments;
5. County general assistance payments;
6. Payments from the Child and Adult Food Program for meals and snacks to licensed families who provide day care in their home;
7. Family subsidy program payments;
8. Housing assistance payments;
9. Per capita judgment funds paid to members of any Indian tribe under Pub. L. 92-254, Pub. L. 93-134, or Pub. L. 97-403;
10. Income derived from submarginal lands, conveyed to Indian tribes and held in trust by the United States, as required by Pub. L. 94-114;
11. Income earned by a child who is a full-time student, or a part-time student who is not employed one hundred hours or more per month;
12. Supplemental Security Income (SSI) - *SCHIP disregards all SSI. Medicaid disregards lump sum SSI payments. Medicaid counts SSI if the client chooses to be eligible under the children and family category. If they choose to be eligible under the aged and disabled category, they get an income level equal to the level that established SSI eligibility.*
13. Compensation received by volunteers participating in certain federal volunteer programs;
14. Payments made to recipients under title II of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970;

15. All income, allowances, and bonuses received as a result of participation in the Job Corps Program;
16. Payments received for the repair or replacement of lost, damaged or stolen assets;
17. Occasional small gifts;
18. In-kind income except in-kind income received in lieu of wages;
19. A loan from any source that is subject to a written agreement requiring repayment by the recipient;
20. Income tax refunds and earned income credits;
21. Homestead tax credits;
22. Educational loans, scholarships, grants, awards, Workforce Safety & Insurance vocational rehabilitation payments, and work-study received by a student.
23. Any fellowship or gift (or portion of a gift) used to pay the cost of tuition and fees at any educational institution;
24. Training funds received from Vocational Rehabilitation;
25. Training allowances of up to thirty dollars per week provided through a tribal native employment works program, or the Job Opportunities and Basic Skills Training program;
26. Needs-based payments, support services, and relocation expenses provided through programs established under the Workforce Investment Act (WIA), and through the Job Opportunities and Basic Skills program;
27. Training stipends provided to victims of domestic violence by private, charitable organizations, such as the Seeds of Hope Gift Shop, or the Abused Adult Resource Center, for attending their educational programs;
28. Tax-exempt portions of payments made as a result of the Alaska Native Claims Settlement Act;
29. Payments to certain United States citizens of Japanese ancestry, resident Japanese aliens, and eligible Aleuts made under the Wartime Relocation of Civilians Reparations Act;
30. Agent Orange payments;
31. Crime Victims Reparation payments;
32. German reparation payments made to survivors of the holocaust, and reparation payments made under sections 500 through 506 of the Austrian General Social Insurance Act;
33. Assistance received under the Disaster Relief and Emergency Assistance Act of 1974 or some other federal statute, because of a

presidentially declared major disaster (but not disaster assistance unemployment compensation);

34. Allowances paid to children of Vietnam veterans who are born with spina bifida, or to children of women Vietnam veterans who are born with certain covered birth defects;
35. Netherlands Reparation payments based on Nazi, but not Japanese, persecution during World War II, Public Law 103-286;
36. Radiation Exposure Compensation, Public Law 101-426;
37. The first $2,000 per year of lease payments deposited in IIM accounts;
38. Interest or dividend income earned on liquid assets;
39. Additional pay received by military personnel as a result of deployment to a combat zone;
40. Fifty dollars per month of current child support, received on behalf of children in the SCHIP unit;
41. Reimbursements from an employer, training agency or other organization for past or future training, or volunteer related expenses; and
42. All wages paid by the Census Bureau for temporary employment related to census activities.

Income Deductions - ***deductions are subtracted after the income is calculated***

The following income deductions are allowed in determining Medicaid/SCHIP eligibility:

1. Mandatory payroll deductions and union dues withheld, or ninety dollars, whichever is greater;
2. Mandatory retirement plan deductions;
3. Expenses of a blind person reasonably attributed to earning income;
4. Reasonable child care expenses, not otherwise reimbursed, that the Medicaid/SCHIP Unit is responsible to pay, if necessary to engage in employment or training;
5. Non-voluntary child and spousal support payments if actually paid;

6. For individuals who are employed or in training, thirty dollars may be deducted as a work or training allowance (does not apply to children in school);
7. The cost of premiums for health insurance for members of the unit who are not eligible for Medicaid/SCHIP; and
8. Medical expenses for necessary medical or remedial care for members of the unit who are not eligible for Medicaid/SCHIP.

Additional Income Deductions allowed for Medicaid

The following additional income deductions are allowed in determining Medicaid eligibility

1. Reasonable expenses, such as food and veterinarian expenses, necessary to maintain a dog that is trained to detect seizures for a member of the Medicaid unit.
2. Premiums for long term care insurance.
3. Transportation expenses necessary to secure medical care.
4. Reasonable adult dependent care expenses.
5. The cost to purchase or rent a car safety seat for a child through age ten is allowed as a deduction if a seat is not otherwise reasonably available.
6. A disregard of $20 per month for aged, blind and disabled applicants or recipients.
7. Guardian or conservator fees, up to a maximum of five percent of countable gross monthly income.
8. For all aged, blind, or disabled applicants or recipients, sixty-five dollars plus one-half of the remaining monthly gross earned income.

Notes: Data as of January 2009 unless otherwise noted.
To be eligible in the infant category, a child has not yet reached his or her first birthday. To be eligible in the 1-5 category, the child is age one or older, but has not yet reached his or her sixth birthday. To be eligible in the 6-19 category, the child is age six or older, but has not yet reached his or her 19th birthday.
The income eligibility levels noted may refer to gross or net income depending on the state. Income eligibility levels listed are either for

regular Medicaid where states receive "regular" Medicaid matching payments or show eligibility levels for the state's SCHIP-funded Medicaid expansion program where the state receives the enhanced SCHIP matching payments for these children. The eligibility level listed is the higher of these two standards.
Eligibility levels shown as percent of the FPL. Currency figures based on FPL for a family of three in 2008: $17,600 for 48 contiguous states and District of Columbia, $22,000 for Alaska, $20,240 for Hawaii.

Sources: Source 1: Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009. Data based on a national survey conducted by the Center on Budget and Policy Priorities for the Kaiser Commission on Medicaid and the Uninsured, January 2009. Available at http://www.kff.org/medicaid/7855.cfm. State data are from Source 1.

Source 2: Medicaid Eligibility, Department of Health and Human Services, Centers for Medicare and Medicaid Services. US figures from Source 2.

Definitions: **The Federal Poverty Level (FPL)** was established to help government agencies determine eligibility levels for public assistance programs such as Medicaid. FPL is represented in this resource as poverty guidelines as opposed to the slightly different poverty thresholds.

Footnotes:

1. US Figure is the federal minimum eligibility level based on the CMS Eligibility Report; 2008.

2. In California, infants born to women on the Access for Infants and Mothers (AIM) program are automatically enrolled in SCHIP unless the child is enrolled in employer-sponsored insurance or no-cost full scope Medi-Cal. The income guideline for these infants, through their second birthday, is 300 percent of the federal poverty line.

3. Florida operates two SCHIP-funded separate programs. Healthy Kids covers children ages five through nineteen, as well as younger siblings in some locations. Medi-Kids covers children ages one through four.

4. The state has adopted the Medicaid option to cover children aging out of foster care, referred to as the Chafee option. In Arkansas, a small group of foster care children can continue in their U-18 and Medically Needy Foster Care categories and receive Medicaid until they are 21 years old. In Florida, the state amended its state law to extend Medicaid coverage to children aging out of foster care until their 21st birthday. Previously, the state only covered children aging out of foster care until their 20th birthday. In Georgia, a child aging out of IV-E Medicaid can sign a consent form to remain in foster care and receive Medicaid coverage up to 21. Ohio and Wisconsin adopted this option in January 2008. New York adopted this option in January 2009.

5. Georgia, Illinois, and New Jersey cover infants in families with income at or below 200 percent of the federal poverty line who are born to mothers ›lled in Medicaid. Georgia and New Jersey cover infants not born to Medicaid enrolled mothers in families with income at or below 185 percent of the ·al poverty line. Illinois covers infants not born to Medicaid-enrolled mothers in families with income at or below 133 percent of the federal poverty line.

Illinois, Massachusetts, New York, and Wisconsin provide state-financed coverage to children with incomes above SCHIP levels. Eligibility is 300% for Wisconsin.

7. Iowa passed legislation in 2008 to expand childrens eligibility up to 300 percent of the federal poverty line in July 2009 dependent on funding and other federal policy issues.

8. Kansas passed legislation in May 2008 that would expand SCHIP eligibility from 200 percent of the federal poverty line to 250 percent of the federal poverty line depending on federal funding and resolution of August 17th directive. There would be an 8 month waiting period for the expansion population.

9. Louisiana passed legislation in June 2008 to expand to 300 percent of the federal poverty line, but have currently implemented up to 250 percent of the federal poverty line. They also passed legislation to adopt the Chafee option, but implementation has been delayed due to hurricanes. Louisiana created a separate SCHIP program in 2008.

10. Maine has not adopted the Chafee option (see footnote 4 for definition), however the state does cover individuals under 21 at or below 150 percent of the federal poverty line. Children in Maine who age out of foster care can voluntarily choose to remain in foster care while finishing school and can keep their MaineCare coverage.

11. In Minnesota, the infant category under "regular" Medicaid includes children up to age 2. Under "regular" Medicaid, income eligibility for infants is up to 275 percent of the federal poverty line, and under SCHIP, eligibility for infants is between 275 percent and 280 percent of the federal poverty line. Under "regular" Medicaid, income eligibility for children ages 2-19 is up to 150 percent of the federal poverty line, and under the Section 1115 waiver, income eligibility for children in this age group is between 150 and 275 percent of the federal poverty line. The Section 1115 waiver provides coverage for children up to age 21.

12. Montana passed Initiative 155 in November 2008 which increases income eligibility in CHIP to 250 percent of the federal poverty line, will offer health coverage to all uninsured Montana children with a sliding scale premium, includes presumptive eligibility, increases the waiting period for children, removes the asset test for children and creates a single store front for Medicaid and CHIP. The implementation date is October 2009.

Nebraska there is former ward coverage for children that continue to finish schooling and extends up to age 21.

14. Ohio submitted a state plan amendment to expand their SCHIP-funded Medicaid coverage to children in families up to 300 percent of the federal poverty line. The state hopes to implement this expansion in January 2009, pending CMS approval.

15. Oklahoma passed legislation to increase the income eligibility guideline to 300 percent of the federal poverty line under its current section 1115

percent of the federal poverty line and the future expansion of 218 percent of the federal poverty line is pending further CMS guidance and SCHIP reauthorization.

16. South Carolina implemented a separate SCHIP program for children with income between 150 and 200 percent of the federal poverty line in April 2008.

17. In Tennessee, enrollment under the states waiver program, called TennCare Standard, is closed to new applicants. The only children currently receiving TennCare Standard are children who lose Medicaid, have no access to insurance, and have family income below 200 percent of the federal poverty line, or who are medically eligible (have a health problem that prevents them from getting health insurance). In 2007 the state created a separate SCHIP program for children in families with income up to 250 percent of the federal poverty line. Eligible children may have access to health insurance but must be uninsured.

18. For Tennessee, the Medicaid figures shown represent the income eligibility guidelines under regular Medicaid. Enrollment under the states waiver program is closed to new applicants; some children who lose Medicaid can enroll (see footnote 4). In 2007 the state created a separate SCHIP program for children in families with income up to 250 percent of the federal poverty line. Children not eligible for regular Medicaid and children closed out of TennCare Standard who meet the SCHIP income guidelines can enroll in the separate SCHIP program.

19. In Vermont, Medicaid covers uninsured children in families with income at or below 225 percent of the federal poverty line; uninsured children in families with income between 226 and 300 percent of the federal poverty line are covered under a separate SCHIP program. Underinsured children are covered under Medicaid up to 300 percent of the federal poverty line. This expansion of coverage for underinsured children was achieved through an amendment to the states Medicaid Section 1115 waiver.

20. West Virginia has passed legislation to expand SCHIP to 250 percent of the federal poverty line in January 2009 pending approval of their state plan amendment.

21. Wisconsin implemented BadgerCare Plus in February 2008. Badgercare Plus has no income limit for children. The state will receive Medicaid reimbursement for children up to 250 percent of the federal poverty line and children with incomes between 251 percent and 300 percent of the federal poverty line are covered with state funds.

Notes: Data as of January 2009.
The income eligibility levels noted may refer to gross or net income depending on the state. "Regular" Medicaid refers to coverage under Medicaid eligibility standards for children in place prior to SCHIP; states receive "regular" Medicaid matching payments as opposed to enhanced SCHIP matching payments for these children.
Eligibility levels shown as percent of the FPL. Currency figures based on FPL for a family of three in 2008: $17,600 for 48 contiguous states and District of Columbia, $22,000 for Alaska, $20,240 for Hawaii.

Sources: Challenges of Providing Health Coverage for Children and Parents in a Recession: A 50 State Update on Eligibility Rules, Enrollment and Renewal Procedures, and Cost-Sharing Practices in Medicaid and SCHIP in 2009. Data based on a national survey conducted by the Center on Budget and Policy Priorities for the Kaiser Commission on Medicaid and the Uninsured, January 2009. Available at http://www.kff.org/medicaid/7855.cfm.

The Federal Poverty Level (FPL) was established to help government agencies determine eligibility levels for public assistance programs such as Medicaid. FPL is represented in this resource as poverty guidelines as opposed to the slightly different poverty thresholds.
NA: Not applicable because state does not have separate SCHIP program.

Notes:

1. Not applicable because there are no national eligibility levels.

2. Florida operates two SCHIP-funded separate programs. Healthy Kids covers children ages five through nineteen, as well as younger siblings in some locations. Medi-Kids covers children ages one through four.

3. Illinois, Massachusetts, and New York provide state-financed coverage to children with incomes above SCHIP levels. Eligibility is unlimited in Illinois and is 400% in Massachusetts and New York.

4. Louisiana created a separate SCHIP program in 2008.

5. South Carolina implemented a separate SCHIP program for children with income between 150 and 200 percent of the federal poverty line in April 2008.

6. In 2007 the state created a separate SCHIP program for children in families with income up to 250 percent of the federal poverty line. Children not eligible for regular Medicaid and children closed out of TennCare Standard who meet the SCHIP income guidelines can enroll in the separate SCHIP program.

7. In Vermont, Medicaid covers uninsured children in families with income at or below 225 percent of the federal poverty line; uninsured children in families with income between 226 and 300 percent of the federal poverty line are covered under a separate SCHIP program. Underinsured children are covered under Medicaid up to 300 percent of the federal poverty line. This expansion of coverage for underinsured children was achieved through an amendment to the states Medicaid Section 1115 waiver.

8. Wisconsin implemented BadgerCare Plus in February 2008. Badgercare Plus has no income limit for children. The state will receive Medicaid reimbursement for children up to 250 percent of the federal poverty line and children with incomes between 251 percent and 300 percent of the federal poverty line are covered with state funds.

m

Testimony
House Bill 1012
House Appropriations - Human Resources Committee
Representative Chet Pollert, Chairman
January 27, 2009

Chairman Pollert and members of the Committee: my name is Carlotta McCleary. I am the Executive Director of ND Federation of Families for Children's Mental Health (NDFFCMH). NDFFCMH is a parent run advocacy organization that focuses on the needs of children and youth with emotional, behavioral and mental disorders and their families, from birth through transition to adulthood.

NDFFCMH supports increasing the net income eligibility from 150% to 200% of the poverty line for the state children's health insurance program. Expanding the net income eligibility allows more children to access mental health care. For many children, mental health care is a key component of the array of services needed for healthy childhood development.

Mental disorders affect about one in five American children and one in ten experience serious emotional disturbances that severely impair their functioning, according to the Surgeon General's comprehensive report on mental health. **Moreover, low-income children enrolled in Medicaid and SCHIP have the highest rates of mental health problems.**

Sadly, over two-thirds of children struggling with mental health disorders do not receive mental health care. The President's New Freedom Commission on Mental Health found that without early and effective identification and interventions, childhood mental disorders can lead to a downward spiral of school failure, poor employment opportunities, and poverty in adulthood. Untreated mental illness may also increase a child's risk of coming into contact with the juvenile justice system, and children with mental disorders are at a much higher risk for suicide.

NDFFCMH works with many families whose children have an Autism Spectrum Disorder. We support the Department of Human Services (DHS) budget that includes an autism waiver for children birth through five. Many of our children and adults do not currently meet the eligibility that ND DHS has set in its Developmental Disability Waiver.

We know that the needs go far beyond the current Autism Waiver proposal. Children and youth with autism spectrum disorder continue to have needs across their life span. Their needs do not stop at the age of five. Many of the transitioning age youth lack the adaptive skills necessary to become independent adults. There is a need for ongoing support for employment as well as supportive living arrangements. NDFFCMH would like to see an autism waiver expanded to include children as well as adults.

NDFFCMH supports increasing Family Foster Care payments to the nationally recommended level. We believe this will help recruit family foster homes.

Transition age youth with mental health disorders are not unique in experiencing difficulties as they transition to adulthood, they are more likely than their peers to experience poor outcomes, including areas of employment and education. Left without access to necessary services and supports, successful transitions to adulthood cannot be realized.

NDFFCMH supports the Department's budget which includes funding for youth facilities in Bismarck and Fargo, each providing eight residential beds for youth in transition. In addition to shelter, participating youth will have access to counseling, case management and other services through the regional human service centers.

NDFFCMH supports the development of a coordinated service delivery system to maximize continuity of care and access to services. Young adults who are transitioning to the adult mental health system should be able to benefit from the infrastructure that would be developed to access such services as peer support programs, independent living and life support skills as well as employment, housing and education supports.

NDFFCMH would like to see Peer-to-Peer Support Program enhanced to include funding for state-wide implementation. This is a very successful program.

Partnerships Program has been a very successful with positive outcomes for children and their families. NDFFCMH supports the increase of 1 FTE for Partnership Program at SEHSC.

Finally, NDFFCMH thanks you for your continued support for children with emotional, behavioral and mental disorders and their families.

Thank you for your time.

ND Department of Human Services
Medical Services
Cost To Increase Healthy Steps Eligibility From 150% (Net) To 165% (Net) Of Federal Poverty Level
2009-2011 Biennium
Premium Cost of $243.93

	# of Children	Total	General	Federal
Premium Cost From 150% (Net) to 165% (Net) of FPL :	608	2,217,812	573,970	1,643,842
.75 FTE [1] to Increase to 165% of FPL:		51,953	13,445	38,508
Total Cost From 150% (Net) to 165% (Net) of FPL:		2,269,765	587,415	1,682,350

Considerations:

The Federal "extension" of SCHIP is scheduled to expire March 30, 2009. SCHIP Reauthorization action has begun at the Federal level. If increased federal funds are not provided during SCHIP reauthorization, general funds would be needed to fund this increase in eligibility level.

Any increase in the income threshold for SCHIP will have an impact on the Caring for Children Program. (As of November 1, 2008, the income threshold for the Caring Program is 200% (net).)

The number of potential eligibles for the 165% (net) scenario above, is based on the number of families who applied for coverage from October 1, 2006 through September 30, 2007, and would have been eligible at 165% (net). It is possible that this number is understated, as it based on the number of families who previously applied for coverage. Families with incomes up to 165% (net) may not have applied for coverage.

As of April 1, 2008, 150% FPL is $31,800 (annually) for a family of four: and 165% FPL is $34,980 (annually) for a family of four.

[1] This reflects an off-set of overtime for Healthy Steps eligibility staff currently in the Medical Services 2009-2011 budget request. The full impact on the state-office Healthy Steps eligibility staff of increasing SCHIP to 150% is unknown; therefore, overtime was budgeted to cover the additional staff time needed to process the expecteed increase in applications. Therefore, the actual estimate for .75 FTE is $89,969; however, after offsetting the overtime already budgeted, the net cost of the FTE needed to go to 165% (net) of FPL is $51,953.

Continuous Eligibility

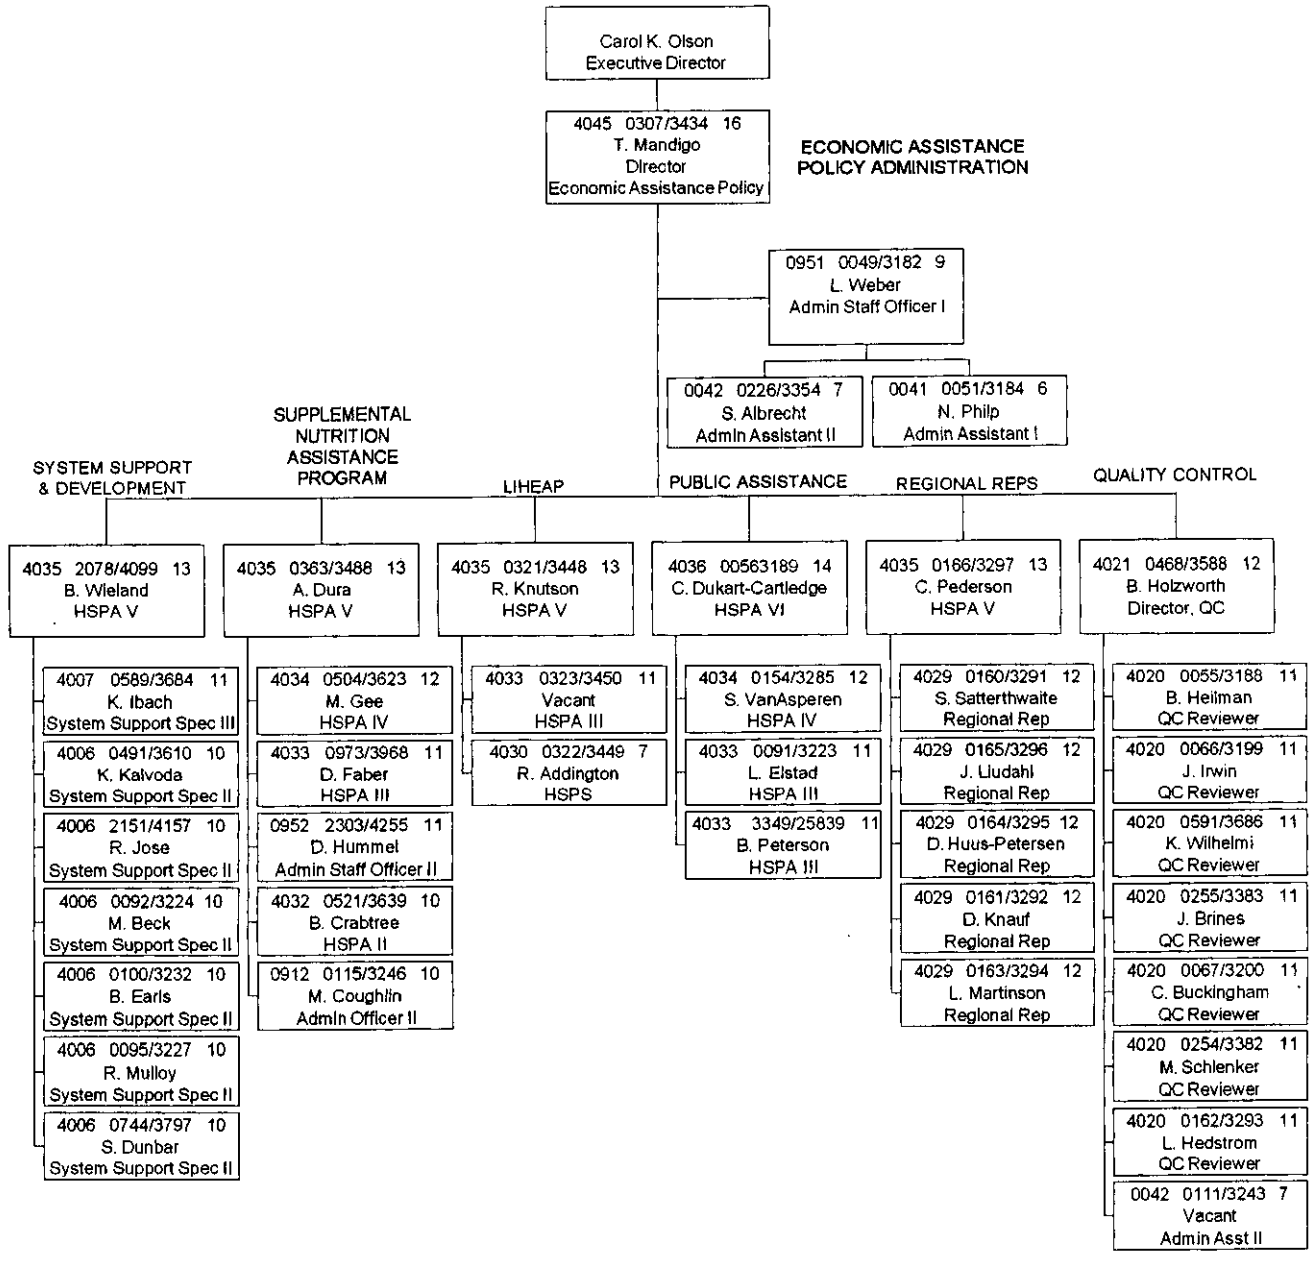
Monthly Average			
	Recipients Eligible	**Cost per Eligible**	**Amount Paid**
June, July, and August 2008 (3 months)	25,910	$189.94	$4,921,345
July 2007 thru May 2008 (11 months)	24,303	$198.51	$4,824,388
First 3 months of Continuous Eligibility as compared to previous 11 months	1,607	($8.57)	$96,957

- When the compounding of the Medicaid enrollment increases is considered, the increased cost will be greater than $100,000 per month.

Program Changes June 2008 through January 2009

- Increase in the Number of Children Enrolled in Medicaid is 4,489
- Increase in Months of Eligibility of 9.34% (June 2008 through August 2008)
- Decrease in closed cases due to Failure to Provide Information
  - Average January 2008 through May 2008: 996
  - Average June 2008 through January 2009: 204

North Dakota Department of Human Services
Economic Assistance Policy Division



2007 - 2009 Budget:
39.8 FTEs

Revised 1/5/09

C

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 12, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Tove Mandigo, Economic Assistance Policy Division Director in the Department of Human Services. I am here today to provide you an overview of Economic Assistance Policy Division, for the Department of Human Services.

Programs

Economic Assistance Policy (EAP) is responsible for eligibility policy for Basic Care Assistance, and state administration of Child Care Assistance, the Low Income Home Energy Assistance Program (LIHEAP), the Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF). This includes:

- Distribution of benefits to recipients and payments to providers;
- Direction, supervision, and training of county social service board administration of EAP programs;
- Implementation of applicable state and federal law;
- Operation of electronic eligibility determination and reporting systems; and
- Preparation of required state and federal reports.

Economic Assistance Policy also does Quality Control reviews of SNAP, Healthy Steps, Medicaid, TANF eligibility determinations, and estate recovery of Medicaid expenditures.

Caseload / Customer Base

EAP will direct and supervise county social services' determinations or redetermination of eligibility for the following:

Basic Care Assistance: approximately 455 residents of licensed Basic Care facilities.

Child Care Assistance: approximately 4,164 children from 2,519 families each month, and will pay about 1,573 licensed, certified, or approved child care providers a total of $931,660 per month.

Supplemental Nutrition Assistance Program (SNAP formerly Food Stamps): 30,786 families each month, and will pay about 450 grocers in North Dakota a total of $8,514,016 in federal funds per month.

Low Income Heating and Energy Assistance Program: approximately 15,500 households each heating season, and will pay about 400 energy providers. About $26.3 million in federal funds is budgeted for heating assistance and weatherization for each year of the biennium.

Temporary Assistance for Needy Families (TANF): approximately 2,851 families with 4,828 children, providing an average monthly cash benefit of $343 for each family, while the Job Opportunities and Basic Skills (JOBS) program will work with 1,425 adult heads of households to find jobs and promote family self-sufficiency at an average cost of $210 per individual.

Kinship Care: will use TANF funds to provide an average monthly cash benefit of $350 for about 50 children who would otherwise be in foster care.

Program Trends / Major Program Changes

TANF:

North Dakota is one of only ten states meeting the federally required 50% work participation rate without the addition of the caseload reduction credit. In order to meet the federally required work participation rate, the Department contracted not only with Job Service North Dakota, but also Career Options. Career Options was in a position to give the kind of wrap-around services on a case-by-case basis necessary for challenging clients.

Diversion Assistance - Front-end

Diversion Assistance was designed to provide aid to families whose earned income has been reduced and who are in need of short-term assistance to provide for financial needs until self-sustaining income begins again. Diversion Assistance is designed to be an alternative to receiving ongoing TANF cash assistance. Due to receipt of federal guidelines on Diversion Assistance that became effective October 1, 2008, the effectiveness of the program is minimal. Therefore, pay after performance is being developed.

Pay After Performance

The pay after performance program has an anticipated implementation date of April 2009. Work-eligible individuals will be required to meet work requirements before their needs will be met. This means a child only payment will be made, and, if the work-eligible individual meets the

work requirements, unless there is good cause, a supplemental payment will be made to meet their needs. If the work-eligible individual does not meet the work requirements, a sanction will be imposed. Pay after performance will be effective for the first four months of an application.

Benefits

- System will process case according to policy without case closure
- Work-eligible individuals will participate in required hours before receiving a benefit
- Anticipate increase work participation rate

LIHEAP: The LIHEAP caseload has remained fairly stable but the fuel costs have steadily increased. This is a totally federally funded program. The federal government recently funded an additional $5.1 billion nationwide, so states could meet the fiscal demands of increasing fuel costs. With this additional funding, trends would indicate that North Dakota will meet the needs of the LIHEAP clients in the 2009-2011 biennium.

SNAP: There has been a sharp increase in the number of clients seeking food assistance during the 2007-2009 biennium. This appears to be the result of an outreach effort on the part of the federal government, coupled with the implementation of simplified reporting and the 2008 Farm Bill. Simplified reporting allows a client to report earnings on a semi-annual basis as opposed to monthly.

Child Care Assistance: The Department implemented a certificate program to meet federal regulations that identifies a constant amount to be paid for three to six months, depending on the family circumstances. This resulted in higher average monthly caseload and cost per case.

Prior to the certification program, each family's payment had to be calculated monthly.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 20011 Budget	Increase / Decrease
Salary and Wages	4,568,776	5,310,083	741,307
Operating	10,092,283	10,834,553	742,270
Capital Assets	205	-	(205)
Grants	203,750,869	314,460,054	110,709,185
Total	218,412,133	330,604,690	112,192,557
General Funds	7,784,373	9,826,276	2,041,903
Federal Funds	191,369,536	302,739,433	111,369,897
Other Funds	19,258,224	18,038,981	(1,219,243)
Total	218,412,133	330,604,690	112,192,557
FTE	39.80	39.80	-

The Salary and Wages line item increased by $741,307 and can be mainly attributed to the following:

- The salary and health insurance package that adds $475,306 in total funds of which $212,910 is general funds;
- $75,703 in total funds is for the continuation of the year two 4% increase of which $38,261 is general funds;
- An increase of $79,682 to cover an underfunding of salaries from the 2007-2009 budget; and
- The remaining $110,616 increase is a combination of increases and decreases needed to sustain the salary of the 39.8 FTEs in this area of the budget.

The Operating line item increased by $742,270, and is a combination of the increases and decreases expected next biennium. Some of the significant changes are noted below:

- $1,565,878 increase to the JOBS program due to the need for increased client services, as a large portion of the individuals remaining on TANF are challenging clients;
- $464,144 increase in Parental Responsibility Initiative for the Development of Employment (PRIDE) to provide for a statewide program;
- $188,308 increase to provide for federally required estate collection activities;
- $1,016,486 decrease to SNAP EBT (Electronic Benefit Transfer) provider payments due to the completion of the EBT reprocurement process, and the resulting decrease in the monthly cost per case of $1.91; and
- $502,969 decrease in the Payment Error Rate Measurement contract due to the cyclical nature of the three-year federal eligibility review requirements.

The Grants line item increased by $110,709,185, and is a combination of the increases and decreases expected next biennium. Some of the significant changes are noted below:

- $97,366,572 increase in SNAP benefits, all federal funds, based upon federal outreach, implementation of simplified reporting, and the 2008 Farm Bill;
- $12,022,292 increase in LIHEAP benefits, all federal funds, based upon increasing heating costs and available federal funds;
- $454,479 increase in Indian County Allocation, all general funds, based upon the statutory funding formula;
- $1,907,617 decrease in TANF grants, mainly due to the decrease in the number of clients, and consists of a $1,217,016 increase

in general funds, a $1,316,576 decrease in federal funds, and a $1,808,057 decrease in other funds or Child Support collections;

- $2,629,386 increase in Child Care Assistance grants, consist of a $350,197 increase in general funds, of which $274,408 was included in the Executive Budget to increase provider rates for centers and group facilities; and
- $155,162 increase in the Supplemental Nutrition Assistance Program Education Plan, all federal funds, based upon NDSU budget projections.

This concludes my testimony on the 2009 – 2011 budget request for the Economic Assistance Policy area of the Department. I would be happy to answer any questions.

A

Economic Assistance Grant Costs

Over the past ten years there have been new programs and services added and various changes made to existing programs. The Department does not know if the counties would have shared in the cost of these new programs and services, or if the counties were to share in the cost, what their share would have been, had the SWAP legislation not been approved. If required to make these assumptions, the Department requests your assistance. **Attachment C** lists the changes made since the implementation of the SWAP legislation which have a direct impact on the economic assistance grant costs.

Indian County Payments

Prior to the 1997-1999 biennium, the Department was appropriated $440,000 to be allocated to Benson, Sioux and Rolette counties for assistance in the cost of providing economic assistance programs due to the large amount of tax-exempt land in these counties. The 1997 Legislative Assembly added an additional $619,000 to the Indian County appropriation for assistance to these three counties. Beginning in 1999-2001 biennium the Indian County payments were based upon a specific formula outlined in Subsection 3 of section 50-01.2-03.2 of the NDCC. This section states that a county is eligible for Indian County payments if both of the following conditions are met:

- more than 20% of their Economic Assistance caseload is living on a federally recognized Indian Reservation or tribal trust land and;
- the administrative costs expressed in mills is greater than the statewide average administrative costs expressed in mills for all other counties.

* For purposes of calculating the CY 2008 Indian County Allocation, the Child Support costs are not included in the "Total Economic Assistance Administrative Costs for SFY 2007". Effective July 1, 2007 the state is responsible for the costs associated with the operation of the Child Support Program. (SB 2205)

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Tove Mandigo, Economic Assistance Policy Division Director in the Department of Human Services. I am here today to provide you an overview of Economic Assistance Policy Division, for the Department of Human Services.

Programs

Economic Assistance Policy (EAP) is responsible for eligibility policy for Basic Care Assistance, and state administration of Child Care Assistance, the Low Income Home Energy Assistance Program (LIHEAP), the Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF). This includes:

- Distribution of benefits to recipients and payments to providers;
- Direction, supervision, and training of county social service board administration of EAP programs;
- Implementation of applicable state and federal law;
- Operation of electronic eligibility determination and reporting systems; and
- Preparation of required state and federal reports.

Economic Assistance Policy also does Quality Control reviews of SNAP, Healthy Steps, Medicaid, TANF eligibility determinations, and estate recovery of Medicaid expenditures.

Caseload / Customer Base

EAP will direct and supervise county social services' determinations or redeterminations of eligibility for the following:

Basic Care Assistance: approximately 455 residents of licensed Basic Care facilities.

Child Care Assistance: approximately 4,164 children from 2,519 families each month, and will pay about 1,573 licensed, certified, or approved child care providers a total of $931,660 per month.

Supplemental Nutrition Assistance Program (SNAP formerly Food Stamps): 30,786 families each month, and will pay about 450 grocers in North Dakota a total of $8,514,016 in federal funds per month.

Low Income Heating and Energy Assistance Program: approximately 15,500 households each heating season, and will pay about 400 energy providers. About $26.3 million in federal funds is budgeted for heating assistance and weatherization for each year of the biennium.

Temporary Assistance for Needy Families (TANF): approximately 2,851 families with 4,828 children, providing an average monthly cash benefit of $343 for each family, while the Job Opportunities and Basic Skills (JOBS) program will work with 1,425 adult heads of households to find jobs and promote family self-sufficiency at an average cost of $210 per individual.

Kinship Care: will use TANF funds to provide an average monthly cash benefit of $350 for about 50 children who would otherwise be in foster care.

Program Trends / Major Program Changes

TANF:

North Dakota is one of only ten states meeting the federally required 50% work participation rate without the addition of the caseload reduction credit. In order to meet the federally required work participation rate, the Department contracted not only with Job Service North Dakota, but also Career Options. Career Options was in a position to give the kind of wrap-around services on a case-by-case basis necessary for challenging clients.

Diversion Assistance - Front-end

Diversion Assistance was designed to provide aid to families whose earned income has been reduced and who are in need of short-term assistance to provide for financial needs until self-sustaining income begins again. Diversion Assistance is designed to be an alternative to receiving ongoing TANF cash assistance. Due to receipt of federal guidelines on Diversion Assistance that became effective October 1, 2008, the effectiveness of the program is minimal. Therefore, pay after performance is being developed.

Pay After Performance

The pay after performance program has an anticipated implementation date of April 2009. Work-eligible individuals will be required to meet work requirements before their needs will be met. This means a child only payment will be made, and, if the work-eligible individual meets the

work requirements, unless there is good cause, a supplemental payment will be made to meet their needs. If the work-eligible individual does not meet the work requirements, a sanction will be imposed. Pay after performance will be effective for the first four months of an application.

Benefits

- System will process cases according to policy without case closure
- Work-eligible individuals will participate in required hours before receiving a benefit
- Anticipate increase work participation rate

LIHEAP: The LIHEAP caseload has remained fairly stable, but the fuel costs have steadily increased. This is a totally federally funded program. The federal government recently funded an additional $5.1 billion nationwide, so states could meet the fiscal demands of increasing fuel costs. With this additional funding, trends indicate that North Dakota will meet the needs of the LIHEAP clients in the 2009-2011 biennium.

SNAP: There has been a sharp increase in the number of clients seeking food assistance during the 2007-2009 biennium. This appears to be the result of an outreach effort on the part of the federal government, coupled with the implementation of simplified reporting and the 2008 Farm Bill. Simplified reporting allows a client to report earnings on a semi-annual basis as opposed to monthly.

Child Care Assistance: The Department implemented a certificate program to meet federal regulations that identifies a constant amount to be paid for three to six months, depending on the family circumstances. This resulted in higher average monthly caseload and cost per case.

Prior to the certification program, each family's payment had to be calculated monthly.

Overview of Budget Changes:

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	4,568,776	741,307	5,310,083	(147,588)	5,162,495
Operating	10,092,283	742,270	10,834,553	-	10,834,553

Total	218,412,133	112,192,557	330,604,690	(147,588)	330,457,102
General Funds	7,784,373	2,041,903	9,826,276	(48,462)	9,777,814
Federal Funds	191,369,536	111,369,897	302,739,433	(99,126)	302,640,307
Other Funds	19,258,224	(1,219,243)	18,038,981	-	18,038,981
Total	218,412,133	112,192,557	330,604,690	(147,588)	330,457,102

FTE	39.80	-	39.80	-	39.80

Budget Changes from Current Budget to Executive Budget:

The Salary and Wages line item increased by $741,307 and can be mainly attributed to the following:

- The salary and health insurance package that adds $475,306 in total funds of which $212,910 is general funds;
- $75,703 in total funds is for the continuation of the year two 4% increase of which $38,261 is general funds;
- An increase of $79,682 to cover an underfunding of salaries from the 2007-2009 budget; and

- The remaining $110,616 increase is a combination of increases and decreases needed to sustain the salary of the 39.8 FTEs in this area of the budget.

The Operating line item increased by $742,270, and is a combination of the increases and decreases expected next biennium. Some of the significant changes are noted below:

- $1,565,878 increase to the JOBS program due to the need for increased client services, as a large portion of the individuals remaining on TANF are challenging clients;
- $464,144 increase in Parental Responsibility Initiative for the Development of Employment (PRIDE) to provide for a statewide program;
- $188,308 increase to provide for federally required estate collection activities;
- $1,016,486 decrease to SNAP EBT (Electronic Benefit Transfer) provider payments due to the completion of the EBT reprocurement process, and the resulting decrease in the monthly cost per case of $1.91; and
- $502,969 decrease in the Payment Error Rate Measurement contract due to the cyclical nature of the three-year federal eligibility review requirements.

The Grants line item increased by $110,709,185, and is a combination of the increases and decreases expected next biennium. Some of the significant changes are noted below:

- $97,366,572 increase in SNAP benefits, all federal funds, based upon federal outreach, implementation of simplified reporting, and the 2008 Farm Bill;

- $12,022,292 increase in LIHEAP benefits, all federal funds, based upon increasing heating costs and available federal funds;
- $454,479 increase in Indian County Allocation, all general funds, based upon the statutory funding formula;
- $1,907,617 decrease in TANF grants, mainly due to the decrease in the number of clients, and consists of a $1,217,016 increase in general funds, a $1,316,576 decrease in federal funds, and a $1,808,057 decrease in other funds or Child Support collections;
- $2,629,386 increase in Child Care Assistance grants, consisting of a $350,197 increase in general funds, of which $274,408 was included in the Executive Budget to increase provider rates for centers and group facilities; and
- $155,162 increase in the Supplemental Nutrition Assistance Program Education Plan, all federal funds, based upon NDSU budget projections.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $48,462 – general fund and $99,126 – federal funds for a total of $147,588.

This concludes my testimony on the 2009 – 2011 budget request for the Economic Assistance Policy area of the Department. I would be happy to answer any questions.

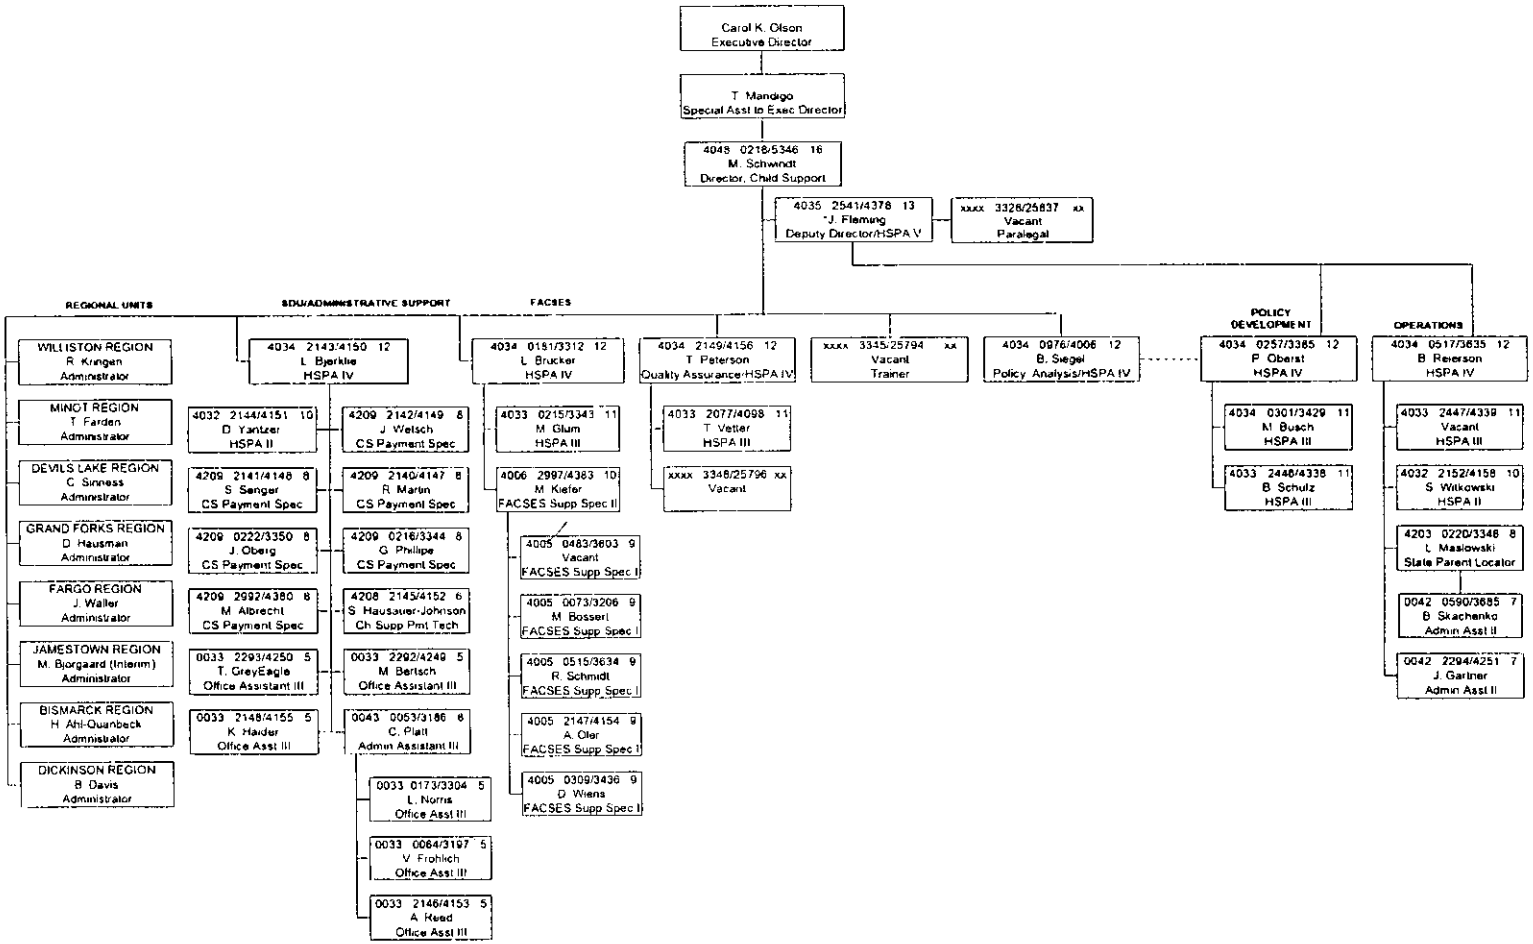
North Dakota Department of Human Services
Child Support Division



*Legal work of RCSEUs is supervised by Jim Fleming

2007 - 2009 Budget:
172.2 FTEs

Revised 1/5/09

E

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 12, 2009

Chairman Pollert, members of the House Appropriations Human Resources Division, I am Mike Schwindt, Child Support Enforcement director. I am here to provide an overview of the award-winning Child Support Enforcement (CSE) program for the Department of Human Services.

Programs

The CSE program is designed to enhance the well-being of children and reduce the demands on public treasuries by securing child support and medical support from legally responsible parents and by encouraging positive relationships between children and their parents.

This budget includes, for the first time, the staff and operating costs of the eight regional child support enforcement units (RCSEUs) transferred from county to state responsibility with the enactment of SB 2205 last session.

Caseload / Customer Base

The total IV-D caseload was at 42,108 in December 2008. The nonIV-D portion of the caseload added 9,971 more cases.

- These cases include about 66,000 children and 79,600 parents.
- Within the IV-D portion of the program, about 4,700 cases are awaiting court orders, the key to getting funds to the children.
- Our caseload is distributed among the 54 states and territories plus a number of Indian tribes and foreign countries.

Department of Human Services
Open Child Support Cases
December 1999 through December 2008

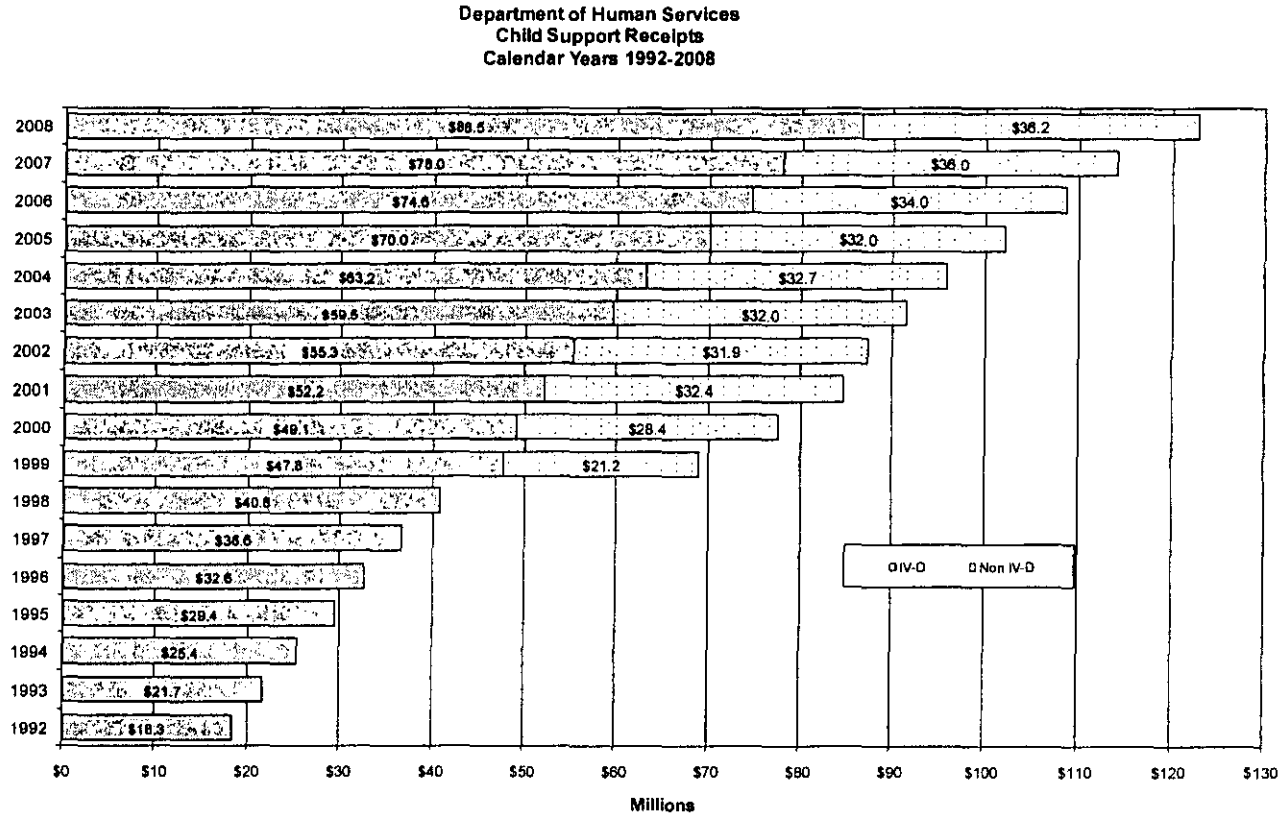
	Dec-99	Dec-00	Dec-01	Dec-02	Dec-03	Dec-04	Dec-05	Dec-06	Dec-07	Dec-08
Non IV-D Cases	8,591	11,071	13,131	11,872	9,474	9,802	9,771	10,314	10,161	9,971
IV-D Cases	37,161	39,244	39,047	39,236	40,180	41,385	41,886	42,323	42,540	42,108

Major Trends, Issues and Program Changes

Collections. Total collections continue to increase. We initially passed the $100 million threshold in annual collections in December 2005. For calendar year 2008, total collections reached $122.7 million, a 7.6% increase over 2007. Within the IV-D program, collections increased 10.9% to $86.5 million while the nonIV-D portion increased only a half percent to $36.2 million. Despite these increased collections, our total receivables continue to climb, reaching $279.7 million as of the end of December 2008.

Of the estimated $250 million we expect to collect next biennium, about 90% will be sent directly to the families, 5% will be sent to another state

for further distribution and the balance will be retained to reimburse taxpayers including about $7 million used to fund our TANF and foster care programs.



Fees. A recent federal mandate requires us to charge an annual $25 service fee on nonassistance cases included in the IV-D caseload. We implemented the fee in October 2007 by charging:

- the $25 fee on select IV-D cases after $500 has been received and paid to the family, and
- a monthly $2.10 fee whenever collections are received on nonIV-D cases.

Fees received are shared with our federal partners as revenue where they are entitled to a piece of the collection. The state share of all fees is projected to be $263,938 and is included in this budget.

Performance. I'm pleased to report that we – the CSE program, the courts, and the clerks of court - continue to rank as one of the best programs nationally. Additionally, our program performance has been recognized by a number of organizations including:

- Western Interstate Child Support Enforcement Council's **Outstanding State Program** in November 2006.
- The Council of State Government' 2007 **regional and national Innovation Awards** for our PRIDE (Parental Responsibility in the Development of Employment) program which relies heavily on TANF, Job Service North Dakota and the Courts.
- The Office of Child Support Enforcement (OCSE) Commissioner's 2007 **Innovative Award for Partnership**, also for the PRIDE program.
- The National Child Support Enforcement Association's 2008 **Outstanding Program Award**.
- The OCSE Commissioner's 2008 **Innovative Award for Partnership** for the Multi-Program Collaboration project involving TANF, Healthy Steps, Medicaid, Children and Family Services, Job Service North Dakota and the CSE program.
- The Family Support Council's 2008 **Outstanding Individual Achievement** award was presented to Mary Jo Nordine for her efforts with the Outgoing Interstate Center in Grand Forks.
- The Family Support Council's 2008 **Program Awareness** award was presented to Martha Bjorgaard with the Jamestown RCSEU.
- The CSE director was also recognized in August, receiving the National Child Support Enforcement Association's 2008 **Outstanding Manager** award along with the OCSE Commissioner's award for **Exemplary Leadership**.

While we have made steady improvements over the years, we still have a long way to go. Using comparative federal fiscal year measures:

- Percent of children in IV-D cases born out of wedlock with paternity established or acknowledged.
    - In 2007 we were at 105%, moving to 104% in 2008.
    - Using same year data, for 2007 we were at 98.2%, moving to 99.7% in 2008.

- Percent of cases with court orders for child support.
    - In 2007 we were at 87% and remained unchanged for 2008. Since a court order is essential to moving forward with the case, we are focusing our efforts on this and the following measure to improve overall performance. The improvement target is 2% per year until we are in the top five in the country. In the latest ranking we were 9th in the country for this measure.

- Percent of current support owed on IV-D cases that is collected.
    - In 2007 we were at 74.2%, moving to 75.85% in 2008. Our improvement target is collecting an additional 2% per year until we collect 90% of support that is due each month. In the latest ranking we were 2nd in the country.

- Amount collected for each $1 spent.
    - In 2007 we were at $5.59, inching to $5.81 in 2008.
    - Overall, we collect about $32 for every $1 in state general funds used.

- Medical Support is the newest performance measure coming on line. This measurement continues under development at the national level.

Benefits. This program also results in measurable savings to taxpayers. In addition to the millions we recover each year to offset the TANF, Foster Care and Medicaid programs, there is another, more difficult to measure component – that being cost avoidance. While this measurement process can use some refinement, applying the federal data to our collections shows that our efforts result in about $22 million in additional savings to the Medicaid, Food Stamps, Housing, SSI and TANF programs each year.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / (Decrease)
Salary and Wages	16,879,193	19,099,615	2,220,422
Operating	4,160,835	4,144,458	(16,377)
Equipment		13,000	13,000
Grants	462,946	200,000	(262,946)
Total	21,502,974	23,457,073	1,954,099
General Funds	491,698	6,365,045	5,873,347
Federal Funds	15,571,363	14,303,519	(1,267,844)
Other Funds	5,439,913	2,788,509	(2,651,404)
Total	21,502,974	23,457,073	1,954,099
FTE	172.20	164.70	(7.50)

Salaries. The salaries line changed by $2,220,422 primarily because of

- the $1,790,188 needed for the Governor's salary and health package. This was funded with $578,186 in general funds, $1,131,349 of federal and $80,653 of other funds.

- the reduction of $621,970 for the 7.5 FTEs extracted consisting of $264,174 in general funds, and $357,796 of federal funds along with
- a $16,250 reduction for temporary salaries, (general funds share of $4,289).
- $182,933 is needed to sustain the 4 & 4% salary increase for the current biennium, (general funds share of $63,747).
- most of the balance is needed to address underbudgeted RCSEU salaries as part of the transfer to state administration as well as maintain salary adjustments occurring during the current biennium.

Operating. The $4.1 million operating line has a net decrease of $16,377.

- The single largest item is the $2 million in operating fees and services, which has a $79,931 increase. This item includes
  - $1,148,778 of federal funds for the Supreme Court, an increase of $98,778.
  - Genetic testing fees and related costs of $135,000.
  - $200,000 for a receivables study.
- Rent for our RCSEUs and the central office increased by $114,128 to $1,054,565. We have moved or anticipate moving the RCSEUs in Williston, Devils Lake, and Fargo because either the host county wanted the space or our lease expired.
- All other items were conservatively budgeted at anticipated usage.

Equipment. There is $13,000 included for copiers at the Dickinson and Williston RCSEUs.

Grants. The grants line shows a net decrease of $262,946, resulting in a $200,000 request which will cover the expected access and visitation federal funding.

Revenues. The CSE program is now state administered. Funding for the program is primarily federal in that eligible expenditures are matched with 66% federal funds and 34% state funds. A recent federal law change prohibits using incentive funds as match for other federal funds. The Other Funds category includes fees of $263,938 and $2.5 million of federal incentive funds which must be reinvested in the program. You will note the reduction of $3.2 million in county funds in the appropriation.

This concludes my testimony on the 2009 – 2011 budget request for the Child Support program. I would be happy to answer any questions.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 3, 2009

- Percent of cases with court orders for child support.
    - In 2007 we were at 87% and remained unchanged for 2008. Since a court order is essential to moving forward with the case, we are focusing our efforts on this and the following measure to improve overall performance. The improvement target is 2% per year until we are in the top five in the country. In the latest ranking we were 9th in the country for this measure.

- Percent of current support owed on IV-D cases that is collected.
    - In 2007 we were at 74.2%, moving to 75.85% in 2008. Our improvement target is collecting an additional 2% per year until we collect 90% of support that is due each month. In the latest ranking we were 2nd in the country.

- Amount collected for each $1 spent.
    - In 2007 we were at $5.59, inching to $5.81 in 2008.
    - Overall, we collect about $32 for every $1 in state general funds used.

- Medical Support is the newest performance measure coming on line. This measurement continues under development at the national level.

Benefits. This program also results in measurable savings to taxpayers. In addition to the millions we recover each year to offset the TANF, Foster Care and Medicaid programs, there is another, more difficult to measure component – that being cost avoidance. While this measurement process can use some refinement, applying the federal data to our collections shows that our efforts result in about $22 million in additional savings to the Medicaid, Food Stamps, Housing, SSI and TANF programs each year.

OVERVIEW OF BUDGET CHANGES

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	16,879,193	2,220,422	19,099,615	(209,487)	18,890,128
Operating	4,160,835	(16,377)	4,144,458		4,144,458
Equipment		13,000	13,000		13,000
Grants	462,946	(262,946)	200,000		200,000
Total	21,502,974	1,954,099	23,457,073	(209,487)	23,247,586
General Funds	491,698	5,873,347	6,365,045	(68,787)	6,296,258
Federal Funds	15,571,363	(1,267,844)	14,303,519	(99,733)	14,203,786
Other Funds	5,439,913	(2,651,404)	2,788,509	(40,967)	2,747,542
Total	21,502,974	1,954,099	23,457,073	(209,487)	23,247,586
FTE	172.20	(7.5)	164.70		164.70

Budget Changes from Current Budget to Executive Budget:

Salaries. The salaries line changed by $2,220,422 primarily because of

- the $1,790,188 needed for the Governor's salary and health package. This was funded with $578,186 in general funds, $1,131,349 of federal and $80,653 of other funds.
- the reduction of $621,970 for the 7.5 FTEs extracted consisting of $264,174 in general funds, and $357,796 of federal funds along with
- a $16,250 reduction for temporary salaries, (general funds share of $4,289).
- $182,933 is needed to sustain the 4 & 4% salary increase for the current biennium, (general funds share of $63,747).
- most of the balance is needed to address underbudgeted RCSEU salaries as part of the transfer to state administration as well as maintain salary adjustments occurring during the current biennium.

Operating. The $4.1 million operating line has a net decrease of $16,377.

- The single largest item is the $2 million in operating fees and services, which has a $79,931 increase. This item includes
    - $1,148,778 of federal funds for the Supreme Court, an increase of $98,778.
    - Genetic testing fees and related costs of $135,000.
    - $200,000 for a receivables study.
- Rent for our RCSEUs and the central office increased by $114,128 to $1,054,565. We have moved the RCSEUs in Williston, Devils Lake, and Fargo because either the host county wanted the space or our lease expired.
- All other items were conservatively budgeted at anticipated usage.

Equipment. There is $13,000 included for copiers at the Dickinson and Williston RCSEUs.

Grants. The grants line shows a net decrease of $262,946, resulting in a $200,000 request which will cover the expected access and visitation federal funding.

Revenues. The CSE program is now state administered. Funding for the program is primarily federal in that eligible expenditures are matched with 66% federal funds and 34% state funds.

The Other Funds category includes fees of $263,938 and $2.5 million of federal incentive funds which must be reinvested in the program. You will note the reduction of $3.2 million in county funds in the appropriation.

House Changes: The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $68,787 - general funds, $99,733 - federal funds, and $40,967 of other funds for at total of $209,487.

This concludes my testimony on the 2009 – 2011 budget request for the Child Support program. I would be happy to answer any questions.

Total Operating Fees & Services Budget Account Code	$ 2,075,689	$ 276,006	$ 1,799,683

Fact Sheet

Child Support Enforcement

e purpose of the Child Support Enforcement program is to enhance the well-being of children and reduce the demand on public treasuries by securing financial and medical support from legally responsible parents and encouraging positive relationships between children and their parents.

The Child Support Enforcement Division within the Department of Human Services works with two types of cases:

- **IV-D cases** which stem from referrals from public assistance programs (TANF, foster care and Medical Assistance) or from either custodial or noncustodial parents applying for IV-D services.
- **NonIV-D cases** which stem from court orders where there is no application or referral to the IV-D program or where people choose to close their IV-D case.

Services Provided -

By the eight Regional Child Support Enforcement Units (RCSEUs):

- IV-D cases: Paternity establishment, establishment and enforcement (including issuing income withholding orders and national medical support notices) of child support and medical support orders, review and adjustment of court orders, local locate when customers need to be found, and customer services.
- NonIV-D cases: None

By the Clerks of Court:

- IV-D and NonIV-D cases: Initiate contempt proceedings, enter civil file information into the automated system, and customer services.

By the Child Support Enforcement central office:

- IV-D cases: Manage a number of programs including Federal and State Tax Intercept, State Parent Locate Service, Credit Bureau Reporting, Financial Institution Data Match, Passport Denial, State Directory of New Hires, Central Registry, and Federal Case Registry. Also provide customer services and centralized receipting and distribution of payments including Electronic Funds Transfer (EFT).
- NonIV-D cases: Centralized receipting and distribution of payments, issuing income withholding orders, stomer services, and EFT.

The court order:

- Is issued by the district court. District court judges or judicial referees may conduct hearings.
- Establishes medical support and the amount of child support due based upon the child support guidelines and the unique fact situations of each case.
- May be amended at the request of either party either through private legal counsel or pro se (self representation).
- Will be reviewed by RCSEUs, in IV-D cases, generally no more frequently than 35 months since the order was entered or last reviewed.
- Is enforced by the courts. Requests for enforcement may come from Clerks of Court, private attorneys, either party or, in IV-D cases, the RCSEUs.
- Is also enforced, in IV-D cases, by the Child Support Enforcement program through a variety of administrative actions.
- Is also enforced, in nonIV-D cases, by the Child Support Enforcement program through administratively issued income withholding orders.

E

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am JoAnne Hoesel of the Department of Human Services. I am here today to provide you an overview of the Division of Mental Health & Substance Abuse for the Department of Human Services.

Programs

The Division of Mental Health & Substance Abuse provides system-wide education, regulation, technical assistance, training for public and private service providers, federal and state reporting and department-wide research analysis and research/data support.

Service programs directly managed by the Division are Compulsive Gambling Treatment, Community-Based High-Risk Sex Offender Treatment, Regional Prevention Coordination and Model programs, and Methamphetamine Residential Treatment.

Customer Base

During SFY 2008 the public mental health system provided services to 17,388 children, youth, and adults. For the same time period, the public substance abuse system provided services to 6,290 adolescents and adults. The Division is responsible for licensure of 84 substance abuse

treatment programs, 38 DUI seminar providers, eight regional human service centers, and six psychiatric residential treatment facilities for children and adolescents. The Prevention Resource Center is a lending and resource library and distributes educational products annually in the areas of developmental disabilities, mental health, and substance abuse. The Division provided private and public workforce development training in the areas of substance abuse and mental health.

Program Trends / Major Program Changes

Recovery Model – Mental health – The Division continues its transition to a recovery approach in service delivery which shifts emphasis from 'symptom control' to prevention and recovery for those with mental illness. Person centered treatment planning, recovery model training, training of peers to support those in treatment, and integrated dual disorder treatment are just a few of the specific techniques in place, which give consumers primary control for their wellness. The result is significant life enhancement, gains in self-esteem, and self confidence as they become contributing members of the community. This approach is in contrast to traditional models of service delivery where consumers are instructed what to do or simply have things done for them. The Recovery Model's goal is that individuals with mental illness have greater control and choice in their treatment, which leads to their enhanced ability to take increased responsibility in their lives.

Substance Abuse services have enhanced their recovery approach by the continued use of the MATRIX model, which acknowledges the impact of methamphetamine and other drug use on the brain in its design. Two human service centers have recently achieved national certification in the MATRIX model through the University of California – Los Angeles. This certification means their programs maintain the model's approach and fidelity. Other centers are currently in the process of review for certification.

The Division recently began a telephone recovery program, which provides ongoing telephone support after completion of traditional treatment. This program is designed to provide support to those who may not have access to support groups or other community supports due to isolation and transportation problems at a critical time in their recovery.

Returning Veterans – North Dakota has the highest number of Army National Guard soldiers per 100,000. North Dakota's rate is 51.52 whereas, the national average of the 50 states is 11.46. In order to address the needs of returning veterans seeking service in the pubic sector, the Division participates in the Inter-service Family Assistance Committee (ISFAC), a collaborative effort with community agencies to assist in promoting quality of life for returning soldiers and their families. With Traumatic Brain Injury (TBI) being the signature injury sustained in the Iraq and Afghanistan wars, training through the Division's TBI grant is being provided to regional human service centers on screening techniques and other TBI treatment related changes. The

National Guard provided statewide training at the annual Clinical Forum conference and a TBI advisory committee was formed with representation from the Veterans Administration (VA). North Dakota has had 400 returning veterans' with positive first level TBI screens. The regional human service centers are reporting an increase in veterans seeking services.

At the regional human service centers in calendar year 2007, alcohol was the **primary substance** in 57% of admissions (2,252), marijuana was 25% of admissions (1,001), and methamphetamine was 12% of admissions (462).

Treatment admissions for those with primary methamphetamine dependence equaled 272 in 2002, 511 in 2005, and 462 in 2007. From 2005 to 2007 there was a decrease of 9.5% in the number of admissions for methamphetamine dependence. As a percent of total substance abuse admissions, methamphetamine admission trend was 9% in 2002; 13% in 2005; and 12% in 2007. At the same time, alcohol and marijuana trends as percents of total substance abuse admissions are as follows: Alcohol from 63% in 2002; 55% in 2005; 57% in 2007, and marijuana was 23% in 2002; 20% in 2005, and 25% in 2007. Abuse of prescription drugs appears to now be the current upward substance abuse trend.

Trauma Informed Systems – Unresolved trauma severely impacts a person's ability to maintain positive mental health and their ability to recovery from a psychiatric illness. Given the importance of addressing trauma, the Division has partnered with UND-Neuropsychiatric Research Institute (NRI) and is part

of their Treatment Collaborative for Traumatized Youth (TCTY) project. Each regional human service center plus additional private providers across the state have staff specially trained in evidence-based treatments to traumatized youth. In the first NRI TCTY report regarding DHS clients, 67 children completed the program and had a wide array of trauma experiences (physical neglect, sexual abuse, physical abuse, and domestic violence). Most children experienced multiple traumatic events with an average of six per child but over 10% of the children reported 10 or more traumatic incidents or types of trauma. Improvement in the children's psychological functioning was reported as outcomes in this initial report.

DD/MI – Individuals with both a developmental disability and a mental illness continue to challenge the system, especially adolescents and those in transition to adult services. Either the youth are too low functioning for the mental health system or too high functioning for the developmental disabilities system. The Department is currently studying options for integrating treatment services.

Community Readiness Survey – In the spring of 2008, the Division contracted with the Rural Crime and Justice Center at Minot State University to gauge the perceptions of alcohol and other drug use of North Dakota citizens. The survey results will be used by the Department's prevention coordinators, Division, and other agencies to target prevention strategies based on the

level of readiness of communities to address their underage drinking problem. 45.3 percent of community members perceived alcohol use by youth as a minor-moderate problem and 49.9 percent of community members believed that alcohol/drugs were only minor or moderate contributing factors in crashes or injuries. This illustrates the state's challenge that despite data showing persons aged 12 – 20 are ranked number two nationally in alcohol use in the past month (OAS, 2007) and from 1998 to 2006, a total of 971 persons died in 827 crashes, and 437 or 45 percent of these deaths were a result of alcohol-related crashes (NDDOT, 2007), there is a misperception of alcohol's impact.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase/ Decrease
Salary and Wages	2,305,342	2,586,907	281,565
Operating	5,988,903	8,620,910	2,632,007
Grants	4,256,644	1,599,006	(2,657,638)
Total	12,550,889	12,806,823	255,934
General Funds	5,700,420	5,950,416	249,996
Federal Funds	6,345,413	6,441,815	96,402
Other Funds	505,056	414,592	(90,464)
Total	12,550,889	12,806,823	255,934
FTE	19.00	19.00	0.00

The Salary and Wages line item increased by $281,565 and can be attributed to the following:

- $226,691 in total funds, of which $164,047 is general fund, for the Governor's salary package for state employees.
- The cost to continue the 4% salary increase for the last year of the 07-09 biennium is $37,474 of which $35,634 is general fund.
- The remaining $17,400, of which 1,812 is general fund, is a combination of increases and decreases needed to sustain the salary of the 19 FTE in this area of the budget.

The Operating line item shows a net increase of $2,632,007 for a variety of reasons:

- Increase in travel of $131,884 and the majority is reflected by an increase in substance abuse and mental health program licensing work, 29,705, increased traveling in the prevention programming, 45,208, travel for the Decision Support Services unit, 32,844, and State epidemiology outcome workgroup travel, 17,997.
- Increase in supply/material- professional of $8,204, all federal funds reflects work planned for the enforcing underage drinking laws grant.
- Increase of $20,040 in building rent due to a shift in cost allocation and an increase in rent.
- Increase of $4,794,599 in operating fees and services, this reflects $80,000 for the Governor's Prevention Advisory Council support, $300,000 general fund for an increase in

the Compulsive Gambling treatment program, $1,653,764 in federal dollars, moves the prevention coordinators contracts from grant line to operating fees and services, $82,990 for the Traumatic Brain Injury Grant, all federal, $220,922 in federal funds moves efforts with Enforcing Underage Drinking from grants to operating fees and services, $145,810 reflects the 7% inflationary increase in each year of the biennium for the Methamphetamine treatment program, $146,191 for mental health evidence-based treatment training, and $225,500 federal funds for the State Epidemiology Outcome Workgroup.

- Decrease of (12,245) for postage in the Prevention Resource Center
- Decrease of (37,807) in professional development
- Decrease of (17,500) in printing in PRC represents the Division spending plan and is 100% federal.
- Decrease of (911,507) for the sex offender treatment program reflecting projected numbers of offenders to be referred by the Department of Corrections and Rehabilitation and the State Hospital.

Grants resulted in a net decrease of (2,657,638) of which ($2,808,594) is federal funds and ($150,956) is general funds.

- Decrease of (807,174) of which ($260,834) reflects a decrease in federal funds and the remaining $546,340 is shifted to the operating fees and services line for the Safe and Drug Free Schools and Community Funds

- Increase of $200,000 for grants awarded from the Governor's Prevention Advisory Council.

This concludes my testimony on the 2009 – 2011 budget request for the Division of Mental Health & Substance Abuse. I would be happy to answer any questions.

Division of Mental Health & Substance Abuse

Detail Testimony

January 21, 2009

The Salary and Wages line item increased by $281,565 and can be attributed to the following:

- $**226,691** in total funds, of which $164,047 is general fund, for the Governor's salary package for state employees.
- The cost to continue the 4% salary increase for the last year of the 07-09 biennium is $**37,474** of which $35,634 is general fund.
- The remaining $**17,400**, of which $1,812 is general fund, is a combination of increases and decreases needed to sustain the salary of the 19 FTE in this area of the budget.

The Operating line item shows a net increase of $2,632,007 for a variety of reasons:

- Increase in travel of $**131,884**, of which $52,591 is general funds. The increases are as follows:
  - $29,705 increase in substance abuse and mental health program licensing, of which $21,609 are general funds;
  - $45,208 increase in the prevention programming, which is all federal funds;
  - $32,844 increase for the Decision Support Services unit, of which $29,206 are general funds;
  - $17,997 increase for the State epidemiology outcome workgroup, which is all federal funds
  - $6,130 increase for the sexual offender treatment program, the traumatic brain injury program and the compulsive gambling program, of which $1,776 are general funds.

- Increase in supply/material- professional of $**8,204**, all federal funds reflects work planned for the enforcing underage drinking laws grant.
- Increase in rent of $**20,040**, of which $19,614 is general funds. Increase in rent is due to staff that were relocated to Prairie Hills Plaza during the 2007-2009 biennium and a rate increase in rent.
- Increase of $**2,534,847** in operating fees and services and other fees, of which ($241,853) is a decrease in general funds. Increases and decreases are as follows:
    - $80,000 increase for Governor's Prevention Advisory Council support, which is all general funds;
    - $300,000 increase for the Compulsive Gambling treatment program, which is all general funds;
    - $1,634,410 increase due to transfer of the prevention coordinators contracts from the grants line to the operating line, which is all federal funds;
    - $546,340 increase due to transfer of the Safe and Drug Free Schools and Community programs from the grants line to the operating line, which is all federal funds;
    - $82,990 increase for the Traumatic Brain Injury grant, which is all federal;
    - $220,922 increase due to transfer of the Enforcing Underage Drinking Laws grant from the grants line to the operating line, which is all federal funds;
    - $145,810 increase reflects the 7% inflationary increase in each year of the biennium for the Methamphetamine treatment program, which is all general funds;
    - $146,191 increase for mental health evidence-based treatment training, of which $86,746 is general funds;

- $225,500 increase for the State Epidemiology Outcome Workgroup, which is all federal funds;
- $40,098 increase for training contract for Substance Abuse programs, which is all general funds;
- $24,093 increase in other programs, which is all federal funds;
- ($911,507) decrease for the sex offender treatment program, reflecting projected numbers of offenders to be referred by the Department of Corrections and Rehabilitation and the State Hospital, of which ($894,507) is general funds.

- Decrease of ($12,245) for postage in the Prevention Resource Center, which is all federal funds.
- Decrease of ($37,807) in professional development, of which $5,800 is general funds.
- Decrease of ($12,916) in other operating costs, of which $61,395 is an increase in general funds due to a funding source change.

Grants resulted in a net decrease of ($**2,657,638**) of which ($2,808,594) is federal funds and $150,956 is general funds.

- ($807,174) decrease, of which ($260,834) reflects a decrease in federal funds and the remaining ($546,340) is shifted to the operating fees and services line for the Safe and Drug Free Schools and Community Funds.
- ($272,000) decrease due to transfer of Enforcing Underage Drinking Laws program grant from the grants line to the operating line, which is all federal funds.
- ($125,000) decrease due to transfer of Mental Health contracts from the grants line to the operating line, of which ($32,291) are general funds.

- ($1,634,410) decrease due to transfer of prevention coordinators contracts from the grants line to the operation line, which is all federal funds.
- ($19,354) decrease due to transfer of prevention funds from the grants line to the operating line for travel and supplies, of which ($17,000) are general funds.
- $200,000 increase for grants awarded from the Governor's Prevention Advisory Council.
- $300 increase for miscellaneous grants, of which $247 are general funds.

	Trips	Budget	Trips	Budget	Lodging	Mileage	Airfare	Increase	Increase*	
Total Non-Employee Trips	36	$ 6,752	417	$ 63,687	$ 144	$ 630		$ 774	$ 56,161	$ 56,935
Total In-State Trips	383	$ 31,411	525	$ 59,583	$ 1,122			$ 1,122	$ 27,050	$ 28,172
Total Out-of-State Trips	46	$ 60,232	71	$ 107,009			$ 9,200	$ 9,200	$ 37,577	$ 46,777
Total		$ 98,395		$ 230,279	$ 1,122	$ 630	$ 9,200	$ 11,096	$ 120,788	$ 131,884

*Explanation of usage increases:

Non-Employee Trips increased due to new or addtional meetings with consumers for their input into programs or for consumer training opportunities. New and existing groups and committees have quarterly and/or annual meetings across the state. These new and existing committees/groups include: Youth Advisory Council, Gambling Advisory Council, State Epidemiological Outcomes Workgroup (SEOW), Peer Support groups, Mental Health Planning Council and TBI Implementation. Also, private professionals and consumers have been added to the teams that do the department's licensing.

In-State Trips increased due to research team trips for training and data research and increased trips by the state Prevention Coordinator due to changes in the oversight of the prevention program. Increase in licensing trips due to more programs to license, more required revisits and more complaints received.

Out-of-State Trips increased due to research team trips for conferences and training to help meet various federal reporting requirements. There are additional conferences tied to the Peer Support program, TBI Implementation and the SEOW group. Increased trips include required trips for Block Grant reviews, SEOW and TBI meetings and other SAMHSA required meetings.

Appendix D: Click here to view full document.

Executive Summary

Use of alcohol, tobacco, and illicit drugs exacts a heavy toll on the lives and families of North Dakotans and the economy of the state. North Dakota's culture lends itself to the use and abuse of substances, namely alcohol, cigarettes, and smokeless tobacco. Compared to the nation and other U.S. states, alcohol use and abuse is the biggest substance-related problem that faces the state (NSDUH, 2004; BRFSS, 2005). North Dakota has among the highest rates in the nation in recent alcohol use and binge drinking, regardless of age group. For example, among North Dakotans aged 12 to 20 years, 42.7 percent consumed alcohol in the past 30 days and 32.3 percent engaged in binge alcohol use in the past 30 days (NSDUH, 2004). Both of these figures are the highest across all 50 states. North Dakota ranks near the bottom among U.S. states regarding the percentage of persons who perceive great harm associated with drinking five or more drinks at a time on two or more occasions in the past month (NSDUH, 2004). This finding assists in understanding why binge drinking rates are so high in North Dakota: many perceive little or no physical, mental, or societal harm associated with this behavior.

There is evidence that alcohol use and abuse is generational in North Dakota. Children and young adults are following the example of the state's adults who use and abuse alcohol at the highest rate in the country. North Dakota children and young adults who are not of legal drinking age are also rated number one in the nation for recent alcohol use and binging (NSDUH, 2004). Further, North Dakota students grades 9-12 are substantially more likely than their U.S. counterparts to have recently driven a vehicle after consuming alcohol (BRFSS, 2005). Among DUI arrests in the state, persons aged 21-24 are the most frequent offenders and their arrest rate has substantially increased in recent years (ND Office of the Attorney General, 2006).

North Dakota adults and children smoke cigarettes at rates that are comparable to the U.S. American Indians, who smoke cigarettes at twice the rate of whites (48.4 percent vs. 20.7 percent) in the state (BRFSS, 1996-2005). Use of smokeless tobacco in North Dakota appears somewhat higher than the U.S. American Indians, who are more likely than whites to be current users of this form of tobacco (BRFSS, 1996-2005).

Among illicit drugs, methamphetamines are a growing problem, both in use and manufacturing. In 2004, there were 217 meth lab seizures in the state, which placed North Dakota in the top 20 percent of all states for meth lab offenses per capita (DEA, 2004). In addition, treatment admissions for meth use are on the upswing, similar to what is happening across the entire country. At present, marijuana is still the leading illicit drug used by persons entering treatment in North Dakota (TEDS, 2005). Marijuana and meth are the top two drugs among North Dakota's drug-related arrests, with meth use increasing at higher rates in recent years (ND Office of the Attorney General, 2006).

Executive Summary

The following is a summary of the key findings from the study. All population densities (Urban, Rural, and Frontier) are combined in this section to represent statewide perceptions and opinions, whereas the ***Community Member*** respondents and ***Key Informant*** respondents are identified separately. The acknowledged points of interest might be important to consider for further interpretations.

Adult Use of Alcohol [see Table 2.1.1]

- When the ***Community Members*** were asked to rank the seriousness of adult use of alcohol, 65.2 percent indicated this to be a minor-moderate problem in their community, 23.2 percent felt this was a serious problem, and 5.4 percent indicated this was not a problem in the community.

- Similarly, 58 percent of the ***Key Informants*** felt this was a minor-moderate problem in their community, 39.8 percent responded this was a serious problem, and only .5 percent indicated this was not a problem in the community.

Youth Use of Alcohol [see Table 2.1.1]

- Alcohol use by youth was considered to be more of a problem within the selected communities, while 45.3 percent of the ***Community Members*** perceived this as a minor-moderate problem and 41.3 percent felt this was a serious problem within their community.

- The majority of the ***Key Informants*** (62.2%) felt that alcohol use by youth was a serious problem, whereas 35.4 percent indicated this to be a minor-moderate problem.

Adult Use of Methamphetamine [see Table 2.1.6]

- Regarding the use of methamphetamine by adults, 32.9 percent of the ***Community Members*** reported this to be a minor-moderate problem, 24.4 percent felt this was a serious problem, and 31.1 percent indicated that they do not know the extent of the problem.

- According to the ***Key Informants***, 46.5 percent believed that methamphetamine use by adults was a minor-moderate problem, 42.8 percent indicated this to be a serious problem and only 7.6 percent reported that they do not know the extent of the problem.

Youth Use of Methamphetamine [see Table 2.1.6]

- In reference to the use of methamphetamine by youth, 33 percent of the ***Community Members*** believed that this was a minor-moderate problem, 22.8 percent reported this to be a serious problem, and 32.5 percent did not know the extent of the problem within their community.

- Of the ***Key Informants***, 50.3 percent believed that methamphetamine use by youth was a minor-moderate problem, 28.5 percent indicated this was a serious problem, and 13.8 percent did not know the extent of the problem within their community.

Contribution of Drug and Alcohol Use to Crashes or Injuries [see Table 2.2.1]

- When respondents were asked to indicate their beliefs regarding the contribution of drugs/alcohol to injuries, 49.9 percent of the ***Community Members*** believed that this was a minor-moderate problem, while 34.7 percent felt this was a serious problem within their community.

- Approximately 38 percent of the ***Key Informants*** indicated this to be a minor-moderate problem, while the majority (58.3%) considered this to be a serious problem.

Community Acceptance of Underage Drinking [see Table 3.1]

- In terms of community acceptance of underage drinking, 68.4 percent of the ***Community Members*** disagreed-strongly disagreed that this behavior was accepted within the community, while 30.7 percent of respondents agreed-strongly agreed that underage drinking is tolerated.

- Perceptions from the ***Key Informants*** indicated more of a split decision, in that 51.8 percent disagreed-strongly disagreed, and 47.9 percent agreed-strongly agreed that this behavior is accepted within the community.

Support for Increasing Taxes on Alcohol [see Table 4.1]

- When respondents were asked to indicate the extent to which they either agree or disagree with increasing alcohol taxes, 41.8 percent of the ***Community Members*** disagreed-strongly disagreed, while 57.1 percent agreed-strongly agreed in support of increasing alcohol taxes.

- Results of the ***Key Informants*** also produced differing opinions, in that 35.4 percent disagreed-strongly disagreed, and 63.6 percent agreed-strongly agreed.

Laws Prohibiting Giving Alcohol to Your Own Children [see Table 4.2]

- There was a disparity in beliefs regarding support for laws in terms of providing alcohol to "your own" children. Nearly 67 percent of the ***Community Members*** supported this law and 31.8 percent were not in favor of this type of law.

- Results from the ***Key Informants*** indicated less of a difference in opinions, in which 75 percent responded "Yes" they would be in support of this law and 23.8 percent reported that "No" they would not be in favor of this law.

Support for Advertising Liquor/Beer/Wine Ads on Television/Billboards [see Table 4.3]

- For this series of three questions, the results were very similar. Over 60 percent of the ***Community Members*** were in support of banning alcohol advertisements on either television or billboards and over 30 percent were not in support of banning this type of advertising.

- Outcomes for the ***Key Informants*** were comparable to the Community Members, in that over 67 percent of respondents supported banning this form of advertisement while more than 29 percent of respondents did not support banning the ads.

Youth Accessibility to Alcohol [see Table 5.1]

- When the ***Community Members*** were asked "how difficult is it for youth to get an older person to buy alcohol for them," 48.7 percent believed that it is slightly/somewhat difficult, 40.1 percent indicated it was not at all difficult, and only 7.6 percent believed this be quite/extremely difficult.

- In reference to the question above, 50.6 percent of the ***Key Informants*** felt this was not at all difficult, 44.9 percent responded as slightly/somewhat difficult and only 2.9 percent believed this to be quite/extremely difficult.

- When the ***Community Members*** were asked "how difficult is it for youth to sneak alcohol from their home or a friend's home," 51.7 percent reported that this was not at all difficult and 39.7 percent perceived this to be slightly/somewhat difficult.

- Regarding the question above, 68.8 percent of the ***Key Informants*** specified that this was not at all difficult and 29.3 percent thought this was slightly/somewhat difficult.

Adult/Youth Access to Marijuana/Methamphetamine [see Table 5.2]

- The ***Community Member*** respondents perceived access to **marijuana** as; 33.3 percent responded this was not at all difficult for adults/youth to obtain in their community, 45.3 percent felt access was slightly/somewhat difficult, and only 12 percent perceived this to be quite/extremely difficult.

- Among the ***Key Informants***, almost half (49.9%) perceived **marijuana** was not at all difficult for adults/youth to access, while 43.7 percent felt accessing marijuana was slightly/somewhat difficult.

- The ***Community Member*** respondents perceived access to **methamphetamine** as; 24.1 percent indicated that methamphetamine was not at all difficult to access, 48.7 percent believed that access was slightly/somewhat difficult, and 16.4 percent specified that methamphetamine was quite/extremely difficult to access.

- Among the ***Key Informants***, 30.5 percent believed that **methamphetamine** was not at all difficult to access, over half (58.3%) believed that access was slightly/somewhat difficult and only 8.1 percent responded that methamphetamine was quite/extremely difficult to access.

Presence of Community Action Plan [see Table 6.2]

- For the ***Community Members***, 22.1 percent responded that "Yes" they do have a community action plan in place, 15.4 percent specified that "No" there was not a plan in place, and 60.1 percent of respondents "Did Not Know" if their community had any action plan in place.

- For the ***Key Informants***, 35.9% answered that "Yes" their community does have an action plan to deal with alcohol/substance abuse issues, 19.4% indicated that "No" the community has no plan in place, and 43.3% "Did Not Know" whether there was an action plan in their community.

Sources of Information Regarding Crime [see Table 6.3]

- The leading source of information about crime for the ***Community Members*** was "Television" (38%). "Newspapers" was the second most common (25.8%) and the least common among the three was "Other" (such as internet) (19.9%). Eight percent of the population sampled in this group did not answer this question.

- Outcomes for the ***Key Informants*** were similar to those of the Community Members as follows: "Television" (43.3%), "Newspapers" (28%), and "Other" (such as internet) (16.7%). Of the population sampled in this group, 5.9 percent did not answer this question.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am JoAnne Hoesel, a Division Director, for the Department of Human Services. I am here today to provide you with an overview of the Mental Health & Substance Abuse area.

Programs

The Division of Mental Health & Substance Abuse provides education, regulation, technical assistance, training for public and private service providers, federal and state reporting and department-wide data analysis and research support.

Service programs directly managed by the Division are compulsive gambling treatment, community-based high-risk sex offender treatment, regional prevention coordination, and long-term methamphetamine residential treatment.

Customer Base

During SFY 2008 the public mental health system provided services to 17,388 children, youth, and adults and the public substance abuse system provided services to 6,290 adolescents and adults. The Division licenses 84 substance abuse treatment programs, 38 DUI seminar providers, eight regional human service centers, and six psychiatric residential treatment facilities for children and adolescents. The Prevention Resource Center is a lending and resource library located in the Division that distributes educational products covering developmental

disabilities, mental health, and substance abuse. The Division also provides private and public system workforce training.

Program Trends / Major Program Changes

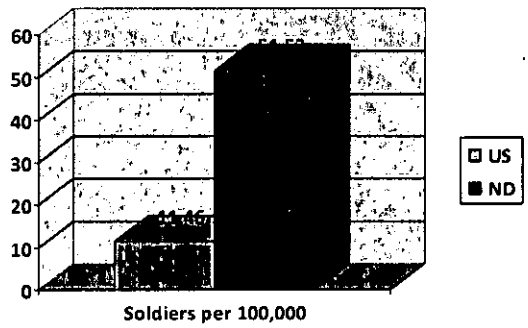
Recovery Model – Mental health – The public mental health system continues its transition to a recovery approach which shifts emphasis from 'symptom control' to that of prevention and recovery. Person-centered treatment planning, recovery model training, training of peers support workers, and integrated dual disorder treatment are a few techniques implemented. The **Recovery Model's** goal is that individuals with mental illness have greater control and choice in their treatment, leading to increased personal responsibility and better outcomes in school, home, work, and community.

The public substance abuse system offers a full array of services from outpatient to residential. Included in the offerings is the use of the **MATRIX** model. This is a method effective with those who have brain damage from meth or other drug use. Those with meth dependence can benefit from treatment and in ND do everyday. Two human service centers have achieved national certification in this MATRIX model through the UCLA -University of California – Los Angeles. This certification means their MATRIX program meets the standards to be listed as an official MATRIX program. The remaining human service centers are in the process of review for certification.

The Division contracts with a private agency to provide a **telephone recovery program**. Transportation can make a difference between sobriety and continued drug use. Isolation often leads to relapses. This telephone recovery program provides telephone support to those

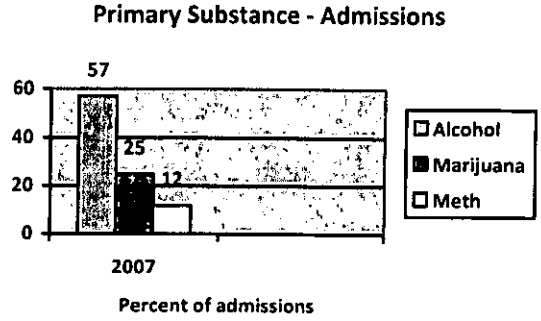
who do not have access to support groups or other community supports.

Returning Veterans – North Dakota has the highest number of Army National Guard soldiers per 100,000. The national average is 11.46; North Dakota's rate is 51.52.

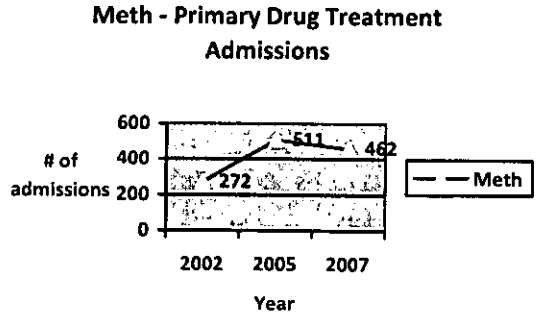


Veterans are returning from the Iraq and Afghanistan wars with **traumatic head injury (TBI)**. This is the 'signature' injury sustained. North Dakota has had over 400 returning veterans' with positive first level TBI screens. The Division participates in the Inter-Service Family Assistance Committee (ISFAC), a collaborative effort with community agencies to address quality of life issues for returning soldiers and their families. The Division's TBI grant provides training to regional human service center staff. Staff learn how to screen for this disorder as TBI is often unknown or not disclosed. TBI can affect the effectiveness of treatment unless treatment methods are adjusted. The National Guard provided training at the Division's annual mental health conference and a TBI advisory committee is in place with representation from the Veterans Administration (VA). The regional human service centers are reporting an increase in veterans seeking services.

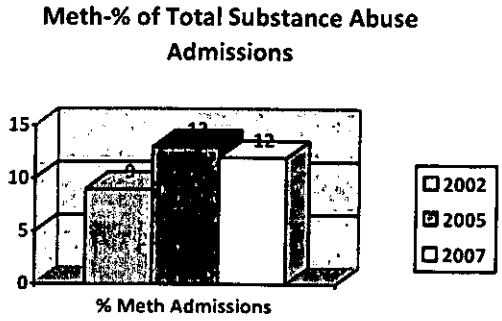
In the public substance abuse system in calendar year 2007, alcohol was the **primary substance** with 57% of admissions (2,252), marijuana was 25% of admissions (1,001), and methamphetamine was 12% of admissions (462) to treatment.



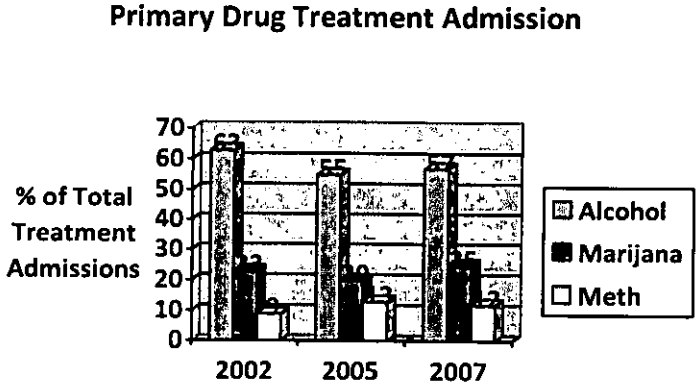
Treatment admissions for those with primary methamphetamine dependence equaled 272 in 2002, 511 in 2005, and 462 in 2007. From 2005 to 2007 there was a decrease of 9.5% in the number of admissions for methamphetamine dependence.



As a percent of total substance abuse admissions, methamphetamine admission trend was 9% in 2002; 13% in 2005; and 12% in 2007.



At the same time, alcohol and marijuana trends as percents of total substance abuse admissions are as follows: Alcohol from 63% in 2002; 55% in 2005; 57% in 2007, and marijuana was 23% in 2002; 20% in 2005, and 25% in 2007. Abuse of prescription drugs appears to now be the current upward substance abuse trend.



Trauma – Trauma comes in many forms (physical neglect, sexual abuse, physical abuse, and domestic violence) and if unresolved can severely impact a person's ability to recover from a psychiatric illness or a substance abuse disorder. The Division is working with UND-Neuropsychiatric Research Institute (NRI) and is part of the Treatment Collaborative for Traumatized Youth (TCTY) project. Each regional human service center plus private providers have specially trained

staff in treatments proven effective for traumatized youth. In the first project outcome report on DHS clients, the majority of children experienced multiple traumatic events with an average of six (6) events per child. But 10% of the group of these North Dakota children experienced ten (10) or more traumatic incidents or types of trauma. The outcome for the first year showed improvements for the children and their psychological functioning. This means they did better in school, home, and/or community places.

Prevention - The Division worked with the Rural Crime and Justice Center at Minot State University to learn how people in North Dakota, in every region, view alcohol and other drug use by youth. The result is a **community readiness survey** completed in the fall of 2008. This survey helps regional prevention coordinators, community leaders, concerned parents, and agencies choose the best prevention methods to match their area of the state. The community readiness survey showed that 45.3 percent of community members view alcohol use by youth as a minor-moderate problem and 49.9 percent of community members believed that alcohol/drugs were only minor or moderate contributing factors in crashes or injuries. In reality, individuals who are between the ages of 12 – 20 are ranked number two nationally in the number that used alcohol in the past month (OAS, 2007) and from 1998 to 2006, a total of 971 persons died in 827 crashes, and 437 or 45 percent of these deaths were a result of alcohol-related crashes (NDDOT, 2007). There is a misperception of alcohol's impact. This example of the survey results show how big of a challenge prevention work is for North Dakota.

The **Epidemiology Work Group** brings all agencies with data related to alcohol or other drug use together and with the help of UND and

NDSU puts North Dakota's data about alcohol use and its consequences into one place – the Epi Profile. The **Governor's Prevention Advisory Council**, formed by the 2007 Legislative session, used this information to target its appropriation toward six local programs. North Dakota's data shows youth using at younger ages. As a result the Council targeted the funded programs toward youth in first through fifth grades along with their parents. In its firt official year, this Council developed a road map for North Dakota prevention efforts, a prevention service gap analysis, plus a funding matrix of prevention programs across state agencies.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase/ Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	2,305,342	281,565	2,586,907	(24,181)	2,562,726
Operating	5,988,903	2,632,007	8,620,910	(232,794)	8,388,116
Grants	4,256,644	(2,657,638)	1,599,006	(200,000)	1,399,006
Total	12,550,889	255,934	12,806,823	(456,975)	12,349,848
General Funds	5,700,420	249,996	5,950,416	(395,019)	5,555,397
Federal Funds	6,345,413	96,402	6,441,815	(51,768)	6,390,047
Other Funds	505,056	(90,464)	414,592	(10,188)	404,404
Total	12,550,889	255,934	12,806,823	(456,975)	12,349,848
FTE	19.00	0.00	19.00	0.00	19.00

Budget Changes from Current Budget to Executive Budget:

The Salary and Wages line item increased by $281,565 and can be attributed to the following:

- $226,691 in total funds, of which $164,047 is general fund, for the Governor's salary package for state employees.
- The cost to continue the 4% salary increase for the last year of the 07-09 biennium is $37,474 of which $35,634 is general fund.

- The remaining $17,400, of which $1,812 is general fund, is a combination of increases and decreases needed to sustain the salary of the 19 FTE in this area of the budget.

The Operating line item shows a net increase of $2,632,007 for a variety of reasons:

- Increase in travel of $131,884, of which $52,591 is general funds. The increases are as follows:
    - $29,705 increase in substance abuse and mental health program licensing, of which $21,609 are general funds;
    - $45,208 increase in the prevention programming, which is all federal funds;
    - $32,844 increase for the Decision Support Services unit, of which $29,206 are general funds;
    - $17,997 increase for the State epidemiology outcome workgroup, which is all federal funds
    - $6,130 increase for the sexual offender treatment program, the traumatic brain injury program and the compulsive gambling program, of which $1,776 are general funds.
- Increase in supply/material- professional of $8,204, all federal funds reflects work planned for the enforcing underage drinking laws grant.
- Increase in rent of $20,040, of which $19,614 is general funds. Increase in rent is due to staff that were relocated to Prairie Hills Plaza during the 2007-2009 biennium and a rate increase in rent.

- Increase of $2,534,847 in operating fees and services and other fees, of which ($241,853) is a decrease in general funds. Increases and decreases are as follows:
  - $80,000 increase for Governor's Prevention Advisory Council support, which is all general funds;
  - $300,000 increase for the Compulsive Gambling treatment program, which is all general funds;
  - $1,634,410 increase due to transfer of the prevention coordinators contracts from the grants line to the operating line, which is all federal funds;
  - $546,340 increase due to transfer of the Safe and Drug Free Schools and Community programs from the grants line to the operating line, which is all federal funds;
  - $82,990 increase for the Traumatic Brain Injury grant, which is all federal;
  - $220,922 increase due to transfer of the Enforcing Underage Drinking Laws grant from the grants line to the operating line, which is all federal funds;
  - $145,810 increase reflects the 7% inflationary increase in each year of the biennium for the Methamphetamine treatment program, which is all general funds;
  - $146,191 increase for mental health evidence-based treatment training, of which $86,746 is general funds;
  - $225,500 increase for the State Epidemiology Outcome Workgroup, which is all federal funds;
  - $40,098 increase for training contract for Substance Abuse programs, which is all general funds;
  - $24,093 increase in other programs, which is all federal funds;

- ($911,507) decrease for the sex offender treatment program, reflecting projected numbers of offenders to be referred by the Department of Corrections and Rehabilitation and the State Hospital, of which ($894,507) is general funds.

- Decrease of ($12,245) for postage in the Prevention Resource Center, which is all federal funds.
- Decrease of ($37,807) in professional development, of which $5,800 is general funds.
- Decrease of ($12,916) in other operating costs, of which $61,395 is an increase in general funds due to a funding source change.

Grants resulted in a net decrease of ($2,657,638) of which ($2,808,594) is federal funds and $150,956 is general funds.

- ($807,174) decrease, of which ($260,834) reflects a decrease in federal funds and the remaining ($546,340) is shifted to the operating fees and services line for the Safe and Drug Free Schools and Community Funds.
- ($272,000) decrease due to transfer of Enforcing Underage Drinking Laws program grant from the grants line to the operating line, which is all federal funds.
- ($125,000) decrease due to transfer of Mental Health contracts from the grants line to the operating line, of which ($32,291) are general funds.
- ($1,634,410) decrease due to transfer of prevention coordinators contracts from the grants line to the operation line, which is all federal funds.

- ($19,354) decrease due to transfer of prevention funds from the grants line to the operating line for travel and supplies, of which ($17,000) are general funds.
- $200,000 increase for grants awarded from the Governor's Prevention Advisory Council.
- $300 increase for miscellaneous grants, of which $247 are general funds.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $7,940 - general fund and $16,241 - federal and other funds for at total of $24,181.

The House reduced 50% of the department-wide travel increase. Mental Health & Substance Abuse Divisions' share of this decrease is $61,557 total funds; $15,842 – general fund.

In Operating Fees and Services, the inflationary increase for the contract with ShareHouse-Robinson Recovery Center was reduced from the 7% & 7% increase to 6% & 6% resulting in a decrease of $21,237. $150,000 was reduced from the Compulsive Gambling Treatment Program. Both reductions are general fund decreases.

In the grants line, all funding for the Governor's Prevention Advisory Council was removed resulting in a general fund decrease of $200,000.

This concludes my testimony on the 2009 – 2011 budget request for Mental Health & Substance Abuse Division of the Department. I would be happy to answer any questions.

H

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, thank you for inviting public comment. My name is Sara Highum from Minot. I am a Peer Support Specialist, as well as a lead for the Consumer and Family Network, and a past member of the Mental Health Planning Council. I wanted to take a few moments to tell you about our Program.

Currently I am working with one individual and leading twice weekly support group a the Harmony Center. The person I work with is seeing an improved quality of life. He is getting out of the house more. It has given me back my self-worth by showing me that I can still be a contributing member of soceity, even with my new limitations. The employment also allows me to participate in the local economy of Minot.

I can say that without this program, I would have been close to requiring hospitalization over the holiday season. I didn't though because people were depending on me and there were also people who would understand. I had a safe, supportive environment to go to. My therapist is leaving for two weeks and this time, she didn't think she needed to have me see anyone in her absence.

The gains I have seen in the people who come to the support is incredible. One member spoke that because of the peer support she was able to keep her sobriety and this was the first holiday in many years that she didn't require

hospitalization. She counts the peer support as a key component of her sobriety. Another gentleman is currently residing in the Transitional Living home and has been for many years. He would sit and not say much about goals and was quite content with his life. Now he participates, visiting with fellow members and has decided to begin the process of thinking about living independently.

Peer support also teaches us how to become active participants in our care and life planning, as opposed to a recipient. We talk about many needs to assist in our recovery, including how to cope with the side effects of the medication and how to talk to your doctor. This helps with keeping us on our medications when otherwise we might have stopped and ended up in the hospital because of a relapse. Relapse prevention or at least controlling the length of it is cost-effective to the community because sadly with relapses, the more we have, the longer it takes to recover. That includes the use of intensive services, both on an inpatient and outpatient basis. It creates a vicious cycle dragging us down deeper and deeper.

We build support systems both using public and private mental health services. More importantly though, we build it with each other. We support each other and some of us are able to return to employment. Even those that can't feel better about ourselves and are contributing back to soceity. We would appreciate any support you can offer us in this endeavor.

Thank you very much for your time and consideration.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am Janice Ray, a member of Progress Community Center in Jamestown, and a group facilitator for our local Peer Support Program.

Five years ago I was living a secluded life not even liking to go out to get groceries. I was afraid of people and would avoid any situation where I would have to talk to others. Coming to the Community Center and participating in peer support has changed my life. My self-esteem has returned and I am now able to go where I want and have even gotten to the point where I can be an advocate for others. During peer support training, I was shown the tools so that I can be a leader and the skills to become a group facilitator. Peer support is about people helping other people who have been through similar trauma or challenges. My motto is: When you need someone to lay your head upon I will be there, everyone try to be there for each other.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am David M. Oxtra from Jamestown. I grew up in a dysfunctional family, with an abusive alcoholic father. I hated him for this. As I grew into adulthood I turned out to be just like him for many years.

Since I became acquainted with the Human Service Center and Progress Community Center, I have turned my life around. These facilities should be praised for the programs they offer such as the peer support group free of charge. I am in recovery now and have had my downfalls, but thanks to these wonderful people who take care in what they do and are willing to listen, I can get back on my feet again.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am Holly K. Nicholson, a member of Progress Community Center. I have been a member of the Peer Support Group in Jamestown since it began. I attended the Peer Support Specialist Training that they had in Minot. It is important that we get funding for Peer Support because it has helped me to be a more confident individual. I am more driven in purpose and it has helped me from having as many problems.

Peer Support has been a Godsend to me because it gives me a reason to be happy and fulfilled. I feel great about it because I can help others through Peer Support. Helping fellow human beings is very rewarding to me.

House Human Services Committee

Support of Peer Support Program OAR

Representative Pollert, Chairman

January 15, 2009

Chairman Pollert and members of the House Human Services Committee, my name is Jennifer Bartsch and I am the Director of the Harmony Center. The Harmony Center is a Psychosocial Center for adults 18 and older who have been diagnosed with a severe and persistent mental illness.

I am writing in support of the Peer Support Program OAR. Currently there is a Peer Support Program based out of the Harmony Center. I have seen first hand how the members who are involved with this program and attend the support group meetings seem to be more confident, self assured, and more involved with their treatment and their journey on the road to Recovery.

The Peer Support Program is a way for people with mental illnesses to be involved/employed in a program that helps them feel good about themselves by giving back and being supportive of others who are struggling with mental illness. People who feel good about themselves and have a support system in place are more likely to need less of other costlier services to maintain living in the community of their choice. Who better knows the roadblocks to Recovery than those who have gone before?

Thank you for your time and consideration

Testimony

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am interested in becoming a mentor, coach and role model. Peer support is helping me achieve these goals. I am learning that I have the tools to help other people with their lives. I have suffered so much in the past. I can help people who are living difficult lives similar to the difficult life I once lived. I do not want people to suffer. I can help people stop suffering just by being there to help and support a friend. Peer support is teaching me to be a friend to someone in need. Whether I can help one person or if I can help one hundred people, I can help someone if I can just have a chance to help. There are so many people out there simply wanting someone to listen to them and understand what they are going through. I have two ears and one mouth. I love to listen to people. I think about dedicating so much of my life to helping others. Peer support is teaching me how to help others. If I can help three people live better lives, those three people can also each help three people and before you know it, there could be a lot of people helping a lot of people. People need peer support because it is good for your health.

Chairman Pollert and member of the House Human Services Committee, I am, Sean Hoaglund a lead for the Consumer & Family Network in Grand Forks. It's a consumer group that promotes recovery based upon the concept.

I support the Peer Support Program for two reasons the first is because it will bring new jobs to North Dakota that consumer can and will help out the economy of the state. Plus they will get the satisfaction that they are supporting North Dakota economy.

The other reason is that this is a program that will promote good working skills for the consumers that are higher functioning to help with the high traffic of consumers that needs help to reach their recovery goals.

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am Charlotte Gregerson, Director of Mountainbrooke, Psychosocial Rehabilitation Center In Grand Forks. Our mission is: To promote mental health through education, advocacy, understanding and access to quality care for all individuals.

Mountainbrooke supports the peer support program. The Peer support program is a consumer driven program. The program promotes recovery and resiliency. Individuals learn how to manage their symptoms and deal with their mental illness. Through Peer Support consumers encourage and engage other consumers in recovery and provide each other with a sense of belonging, supportive relationships, valued roles, and community.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am Allen R. Falk, Director, Progress Community Center the Psycho-social Rehabilitation Center in Jamestown.

We serve approximately 300 members with a daily attendance of 75 - 95 members. We have had an active peer support group in Jamestown for the past six months. There are approximately 20 individuals involved at this time, with everyone participating on a volunteer basis. The benefits of this program are noticeable to me with fewer hospital admittances. I have seen situations where hospitalization has been avoided completely because of having an improved ability to cope with a crisis due to the ability to talk to education peers about their illness and being able to discuss shared experiences. As their self confidence grows we have seen members take increased leadership roles. They are helping themselves and each other and achieving more than they had previously thought they could.

Testimony

House Human Services Committee

Representative Pollert, Chairman

January 15, 2009

Chairman Pollert and members of the House Human Services Committee, I am Mary Otteson, Director's Assistant Mountainbrooke.

I support the Peer Support Program. With the Peer Support Program individuals are able to learn how to cope and manage their Mental Health in ways that they have never been able to do before. With people having the Peer Support Program they learn together how to share insight of their illness and begin to share openly with one another. They then become encouraged with one another, feeling safe not rejected. With building one another up they begin a sense of belonging.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, I am Tammy J. Falk, Peer Support Coordinator for the Jamestown area. Peer support has been active in Jamestown for the past 6 months on a volunteer basis. In January 2009 we received funds through the Department of Human Services to run our program through June 2009.

In June 2008 four of our members and myself volunteered our time to go to Peer Support Specialist training. After training they have returned to Jamestown and began holding weekly peer support meetings with the desire to bring hope and encouragement to their fellow members. The change in both the volunteer specialists and the group members has been wonderful to see. Both have grown in the areas of self reliance, self confidence motivation to be more involved. They are looking beyond themselves and their illness and reaching out and help others who are struggling and encourage them to continue to strive for recovery and to keep pushing to achieve more. They are learning about the choices they have and that they need to be a part of the decision making in their recovery process. Everyone who comes to the meetings has an opportunity to share their experiences which empowers other group members.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Chairman Pollert and members of the House Human Services Committee, my name is Mary Thomason and I am the Peer Support services coordinator for the Minot Area. When I was offered the job of Peer Specialist Coordinator, I was still grieving for the loss of our son. I had fallen into a deep depression and life was pretty unbearable. I took this position because I had some experience supervising a program similar to this one in that I worked with people who had mental health illnesses. Also I was hoping the job would get me out of the house and give me something worth while to do.

The longer I am involved with the Peer Specialists and the Peer Support groups, the better I feel. Instead of just existing, I've begun to feel life is worth living again. This job has given me much more then I ever hoped it would, but even better is what it's doing for others. The support groups have fostered a greater acceptance of each individuals worth and has given them a true sense of belonging. Several of the people have mentioned to me how much they look forward to meeting together each week and how helpful it is to their well-being.

I'm especially proud of Minot's three Peer Specialists and the work they are doing with the eight folks with whom they are matched. These three have their own mental health issues to deal with and yet they are always there for their

matches to serve as role models, provide social and recreational links to the community, but most importantly support their friends on the road to recovery.

I could go on and on about how wonderful and cost effective the Peer Specialist program is, but I know your time is valuable. I hope you feel this program is important enough to fund.

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 14, 2009

Representative Pollert and members of the Human Services Committee, my name is Colleen Miller and I am a Peer Support Specialist from Minot. The Peer Support Program has been a blessing for me, by aiding me in my recovery process. Not only does it build more friendships, but it helps me to know others have similar experiences with mental illness to which I can relate. At times I have doubts about my abilities to perform the job, but my co-workers and supervisor reassure me and build my confidence to stick with it.

One of my matches takes responsibility to pay off child support for three children and pay off debt by working more hours, despite her dual diagnosis. Even though she has made part mistakes, she is making great progress. She is living with the consequences and striving to live a better future.

My other match has inspired me not to take things for granted. With her new love for life and spirituality, she is striving to build better relations with her once distant parents, and now lives life to the fullest by spending more quality time with friends and family, especially her daughter.

I am so proud of my third match – how she has blossomed with the peer support program. For years she had wanted to volunteer at a local thrift store, but has been limited in this because of her paranoia, She now has been more

enthusiastic in working there that she suggests it on a regular basis. We talk quite a bit while working; and this helps her open up, expressing herself, and has kept her paranoia away thus far. I'd like to see her not be afraid of "being overheard", as she has put it, when she speaks; but instead to be heard and recognized. She is growing more social and less timid, and is feeling more comfortable in her expression. Seeing this is most rewarding.

This program has been a godsend for all of us.

Testimony

House Human Service Committee

Support for the Peer Support Program Oar

Representative Pollert, Chairman

January 15, 2009

Chairman Pollert and members of the House Human Services Committee, my name is Marcus Jensen from Jamestown and I have a mental illness. I have chronic depression which is well controlled with medication. Because of the medication, I live and work in my community. In the last few months, I have been involved with a project called "Peer Support" which is peers helping peers.

Individuals who have a mental illness have a little different outlook on life and we need to talk to people who understand what we are experiencing. This is where Peer Support steps in. Many of us are still working and living the way we used to. Being able to sit down with peers in a safe environment and discuss our situations and life experiences is extremely helpful in being able to function day to day.

As stated before, my illness is quite well controlled however; there are times when I need to talk to someone who understands. Psychologists and psychiatrists are very helpful, in their place, but on a day to day basis they still don't feel or experience what we do and having someone who has been

there, or perhaps, is there, to turn to is very supportive. That is what Peer Support is all about.

I encourage your support in putting the Peer Support program into the budget to help many North Dakotans.

Chairman Pollert and members of the House Human Services Committee, I am Loretta Cannon, a member of Mountainbooke in Grand Forks.

The peer support group is greatly needed for us as a person with mental illness. Just like AA and other support groups, this is needed to help us to help each other. We need this program to know we're not alone and that we can fit in with society. We need to help each other to keep ourselves functional and safe. Knowing that there are others out there with the same problems helps us to know we can be understood and we are not different.

Chairman Pollert and members of the House Human Services Committee, my name is Robin Ault from Jamestown. I am a member of Progress Community Center and a member of their Peer Support Group. I like going to group because I learn a lot of things I did not know. I like being with people and talking with them. I learn what people are going through. I also have learned how to do things for myself.

I

House Human Services Committee

Support for the Peer Support Program OAR

Representative Pollert, Chairman

January 26, 2009

Chairman Pollert and members of the Human Services Committee, my name is Steve McWilliams from Minot. I am a peer support person and currently work with four matches. This program has done so much for my feelings of self-worth. When they are having a bad day, I am able to lift their spirits and they are able to lift mine. My first match is a young man that has surpassed any expectations that I had for him. He is living in an apartment, transfering into living independently. He is now using the library and other activities. A moving moment for me was when I attended an open house where he is living. He came and sat next to me, beaming like this was the first time he had someone visiting for him. He turned and told me that I was an inspiration to him.

Another of my matches is back to working. He is also setting goals and working on them, even if it means overcoming obstacles. He is working on earning his drivers license. My third match is beginning to go out in public more. He also has said how much it means to him to have someone to talk to besides his mother. I am also working out with another match periodically at the local communicity center. During the summer, we also went out to the park for both exercise and recreation.

This program is important. We are helping each other on our road to recovery.

Representative Pollert, Chairman

January 15, 2009

Chairman Pollert and members of the committee, my name is Amber Hammer I am the Peer Support Coordinator for Western Sunrise Inc. in Williston, North Dakota.

In the beginning, I thought I was all alone; I was the only person who had a mental illness and has had difficult issues to face. After time went by I was introduced to the Peer Support program. I was then matched up with a peer support specialist, one who has experienced some of the things I had. I had pseudo seizures. Once at group I ended up having one. They called my doctor to see what to do. While they were waiting to hear from my doctor, my peer support specialist was making sure that I didn't hurt myself, was at my side calming me down, making sure I aware of my surroundings, and comforting me. She had never seen me have one before but was able to bring me back. It was something that just happened and she knew what to do at that time. I was alert of what happened before the doctor got to the phone. She taught me some more coping skills that she had used before and worked for her. She pushed me to do challenging things that I would have never dreamed of doing. This is a goal that specialist encourages their matches to do. With out her challenging me I wouldn't be where I am to day speaking to you. She gave me HOPE to keep working on my

recovery process and that things will get better. She was proof. I then became a peer support specialist. I too wanted to help others like she did me. I have graduated with my associate's degree. Today as I introduced myself I said I was the Peer Support coordinator one who leads the group.

Thanks for you time

Support for Peer Support Services Initiative
Representative Pollert, Chairman

January 27, 2009

Chairman Pollert and members of the Appropriations Committee, Human Resources Division, my name is Todd Christlieb. I am mental health consumer and a member of the Mental Health America of North Dakota/Social Club at the Myrt Armstrong Center in Fargo, North Dakota.

I am a strong supporter of the Peer Support Services Program. As a member of the Myrt Armstrong Center, I interact with other members on a daily basis. We provide support to each other on an informal basis. I am a Program Coordinator for the Consumer and Family Network. Our main focus is to encourage peer support and recovery, also the primary elements of the Peer Support Services Program.

I have witnessed, through my job, what peer to peer support can do. A member is now working because of this support. I can only imagine what could happen with trained people.

Thank you.

L

Testimony
House Appropriations Committee Human Resources Division
Support for Peer Support Services Initiative
Representative Pollert, Chairman

January 27, 2009

Chairman Pollert and members of the Appropriations Committee, Human Resources Division, I am Susan Rae Helgeland, Executive Director of Mental Health America of North Dakota (MHAND). I am here to support an Optional Adjustment Request (OAR) to the Governor's Budget to fund a state-wide ND Peer Support Services Initiative.

MHAND's Mission *to promote mental health through education, advocacy, understanding and access to quality care for all individuals* is descriptive of the Peer Support Services program. Peer Support Services provide much needed and desired employment opportunities for people with mental illness while contributing to recovery for people with mental illness. In addition, the Peer Support Services program enhances existing case management services and can assist mental health providers.

Peer Support Specialists can work in multiple settings such as medical, corrections, employment and housing as well as other areas where people with mental health needs receive services. ND's human service system deserves a Peer Support Services program. It is cost efficient and contributes to recovery.

Funding is vital for our program so we can reach all the individuals who would like to participate. Our goal for this year is to expand our program to include meetings at the North Dakota State Hospital and to have individual one-on-one peer support. We have started to make plans for this, but need to know that all our work will not come to an end in June when our funds run out.

House Appropriations – Human Resources Division
Tom Alexander – Testimony
North Dakota Medicaid Infrastructure Grant (ND MIG),
North Dakota Center for Persons with Disabilities (NDCPD)
at Minot State University
House Bill 1012

Chairman Pollert and members of the committee, my name is Tom Alexander. I am the Project Director for the ND Medicaid Infrastructure Grant (NDMIG) with the North Dakota Center for Person with Disabilities at Minot State University. I greatly appreciate the opportunity to present testimony on HB 1012.

To begin, I would like to express my support for the proposed 7% & 7% increase for Qualified Service Providers (QSPs) and other providers as recommended in the Governor's budget; funding for the development and implementation of an Aging and Disability Resource Center (ADRC); and support for increased home and community based services (HCBS) for the elderly and people with disabilities of North Dakota. In addition I would like to urge you to reinstate the DHS's OAR for the Peer Support Program into the Human Services Budget. The following information will briefly explain the Peer Support Program and Services.

Peer Support Services refer to support provided *by* people with mental illness *to* others with mental illness. They are consumer-centered services with a rehabilitation and recovery focus. They are designed to promote skills for managing and coping with symptoms while facilitating the use of natural resources and the enhancement of community living skills. *Peer Support Services* are provided by a person who has progressed in their own mental health recovery

and is working to assist other people with mental health issues. These individuals are called *Peer Support Specialists*. Because of their life experiences, *Peer Support Specialists* have expertise that professional training cannot replicate. Peer Support Services are an integral piece of current state-wide efforts to create a Recovery-oriented, evidence based, consumer-driven Mental Health system of care.

Peer Support Specialists provide specific interventions including support and assistance with:

- Identifying individual strengths, resources, preferences, and choices;
- Identifying existing natural supports for development of a natural support team;
- Developing crisis management plans;
- Identifying risk factors related to relapse & development relapse prevention plans & strategies;
- Promoting self-advocacy & participation in decision-making, treatment, & treatment planning;
- Building a natural support team for treatment and recovery; and
- Developing functional, interpersonal, coping, and community living skills that are negatively impacted by the person's mental illness.

In the fall of 2007 NDDHS submitted a proposal to the Substance Abuse and Mental Health Services Administration (SAMHSA) titled, "Transformation Transfer Initiative (TTI)." ND was fortunate enough to be one of ten states selected to be funded for the initiative. The TTI project supported new and expanded efforts to improve the capacity and effectiveness of mental health systems that foster recovery and meet the multiple needs of consumers.

A variety of consumers, stakeholders and professionals were invited in January 2008 to be a part of the TTI – Peer Support Initiative. The purpose of the initial work group was to meet, provide an overview and a timeline for the initiative, form sub-groups, schedule meetings, and complete the Project Management Plan.

The main goal of the Project Management Plan *is "Initiative will prepare people with mental illness to become Peer Support Specialists, using their shared experience to guide others toward recovery."* The management plan also has eleven objectives to accomplish the goal and they include:

1. Develop a Peer Support Initiative Work Group (a.k.a. Stakeholder Committee and/or Steering Committee) and Sub Groups which included:
   - Technical Support and Research
   - Stakeholder
   - Stakeholder-System Partner Training/Peer Support Specialist Training
   - Psychosocial Rehab Centers
   - Peer Support Curriculum
   - 1915i Amendment
2. Conduct Stakeholder Input Meetings
3. Complete an initial Project Management Plan, and update as necessary until project is completed.
4. Design the Research and Outcomes Plan
5. Design Technical Support Plan
6. Develop Peer Support Certification Curriculum
7. Provide Training to Stakeholders within the Mental Health System to educate, inform, and increase readiness for peer involvement in the formal service delivery process.
8. Define the Recovery Principles Approach within the 8 Regional Psychosocial Rehabilitation Centers
9. Complete and submit the 1915i Amendment & Explore Options for Additional Funding
10. Evaluate Project and Submit the Final Report
11. Develop a Training & Employment Plan for Peer Support Specialists.

The management plan was submitted SAMHSA in September of 2008 with all objectives complete. It is important to note that this plan would provide peer support services to Medicaid eligible and non-Medicaid eligible individuals.

Currently, Northwest Human Services Center (Williston) and North Central Human Service Center has a very successful peer support specialist projects funded through the human service center at approximately $65,000. South Central Human Service Center has received $25,000 to begin a Peer Support Specialist program. The $25,000 is a good start but will not sustain the program.

Western Sunrise, Inc., a consumer-run, nonprofit organization in Williston, N.D., is an example of a successful consumer-directed peer support model currently operating in North Dakota. Outcome data for the *Peer Support Program* is extremely favorable. Outcome measures indicate: 50% decrease in hospitalization rates; 50% of consumers gained employment; volunteerism rates increased; and 94% of consumers indicated that their quality of life improved. Many of the consumers in the program began to rely less on other more expensive services.

The existing *Peer Support Programs* are funded through the Human Service Centers. There are options for federal dollars as well. Through an amendment to the State Plan, Medicaid can become a partner in funding *Peer Support Services*. More North Dakotans with a mental illness can benefit from *Peer Support Services* by making the program available state-wide. No one has to live feeling recovery is impossible; *Peer Support Services* makes recovery a reality. Other states have

experienced great successes by employing *Peer Support Specialists* to work in multiple settings such as medical, corrections, employment, and housing, as well as other areas where people with mental health needs receive services.

As part of the management plan the ND Department of Human Services submitted an OAR which did not make Governor Hoeven's proposed budget to the assembly.

The DHS, consumers, stakeholders and mental health professionals completed a great deal of work to develop the Peer Support Services Project Management Plan. This work should not go unrecognized. Therefore, I would like to recommend a two-step process to fund this initiative. The first step would include adding an additional $600,000 for the biennium into the 8 regional human service centers budgets, which would provide $75,000 per human service centers for the biennium to provide peer support services to individuals who are not Medicaid eligible. The second step would include the NDDHS to submit a revised state plan amendment to CMS under the Rehab Option and 1915 (b)4 Waiver. This would allow the management plan to be implemented and allow the peer support program to blossom prior to CMS's approval for a state plan amendment.

This is a project that needs to be funded for many reasons which were stated earlier. The bottom line is Peer Support Projects work. The current state projects and the national data indicates that as well. This is an opportunity that should not be missed! Thank you for your time and I would be happy to answer any questions that you may have.

March 9, 2009
HB 1012
Senate Appropriations

Same spoken to House

Chairman Pollert and members of the Committee, I am Randy Solem, Chair of the Mental Health Planning Council for the Department of Human Services. There is a Mental Health Planning Council in every State and U.S. Territory. Its focus is on mental health wellness and recovery that is consumer and family driven. On behalf of the Council, I would like to express support for the Governor's recommended budget for the Department of Human Services. I'd also like to encourage you to consider support for: 1) Crisis Intervention Team training and implementation; and 2) Peer Support Services.

The concept of a Crisis Intervention Team (CIT) was initially developed in Tennessee years ago as the result of a police shooting of a man with mental illness. It was recognized that law enforcement officers needed training on how to best work with people with mental illness. This program is highly acclaimed and has spread throughout the country.

The Minot Police Department is the first in North Dakota to use the CIT model. The Mental Health Planning Council heard first-hand about the intense training that six police officers received in Denver. Actors are used to portray real life situations and experiences of people with mental illness.

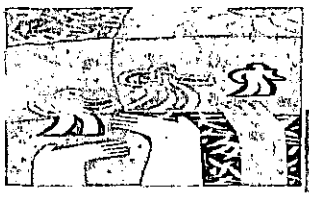
One of the most obvious benefits of the model is the focus on the safety of the person with a mental illness as well as law enforcement personnel. The police are trained to interact with the individual with a mental illness without the use of force unless there is absolutely no other option.

The Law Enforcement Academy in Bismarck and other police departments are also interested in this model. The Mental Health Planning Council encourages your support for funding the CIT model of training and implementation.

Our second area of emphasis is Peer Support Services, which are provided by specially trained individuals with a mental illness who relate to participants based on their experience in the recovery process. They teach social and coping skills essential to increasing resiliency and provide a model of recovery. These services are now being provided in the communities of Williston, Minot, and Jamestown.

Peer Support Specialists provide a diverse scope of tasks. These may include counseling, teaching, medication monitoring, benefits counseling, staffing crisis intervention and jail diversion programs, family and community education, and assistance in obtaining or using housing, transportation, and employment. Through studies conducted in 1998 and 2007, it has been found that people receiving peer support had fewer hospitalizations. This will mean a greater quality of life for program participants as well as a lower cost for treatment and services.

Thank you for your time and consideration.



Peer Support Services Intiative

Individuals with mental illness providing support to others with mental illness

What are Peer Support Services?

JANUARY 20, 2009

Peer Support Services refer to support provided by people with mental illness to other people with mental illness. They are consumer-centered with a rehabilitation and recovery focus. They are designed to promote skills for managing and coping with symptoms while facilitating the use of natural resources and the enhancement of community living skills. *Peer Support Services* are provided by a person who has progressed in their own mental health recovery and is working to assist other people with mental health issues. These individuals are called *Peer Support Specialists*. Because of their life experiences, *Peer Support Specialists* have expertise that professional training cannot replicate. Peer Support Services are an integral piece of current state-wide efforts to create a Recovery-oriented, evidence based, consumer-driven Mental Health system of care.

Peer Support Specialists **provide specific interventions including supporting and assisting with:**

- Identifying individual strengths, resources, preferences, and choices;
- Identifying existing natural supports for development of a natural support team;
- Developing crisis management plans;
- Identifying risk factors related to relapse & development relapse prevention plans & strategies;
- Promoting self-advocacy & participation in decision-making, treatment, & treatment planning;
- Building a natural support team for treatment & recovery; and
- Developing functional, interpersonal, coping, and community living skills that are negatively impacted by the person's mental illness.

How Will Peer Support Services Help?*

Jane is 32-years old and lives by herself in an efficiency apartment in a city of about 30,000 people. She has an Associate's Degree in occupational therapy. She doesn't work. Her minimal income is from public benefits. She rarely ventures out other than for occasional trips to the grocery store and infrequent visits to her doctor. She quit taking her prescription medications. She doesn't care. She doesn't like her life. She has a mental illness. She has severe depression.

While at the store, Jane ran into a friend, Mary, whom she hadn't seen for years. They talked a while in the frozen foods section. Mary convinced Jane to go to the local café for a cup of coffee. They talked more. Jane confessed that her days were long and empty. Mary told Jane about a new program in the community offering *Peer Support Services*. Mary, in fact, was a *Peer Support Specialist*. The two met several more times that week. They drank more coffee and shared more stories. Jane was eventually convinced that she should try the *Peer Support Program*.

There were ups and downs for Jane but after a month, she was again taking her medication as prescribed. After two months, she was volunteering three afternoons a week at the local hospital. She was starting to like her life again.

*The story of Jane is fictional but is based on situations that many North Dakotan's face and how they may benefit from Peer Support Services.

Peer Support Programs Working in North Dakota

Western Sunrise, Inc., a consumer-run, nonprofit organization in Williston, N.D., is an example of a successful consumer-directed peer support model currently operating in North Dakota.[1]

In 2002 Western Sunrise, Inc. embarked upon a strategic planning effort for their organization. The main area that consumers felt there was a gap in, was in the arena of *peer support*.

In response to this need, Western Sunrise, Inc. applied for and received a grant to provide *Peer Support Services* from the North Dakota Olmstead Commission in the fall of 2003. They have recently expanded their program to the Minot and Jamestown areas. They employ eight *Peer Support Specialists* who provide direct recovery-orientated services to consumers in the community.

Outcome data for the *Peer Support Program* is extremely favorable. Outcome measures indicate: 50% decrease in hospitalization rates; 50% of consumers gained employment; volunteerism rates increased; and 94% of consumers indicated that their quality of life improved. Many of the consumers in the program began to rely less on other more expensive services.

[1]*North Dakota Department of Human Services (2008-02-05).* N.D. Dept. of Human Services receives federal funding to establish peer support program. Press release. *http://www.nd.gov/dhs/info/news/2008/02-05-grant-for-peer-support-program.pdf Retrieved on 2009-01-15.*

How are Peer Support Services Funded?

The existing *Peer Support Programs* are funded through the Human Service Centers. There are options for federal dollars as well. Through an amendment to the State Plan, Medicaid can become a partner in funding *Peer Support Services*. It is estimated that seven to ten states already have Medicaid-funded *Peer Support Services* for individuals with mental illness including Georgia, Iowa, New Mexico, North Carolina, and Pennsylvania. States are only beginning to see the impact that *Peer Support Specialists* have in the lives of other peers.

What More Can We Do?

More North Dakotans with a mental illness can benefit from *Peer Support Services* by making the program available state-wide. No one has to live feeling recovery is impossible, *Peer Support Services* makes recovery a reality. Other states have experienced great successes by employing *Peer Support Specialists* to work in multiple settings such as medical, corrections, employment, and housing, as well as other areas where people with mental health needs receive services. The possibilities are endless.

Testimony
House Bill 1012 –Department of Human Services
Senate Appropriations Committee
Senator Ray Holmberg, Chairman
March 9, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, thank you for the opportunity to provide comments on HB 1012, particularly in the area of mental health/substance abuse services. I am Janet Sabol from Minot. I have volunteered for the National Alliance on Mental Illness (NAMI) in the local affiliate and statewide for over 10 years serving as the state coordinator, state president and current spokesperson.

The following areas are strongly supported to improve the health and quality of life for North Dakota's citizens who have mental illnesses:

*The Division of Mental Health/Substance Abuse (DMHSA) has been making steps in transition to a recovery approach for people with mental illnesses. This includes the implementation of Peer Support Specialist services available in the Williston and Minot regions. The Jamestown region has implemented support groups awaiting funds for individual Peer Support Specialists. Marilyn Rudolph, director of the Northwest and North Central Human Service Centers, reported the importance of these services in testimony the committee received March 4. This weekly support to peers has been proven

to be cost effective, a deterrent to hospitalization and a way to alleviate worsening of symptoms. Expansion of this program is requested at an estimated additional cost of $500,000.

*Supported housing: The DMHSA undertook a Continuum of Care Workgroup Project with the Executive Summary completed in April 2008. In that report housing and supervised housing options were rated as priority number one. Priority two was peer supports, one of which I just talked about and the third priority was enhanced community-based services. Supported housing and a variety of housing options is a great need throughout the state. Not only will people be able to remain in their community with the appropriate supervision for them, but it will greatly diminish the homeless population. The Minot YWCA executive director who works with homeless women has noted that 85% of these ladies have some type of mental health diagnosis.

*Diversity and expansion of community-based services: Enhanced residential services are needed in Minot, Grand Forks and Dickinson regions. There are no crisis beds in the Minot region which would help keep individuals from private or state hospitalization. Supported residential and detox services in the Grand Forks region, staffing needs in the Fargo and Jamestown region and residential services in Dickinson are all important to a diverse continuum

of services. The House removed funding for these services and there is a need to reinstate them. Cost: $3.5 million

*Crisis Intervention Team (CIT): The DMHSA and Mental Health Planning Council as well as the Governor's Commission on the Alternatives to Incarceration have verbally supported the implementation of Crisis Intervention Team training. Unfortunately, no monies were designated in the Governor's budget or Human Services budget. This evidence-based pre-booking jail diversion program involves 40 hour training for law enforcement and first responders designed to improve outcomes of interactions with people who have mental illnesses. (See Attachment A for a fact sheet.) The Ward County CIT Committee, with representatives of 24 agencies, has been meeting regularly since September 2007. The group obtained funding to send six (6) people to the 40 hour training and 8 hour Coaches' training in Colorado. The committee is now looking into offering the training in Minot later this fall. Police departments in Fargo and Bismarck have also indicated interest in this type of training. Increased safety of the officers, the person with a mental illness and the general public is a result of this program, but maybe more important is the individual's diversion from the criminal justice system to mental health treatment. Cost for the initial training is estimated at $25,000.

Annual trainings for 30 new officers and updates for CIT certified persons would improve outcomes across the state.

*Development of the Aging and Disability Resource Link model which is under Aging Services' budget and was removed by the House at a cost of $600,000. A person with a mental illness disability faces many challenges when seeking services that can involve going to 7 different agencies or more. Many times the illness causes a lack of focus, an inability to concentrate, an "overwhelming" feeling, and an overall inability to complete required applications necessary to receive services. Establishment of a "one stop shop" will improve access to services and includes follow-up with consumers, an essential component for persons with mental illness.

On Wednesday, March 11 NAMI will be releasing the 2nd Grading the States report of public mental health services. Information about North Dakota will be available at www.nami.org/grades09 . In March 2006 North Dakota was one of 8 states receiving an "F". The national grade was a "D" and there were no "A"s. I would encourage the subcommittee to take a look at the areas where improvements are needed and put financial resources into those services. In a time when the state has a budget surplus and federal economic stimulus monies

will be available, it's time to provide monies to the most vulnerable of our citizens—those who are young, elderly and coping with disabilities.

Thank you for your time and support of improved services in the Human Services budget. I would be willing to answer any questions you or the committee members may have.

NAMI
National Alliance on Mental Illness

Crisis Intervention Team Toolkit
CIT Facts

What is CIT?

Crisis Intervention Teams (CIT) are a pre-booking jail diversion program designed to improve the outcomes of police interactions with people with mental illnesses.

The first CIT was established in Memphis in 1988 after the tragic shooting by a police officer of a man with a serious mental illness. This tragedy stimulated a collaboration between the police, the Memphis chapter of the National Alliance on Mental Illness, the University of Tennessee Medical School and the University of Memphis to improve police training and procedures in response to mental illness. The Memphis CIT program has achieved remarkable success, in large part because it has remained a true community partnership. Today, the so-called "Memphis Model" has been adopted by hundreds of communities in more than 35 states, and is being implemented statewide in Ohio, Georgia, Florida, Utah, and Kentucky. To locate a CIT program near you, visit the University of Memphis website at: http://www.cit.memphis.edu/USA.htm.

The Memphis Model of CIT has several key components:

- A **community collaboration** between mental health providers, law enforcement, and family and consumer advocates. This group examines local systems to determine the community's needs, agrees on strategies for meeting those needs, and organizes police training. This coalition also determines the best way to transfer people with mental illness from police custody to the mental health system, and ensures that there are adequate facilities for mental health triage.

- A **40 hour training program** for law enforcement officers that includes basic information about mental illnesses and how to recognize them; information about the local mental health system and local laws; learning first-hand from consumers and family members about their experiences; verbal de-escalation training, and role-plays.

- **Consumer and family involvement** in decision-making, planning training sessions, and leading training sessions.

Why Do We Need CIT?

CIT equips police officers to interact with individuals experiencing a psychiatric crisis, by:

- **Providing specialized training.** Police officers report that they feel unprepared for "mental disturbance" calls and that they encounter barriers to getting people experiencing psychiatric symptoms quickly and safely transferred to mental health treatment. CIT addresses this need by providing officers with specialized training to respond safely, and quickly to people with serious mental illness in crisis. Officers learn to recognize the signs of psychiatric distress and how to de-escalate a crisis — avoiding officer injuries, consumer deaths and tragedy for the community. In addition, CIT officers learn how to link people with appropriate treatment, which has a positive impact on fostering recovery and reducing recidivism.

- **Creating a community collaboration.** Due to critical shortages in community mental health services, police officers have become first line responders to people with serious mental illness who are in a psychiatric crisis. When these crises occur, officers often have no options other than to arrest the individual, due to the lack of protocol or coordination between law enforcement and the mental health system. By creating relationships between law enforcement and mental health services, CIT can facilitate agreements that get people quickly transferred to mental health treatment, while reducing the burden on police and corrections. Speedy transfers to treatment save police time and money, and reduce the need for costly emergency psychiatric services.

CIT Works — for law enforcement, for consumers, and for the community.

CIT helps keep people with mental illnesses out of jail, and gets them into treatment.

- Studies show that police-based diversions, and CIT especially, significantly reduce arrests of people with serious mental illnesses.[1,2] Pre-booking diversion, including CIT, also reduced the number of re-arrests by 58%.[3]

- In a one-year study of pre-booking jail diversion, including CIT, participants in jail diversion programs spent on average two more months in the community than non-diverted individuals. Individuals diverted through CIT and other programs receive more counseling, medication and other forms of treatment than individuals who are not diverted.[3]

- CIT training reduces officer stigma and prejudice toward people with mental illness.[4]

- CIT officers do a good job of identifying individuals who need psychiatric care[5] and are 25% more likely to transport an individual to a psychiatric treatment facility than other officers.[6]

CIT reduces officer injuries, SWAT team emergencies, and the amount of time officers spend on the disposition of mental disturbance calls.

- After the introduction of CIT In Memphis, officer injuries sustained during responses to "mental disturbance" calls dropped 80%.[7]

- After the introduction of CIT in Albuquerque, the number of crisis intervention calls requiring SWAT team involvement declined by 58%.[8,9]

- In Albuquerque, police shootings in the community declined after the introduction of CIT. [9]

- Officers trained in CIT rate their program as more effective at meeting the needs of people with mental illness, minimizing the amount of time they spend on "mental disturbance" calls, and maintaining community safety, than officers who rely on a mobile crisis unit or in-house social worker for assistance with "mental disturbance" calls. [10]

CIT Works in Rural Communities: Many rural communities have created regional collaboratives for CIT. For example, successful rural CIT programs exist in the New River Valley in Virginia, and in Cambria County, Pennsylvania.

Testimony
House Bill 1012
Senate Appropriations
Senator Ray Holmberg, Chairman
March 4, 2009

Chairman Holmberg and members of the Committee: my name is Carlotta McCleary. I am the Executive Director of ND Federation of Families for Children's Mental Health (NDFFCMH). NDFFCMH is a parent run advocacy organization that focuses on the needs of children and youth with emotional, behavioral and mental disorders and their families, from birth through transition to adulthood.

NDFFCMH supports increasing the net income eligibility from 150% to 200% of the poverty line for the state children's health insurance program. Expanding the net income eligibility allows more children to access mental health care. For many children, mental health care is a key component of the array of services needed for healthy childhood development.

Mental disorders affect about one in five American children and one in ten experience serious emotional disturbances that severely impair their functioning, according to the Surgeon General's comprehensive report on mental health. **Moreover, low-income children enrolled in Medicaid and SCHIP have the highest rates of mental health problems.**

Sadly, over two-thirds of children struggling with mental health disorders do not receive mental health care. The President's New Freedom Commission on Mental Health found that without early and effective identification and interventions, childhood mental disorders can lead to a downward spiral of school failure, poor employment opportunities, and poverty in adulthood. Untreated mental illness may also increase a child's risk of coming into contact with the juvenile justice system, and children with mental disorders are at a much higher risk for suicide.

NDFFCMH works with many families whose children have an Autism Spectrum Disorder. We support the Department of Human Services (DHS) budget that includes an autism waiver for children birth through five. Many of our children and adults do not currently meet the eligibility that ND DHS has set in its Developmental Disability Waiver.

We know that the needs go far beyond the current Autism Waiver proposal. Children and youth with autism spectrum disorder continue to have needs across their life span. Their needs do not stop at the age of five. Many of the transitioning age youth lack the adaptive skills necessary to become independent adults. There is a need for ongoing support for employment as well as supportive living arrangements. NDFFCMH would like to see an autism waiver expanded to include children as well as adults.

NDFFCMH supports increasing Family Foster Care payments to the nationally recommended level. We believe this will help recruit family foster homes.

Transition age youth with mental health disorders are not unique in experiencing difficulties as they transition to adulthood, they are more likely than their peers to experience poor outcomes, including areas of employment and education. Left without access to necessary services and supports, successful transitions to adulthood cannot be realized.

NDFFCMH supports the Department's budget which includes funding for youth facilities in Bismarck and Fargo, each providing eight residential beds for youth in transition. In addition to shelter, participating youth will have access to counseling, case management and other services through the regional human service centers.

NDFFCMH supports the development of a coordinated service delivery system to maximize continuity of care and access to services. Young adults who are transitioning to the adult mental health system should be able to benefit from the infrastructure that would be developed to access such services as peer support programs, independent living and life support skills as well as employment, housing and education supports.

NDFFCMH would like to see Peer-to-Peer Support Program enhanced to include funding for state-wide implementation. This is a very successful program.

Partnerships Program has been a very successful with positive outcomes for children and their families. NDFFCMH supports the increase of 1 FTE for Partnership Program at SEHSC.

Finally, NDFFCMH thanks you for your continued support for children with emotional, behavioral and mental disorders and their families.

Thank you for your time.

Mental Health Extended Services in Relation to HB1012
January 27th, 2009
Human Resources Division of House Appropriations

I. Background: Mental Health Extended Services is a program that assists people with serious mental illness find and maintain community-based employment. This service is an extension of Vocational Rehabilitation's Supported Employment Program. A person needs to meet certain criteria to be eligible for this program. This service provides supports such as job coaching to assist with skill training and development and other employment-related activities. This program is delivered in the same manner as Extended Services for individuals with Developmental Disabilities, but is funded through a different pool of money.

II. Issue: On October 24th, 2008, area agencies providing employment services were informed that Mental Health Extended Services was over budget by approximately 19%. The solution provided to this issue was to administer a new set of more restrictive guidelines that effectively eliminated at least six people from services—those with significant support needs who benefit most from the program. Over the course of the next two months, meetings were hastily arranged to let people know that their services would be ending on January 1st, 2009. No alternatives were provided beyond an invitation to join social therapy groups for people with mental illness. It was disclosed that the person had a right to appeal this decision, but no explanation was provided on that process, nor were any appeal forms provided to anyone until North Dakota Protection and Advocacy became involved. Beyond the six people who were immediately affected by this decision, many other people in the program may be in jeopardy of losing their services over the next three months if they are unable to adjust to the new highly restrictive guidelines. There is also a list consisting of nine people at present time who are waiting for Mental Health Extended Services and this list is expected to increase. Despite the current budget shortfall and the need for additional services as evidenced by the waiting list, there has been no request for any additional funding for the 2009-2011 biennium. There is also a discrepancy between the services available to those individuals with a developmental disability versus those with a mental health diagnoses in relation to the new guidelines. This has not been addressed.

- ***Friendship, Inc.***

- We were authorized 3520 units (intervention hours) @ $31.34 a unit = $110,316.80 for the 2009 Fiscal year

- July 1, 2008- December 31,2008 we were authorized $56,349.32; we used a total of $42,998.48 which is a savings of $13,350.84

- To continue to provided serves at this level January 1, 2009- June 30, 2009 we will need $42,998.48

- For the 2010-2011 biennium we are projecting $171,994 for the 24 month period with an addition of $66,190 to allow for new referrals

- ***Evaluation and Training Center (ETC)***

- We were authorized for $115,000 Fiscal year

- We were authorized $230,000 per this biennium

- To amend our current situation we would need $104,000

- With an addition of $50,000 for new referrals

- ***Community Living Services (CLS)***

- For the 2010-2011 biennium we are projecting we will need an additional $19,800

From: Terry Paulson - ETC

Mental Health Extended Services

I. Management of Fiscal Resources between the State Mental Health and Region V Mental Health in Fargo, do not appear to be managed very effectively. We were told on October 24th, 2008 that they had over spent their funds by approximately 19% and needed to make some changes. They told Providers at this meeting that they were looking at changing the criterion for being in the Extended Services program, and than proceeded to hand out a copy of the more restrictive guidelines. They went on to say that they would be meeting with each Provider and those consumers affected by these changes in the next month to decide on a course of action. They went on to discuss a pilot program that they were going to run to determine how the new criterion would work, and stated that a Request for Proposals would be issued in the near future for any Providers who would be interested in submitting a request. I am not sure where the funding for this pilot project would be coming from.

II. I felt that the handling of cutting off services to the six consumers that we serve could have been handled differently. They told each consumer that they had the right to appeal the decision, but did not fully explain the process, or provide them with the appeals form that was used by the Human Services Center. I felt that they did not allow for any flexibility to work towards meeting their new restrictive criteria, and were very arbitrary in just cutting them off from services with one months notice.

III. It is unusual for a State Agency to change it's criterion for services in the middle of the year, without first seeking input from the Organizations and people they serve. In discussing these changes with a Provider of Mental Health Services in the Bismarck area, they were unaware of any changes at all in their Region, and had not been contacted by anyone related to this issue.

IV. There are at least seven consumers that are being assisted by a client assistance attorney in our region in the filing of an appeal with the Human Service Center. I know that the State Protection and Advocacy Project is also involved in this process, and has similar concerns as

well. There are approximately eleven consumers impacted by these changes in our Region. We are continuing to meet with Mental Health officials and consumers that have been impacted to see if anything can be worked out.

V. Possible Solutions:

1. There needs to be an option/mechanism of transferring funds within the Mental Health Division, so that services to clients are not impacted. It was our understanding that they had monies in the caseworker side of the budget, but could not transfer to the Extended Services side.
2. Guidelines should be established that would require a period of public input/ comment, prior to changes in service eligibility criterion.
3. There needs to be a stronger system of fiscal management and coordination established between State Mental Health and the Regional Offices. There should be no excuse for over spending by 19% and having to change services on such short notice.
4. Allow the ten or eleven clients impacted, to remain in services, pending disposition of their appeals and resolution of the above issues.

IMPLEMENTATION OF EXTENDED SERVICES TO EMPLOYED INDIVIDUALS WITH SERIOUS MENTAL ILLNESSES

I. INTRODUCTION

History indicates that many individuals with serious mental illnesses have not been employed because of social stigma, the severity of their disease and/or a lack of the necessary supports to maintain them on the job. When an individual obtained a job, long-term employment was unlikely because the employer had no knowledge or training in working with the handicap, fellow employees were unsympathetic and/or no support system existed on or off the job site.

In order to assist these individuals, Vocational Rehabilitation developed a program called, "Supported Employment Program" (SEP). This program was started for individuals with mental retardation/developmental disabilities in 1986. Since that time, it has also been adapted to serve individuals with serious mental illnesses.

II. DEFINITIONS

The Supported Employment Program has been defined by Federal Regulations (34 CFR part 363) as competitive work in an integrated work setting with ongoing support services for individuals with severe disabilities for whom competitive employment:

--Has not traditionally occurred

--Has been interrupted or intermittent as a result of severe handicaps

The first phase of supported employment is called training and stabilization. This phase is provided by vocational rehabilitation. When the client has been stabilized on the job, he/she is then referred for extended services.

SEP includes a second phase, extended services, which is a system designed to provide necessary employment-related ongoing support and includes job development and replacement in the event job loss occurs.

On-going support service is continuous or periodic job skill training provided for individuals with serious mental illnesses throughout the term of employment to enable the individual to perform the work. It also includes services provided at or away from the work site such as personal care, counseling to family members and other employment-related activities.

In the case of job loss, those activities of replacement, retraining and restabilization will also be necessary to maintain an individual's employment status.

Direct Service means face-to-face contact by the job coach such as job development, job match, job placement and job skills training. Job skills training could include on or off the job site.

III. ELIGIBLE RECIPIENTS

Eligible recipients are North Dakota residents with serious mental illnesses. All recipients will have a SMI case manager who is employed at a regional human service center. (Include statement about need for on-going employment support).

IV. OUTCOMES

The success of extended services for individuals with serious mental illnesses can primarily be measured by the number of hours of work the person performs, the amount of wages a person receives, the length of time a person stays on the job and the degree of integration achieved within the work environment. The expected outcomes to be achieved for individuals in extended services are as follows:

Individual outcomes

--Work that is performed on a full-time or part-time basis averaging a minimum of 20 hours per week, unless the individuals's multi disciplinary team approves a lesser level of employment and it is documented in the client's record.

--Preferred compensation at a level of minimum wage and higher, if less, it must be in compliance with Section 14(C) of the Fair Labor Standards Act.

--Employment must be at an integrated work site as described in Service Chapter 720-01.

System Outcomes

The success of extended services can be gauged by statewide achievement of the above, as well as the responsiveness and flexibility with which the system can adjust to the changing intervention needs of individuals maintaining their employment. Specific outcome expectations are:

--The individualization of planning and reimbursement activities (based on specific intervention needs of the client).

--The establishment of an on-going support service structure to maintain job placement, training and stabilization efforts accomplished in obtaining work for individuals with serious mental illnesses.

--An emphasis on decision-making being accountable at local levels (multi-disciplinary teams, including SMI case management and extended service case management participation).

--Reimbursement to service providers which covers actual costs.

V. ROLE OF THE SMI CASE MANAGERS AND EXTENDED SERVICE CASE MANAGERS

Individuals with serious mental illnesses who are clients of a regional human service center must have a SMI case manager. When a multi disciplinary team has determined that an individual with serious mental illness could benefit from the supported employment program, the SMI case manager and/or the extended service case manager will refer him/her to Vocational Rehabilitation. If Vocational Rehabilitation also determines that the individual is eligible for the supported employment program, the SMI case manager and/or extended service case manager will work cooperatively with the Vocational Rehabilitation counselor. The Vocational Rehabilitation counselor will then make the necessary arrangements for referral to a local provider who will provide training and stabilization.

After the client has been stabilized on the job and the client no longer needs the services of Vocational Rehabilitation, he/she will enter the second phase which is extended services. The extended service case manager will then negotiate with the local provider to provide extended services. The

extended service case manager will negotiate an authorization for extended services based on the client's needs. If the client, after a period of time, requires additional job-related services including job development and placement on a different job, the extended service case manager will renegotiate an authorization.

The extended service case manager's role in coordination with the client's case manager, will be to provide support services to assist clients in maintaining their independence. Such activities may include assisting clients in accessing housing, therapy, medical treatment, SSI and other entitlement and/or any other supportive activities. The local provider will provide all extended service activities as they relate to the job. The provider will work with the employer and provide job coaches as needed to maintain the client on the job.

VI. CLIENT ENTRY INTO EXTENDED SERVICES

Individuals entering extended services will principally be referred from Vocational Rehabilitation having left that program with an:

--Intervention by a job coach being 20% less of an individual's work hours for two consecutive months, or

--Intervention being consistent at a level above 20% but less than 50% of work hours for four consecutive months.

Individuals may also enter extended services from other sources than Vocational Rehabilitation. Clients may already have a job, but need on-going support on or off the job site. Local providers may be contracted with to provide job coaching or some other support services to maintain the individual on the job.

VII. CLIENT EXIT FROM EXTENDED SERVICES

Individual's receipt of extended services may be discontinued for the following reasons:

--Retirement

--Death

--Paid intervention no longer necessary

--Intervention needs fall below minimum of twice monthly

—Individual choice (which may include job separation)

VIII. JOB LOSS

If job loss occurs under extended services and re-employment is to transpire, the provider, in conjunction with the extended service case manager, will develop a re-employment plan based on the individual's employment needs. This plan will outline the specific activities to be undertaken, as well as the magnitude and duration of efforts to get the individual's job (intervention needs) stabilized.

IX. REIMBURSEMENT

Reimbursement for extended services is intended to be client-centered, provider sensitive and in compliance with Federal Rules and Regulations.

A. Rate Setting

Individualized intervention rate setting is designed to accommodate provider's actual costs of extended services via an up front process. This rate setting process will include:

1. Direct service; and,

2. Administrative costs. Hourly rates of intervention will be set by the Developmental Disability Unit and communicated to regions for use in developing authorizations. The hourly rate will reflect the full cost of providing one hour of direct intervention to an individual.

B. Claims Processing

Extended service case managers will negotiate with the provider the number of intervention hours needed to maintain the individual on the job. She/he will then complete a rate form which will determine the amount the provider will receive. This will be the number of intervention hours times the rate which was established by the Department for the provider.

At the end of the month, the provider will submit a billing form to the extended service case manager who in turn will authorize the expenditure on the VRIS II System.

C. Audit

All providers are required to adopt an accounting system which allows for reporting of all costs to the Department of Human Services. The settlement of an audit to actual costs (which includes appropriate administrative cost allocation) will be made through a recoupment or refund to the Department of Human Services, Division of Mental Health and Substance Abuse Services for an overpayment, or an additional payment to the Provider for an underpayment.

X. EXTENDED SERVICE CASE MANAGER FUNCTIONS

A. Authorization

Extended service case managers will be responsible for documenting supported employment on the client's individual treatment plan (ITP).

B. Utilization Review

The conduct of utilization reviews will be a delicate matter for extended service case managers due to the sensitivity of on-site verifications of services being provided. Though such practice will not be prohibited, it is expected that utmost caution be exercised should on-site review take place. Otherwise, the collection of information from the individual served and the service provider should provide sufficient basis for the determination of the quality of service delivered.

XI. ROLE OF THE DIVISION OF MENTAL HEALTH AND SUBSTANCE ABUSE SERVICES

The role of the staff of the Division of Mental Health and Substance Abuse Services will be to monitor authorizations, maintain data on clients and provide quarterly audits of expenditures of money. The Division staff will make the necessary arrangements for the training of extended service case managers, local providers and others who may be involved in the provision of extended services.

"S" Drive/Jude: Extsers

New Guidelines

Serious Mental Illness Extended Services Consumer Continued Stay Criteria

Philosophy: The Extended Services program will assist consumers to maintain their substantial gainful community based employment achieved during their time spent under the Supported Employment Program. It is believed that with an appropriately matched job and on the job training and support a consumer will, over time, progress towards independence or a need for minimal interventions.

Goal: Assist consumers with disabilities to achieve and maintain community based employment in an integrated setting that includes the development of natural supports.

Criteria Points:

- Individual should be employed at least 50 hours per month
- The individual requires 20% or less intervention at the time of referral.
- It is expected that intervention will continue to decrease throughout the time on the program.
- The cost of job coaching interventions should not exceed the individual's monthly earnings.
- The individual earns at least minimum wage. No piece rate pay.
- An employer/employee relationship exists
- The employment relationship is not time limited
- The essential functions of the job must be performed by the individual
- The setting is not primarily a learning, evaluative, or experiential activity
- The setting is not a simulated segregated environment.
- The individual will develop an Individual Employment Plan with their job coaching service provider that targets issues/behaviors that are creating barriers to gaining independence on the job.
- The service provider will report monthly on progress made on the Individual Employment Plan and will attend quarterly meetings that will formally review progress towards achieving independence.
- Re-Employment activities need to be pre-authorized by the Extended Services Coordinator

Letters in Support of Increased Funding for Mental Health Extended Services

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Glenn Erickson and I live in Fargo. I am 63 years old and have a long history of mental health issues, including major depression episodes were I have been hospitalized. I work at Hornbacher's at Osgood as a grocery bagger. They really like me there. I was just given another raise and now make $8.85 per hour. I love my job.
I receive services from Friendship through the Mental Health Extended Services program. My job coach helps me during my time in the drive-up and also to helps me remember things, like what items can go together and what can't. My supports help me from getting frustrated and going into a deep depression.
I get a lot of help from Hornbacher's and also from Friendship. They work together to make sure that I am doing what I need to do so I can keep my job and get raises. I really like my job coaches. They help me stay calm if I start to feel bad about myself and feel like the world would be better off without me. I can handle the little things better because of my supports.
I truly appreciate my services and want them to continue like they are now. My job gives me something to look forward to and to feel good about when everything else is going wrong.

Thank you,

Glenn Erickson
5300 12th Street S

Glenn Erickson

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Mary Reynolds. I am from District 21 in Fargo. I have been receiving services from Southeast Human Services and Friendship, Inc. since 2001. Since that time, I have worked a few different jobs. Now I have successfully settled in to two jobs that I love at 49 years old. In my younger years, I was a successful cosmetologist. Some circumstances came into my life and I began suffering from mental illness. The services I have received since then have helped me get back on my feet.

In the beginning, I had full supports and struggled. People have called me names at a job and I have been let go because of my illness. Friendship was able to help me pick up the pieces. Had I not had this support, I would not be so independent now.

I now work 58 hours a month and only have job coaching for a very minimal part of those hours. I was told I was going to lose my services because I did not meet the new requirement of working at least 50 hours a month. The things is, I had just gotten a new job doing home care for seniors and had not built up clients yet. The people at Southeast Human Services were not going to give me a chance to show that my hours were increasing until I got Protection and Advocacy involved. I cried and cried and had no clue as to what I was going to do. Fortunately in January, I did get clients and now I meet the new criteria. I found the way this whole thing was handled to be very inappropriate and hurtful. The director of Mental Health Extended Services has had me in going circles and has not followed through on the things we have discussed.

I still need to know that Friendship is backing me up. My self-esteem has grown, but I still have issues with my illness. I have been disabled since 1987. I am finally feeling like an "able" person. Please do not take these services away from us. There will be a lot of sick people if their work is taken from them. I hope you hear from other people in my same situation. I cannot be with you today because I have to work, but thank you for considering my story in your decisions.

Thank you for your time,

Mary Reynolds

Dear Mr. Chet Pollert, and members of the Committee:

Re: HB 1012 – Mental Extended Services

My name is Brenda Majerus, I am Director of Supported Employment / Extended Services at Friendship, Inc.

I am asking you to make additional dollars available for mental health extended services. This program provides funding for job coaching for people with severe mental health needs on community based jobs as well as re-employment dollars for those that have lost jobs. There are currently not enough dollars to fund this program. People with high job coaching needs or the job doesn't meet the criteria of the new program guidelines are being cut from the program or the job coaching needs will need to be cut to the lowest level possible which jeopardizes a person's employment. The goal according to the new guide lines would include the persons with severe mental health would eventually be able to leave the program leaving employers responsible for providing the job supports to individuals without taking into consideration that the persons mental illness is not going to go away and along with the mental illness the person may a have a cognitive disability, addition to drugs and alcohol or other conditions that may factor the need for on going support. As I understand it there are not enough dollars available for people who are receiving Vocational Rehabilitation Services that qualify for extended services to be referred for employment services because there are no extended service dollars available in mental health.

I feel that employment should be an option for every citizen that chooses to be employed in the job of his or her choice and that it is vital to a person's overall mental and physical health. When a person with a disability is earning a wage they feel better about themselves, they contribute to their community by earning a wage. SSI and SSDI payments are decreased, they are less dependent on food stamps and other government programs and are able to pay more of their rent. We see people employed taking their prescribed medications, which leads to better health, less hospitalizations, and fewer incarcerations, which saves taxpayer dollars.

I have worked in the human services field for a number of years. Because of the needs of people with a mental health diagnosis employers were not as willing to hire this population. Services providers have worked very hard to educate employers and create job opportunities for people with a mental health diagnosis. Please look at the benefits this program creates for Region V and the State of North Dakota and increase dollars so we can continue the provide people with quality job support services

Respectfully,

Brenda Majerus

Brenda Majerus, Director of Supported Employment / Extended Services

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Suzanne Hanson. I live in District 21 in Fargo. I graduated with honors from North Dakota State University in 2007. I have a degree in political science and philosophy that I was planning on using to go to law school and most likely leave North Dakota. During college, I had been working as a job coach with Friendship, Inc. After graduation, I was offered a promotion and decided to stick with my current occupation. The pay is not what I might otherwise be making had I pursued my law degree, but the rewards are many. It is a wonderful experience to help someone in becoming gainfully employed. Work is such a defining and positive factor for many of us in our adult life, and persons with disabilities should have the same opportunity to have a positive community role.

Being born and raised in North Dakota, I know the value of good work ethics and self-sufficiency. I feel that those values and opportunities should be available to all. I find it very disheartening that a program that is in line with our state's values and gives people an opportunity to contribute is in jeopardy of being phased out for many people because of certain budget allocations.

I am encouraging you to ensure that the Department of Human Services has enough money for people with disabilities to receive Extended Services if they need them. This program is something that is positive for many parties—the person receiving supports, area businesses and our communities. We should not be cutting back this program, but finding ways to expand it to help people move from dependence to independence.

Thank you,

Suzanne Hanson

To Whom It May Concern:

My name is Jim Hoff. As a client of Friendship, I have been involved with the organization for roughly 6 & ½ years. I do lawn care and custodial work with very low intervention (job coaching). The rewards and support I receive have always matched my capabilities. Through my highs and lows, it's nice to know they are in my corner. It would be a shame to lose this footing or shake up the foundations of a good program through budget cuts.

Sincerely,
Jim Hoff

RE: HB 1012 – Mental Health Extended Services

To Whom It May Concern,

My name is Matt Gregory and I am the Managing Partner of the Texas Roadhouse in Fargo, ND. I would like to encourage you to support additional funding for mental health extended services. This program provides job coaches to support people with severe mental health needs in community based jobs as well as re-employment dollars for those who have lost their jobs.

Our company has employed people with disabilities who receive supported employment services for the last 2 1/2 years. We feel that it has benefited our restaurant to have these employees work for us. They have proven to be reliable, trustworthy as well as friendly individuals.

Without supported employment services, it would be very difficult for our company to provide job supports at the level needed to help individuals with severe mental health needs be successful in their positions. The job coaches have helped them, not only to be on time, but to also understand their job requirements and to help enforce rules when necessary. They are trained well in how to deal with any issues that come up and to help the employee be happier in their job here as well.
I hope you will see the benefits of services that keep people successfully employed in their communities and support the additional funding needed for mental health extended services in HB 1012.

Respectfully,

Matt Gregory

RE: HB 1012 – Mental Health Extended Services

To Whom It May Concern:

My name is Bryce Weisser and I am the Manager at The Bottle Barn located at The Hub in Fargo. I would like to encourage you to support additional funding for Mental Health Extended Services. This program provides job coaches to support people with severe mental health needs in community based jobs as well as re-employment dollars for those who have lost their jobs.

Since my time as a manager at The Bottle Barn, I have employed two people who used the services at hand as cashiers and stockers. Although it has not always been perfect and sometimes I had to spend longer periods of time allowing for training, it has been a rewarding experience that I would encourage other employers to become involved in. I found my employees to be dedicated to their jobs and excited for the opportunity to work in a setting that was different than what they were used to.

Without supported employment services, it would have been difficult for our company to provide job supports at the level needed to help individuals with severe mental health needs be successful in their positions. It was helpful to have the job coaches be able to provide information and input to help our management team work better with our employees.
I hope you will see the benefits of services that keep people successfully employed in their communities and support the additional funding needed for mental health extended services in HB 1012.

Thank you,

Bryce Weisser

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Kim Fuss and I was the manager at Taco John's in Fargo for 23 years. During that time, I employed many individuals who had supports through Extended Services Mental Health. I found them to be very loyal employees who would suffer a great deal if they no longer had supports, such a job coaching. I feel to that if they were to lose their services, it would have a great impact on their self-confidence and ability to earn a paycheck for a job well done.

I would hate to see things go back to how they were in the past, when people with disabilities were shut out of society so no one could see them or hear them. For people to lose this progress and go back to wasting their skills and their life inside of four walls is not something we should ever see in North Dakota. I don't want to see that happen again—people deserve to be able to better themselves by working and earning paychecks in our communities.

It was wonderful to see the transformation of people who came to work for me who had disabilities. Often they were very shy and quiet when they first started and were able to become active and outgoing workers because of both their supports and our positive working environment. These are the opportunities we need to keep open for people. They are wonderful people to work with. I enjoyed it so much, that when I wanted a career change, I became a job coach myself.

I support making enough funds available to keep Mental Health Extended Services available to those people who need it.

Thank you for your time,

Kim Fuss

RE: HB1012 – Mental Health Extended Services

To whom it may concern:

My name is Jason Westby I am the Manager of the Kelly Inn in Fargo, North Dakota. I would like to encourage you to support additional funding for mental health extended services. This program provides job coaches to support people with severe mental health needs in community based jobs as well as re-employment dollars for those who have lost their jobs.

Our company has employed people with disabilities who receive supported employment services for 14 years. We feel that this program is very important to the clients for their well being and to our company. They work very hard, do a great job, are very reliable, and our guests and employees enjoy their company as well. If there is a job that needs a lot of direction it is nice to know the job coaches are always there to help them along to make sure that we get a job well done.

Without supported employment services, it would be very difficult for our company to provide job supports at the level needed to help individuals with severe mental health needs to be successful in positions of employment. I feel job coaches are essential part of making work a success for individuals with mental health issues. For example Friendship has been employed with us for 14 years and it has been a great experience. I would hate to loose their services.

I hope you will see the benefits of services that keep people successfully employed in their communities and support the additional funding needed for mental health extended in HB – 1012.

Respectfully,

Jason Westby

RE: HB 1012 – Mental Health Extended Services

To Whom It May Concern:

My name is Ryan Smith and I am the former Director of Operations for the Wendy's Restaurants in Fargo. I am writing this letter to show my support for the proposed funding increases for the extended services job support program.
I have worked with and employed people with disabilities who receive supported employment services for several years. We have worked with different area agencies to help people with disabilities learn job tasks and learn ways to increase job performance. The assistance from the job coaches has been invaluable in our fast-paced working environment. They are able to provide the extra support needed to help people remain in their positions and grow in their work skills.

I support services that keep people successfully employed in their communities and support the additional funding needed for mental health extended services in HB 1012.

Respectfully,

HB 1012
January 27, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Crystal Farmer. I'm from District 21 in Fargo, ND. I'm here today to talk about increased funding for Mental Health Extended Services. This is a program that helps individuals maintain employment. This is my story.

When I first started to receive special services my confidence and self-esteem increased dramatically. I don't know what I would do without these services. The services have helped me change my attitude, my outlook on life, and achieve some of my goals. I currently have my own popcorn business, which has been very successful for me. I have help with doing the taxes because I still have trouble doing it myself.

Most likely if I lose my services, I would quit my job because I can't do this entirely on my own. I would no longer have extra money in case of an emergency. Overall this would lower my self- esteem, make me feel lonely, hopeless, useless, and bored. I wouldn't even want to go outside as often as I do now.

I don't want any of this to happen. I want to keep my job and independence growing, so one day I can have a career I love. Please, help our people who have a mental illness keep these services because we need them everyday, rain or shine, cloudy or sunny, no matter what time of the year it is, we need them now and we will need them in the near future.

Thank you for your time and consideration,

Crystal Farmer

Q2

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is James Baumgarter from District 21 in Fargo, ND. This is my story.

I had a really good job working at Quality Film Developing for 25 years. I was doing really good and felt good about my life. Then a woman came into my life who took advantage of me. I was crazy about her and went out of my way to do anything for her. She had a gambling problem. I lost so much. My retirement fund, my severance pay, a lot of my collectables, and even my weight went from 200 lbs to 160 lbs. I went into a deep depression and wanted to leave my life. I ended up in the hospital and got help. I got involved with Southeast Human Services and Vocational Rehabilitation. They helped me get my life back. Right now I have two good part-time jobs, The Avalon and John's Janitorial Service. Thanks to Friendship, Inc., I got those jobs. They helped learn my job tasks and still provide minimal supports to help with my anxiety. So I am doing all right thanks to Southeast and Friendship, Inc. I do not receive Social Security or housing assistance, so my job is very important to me.

There are a lot of people in need of help, so we have to keep these programs that helped me and so many going. I support increased funding for Mental Health Extended Services.

The thing is we have to help one another because if we don't what kind of a future will there be for mankind and womankind? So we all have to do our part. We have to help each other survive.

I thank you all for your time.

Sincerely,

James Baumgartner

HB 1012
January 27th, 2009
Human Resources Division of House Appropriations

To Whom It May Concern:

My name is Valerie Koivunen and I live in District 27 in Fargo. I would like to inform you of my support for increased funding for the Mental Health Extended Services program under HB1012. I am a job coach, but also a mother of a daughter who receives Extended Services for her mental health issues.

I would like to tell you about some of the people that I provide supports to. Not only do they need their jobs for income, but also for social interaction and community inclusion as well. Many of our people would suffer from isolation, loss of self-esteem and self-confidence if they did not have meaningful and constructive work. Extended Services keeps people with mental health problems out of the State Hospital, out of nursing homes and incarceration. This is because like the rest of us, their identity is tied to the work they do and the pride they have in earning a paycheck for a job well done.

On a personal level, I know my daughter would be insecure, angry and withdrawn without the employment supports she receives. She appreciates the interaction of her co-workers and the feedback from her job coach.

I appreciate your time and attention on this matter.

Thank you,

Valerie Koivunen

Q4

Testimony on House Bill 1012
House Appropriations Committee, Chairman Chet Pollert
January 27th 2009
Submitted by Taylor Petermann

Chairman Pollert and members of the Committee, my name is Taylor Petermann. I live in Fargo and I am here today to ask for continued funding for the services that have been so beneficial for me as I've recovered from a serious mental illness.

I went from being in the State Hospital to being a productive member of society because of treatment and the services I have received in the community. The services that I think have been necessary are: case management and job coaching. My case manager helped me get into my own apartment and annually complete the forms needed to stay there. She helped me sign up for food stamps, the Workers With Disabilities Program, and a weekly medication distribution service - just to name a few things she has helped me with.

I have also benefited greatly by having a job coach who has patiently taught me my job and who has always been there when I had a question. A year and ½ ago I didn't think I'd be able to work more than 2 hours per day. But today I get up early 5 days a week, jump on the bus, and work for 5 or more hours. My skills and confidence have improved and having a Job Coach has made this possible. It's critical that people like myself keep these services to ensure that they can hold their jobs in the community. Without these services they may not be able to hold jobs and may become unproductive.

Thank you, Chairman Pollert and committee members for listening to my testimony.

HB 1012
January 27, 2009
Human Resources Division of House Appropriations

Chairman Pollert and members of the Committee, my name is Katie Storm. I am from Friendship Inc. I am one of their clients. I am here today to talk about Extended Services for people with mental illness. This is a program that helps individuals maintain employment. Because the Department of Human Services does not have sufficient funds in their budget, they are changing the eligibility criteria for Extended Services. This is forcing some clients out of this program. I am one of them. Here is my story.

I am proud to be associated with Friendship Inc. I am grateful that everyone there has been willing to work with me, when I have been at my best and my worst. They have helped me to help myself realize my potential in the work place and to make friends. When I first started with Friendship about three years ago, I was lacking many of the skills that are necessary to hold down a job and properly interact with my coworkers. I was given the opportunity to work at many different job sites and have one-on-one support from Suzanne.

To me it was especially Suzanne's willingness to find time; to teach me one-on-one made the biggest different for me. She made sure that I learned the proper way to approach people in a work environment and even helped me to fill out some practice job applications. It was also while I was working with her that I filled out an application to work at Wal-Mart. I am currently starting my second year as a Wal-Mart employee and I have the good people at Friendship to thank.

I value this program and would see it as a disservice to the disabled community and every one at Friendship Inc, if funding was cut for the program. After all everyone at Friendship Inc, has been working hard so that their clients can enjoy the dignity and satisfaction of participating in the work force.

I am asking that you ensure that the Department of Human Services has enough money for people with disabilities to receive Extended Services if they need them. Also, the Department of Human Services should not be able to change who is eligible for services without a formal change in rules that requires public comment.

Thank you for your time and consideration. I will be glad to answer any questions.

HB 1012
January 27, 2009
Human Resources Division of House Appropriations

Chairman Pollert and members of the Committee, my name is Paula Storm. I am from Friendship Inc. I am the parent of one of their clients. I am here today to talk about Extended Services for people with mental illness. This is a program that helps individuals maintain employment. Because the Department of Human Services does not have sufficient funds in their budget, they are changing the eligibility criteria for Extended Services. This is forcing some clients out of this program. I am one of them. Here is my story.

My daughter Katie has a learning disability which affects her Written Language skills, Math skills, and ability to process and integrate information. She has difficulty adjusting from old to new situations, developing social judgment skills and learning to read nonverbal cues in social situations. In complex situations, like learning to drive a car, where lots of visual information must be processed quickly to make a decision, she becomes overwhelmed by her inability to rapidly integrate the constantly changing visual cues with the skills of controlling the car. She does not drive a car. Katie attended college for several years and did not graduate with a degree. As the subject matter became more complex, Katie began to have problems with attending class, work completion, anger, and depression. After college we were at a loss for what was next. Katie was unhappy, unemployable, angry, and disruptive to her family. My husband and I were left with a sense of failure and frustration with ourselves and Katie, and with an education system that does not teach to the needs of the student to prepare them for a future but rather teaches to the mandates that the government requires.

We were at a loss until one day I was at the local Hornbachers store and noticed a young person getting coached on filling my grocery bags, and the light bulb went on. My daughter needed the same thing, that extra crutch to solve a problem at work and learn the social skills of the work environment. Through her counselor at Southeast Human Services, we were referred to Friendship Inc. The dedicated staff and the services provided at Friendship have turned our daughter's life around and that of our entire family. Through the on-the-job work skill training program and job coaching support, she has been able to apply for, successfully acquire and maintain employment. In addition, Friendship Inc. has helped us work out transportation to and from her two jobs using Mat Para Transit of the FM area.

Katie's continued employment and positive job performance relies on the continued support of having a job coach. To eliminate a service that is clearly working is foolish. The support provided by her job coaches has allowed Katie to be productive, as an employed wage earner and taxpayer. There are obvious positive benefits to society, in addition to the positive sense of self worth that comes from being employed and working toward independence.

Further, in the Fargo Forum Sunday January 25th edition in an article entitled "Nonprofits Bend Dorgan's Ear" Senator Dorgan was talking about a stimulus package that Congress hopes to soon pass, to pay for ready-to-go projects. Job coaching is not only ready-to-go it is working and needs to continue.

It would be of huge benefit to parents and students with learning problems to assign them a career counselor/case manager separate from the High school Counselors. A Counselor who has the knowledge and access to services available and who would be assigned to work with the student and family through this transitional period from High School, to work training, to employment and finally to independent living. A High School counselor who is working with the college bound does not have the time to help and follow these young adults. Nor do the special education teachers and staff who are over burdened with responsibilities of teaching them skills to pass tests.) In its simplest terms dot the necessary I's and cross the T's that provide the dollars for the school to meet the current Federal Requirements.

I am asking that you ensure that the Department of Human Services has enough money for people with disabilities to receive Extended Services if they need them. Also, the Department of Human Services should not be able to change who is eligible for services without a formal change in rules that requires public comment.

Thank you for your time and consideration. I will be glad to answer any questions.

Paula Storm
4901 Meadow Creek Dr. SW
Fargo, North Dakota 58104

Q7

Hi, Mr. Chairman and committee members, my name is Gail Eickstadt,

I worked independently for eight years at the Fargo Country Club as a dishwasher. I had to quit this job because I was unable sleep and was having a lot of seizures. My Case Manager referred me to Vocational Rehabilitation for supported employment services. I started working with Friendship, Inc. I went through a time when I was not eating well and not taking my meds this led to increased seizure activity and job loss

I have had many jobs and volunteer opportunities over the years. I was also let go from volunteer sites because I didn't have the support of my job coach to assist me with learning job tasks.

These past few years with Job Coach supports have been very successful for me. I am working at Texas Road House and CHI. I love my jobs! I want my coaching to continue. I like earning money and feel good about myself.

Last spring I received the APSE "Best of the Best Award" This was an Honor for me. My name was drawn and I won a trip to the National APSE " The Net work on Employment" Conference in Louisville Kentucky! This trip would of not been possible for me if my Employment Specialist did not accompany me on this trip I had a wonderful time at the conference.

Thank you for your time,

Gail Eickstadt

road map

July 1, 2007 – June 30, 2009

I. Executive Summary

The Governor's Prevention Advisory Council on Drugs and Alcohol was established by Executive Order 2007-03 (Appendix A) under Governor John Hoeven. The Council was created to coordinate knowledge and resources that will result in evidence based alcohol and drug abuse prevention strategies. Successful implementation of these strategies will reduce, postpone, or eliminate alcohol and drug related destructive behaviors and their consequences to individuals, families and communities.

The Council is comprised of North Dakota First Lady Mikey Hoeven, two legal representatives, two advocacy group representatives, an addiction counselor, the Chancellor of Higher Education, a non-voting member from the Governor's Office, two members of the North Dakota Legislative Assembly, the Executive Director of the North Dakota Department of Human Services, the Director of the North Dakota Department of Health and the Director of the North Dakota Department of Transportation. The Executive Order directs the Council to:

- Explore the interrelationship between substance abuse prevention, education, and enforcement programs.
- Address traffic safety issues including driving under the influence of drugs and/or alcohol.
- Develop prevention policies that promote safe, stable families and communities.
- Develop a plan to access additional funding.
- Organize under the Governor for the purpose of receiving and distributing any appropriations and other funding sources.

North Dakota Senate Bill No. 2276 was passed on January 3, 2007, providing duties to the Council along with a continuing appropriation of funds. An amount of $100,000 was appropriated for the biennium beginning July 1, 2007, and ending June 30, 2009. The bill also allows for the Council to accept grants and gifts of any money, property, or service from any public or private source.

Council activity to-date includes the following activities:

- Gathering and analysis of state data of key indicators for high risk populations and specific areas of need for intervention activities.
- Determining the target audience for the initial round of Council prevention activities (grades K-6 and parents).
- Review of the Substance Abuse and Mental Health Services Administration (SAMHSA) National Registry of Evidence-Based Programs and Practices for alcohol and drug interventions.
- Initiation of a grant request process, and subsequent award of grants to five eligible programs for a total of $94,326.85.
- Creation of a state program matrix (Appendix B) to facilitate a gap analysis that will allow the Council to recommend collaboration opportunities and avoid duplication of services.

This roadmap will outline initial activities that the Council will facilitate at local, state and federal levels to create and support initiatives for a positive change.

II. Background

Data Analysis: Since its inception, the Council has devoted considerable efforts to the analysis of data that will provide insight into key indicators of high risk populations and specific areas of need for prevention efforts. Two major sources of this data were the Youth Risk Behavior Survey (YRBS) (Appendix C, Summary) and the North Dakota State Epidemiology Outcome Workgroup (SEOW) (Appendix D, Executive Summary). Another major source of data was the Community Readiness Survey to Gauge Perceptions of Alcohol and Other Drug Use (Appendix E, Executive Summary) funded and prepared for the North Dakota Department of Human Services, Division of Mental Health and Substance Abuse Services. The survey was conducted in the spring of 2008 and sent to 14,400 households and 1,725 key informants to measure perceptions about alcohol and drug use and current prevention efforts.

The State Epidemiological Outcome Workgroup (SEOW) was initiated in 2006 through efforts of the North Dakota Department of Human Services (ND DHS) and was funded by the Substance Abuse and Mental Health Services Administration (SAMHSA). The SEOW used North Dakota and national data sources to compile the profile. Among the data sources was the Youth Risk Behavior Survey (YRBS), which has generated weighted data since 1991. In 2007, the High School YRBS was completed by 9,750 students from 104 schools, and the Middle School Survey by 6,745 students from 110 middle schools. The data showed that for persons aged 12 to 20 years, North Dakota was ranked number one among U.S. states in binge drinking. Another of the SEOW's sources, the National Survey of Drug Use and Health (Office of Applied Studies (OAS) 2007) estimated that almost one-third (31.5 percent) of North Dakotans aged 12 years and older had binged on alcohol on one or more occasion in the past 30 days. Binge drinking rates have risen markedly among middle school respondents according to the YRBS. A 2006 study by SAMHSA suggested a strong connection between the onset age of drinking and the likelihood of becoming a chronic user.

Target Audience: In order to reach out to population segments that may not be the focus of existing studies, the Council decided to focus their primary efforts on students in grades K-6 and their parents. The North Dakota Epidemiological Profile (NDEP) of March 2007 suggested that there was a "generational concept" of alcohol use in the state. The demonstrated high rates of alcohol use and binging among all age groups support this theory. Members of the Council chose to target the youth and their parents in all prevention efforts to promote a change in the cultural behaviors that contribute to the high risk factors found in our state's youth.

The 2007 NDEP also stated that North Dakota had the highest rates in the nation for alcohol use and abuse (National Survey on Drug Use and Health (NSDUH), 2004; Behavioral Risk Factor Surveillance System (BRFSS), 2005). In order for communication strategies to be effective in youth, adults must be invested in supporting prevention efforts through their own behaviors. Results of the Community Readiness Survey sent to 14,400 adults in April of 2008 will help the Council identify how prepared adults are to take action against destructive behaviors in their communities. Prevention specialists and community members will have access to information from the survey that will allow them to target strategies to specific cultural behaviors in their local areas.

July 1, 2007 – June 30, 2009

III. Council Activity

Identify Best Practices and the Grant Process: A Request For Proposal (RFP) was posted by the Council on May 30, 2008. Eligible organizations were invited to apply for grant money to fund innovative projects discouraging alcohol and drug abuse in the targeted audience identified by the Council (students grades K-6 and their parents). Applicants were encouraged to submit initiatives based on the Substance Abuse and Mental Health Services Administration (SAMHSA) National Registry of Evidence-Based Programs. However, the Council recognized the potential impact of innovative projects that may not be within the SAMHSA directory. For non SAMHSA based applications the Council chose to use National Academy of Science's Features of Positive Development Settings criteria for the analysis of the project. Those criteria were:

- Physical and psychological safety
- Appropriate structure
- Supportive relationships
- Opportunities to belong
- Positive social norms
- Support of efficacy and mattering
- Opportunities for skill building
- Integration of family, school and community efforts

A pre-proposal technical conference was held two-weeks prior to the proposal deadline of June 30, 2008.

Pursuant to Council review and decision, awards were announced on August 20, 2008 for the following organizations:

- Northern Lights Youth Services, Inc., Hillsboro;
- West Dakota Parent and Family Resource Center, Dickinson;
- United Tribes Technical College, Bismarck;
- Casselton Youth Task Force, Casselton;
- Sunrise Youth Bureau, Dickinson

A sixth applicant withdrew during the review process due to a staffing shortage. A decision was made by the Council to contact the applicant for a possible award to be made with remaining Council funds. Safe Communities Coalition (Altru Health Systems) was ultimately funded.

The Department of Human Services agreed to handle the grant monitoring and administration.

July 1, 2007 – June 30, 2009

III. Council Activity

Assessment of Gaps in Prevention Efforts: It is a primary goal of the Council to support activities that enhance current offerings to leverage efforts by working collaboratively to effectively reach goals.

A gap analysis of programs and services being offered in the state is being done with the help of information provided by state agencies about their prevention activities. Programs and services were put into a matrix that allowed the Council opportunity for analysis of each program as well as an evaluation of the coverage provided to each region, age group and access point (home, school or community).

To further identify the existence of gaps in resources, a survey of individuals from various sectors and disciplines will be undertaken to gather information "from the field". Results of these surveys will provide valuable direction about the needs identified at the grass roots level. Contacts are being made with alcohol distributors and hospitality associations as well as intervention programs like Students Against Destructive Decisions (SADD) to assess resources and initiatives already in place.

By establishing a clear picture of both the resources and the needs at the local and state level the Council feels they can be most effective. By providing grant funding, and coordinating knowledge and resources between entities, the Council can encourage innovative solutions and collaborations that will most efficiently produce results.

Assist with Communities' Involvement in Prevention Outreach: Grant recipients from this year's cycle are required to present a report to the Council one year from the project award date. Promotion of successful projects to other state and local entities is one way the Council intends to encourage participation and grow the pool of organizations involved in prevention efforts.

Support State Efforts to Increase Prevention Efforts: The North Dakota Department of Human Services applied for the Strategic Prevention Framework State Incentive Grant (SPFSIG) through SAMHSA. The application is for a 5 year grant funded annually at up to 2.3 million dollars. The goal of the grant is to build statewide infrastructure. Eighty-five percent (85%) of the funding must flow through to the community level. The Council will serve as the Advisory Council for the SPFSIG.

July 1, 2007 – June 30, 2009

IV. Initial Recommendations for Future Activities

Goal: Lead a multi-system prevention effort to advance and coordinate knowledge of healthful behaviors and decisions that reduce, postpone and eliminate the problems resulting from a destructive decision.

Objectives:

- Design a Council infrastructure that will allow the Council to lead a sustaining multi-system prevention effort
- Explore the interrelationship between substance abuse prevention, education and enforcement programs
- Access additional funding for statewide prevention efforts
- Design a mechanism to receive and distribute prevention funds to regional and community levels.

Goal: Build a highly effective collaboration network of federal, state and local ideas and resources.

Objectives:

- Evaluate current North Dakota program matrix for regional or age gaps
- Conduct a public health mid-management survey to identify prevention and intervention programs and gaps in services
- Collect information from alcohol distributors and hospitality associations on current initiatives, outcomes and additional resources
- Obtain input from Students Against Destructive Decisions (SADD) or other intervention programs on successful strategies and resources available for future initiatives
- Gather information from partners about risk behaviors that are not being addressed by current programs

Goal: Identify opportunities to leverage funding that will create a sustaining and effective resource base for prevention and intervention efforts.

Objectives:

- Explore opportunities to partner with private sector companies or corporations
- Research federal grant opportunities
- Identify possible collaboration for funding between the Council and community organizations

IV. Initial Recommendations for Future Activities

Goal: Implement key communication strategies.

Objectives:

› Firmly establish, with the authority of the Governor's Office, that North Dakota is a Zero Tolerance state
- Clearly communicate to all segments of the population what the Zero Tolerance Law means (persons under the age of 21 operating a vehicle with a .02 percent blood-alcohol level or over are subject to DUI penalties)
- Encourage the Department of Labor and employers to promote the law among employees

› Address the seriousness of the behaviors documented by statistics
- Communicate statistics from YRBS and SEOW that indicate higher than average number of drinkers and bingers of all ages in North Dakota
- Highlight the connection between onset age of drinking and later addiction
- Remind ND citizens of the numbers of deaths and serious injuries caused by alcohol or drug related vehicle crashes

› Make the problem real to parents, curb enabling behavior and denial
- Change the culture of acceptance and permissiveness
- Encourage modeling appropriate attitudes towards drinking
- Provide skill building, real-life strategies

› Create individual and societal awareness about the cost of alcohol/drug abuse
- Educate on the effects of alcohol on the adolescent brain

› Work with community members in localizing messages to be more effective and relevant to their particular target audience
- Spheres of influence within communities, speaking opportunities, press releases, local talk show appearances, public service announcements, media kits

Appendices:

› Appendix A: Governor's Executive Order

› Appendix B: Funding Matrix

› Appendix C: Youth Risk Behavior Survey (YRBS)

› Appendix D: North Dakota State Epidemiology Outcome Workshop (SEOW) Executive Summary

Executive Order 2007-03

Governor's Prevention Advisory Council on Drugs and Alcohol

WHEREAS, the Governor's Prevention Advisory Council on Drugs and Alcohol recognizes that preventative behavior reduces adverse personal, social, health, and economic consequences resulting from destructive decisions and that prevention fosters safe and healthy environments for individuals, families, and communities; and

WHEREAS, the Council will advance and coordinate knowledge, resulting in the adoption of policy-based prevention strategies and prevention innovations and will share knowledge of healthful behaviors and decisions that reduce, postpone, or eliminate the problems resulting from destructive decisions; and

WHEREAS, the Council will lead a multi-system prevention effort, drawing upon the resources and talents of those at the community, state and federal levels.

NOW, THEREFORE, I John Hoeven, by the authority invested in me as Governor of the State of North Dakota, do hereby create the Governor's Prevention Advisory Council on Drugs and Alcohol, and order and direct the following:

I. Establish the Governor's Prevention Advisory Council on Drugs and Alcohol, appointed by the Governor, consisting of the following members, who serve at the pleasure of the Governor;

- North Dakota First Lady
- 2 Legal Representatives (County Sheriff or Local Police, Highway Patrol, States Attorney, Defense Attorney)
- 2 Advocacy Group Representatives (Teen Challenge and SADD)
- An Addiction Counselor
- Chancellor of Higher Education, or designee
- A non-voting member from the Governor's Office Two members of the North Dakota Legislative Assembly
- Executive Director of the North Dakota Department of Human Services, or designee
- State Health Director, or designee
- Director of Department of Transportation, or designee

600 E Boulevard Ave
Bismarck, ND 58505-0001
Phone: 701.328.2200
Fax: 701.328.2205
www.nd.gov

- Director of the Department of Public Instruction, or designee
- Director of Indian Affairs, or designee

II. The council will make recommendations to the Governor for purpose of improving the delivery of prevention services that reduce problems resulting from destructive decisions.

III. The council shall a) explore the interrelationship between substance abuse prevention, education, and enforcement programs; b) address traffic safety issues including driving under the influence of drugs and/or alcohol; and c) develop prevention policies that promote safe, stable families and communities; and d) develop a plan to access additional funding; and e) be organized under the Governor for the purpose of receiving and distributing any appropriations and other fund sources.

It is further ordered the Governor's Committee on DUI and Traffic Safety, Executive Order 1993-10, be rescinded and dissolved immediately.

The Governor is vested with the executive authority to issue this Order pursuant to Article V, Section 1 of the North Dakota Constitution.

This executive Order is effective immediately and will continue until further order of the Governor.

Executed in Bismarck, North Dakota, this 9th day of May, 2007.

John Hoeven
Governor

					Federal	State	Special (Fees, etc.)	0-5	6-9	10-12	13-15	16-18	19-22	23-26	27+	School	Home	Comm
NDDOT	*Drunk Driving. Over the Limit. Under Arrest.* High-Visibility Enforcement (HVE) Campaign	Participating law enforcement agencies	1. High Visibility Enforcement is a proven method of deterring impaired driving through targeted, intense distribution of the "Drunk Driving. Over the Limit. Under Arrest." message through TV, radio and billboard ads coupled with overtime enforcement by law enforcement. 2. All residents of North Dakota. 3. To decrease the number of individuals who drive impaired.	Statewide	$ 250,000.00													
NDDOT	Social-norming media campaigns	NDDOT	1. Social-norming messages such as "Buzzed Driving is Drunk Driving." 2. These messages are directed at all citizens through various media including TV, radio, email, social media venues (blogs, websites, etc.), billboards, newspaper, magazines, etc. 3. To change the social perception of drinking and driving by educating the public on the dangers and risks.	Statewide	$ 225,000.00													
NDDOT and some programs are self-sustaining through income generated through the program	Responsible Beverage Server Training	Server training is conducted through Safe Communities Programs and/or local law enforcement agencies	1. Attempts to change the drinking environment through education/behavior change of those selling and serving alcohol. 2. Informs servers and owners of alcohol establishments of the state laws that prohibit alcohol sales to minors and obviously intoxicated persons. 3. To decrease the violation of laws related to alcohol sales to minors and obviously intoxicated persons and to reduce the risk of impaired driving by those who are underage or intoxicated. And to assist alcohol establisments to develop and implement policies, train management, and train the servers on these issues.	- Grand Forks - Fargo - Jamestown - Bismarck - Dickinson - Williston - Minot - Barnes County - Cass County - Traill County	$ 25,000.00													
NDDOT	Traffic Safety Resource Prosecutor (TSRP)	North Dakota Association of Counties (Attorney Aaron Birst)	1. Provides training, technical assistance and resources to law enforcement, prosecutors, judges and other court personnel. 2. The TSRP serves the NDDOT, law enforcement, prosecutors, and judges. 3. To assure appropriate prosecution and adjudication of impaired driving offenders.		$ 100,000.00													
NDDOT	Parents LEAD *(Listen, Educate and Discuss Alcohol With Your Kids)*	NDDOT	1. Provides education to parents about the dangers and consequences of underage drinking and the importance of discussing underage use and overconsumption with their children. The program uses a website, a spokeswoman whose son died of overconsumption, and unique message distribution methods. 2. Parents and youth/young adults. 3. Skilled parental intervention to deter underage drinking and overconsumption.	Statewide	$50,000													

State Department Source	Name of Program	Contractor(s), Service Provider, or Agency *Who Provides the Service?*	Program Description *1. What does it do?* *2. Whom does it serve?* *3. What is the desired outcome?*	Geographic Region Served	Approximate Annual Funding			Age Group/Location Impacted									
					Federal	State	Special *(Fees, etc.)*	0-5	6-9	10-12	13-15	16-18	19-22	23-26	27+	School	Home	Comm
NDDOT and some programs are self-sustaining through income generated through the program	Victim Impact Panels	Safe Communities programs	1. Victims of impaired driving crashes tell their stories to offenders describing the impact the event had on their lives and the lives of their families. 2. DUI offenders. 3. The goal is to reduce recidivism and to give the victims an opportunity to share their stories in a meaningful way.	- Richland County - Fargo - Bismarck - Dickinson - Williston	$5,000													
NDDOT	Club NDSU	NDDOT funding. Program conducted by NDSU and Safe Communities	1. Provides activities for NDSU students with free non-alcoholic beverages during scheduled weekend events. Students swipe a magnetic-stripped card with each non-alcoholic drink they consume and they are emailed an educational item the next day informing them what their blood alcohol would have been had the drinks contained alcohol. 2. College/university students. 3. Provide education related to alcohol impairment to deter impaired driving.	NDSU Campus	$5,000													
NDDPI	Title IV - Safe & Drug Free Schools and Communities	ND Dept of Public Instruction	1. Prevent violence in and around schools; prevent the illegal use of alcohol, tobacco, and drugs. 2. Involve parents and communities; and, 3. Are coordinated with related efforts and resources to foster a safe and drug free learning environment that promotes student acheivement.	Statewide	$ 1,300,000.00													
NDUS	North Dakota Higher Education Consortium for Substance Abuse Prevention (NDHECSAP)	North Dakota University System	1.To provide campuses with skills, attitudes, abilities, & knowledge that will enable them to address collegiate alcohol/substance abuse. To provide an environment in which students will be given the opportunity to take full advantage of their university experience and to lead productive & satisfying lives. The NDHECSAP advocates for stronger prevention policies, collaborates in campus-community partnerships, and assists members of the NDHECSAP to develop evidence-based prevention programs. A key feature of the NDHECSAP's work is the promotion of prevention strategies that affect the campus environment as a whole and have a large-scale impact on the entire campus community. This includes research in the area of college drinking and other drug use behaviors, attitudes, and perceptions. 2. Stakeholders: North Dakota students. Strategic Plan identifies establishing relationships and partnerships with other stakeholders (communities, state agencies, and diverse populations) to establish protocols within and between campuses and communities supporting positive prevention efforts for all North Dakotans. 3. Reduce risk factors and increase protective factors to positively influence behavior related to substance abuse in North Dakota college students. Create campus communities where policies, practices, and programs promote student safety and success.	Statewide		$ 100,775.00													

State Department Source	Name of Program	Contractor(s), Service Provider, or Agency *Who Provides the Service?*	Program Description *1. What does it do?* *2. Whom does it serve?* *3. DHS	Outreach Coordinator Position *(funding cut as of June 30, 2009)*	SAPT Block Grant allocated through the Division of Mental Health and Substance Abuse Prevention Services to North Dakota University System.	1. Higher Education Outreach Coordinator position serves as a liaison to the campuses and a resource for local campus work, assists campuses in the implementation of environmental management strategies, the identification of evidence-based programs, and the evaluation of campus program effectiveness. Assists campuses in the development of a campus task force and action plans for campus task force work, including policy development and review. Participates in community coalition meetings and connection to the comunity. 2. Stakeholders: North Dakota students. 3. Higher Education statewide initiative to support local campus work and due to the diversity of the campuses the ORC will be the contact to assist each campus individually to identify campus programs and best practices implementation appropriate to each campus vision. At the campus level, time and resources are limited and inconsistent. Only 2 out of 11 NDUS campuses have identified staff and often are strained beyond primary responsibilities and with limited resources available for prevention efforts. The Outreach Coordinator fills this gap.	Statewide	$ 65,000.00												
DHS	*"Let's Keep Our Kids Alcohol Free"* *Campaign by the Office of the First Lady*	ND Highway Patrol	1. The campaign is designed to increase awareness about the problem of underage drinking across the state of North Dakota and to encourage children to say no to underage drinking. 2. The campaign is targeted to the parents across the state in an effort to encourage them to talk to their children on an on-going basis about the dangers of underage drinking. 3. To decrease the incidence of underage drinking across the state of North Dakota.	Statewide	$ 30,000.00												
	Alive at 25	North Dakota Safety Council *(ND Highway Patrol provides instructors to the NDSC for no charge.)*	1. Provides young drivers a foundation to make safe decisions while operating a motor vehicle. 2. Drivers age 14-24. 3. Reduce serious injury and fatal crashes through education.	Statewide	$ 7,500.00		*Funding is also provided from participant fees.*											
DHS	Safe & Drug Free Schools and Communities *(Governor's Portion)*	Community Readiness Survey *Minot State University*	1.Baseline Assessment for all regions in ND - completed in Fall of 2008. 2. 09-11 biennium will fund community-focused best practice programs-statewide using the community readiness survey results. 3. Tribal Survey development in process.	Statewide	$ 284,670.00													

State Department Source	Name of Program	Contractor(s); Service Provider, or Agency *Who Provides the Service?*	Program Description *1. What does it do?* *2. Whom does it serve?* *3. DHS	Regional/Tribal Prevention Coordinators	Regional coordinators are based out of local non-profits such as Community Action Partnership or Dakota Medical Foundation. Tribal are based out of the tribe or tribal Boys and Girls Clubs.	1. Twelve coordinators provide community prevention efforts throughout their regions/tribal areas. 2. They assist coalitions and assist in coalition development.	Statewide	$ 780,000.00													
DHS	Prevention Resource Center	PRC is a clearinghouse and library located in the Division of Mental Health & Substance Abuse.	1. The PRC provides free materials and resources regarding substance abuse prevention and mental health topics. 2. Provide clearinghouse materials throughout the state and per request. 3. Substance abuse library including books, videos, media and learning kits, prevention materials and tools.	Statewide	$ 130,000.00													
DOH	Community Health Grant Program: *To youth groups through local public health*	Local public health units/schools	1. Preventative health services in schools and communities with an emphasis on tobacco control. 2. Serves the entire state. 3. Education and policy changes regarding the dangers of tobacco use.	Statewide	$ 3,760,000.00													
DHS	Enforcement of Underage Drinking Laws (EUDL)	Highway Patrol & Local Law Enforcement	1. Compliance checks, shoulder taps, point of purchase operations, and party patrols. Server Law campaign for spring 2009 in collaboration with Attorney General's office. 2. Safety and education - prevention messages and media. 3. Overtime hours for officers in order to do the above listed activities. Youth advisory council activities.	Statewide	$ 175,000.00													
DOH	Statewide tobacco cessation for primary prevention including city/county/state programs and the Quitline	Contractors, UND School of Medicine, Mayo Clinic, BC/BS of ND, NDPERS, and various local public health units	1. Provides cessation services to those that want to quit using tobacco. 2. Quitline serves all citizens of North Dakota, city/county/state programs are specific to those employees. 3. Cessation from tobacco products.	Statewide			$ 1,069,000.00											
DOH	Tobacco prevention and control for Centers for Disease Control and Prevention (CDC)	Local public health units, tribal agencies, and various other contractors	1. Overall, tobacco prevention and cessation for the state of North Dakota. 2. All residents of North Dakota. 3. Education, policy, and cessation related to tobacco prevention.	Statewide	$ 2,540,260.00

Governor's Office	"Guiding Good Choices" "Project Alert"	Casselton Youth Task Force	Implementation of "Guiding Good Choices" to parents of children in grades 4th through 8th and "Project Alert" utilizing teen leaders for students in grades 6th and 7th. There programs are listed on the SAMHSA National Registry of Evidence-Based programs and practices.	Casselton		$ 6,852.85												
Governor's Office	"Circle of Youth Dream Catcher"	United Tribes Technical College	"Circle of Youth Dream Catcher" is implemented at Theodore Jamerson Elementary School at United Tribes Technical College and is geared toward 4th through 6th grades. The project's objectives are to provide youth with prevention based topics infused with Native American culture, to provide prevention based activities, and provide youth and their parents community prevention strategies.	United Tribes Technical College		$ 8,500.00												
Governor's Office	"Reality Check"	Northern Lights Youth Services, Inc.	The "Reality Check" program trains 120 high school students to provide prevention lessons to 1,500 elementary students. "Reality Check" uses positive role modeling activities of high school students with information on alcohol, tobacco, and other drug use prevention strategies.	Hillsboro		$ 58,390.00												
Governor's Office	"Project Northland" "Slick Tracy Home Team Program" "Incredible Years"	West Dakota Parent and Family Resource Center	Implementation of "Project Northland" for 6th graders and their parents, "Slick Tracy Home Team Program" for 6th graders and their parents to discuss alcohol related issues, and the "Incredible Years" which is a parenting education program for the project. These are also listed on the SAMHSA National Registry of Evidence-Based programs and practices.	Dickinson		$ 15,011.00												
Governor's Office	"About Protecting You/Protecting Me"	Sunrise Youth Bureau	The program is geared toward children in grades 1st through 5th and reaches children before they have fully shaped their attitudes and opinions about alcohol use by youth and their role in preventing it. This program is listed on the SAMHSA National Registry of Evidence-Based programs and practices.	Dickinson		$ 5,573.00												
Governor's Office	"Keep a Clear Mind"	Safe Communities Coalition	"Keep a Clear Mind" is a drug education program for elementary school children and their parents. The program is listed on the SAMHSA National Registry of Evidence-Based programs and practices.	Grand Forks		$ 4,718.00

Youth Risk Behavior Survey

Elizabeth Miller, YRBS Data Manager
(701) 328-2098

The Youth Risk Behavior Survey was developed in 1990 by the Centers for Disease Control and Prevention (CDC) to monitor priority health risk behaviors that contribute markedly to the leading causes of death, disability and social problems among youth and adults in the United States. The YRBS was designed to monitor trends, compare state health risk behaviors to national health risk behaviors and intended for use to plan, evaluate and improve school and community programs. North Dakota began participating in the YRBS survey in 1995. Students in grades, 7-8 and 9-12 are surveyed in the spring of odd years. The survey is voluntary and completely anonymous.

The six monitored priority health risk behaviors, often established during childhood and early adolescence and result in unintentional and intentional injuries, include: Tobacco Use, Unhealthy Dietary Behaviors, Physical Inactivity, Alcohol & Other Drug Use, Sexual Behavior/STD's/HIV/AIDS/Unintended Pregnancies and Violence/Injury.

REALITY CHECK

Effects on Thinking Tasks:

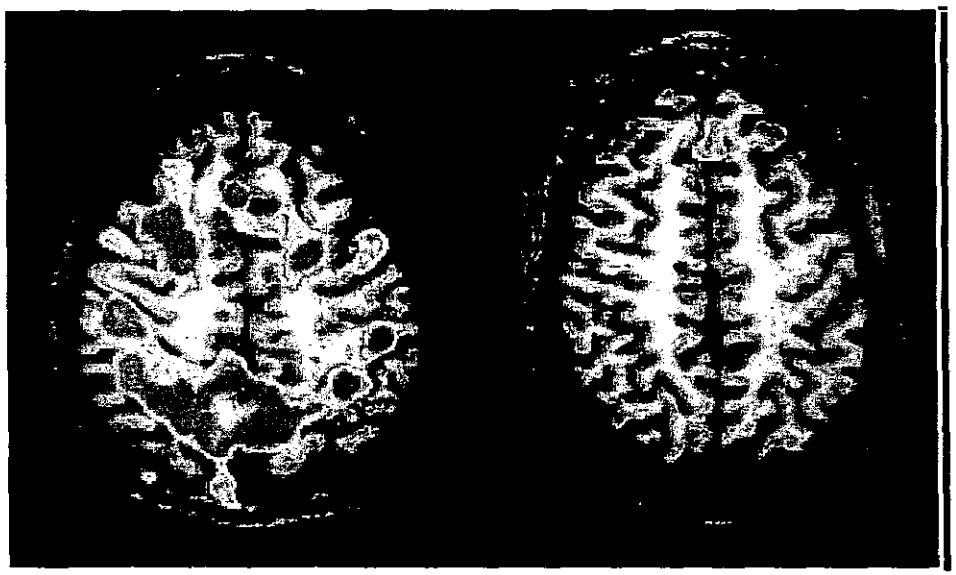

Image from Dr. Susan Tapert, University of California, San Diego

The image on the left is an MRI scan of a healthy 15 year old non-drinker.

Colored areas show parts of the brain activated by thinking tasks.

The image on the right is that of a 15 year old heavy drinker

* These images were taken when the drinker was SOBER, NOT DRUNK!

Funding Prevention Makes Economic Sense, Researchers Say

February 4, 2009

Funding Tips & Trends

Every dollar invested in substance-abuse prevention yields $10 in savings, according to researchers from Iowa State University who recently presented their findings to the United Nations.

Researchers Richard Spoth, director of the Partnerships in Prevention Science Institute at Iowa State, and colleague Max Guyll told attendees at the U.N. Office on Drugs and Crime/World Health Organization meeting in December that studies of PPSI's Iowa Strengthening Families Program (ISFP) and Life Skills Training Program (LST) demonstrated significant cost benefits.

The research estimated how many cases of drug use each intervention prevented, then compared the cost of each successful intervention to the cost savings to the community. Spoth and Guyll said that ISFP yielded a $9.60 return for each $1 invested in preventing alcohol disorders, while LST has a $9.98 return on investment in terms of preventing methamphetamine use.

The International Narcotics Control Board has asked Spoth to help develop a report on the state of the art of prevention. The reports on ISFP and LST are available online.

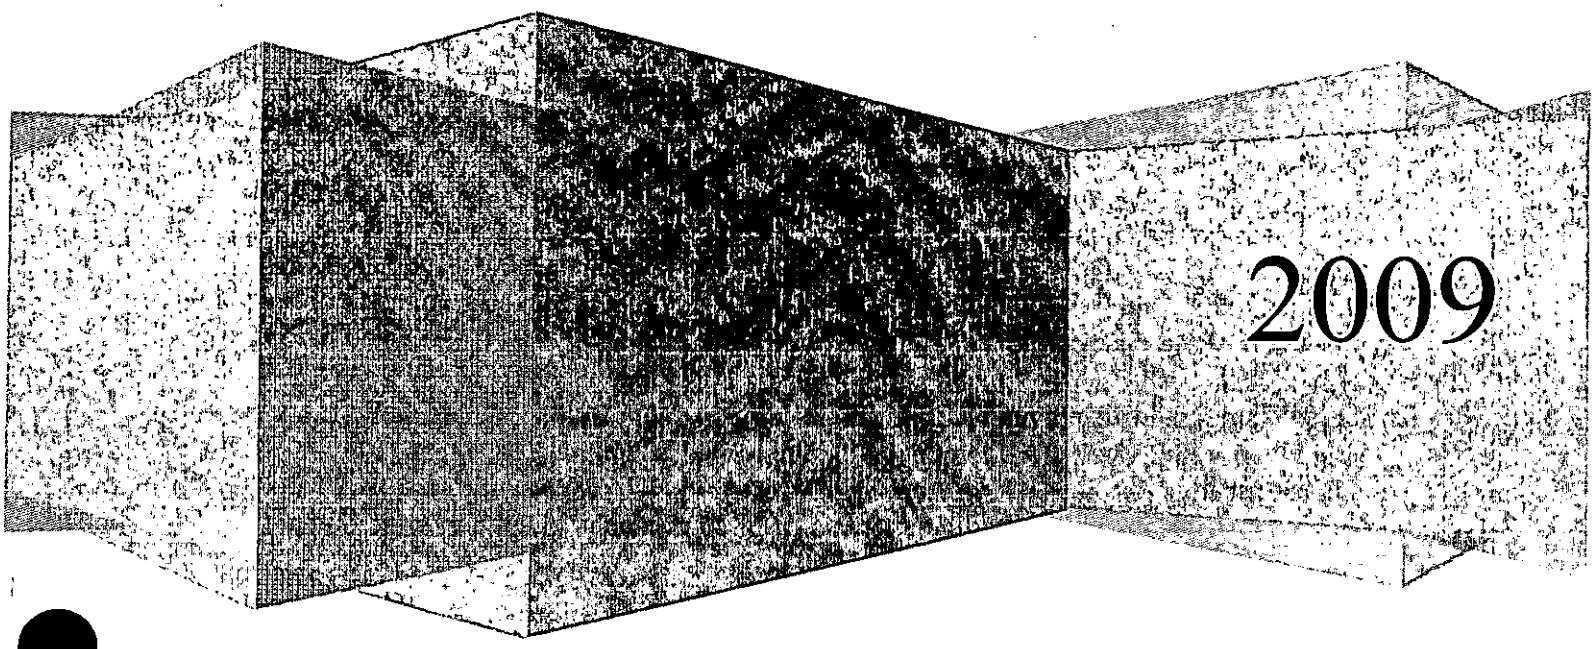
ROBINSON RECOVERY CENTER

18 Month Comparative Analysis

Anna M. Johnson, LAC, LADC



ROBINSON RECOVERY CENTER
18 MONTH COMPARATIVE ANALYSIS
NARRATIVE
JANUARY 1, 2006 TO DECEMBER 31, 2008
ANNA M. (ANDI) JOHNSON, LAC
SHAREHOUSE DIRECTOR OF OPERATIONS

(For purposes of this summation report the initial 18 month timeline refers to January 1, 2006 to June 30, 2007. The 2nd 18 month refers to July 1, 2007 to December 31, 2008.)

The Robinson Recovery Center opened its doors on January 3, 2006 as a result of legislation passed in the 59th Legislative Assembly. ShareHouse has been honored to provide methamphetamine specific treatment to clients and their families and has admitted 194 clients since January 1, 2006. This has given us a keen opportunity to learn more about persons addicted to methamphetamine and the conglomerate of issues which pervade their lives. Within these past 3 years we have continued to gain experiential, therapeutic, and residential knowledge about the methamphetamine addict in hopes of improving treatment and recovery outcomes.

Upon admission to the Robinson Recovery Center, the methamphetamine client presents with decreased cognitive abilities, heightened sexual responsivity, lack of social skills, physical deterioration, high degree of impulsivity, poor dental hygiene, increased dual diagnosis, significant criminal history, and increased potential for the development of infectious diseases.

Our continued attempt to balance residential rule enforcement and retention in treatment therapeutically continues to be our greatest challenge requiring innovative and creative thinking on the parts of the RRC staff to include the residential coordinator, four social workers (case managers), two licensed addiction counselors, and the clinical director.

Due to increased relapse potential, impulsivity, heightened sexual sensitivity, and increased violence resulting in property damage and danger to RRC employees, the residential rules were significantly revised in November 2006 to include no cell phones, no computers, no cameras, increased facility and room searches, and increased need to segregate the methamphetamine population by gender. This resulted in segregating all group sessions, allowing only one gender to attend self help support groups in the community each night, and segregated smoke breaks. Most recently, the schedule has changed to discontinue TV and radio diversions during the day and during all evening programming. These rules remain the same to date.

These residential rule changes, dissimilar to primary rules at ShareHouse, have significantly improved management of the facility. Their impact on retention therapeutically continues to be researched. In dealing with the retention effort, ShareHouse has incorporated the best practice of contingency management in our programming efforts beginning January 2007.

It became clear that the intensity of the case management effort required an additional position which was added June 2006. Issues contributing to the case management effort include higher incidence of legal involvement, higher incidence of CPS involvement, high level of impulsive thinking and behavior increasing the potential to relapse, high degree of dual diagnosis, negative peer associations, high degree of criminal thinking, increased need for monitoring efforts, and increased need for support for each client.

With the doubling effort which began July 1, 2007, the human service centers have continually responded to the need for increased treatment for the methamphetamine addict which impacted admissions for methamphetamine specific treatment on a residential level. Therefore, the number of beds which remained available for treatment averaged 15 during the biennium. The Division of Mental Health and Substance Abuse met with key administrators from the RRC to discuss the intent of the legislation to include opiate and cocaine addiction on a residential level. This increased admissions slightly during the biennium.

Staff changes have included a change in Program Director, the addition of 2 full time Social Workers, and an increase in Residential Supervisors on site 24 hours per day.

Facility changes have included obtaining additional space in the same building on the ShareHouse campus. The Robinson Recovery Center is located in a 12 plex apartment building, 4 apartments per floor. The upper floor is identified as the male resident's floor and houses 20 males at any one time. The middle floor is comprised of 2 staff office apartments and 2 apartments which houses 10 residents. The bottom floor is also comprised of 2 staff office apartments and 2 apartments which houses 10 residents.

This facility has increased the need for security with the doubling effort. However, in an effort to remain therapeutic rather than penalistic, ShareHouse has chosen to increase Residential Supervisor staff rather than to purchase door locks and security cameras throughout the facility. This has impacted gender specific admissions due to the security needs of the building. Due to the high level of impulsivity and heightened sexual responsivity of the residents, the need for ongoing monitoring of gender specific interventions remains high. As a resident, female apartments must be monitored at all times. With the Residential Supervisor's office located on the main floor, the females are housed on the main floor. Female residents cannot be housed on the 2nd floor due to increased access to male residential apartments. This has kept the availability of female admissions to the Robinson Recovery Center at only 10. However, as identified in the summation report, female referrals and admissions to the facility has decreased dramatically and did not remain at 50% as identified in the previous 18 month summation report.

Synopsis of Comparative Analysis

Referrals:

Robinson Recovery Center received a total of 490 unduplicated referrals since January 2006. The Fargo region remains the largest contributor with just over half of the referrals coming from that region. This was followed by Grand Forks during the initial 18 months

but this region decreased referrals by 11.80%. During the second 18 month period, Bismarck increased it's referrals by 9.66% becoming the 2nd largest referent. The Western Region of the state increased its referrals by 4.59% from 18.22% to 22.81% while the Eastern Region contributed to the majority of referrals with 77.19% during the 2nd 18 month time period.

The largest reason for denied access was unresolved legal issues which increased 5.02% during the 2nd 18 month period. This was due to the presence of a combination of class A, class C and federal class a felony charges stemming from methamphetamine use, manufacturing, or dealing. This was also related to previous charges which impacted minimum mandatory sentences for clients involved. I was unable to accept these clients due to the high potential of minimum mandatory sentences leading to incarceration. Due to their ability to receive treatment while in prison, they were unable to be admitted to this project. During the initial 18 month period, refusing treatment was the 2nd largest contributor which decreased 8.93% during the 2nd 18 month period. Inability to locate the client became the 2nd largest reason for denied admission although this decreased by 4.80% during the 2nd 18 month period. Medical issues exceeding the facility's ability to treat the client increased by 2.37% largely due to the increase in opiate addiction to the facility.

Admissions:

The Robinson Recovery Center admitted a total of 194 clients since opening in January 2006. In the first 18 months, 93 were admitted while 101 were admitted during the 2nd 18 months increasing admissions by 4.12%. The percentage of admissions from referrals increased 4.56% during the 2nd 18 month period.

The largest number of admissions came from Fargo which averaged 49.48% of admissions in the past 3 years. Grand Forks had a dramatic decrease in admissions (14.58%) from the initial 18 months while Bismarck had a dramatic 16.66% increase during the 2nd 18 month period. This contributed to Bismarck having the 2nd largest admission rate during this period.

The Western region of the state contributed to an average of 19.59% of all admissions to the Robinson Recovery Center thus far while the Eastern region contributed to an average of 80.41%.

Inconsistent with the national average, male admissions have exceeded female admissions during the 2nd 18 month period thus decreasing the availability of female methamphetamine residential treatment beds in our state. Regarding age, the youngest and oldest client remained roughly the same at 18 and 52 respectively.

The length of stay for clients at the Robinson Recovery Center is directly proportional to their ability to maintain active recovery following treatment. For clients who remain in treatment longer, their success following treatment improves dramatically. The average length of stay increased roughly 3 weeks from 3.15 months during the initial 18 months to 3.84 months recently. For those persons who did not successfully complete the

program, their average length of stay was 2.54 months while those successfully completing treatment increased 1.165 months from 6.02 months during the initial 18 months to 7.185 months during the 2nd 18 month period.

After successful completion of 2 months of intensive treatment incorporating the Matrix Model, cognitive restructuring, therapeutic community, anger management, healthy relationships, schedule review, continuing care, family group sessions, recreation group, and exercise group, the client is expected to seek a minimum of 20 hours of employment per week to aid in community transition. Full time employment has dramatically increased while unemployment continues to dramatically decrease consistent with the initial 18 month report.

Academic and Residential status has also improved consistent with results from the initial 18 month report. Although this information was not formally reported during or following treatment, an interview with each of the case manager's reviewing each client by name and number has indicated similar results with the initial 18 month report.

Changes in legal status included significantly more admissions while on probations (almost double) during the second 18 month reporting period than the initial 18 month period. This appears to be due to increased flexibility to offer treatment as an alternative to incarceration.

Addiction is a disease of the brain. As a disease, one of the most important dynamics of recovery is support from others. For this reason, sponsorship in the Robinson Recovery Center programming is a requirement. Each resident is expected to obtain a temporary sponsor within 2 weeks from admission and a permanent sponsor within 30 days from admission. Engaging the sponsor in the treatment program has been a pivotal dynamic to aid in treatment success for each client.

Child Protection Services has been involved cumulatively in 41 (21.13%) of the 194 admissions with 15 (75.61%) women. Having children reunited with parents in a stable environment is a cherished benefit and a strong extrinsic motivator of ongoing recovery.

Use of Methamphetamine and other drugs of abuse were calculated during the 2nd 18 month period secondary to increased flexibility in admission criteria consistent with the intent of the grant. Thus methamphetamine contributed to 65.35% of admissions, opiates to 26.73% of admissions and cocaine to 7.92% of admissions.

Dual Diagnosis statistics have remained high with an average of 79.38% of admissions having a dual diagnosis. To meet this criterion, dual diagnosis is defined as someone having another diagnosis of depression, anxiety, ADHD, personality disorder, or other qualifying mental health problem. This is noted to be a high incidence relatively speaking which impacts rates of recovery for persons dually diagnosed. In addition to mental health issues, medical and dental problems have increased dramatically, largely due to the increase in the treatment of opiate addiction.

Discharge Statistics:

The Robinson Recovery Center identifies the following criteria for successful discharge from this program:

- Completed a minimum 4 months of treatment
- Maintained gainful employment or successfully completed his/her GED
- Has maintained attendance to self help support groups in the community
- Has made a commitment to continued attendance to aftercare groups
- Has identified 1-2 permanent sponsors and involved them in the treatment process
- Continues to successfully manage any dual diagnosis issues
- Has resolved medical and dental issues during treatment
- Continues to submit to random UA screens for a minimum 6 months following treatment programming.

During the initial 18 months of treatment 44.44% of participants successfully completed the program. During the 2nd 18 months of treatment 28.99% of participants successfully completed the program to produce an average rate of 33.33%. The following dynamics appeared to contribute to Temporary Discharges with ability to return:

- Significant Cognitive Deficits
- High level of impulsivity behaviorally and cognitively
- High incidence of dual diagnosis
- Highest level of care for addiction treatment
- Environmental issues (legal, residential, academic, employment, and family)
- High incidence of AMA discharges secondary to issues of fraternization (heightened sexual responsivity and level of impulsivity) regardless of gender specific treatment and intervention measures.

However, when taking this a step further, I decided to review 10 charts and discuss the findings with the Robinson Recovery Center (RRC) staff. I reviewed charts in which residents had participated in the treatment program for 3 months or longer and received a temporary discharge with ability to return. As progress is identified within 6 dimensions (withdrawal/intoxication, medical, psychiatric, motivation, relapse potential, recovery potential), I gave one point within each dimension if progress was identified in that dimension. In each of the 10 charts pulled, progress was made in each of the 6 dimensions with the exception of one chart scoring 5 of 6 points. Therefore, significant progress was made by each client irrespective of the type of discharge.

When meeting with the clinical staff and reviewing the aforementioned findings, they began to problem solve different scenarios asking if more could have been done to help clients achieve success on discharge and beyond. All concluded that could be done and challenged themselves within the initial 3 months of 2009 to achieve a much higher rate of success at Robinson Recovery Center. At the end of 3 months, I will share with them the rate of discharge and review differences with them.

Conclusions:

There is a marked paradigm shift in the addiction profession that is aimed at gaining a better understanding of recovery as a process rather than as an event. This is directly related to identifying addiction as a disease with identifiable symptoms and pattern of recovery similar to that of other diseases. There is a pattern of behavior that accompanies this disease and a timeline for "remission." With this is a "prescription" for life improvement rather than a medication to "cure" or "manage" this disease. That "prescription" includes:

- Involvement in a self help group
- Obtaining the support of a sponsor
- Attending aftercare counseling (either individually or group sessions)
- Abstaining from mind altering chemicals
- Maintaining gainful employment
- Maintaining health
- Responsible fiscal management

With this in mind, the following conclusions are reached:

- Treatment is not a single event but a process along the continuum with measurable periods of remission following successful completion of treatment which matches the level of severity of the current symptoms of the disease.
- Within treatment for the methamphetamine addict gender specific treatment is required.
- Adherence to regulatory rule enforcement to aid in the provision of structure is an important component of treatment. The higher the level of distractions, the higher the incidence of impulsive thinking and impulsive behavior, the higher the probability of relapse potential in the community. This also presents a dichotomous effect regarding temporary discharge status which will continue to be monitored.
- The longer the treatment episode, the higher the probability of success within the community following treatment and the longer period of remission. This involves ongoing attendance to aftercare in the community.
- When the probation officer and CPS worker is actively engaged in the treatment process, the probability of success increases.
- A commitment to aftercare involvement and maintained self help group attendance increases the likelihood of success for the methamphetamine addict.
- The potential for relapse appears higher for the methamphetamine addict secondary to level of impulsivity and decreased cognitive functioning.
- Due to the high incidence of dual diagnosis, an increased level of dual diagnosis programming and direct involvement of psychologists and psychiatrists to the process of treatment is needed. Psychological testing to identify current level of IQ and concrete/abstract thinking ability is needed to tailor treatment to the current abilities of the client.
- A higher staff to client ratio is needed due to the intensity of treatment services and numerous aforementioned issues.

- Due to the high degree of fraternization secondary to the vulnerable emotional status of each of the residents, the need for separate facilities is highly recommended to segregate gender residentially. ShareHouse offers gender specific residence in two separate facilities: Sister's Path located in Fargo, North Dakota and Stepping Stones located in New York Mills, MN. Success rates were analyzed in both of those facilities for 2007 – 2008. Success Rates in these facilities were 42.42% to 63.16%.

In answer to the question, was the doubling effort beneficial? Briefly, yes. Since the doubling effort, the count residentially has never been below 20 and has accommodated the need for the methamphetamine, opiate, and cocaine addict. It has been successful as an alternative to incarceration for many of these individuals.

Is treatment needed and successful? In short, yes. Would anyone negate the need for cancer treatment with the knowledge that it is one of the leading causes of death in our society today. Would anyone deny an asthmatic hospitalization with double pneumonia knowing the cause to be directly related to their disease? Would anyone not make an attempt to resuscitate an individual having a heart attack on the senate or house floors simply because we knew them to have heart disease? The resounding answer to these questions is NO – we would not. The debate about the helpfulness of treatment in the face of this disease is a repeated question to this legislative body. The numbers on any of the reports viewed by the legislature does not appear to be a fair representation of the enormous success of the individuals participating in these treatment programs as evidenced by the fact that progress was identified in 10 individuals who are able to return to the program but who were not considered successful completions at the time of this report.

The many clients, family members, and friends would like to say a word of thanks to the North Dakota legislators for boldly affirming the need for methamphetamine treatment and giving them a second chance at life.

In closing, the work of the addict in treatment is a difficult road with little to no cognitive direction. Once engaged in the treatment process, dual diagnosis can contribute to ongoing difficulties. Poor boundaries contribute to fraternization issues and ongoing emotional reactions. Upon successful completion of treatment, the direction becomes clearer but the road remains long with normal life struggles tempting each client to relapse. Only with ongoing support, recovery maintenance, and understanding will the recovery of the methamphetamine client continue and succeed.

Respectfully Submitted,

Anna M. (Andi) Johnson, LAC
ShareHouse Director of Operations

Prepared by the North Dakota Legislative Council staff for the Budget and Finance Committee
August 2008

COMPULSIVE GAMBLING TREATMENT

This memorandum provides information on state lottery proceeds used for compulsive gambling treatment services, casino and tribal contributions for compulsive gambling treatment services, and a history of lottery revenue transferred to the general fund.

COMPULSIVE GAMBLING TREATMENT

Pursuant to subsection 4 of North Dakota Century Code (NDCC) Section 53-12.1-09, $50,000 of net proceeds must be transferred from the lottery operating fund to the compulsive gambling prevention and treatment fund each quarter for a total of $400,000 each biennium. The Department of Human Services has a continuing appropriation authority under Section 50-06-22 to use this funding for compulsive gambling prevention and treatment services. The schedule below presents information relating to gaming taxes and net lottery proceeds, funding provided for compulsive gambling treatment services, and the percentage of gaming and net lottery proceeds provided for compulsive gambling treatment services:

Biennium	Gaming Taxes Deposited in General Fund[1]	Net Lottery Proceeds[2]	Total Gaming and Net Lottery Proceeds	Amount Provided for Compulsive Gambling Treatment	Percentage of Gaming and Net Lottery Proceeds Provided for Compulsive Gambling Treatment
2003-05	$19,050,271	$7,669,005	$26,719,276	$400,000	1.50%
2005-07	17,748,914	13,000,000	30,748,914	400,000	1.30%
2007-09	20,540,000[3]	12,400,000[3]	32,940,000[3]	400,000	1.21%
Total	$57,339,185	$33,069,005	$90,408,190	$1,200,000	1.33%

[1]Gaming taxes include the tax levied on games of chance conducted by licensed charitable gaming organizations and taxes on pari-mutuel horse racing.

[2]These amounts reflect net lottery proceeds that include $400,000 per biennium transferred to the compulsive gambling treatment fund and $105,625 transferred each quarter in the 2007-09 biennium to the Attorney General multijurisdictional drug task force grant fund.

[3]These amounts reflect 2007 legislative estimates for the 2007-09 biennium.

INDIAN CASINO AND TRIBAL FUNDING FOR COMPULSIVE GAMBLING TREATMENT

Subsection 1 of Section 29 of the gaming compact between North Dakota Indian tribes and the state of North Dakota provides that the tribes intend to continue voluntary donations in support of effective programs to address gambling addiction. The Indian casinos and tribes do not provide funding to the state for compulsive gambling treatment services. However, according to information received from Lutheran Social Services, the Indian casinos and tribes have provided funding to Lutheran Social Services since 1999 for compulsive gambling treatment services. Lutheran Social Services received $30,000 each year in 2006 and 2007 and in 2008 Lutheran Social Services has received $45,000 for these services. Lutheran Social Services uses this funding to provide training to casino employees and financial assistance to individuals for 16 weeks of treatment and transportation costs.

USE OF LOTTERY REVENUE

Pursuant to NDCC Chapter 53-12.1, all revenue from the sale of tickets, interest income, and other fees or collections, less prizes and retailer commissions, are to be deposited in the lottery operating fund. Except for appropriations made by the Legislative Assembly for administrative and operating costs of the lottery, disbursement of other money in the lottery operating fund must be for the following purposes:

- Payment of a prize for a valid winning ticket;
- Notwithstanding NDCC Section 53-12.1-10, payment of marketing expense that is directly offset by cosponsorship funds collected;
- Payment of a gaming system or related service expense, retailer record and credit check fees, game group dues, and retailer commissions; and
- Transfer of net proceeds:

  $50,000 must be transferred each quarter to the compulsive gambling prevention and treatment fund;

  An amount of the lottery's share of a game's prize reserve pool must be transferred to the Multi-State Lottery Association;

  Starting July 1, 2007, $105,625 must be transferred each quarter to the Attorney General multijurisdictional drug task force grant fund; and

  The balance of the net proceeds, less holdback of any reserve funds the director may need for continuing operations, must be transferred on at least an annual basis to the general fund. The following schedule presents information on net lottery proceeds transferred to the general fund:

Biennium	Transfer to General Fund
2003-05	$7,269,005
2005-07	12,600,000
2007-09	11,155,000[1]
Total	$31,024,005

[1]This amount reflects the 2007 legislative estimate for the 2007-09 biennium.

According to information received from the Attorney General's office, there have been no delays in the use or transfers of lottery revenue.

The following schedule presents information on the distribution of total lottery revenue for the 2003-05 and 2005-07 bienniums:

	2003-05 Biennium	2005-07 Biennium
Prizes	$11,875,949	$22,333,788
General fund revenue	7,269,005	12,600,000
Contractual services	2,579,212	4,743,058
Retailer commission	1,244,795	2,321,849
Administration and operating	1,044,457	1,421,258
Advertising and marketing	447,044	870,134
Compulsive gambling fund	400,000	400,000
Multi-State Lottery Association prize reserve pool	251,116	359,111
Total	$25,111,578	$45,049,198

A

Good morning (afternoon). My name is Jonathan Holth, and I am a recovering compulsive gambler and alcoholic. It's an honor to be here to speak to you about a subject so near and dear to my heart. When I was younger, I dreamt of sitting in your chair. I always wanted to be a politician. My mother used to joke about the fact that while my friends were out playing with trucks in the dirt, I would be inside reading books about presidents. This dream of mine is one of many dreams left unfulfilled throughout my childhood and early adulthood.

I am a product of North Dakota. I was born and raised in Grand Forks. I love everything about this state, including the weather.

When I was in high school, I had a plan for myself. I knew exactly what type of person I wanted to be, what I wanted to do for a living, where I wanted to live, who I was going to marry, how many children I was going to have, and at what age I wanted to achieve all of this.

As I began to implement my plan, a few things started to change. As I entered my college years, I began to experiment more and more with alcohol and with gambling. I began to take frequent trips to the casino, spending money from both my part time jobs that I couldn't seem to hold on to, and then, from my student loan checks.

Eventually, after maintaining a 4.0 grade point average throughout high school, graduating with honors, receiving numerous scholarships to college, and having the world in the palm of my hand, I dropped out of college. I chalked it up to bad luck. I began working restaurant jobs. Serving, bartending, and eventually, managing. My plan that I had for myself in high school was out the window. All aspects of my plan were forgotten. I continued to gamble, and began to explore different gambling avenues. This is right about when the poker boom began, and I was right in the middle of that boom. I began to play poker whenever I could, in casinos, home games, online, even in the World Series of Poker in Las Vegas. I began winning, and making money. It was then that my career plans changed – I was going to be a professional poker player. The whole time that I was experiencing success at poker, I was becoming more and more blind to the simple, daily tasks of a productive, functioning member of society. Although I was making money, I wasn't saving a penny. My health was slipping. I began to lie about my whereabouts. I kept ridiculous, insane hours. I lost friends. I alienated family. My work slipped.

Everything came second to gambling. But, I was making money, so nothing was wrong with my life, right? That's the way of thinking that I maintained. Insane thinking. In late 2005, I had the opportunity to realize one of my dreams, opening my own restaurant. This required me to spend a lot more time at work, and a lot more time away from the tables. Instead of pushing gambling aside and concentrating on building a successful business, I searched steadfastly for new ways to gamble, new ways to feed the appetite of my addiction. It didn't take me very long to discover sports betting. I now could gamble at any hour, for as long as I wanted, wherever I wanted, and I could do it alone without anyone knowing. Perfect. As fast as I found sports betting, I began to lose control. I was running out of money fast, and I needed to find new sources of income. How would I do this? Stealing and manipulating, that's how.

I began stealing from whoever I could, my parents, siblings, even my business partner. My life was spinning out of control. I made a good salary, and had no money. I owed tens of thousands of dollars, and had nothing to show for it. I was about to lose my business. I could easily have been in jail, or even dead. I was placing bets with criminals, with people that I would never have associated with had it not been for a deep gambling addiction. Then, something happened.

That something is recovery. I got help. By having the proper resources available, I was able to fight the addiction. Recovery is a lifelong process. It is something that must stay at the forefront.

Since I have experienced recovery, I have had amazing things happen. I feel, for the first time in my life, like a productive, contributing member of society. I am in the process of opening up a second restaurant. I have written a book about sobriety. I have had the chance to participate in fundraisers to help those less fortunate. These are all things that wouldn't be possible without recovery, and recovery wouldn't be possible without the necessary resources. That plan that I had for myself in high school that I spoke of earlier? Well, some of those things are gone and I will never be able to get them back. However, the part about what type of person I wanted to be – that part I am slowly achieving through the gift of recovery. To me, that's the most important part, and that gives me peace of mind.

same testimony given to Senate

HUMAN RESOURCES SUB-COMMITTEE

Testimony presented by Lisa Vig, LAC, CGC
On behalf of the Problem Gambling Advisory Committee

January 27, 2009

My name is Lisa Vig. I am a licensed addiction counselor and a nationally certified gambling counselor. I am a member of the Problem Advisory Committee, which is comprised of other gambling service providers, representatives from Mental Health America which administers a statewide helpline, representatives from Indian Gaming, consumers and other concerned citizens. I'm here to request support for an additional $300,000 that is being considered for problem gambling services within the Department of Human Services budget. Here are a few facts about problem/pathological gambling in North Dakota.

- In 1990 and 2001, incidence and prevalence studies were conducted in North Dakota.
- There are up to 12,400 North Dakota residents that can be classified as problem or pathological gamblers.
- Pathological gamblers are defined as those with a continuous or periodic loss of control over gambling, who display a progression in gambling frequency and amounts wagered, are preoccupied with gambling and in obtaining monies with which to gamble, and continue to gamble despite adverse consequences. Problem gamblers have gambling related difficulties that are less serious than those of pathological gamblers, but have patterns of gambling behavior that compromise, disrupt or damage personal and family relationships or their employment.
- There is no health insurance coverage for a diagnosis of compulsive gambling.

In order to address these issues, we need to have a comprehensive, statewide effort.

- An extensive, statewide public awareness campaign conducted through a variety of media such as television ads, billboards, newspaper and radio advertisement with appropriate messaging about responsible gambling behaviors and how a problem gambler might find help
- The Mental Health America local help-line number, 2-1-1 needs to be promoted as a statewide referral and initial screening point.
- Fee for service providers need to be in place in areas of the state where outpatient services are not available.
- Training opportunities need to be made available for professionals who work with compulsive gamblers and family members.
- Educational materials need to be placed in Resource and Addiction Libraries around the state so that individuals who wish to become educated about gambling addiction have access to current, reliable materials
- Prevention and awareness programs need to be established and made available to middle schools where most of the gambling behaviors and attitudes are formed and again, at a college level where most of the gambling behavior is beginning to escalate.
- Continued access to outpatient treatment programs across the state, that have trained and skilled staff and the necessary tools to provide a comprehensive treatment program with outcome measurement capabilities.

Lutheran Social Services of ND began providing counseling to gamblers in 1989. Over the years, programming has been modified to meet the changing needs of gamblers and their families. Presently, five, gambling trained, mental health professionals and three peer professionals are available in Williston, Fargo, Grand Forks, Minot and Bismarck. Despite the high numbers of projected gamblers in North Dakota we see relatively few for treatment. **Proper public awareness and education will affect this greatly**.

In 2004, 108 gamblers received treatment. In 2005, 148 gamblers received treatment. In 2006, 136 gamblers received treatment. In 2007, 142 gamblers received treatment and in 2008, 138 gamblers received treatment. Since the inception of the lottery in March of 2004, a capped amount of $400,000 has been allocated to the compulsive gambling fund. Initially, this amount served us well as we established a baseline of service delivery across the state, advertised those services and offered a training program for other mental health professionals who would be identified as a 'fee for service provider' in more rural or underserved parts of North Dakota. However, after 4 years of 'capped' funding, the comprehensive services that were in place, have begun to suffer. Staff hours have been reduced at all of the service delivery sites. There is very little advertising happening, no training events or workshops held locally and virtually no funding to attend conferences out of town.

This directly impacts the licensure and/or certification for professionals providing the service. Untreated gambling problems are very costly to the state and its citizens. We have a responsibility to inform, educate and provide help for compulsive gambler and their family members.

There are countless stories of how recovery has positively impacted an individual's life, his family, workplace, community and state. Thank you for your support of this funding increase, insuring that more lives are positively impacted in North Dakota because of recovery.

Dear Gamblers Choice,

I wanted to take a few minutes to let you know how much your organization has changed my life. I use to waste so much time and money gambling which led to severe depression, not to mention it really turned me into a nasty and uncaring person. My marriage was all but over, my relationship with my kids was nonexistant, and the relationship with my brothers & sisters had ceased to exist. I had become such a liar and nasty person I didn't even like myself in fact I hated myself. I had become a person that couldn't be trusted. I am now rebuilding my marriage, getting active with kids life and getting reacquainted with my brothers & sisters. I have quit the lying and am starting to show people I can be trusted again.

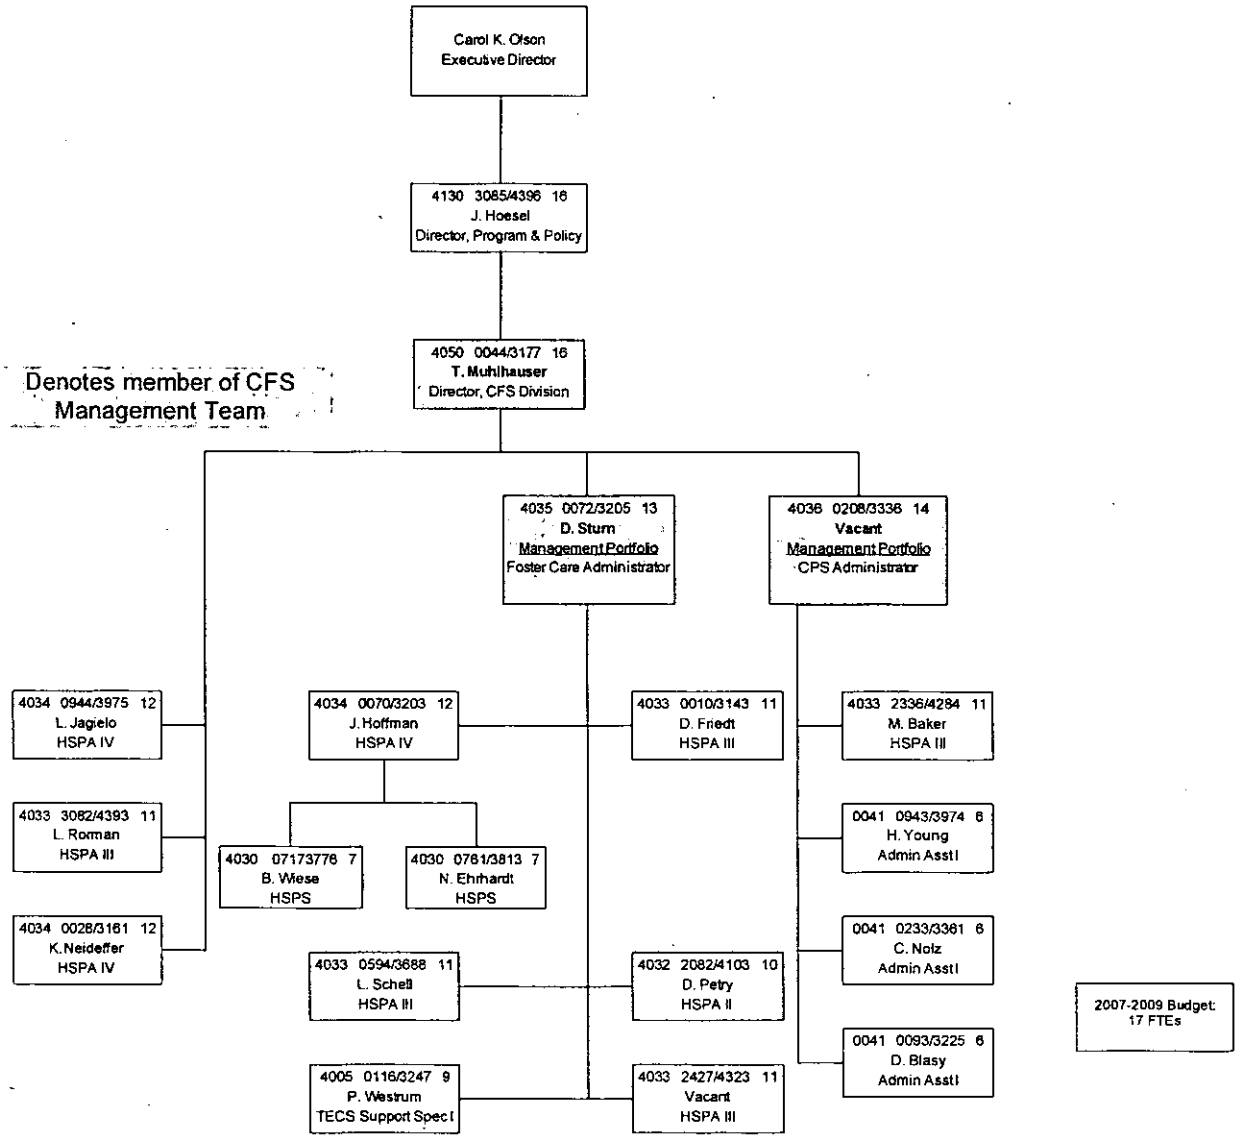
Everyone likes the new me and so do I. The other day I was given the opportunity to help a person who lost control of their vechile on ice and ended up in the ditch. We hooked up our winch and pulled them out. They offered us some money but we turned it down. Before

them $50. I was so excited given the chance to help a stranger that it was reward enough. Doing that made me feel so much better about myself Thanks to you I know longer put myself first, the needs of other comes first. Thank you so much for helping me turn my life around I know it wasn't easy for you to do. May God bless everyone in your organization because without you I would be broke, homeless, in jail, divorced, insane, or dead. Probably the last one. You have given me a second chance at leading my life with meaning.

Thank You so very much,

Dennis

North Dakota Department of Human Services
Children & Family Services Division



Revised 1/14/09

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, my name is Tara Lea Muhlhauser, and I am the Director of Children and Family Services (CFS) in the Department of Human Services. I am here today to provide you an overview of Division of Children and Family Services for the Department of Human Services.

Programs

- **Child Protective Services**: provides protection for children who have been or are at risk of being neglected and/or abused. Services provided include child protection assessment, case management, child fatality review, institutional child protection services and child abuse and neglect prevention programs.

- **Family Preservation Services**: provides therapeutic intervention to families whose children have been or are at risk of abuse, neglect and out-of-home placement. Services include parent aide, prime time child care, intensive in-home treatment services, respite care, family group conferencing and safety/permanency funds to prevent placement.

- **Foster Care Services**: provides a substitute temporary living environment for children who cannot safely remain with their families. Services include recruitment and retention of foster homes; and licensing and placement services for relative homes, family foster homes, group homes, and residential child care

facilities and licensed child placing agencies. This also includes foster care eligibility determination and payment, case planning and reviews, subsidized guardianship, Interstate Compact on the Placement of Children, Independent Living services to assist transitioning youth, including skills assessment, training and stipends.

- **Adoption Services**: provides permanent adoptive homes for eligible children. Services include recruitment, adoption assessment, placement, follow-up services, post adoption services, adoption subsidy, birth family services, adoption search, licensure of child placing agencies, and the Interstate Compact on the Placement of Children for Adoption.

- **Early Childhood Services**: coordinates activities, establishes standards, and provides training to providers of early childhood care and education. Services include licensing, child care resource and referral, providing consultation to the tribes on licensing, and coordination through the Head Start Collaboration Office.

- **Refugee Services**: provides resources to eligible refugees so they can become self-sufficient. Services include job development and employment enhancement, case management, cash assistance, refugee medical assistance, and education.

All these services are **provided either by the county social service agencies or through contracts with non-profit providers** and they focus on the safety, permanency, and well-being of children and their families.

Caseloads

The number of **Child Abuse and Neglect assessments** completed for FFY 2008 was 4011.

A caseload decrease can be noted in the **number of children placed in foster care.** The daily snapshot of children in foster care on 12/14/08 was 1,109 children in comparison to the daily snapshot on 12/14/06 which included 1,331 children. This snapshot includes tribal IV-E cases, Division of Juvenile Services (DJS) youth placed in foster care, and pre-adoptive placements. Approximately 29% of these children are Native American (321 children) in the most recent daily snapshot.

As of November 30, 2008, 41 youth were placed out-of-state in institutional care. This number has varied in 2008 from a low of 37 to a high of 50. This number has also continued to decline in the past two years.

The number of foster children gaining permanency through subsidized adoption has increased over the last three years and this trend is projected to continue through the 2009-11 biennium. Of the 110 finalized special needs adoptions in 2008, 86% of these children were adopted by their foster parents. In mid-2008, there were 128 children whose parents' rights had been terminated and who were waiting for a permanency option of adoption, guardianship or another planned permanent living arrangement.

At current, there are 37 children benefitting from a subsidized guardianship, with five pending. In 2008, there was a total of 48 children in this program during the year, 47 in 2007.

Refugees entering North Dakota from 2000 to 2006 (October 1 – September 30) are as follows:

Year	Number of Refugees
2000	**647**
2001	**367**
2002	**51**
2003	**111**
2004	**223**
2005	**225**
2006	**182**
2007	**400**
2008	**425**

These numbers do not include secondary migration refugees who resettle in other states and move to North Dakota, which averages about 165 each year. The numbers increased quite dramatically in 2007-2008 in ND and nationally due to the numbers of increased arrivals supported by the US Department of State. It is anticipated the arrivals will be maintained at this level over the next few years.

Trends/Issues/Accomplishments/Major Program Changes

CFS continues to place emphasis on safety, permanency and well-being of children across all programs in the division. **Family preservation programs** and **involvement of relatives and kin** when children are in need of placement, during service delivery and during reunification efforts are central to our work in achieving this emphasis. This past September, a new federal law, P.L. 110-351 "Fostering Connections" brought us

several new federal requirements related to notification of relatives when a child is placed in care, and guidance for involving school, medical providers, relatives and other services providers in providing a comprehensive plan for a child while in care, and at the time of transition to adulthood from care.

The second **Federal Child and Family Services Review (CFSR) took place in April 2008.** Although completed, we have no official notification of the results of this review. Based on comments from the Exit Interview with the federal team, we did not reach "substantial conformity" (e.g. we did not pass). No state has yet passed the CFSR in either the first or second rounds of these federal reviews. We were noted in this round to have many strengths and a few challenges that will require a Performance Improvement Plan (PIP). The first Federal CFSR Review was completed in September 2001. Though North Dakota received the highest rating in the nation in that first review, all 50 states and two territories were found to be deficient and were required to negotiate a Program Improvement Plan (PIP). North Dakota successfully completed this program improvement plan in 2006.

In August 2008, North Dakota successfully "passed" the **Federal IV-E Audit.** Official notification of this is forthcoming; this official notification will provide us with additional information on how many cases were found to be in error. This audit is conducted every three years. North Dakota successfully passed this audit in 2005 with only one error found in the 80 cases under review. In both the 2005 and 2008 audits around the nation, there were a number of states that did not achieve "substantial conformity" in these audits. Fiscal sanctions are applied when cases are found in error.

Family Preservation programs and prevention services (to prevent child abuse and neglect or to prevent child placement) continue to be a primary focus of the work of CFS. Foster care placements are down, when placements occur we have increased the number of children placed with relatives, and we have placed emphasis on reunification efforts to keep child connected with families and in close proximity to relatives.

The Village Family Services, in collaboration with the Department, was awarded a grant from the Bush Foundation to provide **Family Group Decision Making** in the State of North Dakota. These services have been available to county social services, the Division of Juvenile Services and the tribes. This service brings family members to the table to develop a plan for children who are either in foster care, at risk of being placed in foster care, or children who are being cared for by their extended family. This also brings significant people in the life of the child(ren) together to discuss how to maintain and build family connections. As of March 1, 2006 (through September 2008), Family Group Decision Making has had 352 referrals, with 225 completed conferences. As of December 2008, 235 families (including 327 children) have been served by this program.

Over the past two years we have worked very hard with our IT partners to develop a new component to our **child welfare data system**. This will allow us to take the current individual program applications, streamline and connect them. This will reduce duplication and create ease in using all the programs developed for safety, permanency and well-being together; enhancing program and data links. This will also support the generation of more usable data to assist with data-driven decision making

for child welfare programs in the Division. This new component is in the testing phase now and will be ready for the counties to use for all child welfare programs in August 2009.

There are still significant challenges in the **availability of quality child care** across the state. In 2000, 90.1% of all North Dakota children lived with both parents or with a single mother, the largest proportion in the nation. In addition, the proportion of North Dakota mothers (with children ages 0 to 17) in the labor force was 81.2% in 2000, the 2nd highest proportion nationwide. The proportion of working mothers is slightly smaller for mothers with young children ages 0 to 5 (76.1%), but rises to 84.9% for mothers with older children (ages 6 to 17). Current national and state-level 2006 data indicate that these proportions have changed little since 2000. This has created a demand for assurances of quality and safety in childcare settings and the need to provide training opportunities for this 10th largest workforce industry in North Dakota. This industry includes workers in home-based and center-based care settings.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	2,140,960	2,689,667	548,707
Operating	5,746,214	5,723,601	(22,613)
Grants	113,233,761	118,086,508	4,852,747
Total	121,120,935	126,499,776	5,378,841
General Funds	21,918,091	26,673,520	4,755,429
Federal Funds	81,146,301	80,142,814	(1,003,487)
Other Funds	18,056,543	19,683,442	1,626,899
Total	121,120,935	126,499,776	5,378,841

FTE	17.0	18.0	1.0

- The Salary and Wages line item increased by $548,707 and can be attributed to the following:
  - $234,044 in total funds of which $109,478 is general funds to fund the Governor's salary package for state employees.
  - $308,496 in total funds all of which are general funds to process background checks for childcare providers. Included are 4 temp staff, a .5 FTE Administrative Assistant position, and a .5 FTE Program Administrator position. It is anticipated that this group will process 9,000 background checks each year of the biennium.
  - The remaining $6,167 is a combination of increases and decreases needed to sustain the salary of the 18.0 FTE in this area of the budget.

- The Operating line item decreased by ($22,613) and is a combination of the increases and decreases expected next biennium. Some of the significant changes are as follows:
  - A decrease in the county wide cost allocation fees ($644,053), due to contract negotiations with the vendor.
  - An increase in the Adoption Services contract, permanency for children who cannot return home, $328,887. Currently serving more children than outlined in the performance based contract and additional funds are needed to meet the anticipated demand for the 2009-2011 biennium.
  - An increase in the Family Preservation Services contract, in-home services designed to keep families together, for the 7%/7% provider inflation included in the Governor's budget - $169,589.

- An increase in printing costs of $25,009 for printing projects for the Head Start and Early Childhood Services programs as well as to accommodate the 9% annual increase for OMB during the 2009-2011 biennium.
- An increase in professional development of $60,849 which includes $57,600 for a $50 daily rate increase for those participating in the CFS reviews as well as to increase the number of reviewers from 8 to 12. The daily rate increase will aid in recruiting the adequate number of staff to participate in the reviews.

- The Grants line item increased by $4,852,747 which can be attributed to the following:
  - Subsidized adoption is projected for 992 children per month for a total program increase of $4,210,886 of which $1,669,619 is general fund.
  - A decrease in the Foster Care caseload of 347 cases per month from the 2007-2009 biennium is offset by; the rate increase for family foster homes for the MARC Report (Minimum Adequate Rates for Children), which established guidelines for the payment of family foster homes, these providers will receive an increase from 23% to 46% depending on the age of the child placed in their home and will aid in the recruitment and retention of family foster homes, funding changes due to elimination of Targeted Case Management for foster care as a billable service to Medicaid, and the 7% inflationary increase for foster care providers each year of the biennium for a overall program decrease of ($1,898,323) of which $27,302 is general funds.

- The 7% inflationary increase for family preservation services for each year of the biennium totals $584,957 of which $479,664 is general funds.
- Increase of $708,511 of which $241,555 is general funds for 25 additional child abuse and neglect assessments per month.
- The 7% inflationary increase for Child Abuse Services for each year of the biennium totals $558,513 all of which are general funds.
- An additional $300,000 was added to expand family preservation services to the Standing Rock and Spirit Lake Tribes.
- Attachment A lists the major grants and describes how the foster care budget has been developed.

This concludes my testimony on the 2009 – 2011 budget requests for CFS. I would be happy to answer any questions.

Children and Family Services

Attachment A

Listing of Major Grants:

- Child Abuse and Prevention Activities: ($2,100,000)
- Independent Living Program: ($1,100,000)
- Refugee payments: ($4,000,000)
- Child Care licensing payments to counties: ($700,000 includes inflationary increase of 7% and 7% per year)
- Child Care Quality grants to nonprofit entities: ($3,200,000)
- Child Abuse/Neglect Assessments by counties: ($5,800,000 includes inflationary increase of 7% and 7% per year)
- Reimbursement to counties for Administration of Child Welfare Programs: ($12,600,000)
- Family Preservation grants: ($6,600,000 includes inflationary increase of 7% and 7% per year).
- Training of child welfare professionals and family foster parents through the UND School of Social Work, a stipend-training program for future child welfare professionals and a contract with the Native American Training Institute: ($1,900,000)
- Subsidized Adoption grants is budgeted for an average of 992 children per month for an average cost per child of $760 ($18,100,000)
- Foster care grants to family, residential child care facility providers, group homes, therapeutic foster care providers and subsidized guardianship services (59,400,000 which includes an inflationary increase of 7% and 7% per year)

The foster care budget is built with the following trend data:

- Average number of children in family homes - 523 per month; average cost per child – $1,715 per month.
- Average number of children in RCCF/GH – 252 per month; average cost per child - $4,818 per month.
- Average number of children in therapeutic foster care - 242 per month; average cost per child - $1,111 per month.
- Foster care services – 196 children per month; average cost per child of $553.
- Subsidized Guardianship - 40 children per month; average cost per child - $477 per month.

NORTH DAKOTA DEPARTMENT OF HUMAN SERVICES
CHILDREN AND FAMILY SERVICES DIVISION

	2007-2009 Biennium Budget	Governor's Budget 2009-2011	Other Bills / Amendments	Total
Parent Resource Centers	$ 335,880	$ 437,420	unsure	$ 437,420
Healthy Families	300,000	300,000	200,000	500,000
Family Group Conferencing / Intensive In-Home	1,578,302	1,747,891	1,456,372	3,204,263
Safety Permanency	198,686	298,686	-	298,686
Total	$ 2,412,868	$2,783,997	$ 1,656,372	$ 4,440,369

Parent Resource Centers are located in eight regional centers in the state, are networked through NDSU Extension , funded by a contract with CFS, and provide parent education and support programs to the public. This network has been in place for two years.

Healthy Families is a parent support and early intervention program for new parents. It is a national model with well-documented results nationally and locally. Current programs exist in Grand Forks, and more recently Burleigh/Morton County was recognized as an expansion site.

Family Group Conferencing/Family Group Decisionmaking is a service provided to bring families together to make decisions that prevent removal of children, or to facilitate reunification or permanence for children. This is a relatively new program in ND, but a well received program nationally with documented results in early intervention, preventing removals of children from their homes and facilitating permanency and family involvement . (Intensive In-Home is a service to parents to address issues that might create a need for present or future removal of their children. Services are provided to the parent(s) directly in their home and typically address safety and risk issues).

Safety Permanency Funds provide a flexible funding option for county casemanagers to assist a family with costs that will directly impact the need to remove a child from a home. These funds are administered through counties with regional and state oversight.

Healthy Families is a parent support and early intervention program for new parents. It is a national model with well-documented results nationally and locally. Current programs exist in Grand Forks, and more recently Burleigh/Morton County was recognized as an expansion site.

Family Group Conferencing/Family Group Decisionmaking is a service provided to bring families together to make decisions that prevent removal of children, or to facilitate reunification or permanence for children. This is a relatively new program in ND, but a well received program nationally with documented results in early intervention, preventing removals of children from their homes and facilitating permanency and family involvement . (Intensive In-Home is a service to parents to address issues that might create a need for present or future removal of their children. Services are provided to the parent(s) directly in their home and typically address safety and risk issues).

Safety Permanency Funds provide a flexible funding option for county casemanagers to assist a family with costs that will directly impact the need to remove a child from a home. These funds are administered through counties with regional and state oversight.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, my name is Tara Lea Muhlhauser, and I am the Director of Children and Family Services (CFS) in the Department of Human Services. I am here today to provide you an overview of Division of Children and Family Services for the Department of Human Services.

Programs

- **Child Protective Services**: provides protection for children who have been or are at risk of being neglected and/or abused. Services provided include child protection assessment, case management, child fatality review, institutional child protection services and child abuse and neglect prevention programs.

- **Family Preservation Services**: provides therapeutic intervention to families whose children have been or are at risk of abuse, neglect and out-of-home placement. Services include parent aide, prime time child care, intensive in-home treatment services, respite care, family group conferencing and safety/permanency funds to prevent placement.

- **Foster Care Services**: provides a substitute temporary living environment for children who cannot safely remain with their families. Services include recruitment and retention of foster

homes; and licensing and placement services for relative homes, family foster homes, group homes, and residential child care facilities and licensed child placing agencies. This also includes foster care eligibility determination and payment, case planning and reviews, subsidized guardianship, Interstate Compact on the Placement of Children, Independent Living services to assist transitioning youth, including skills assessment, training and stipends.

- **Adoption Services**: provides permanent adoptive homes for eligible children. Services include recruitment, adoption assessment, placement, follow-up services, post adoption services, adoption subsidy, birth family services, adoption search, licensure of child placing agencies, and the Interstate Compact on the Placement of Children for Adoption.

- **Early Childhood Services**: coordinates activities, establishes standards, and provides training to providers of early childhood care and education. Services include licensing, child care resource and referral, providing consultation to the tribes on licensing, and coordination through the Head Start Collaboration Office.

- **Refugee Services**: provides resources to eligible refugees so they can become self-sufficient. Services include job development and employment enhancement, case management, cash assistance, refugee medical assistance, and education.

All these services are **provided either by the county social service agencies or through contracts with non-profit providers** and

they focus on the safety, permanency, and well-being of children and their families.

Caseloads

The number of **Child Abuse and Neglect assessments** completed for FFY 2008 was 4,011.

A caseload decrease can be noted in the **number of children placed in foster care.** The daily snapshot of children in foster care on 12/14/08 was 1,109 children in comparison to the daily snapshot on 12/14/06 which included 1,331 children. This snapshot includes tribal IV-E cases, Division of Juvenile Services (DJS) youth placed in foster care, and pre-adoptive placements. Approximately 29% of these children are Native American (321 children) in the most recent daily snapshot.

As of November 30, 2008, 41 youth were placed out-of-state in institutional care. This number has varied in 2008 from a low of 37 to a high of 50. This number has also continued to decline in the past two years.

The number of foster children gaining permanency through subsidized adoption has increased over the last three years and this trend is projected to continue through the 2009-11 biennium. Of the 110 finalized special needs adoptions in 2008, 86% of these children were adopted by their foster parents. In mid-2008, there were 128 children whose parents' rights had been terminated and who were waiting for a

permanency option of adoption, guardianship or another planned permanent living arrangement.

At current, there are 37 children benefitting from a subsidized guardianship, with five pending. In 2008, there was a total of 48 children in this program during the year, 47 in 2007.

Refugees entering North Dakota from 2000 to 2006 (October 1 – September 30) are as follows:

Year	Number of Refugees
2000	**647**
2001	**367**
2002	**51**
2003	**111**
2004	**223**
2005	**225**
2006	**182**
2007	**400**
2008	**425**

These numbers do not include secondary migration refugees who resettle in other states and move to North Dakota, which averages about 165 each year. The numbers increased quite dramatically in 2007-2008 in ND and nationally due to the numbers of increased arrivals supported by the US Department of State. It is anticipated the arrivals will be maintained at this level over the next few years.

Trends/Issues/Accomplishments/Major Program Changes

CFS continues to place emphasis on safety, permanency and well-being of children across all programs in the division. **Family preservation programs** and **involvement of relatives and kin**

when children are in need of placement, during service delivery and during reunification efforts are central to our work in achieving this emphasis. This past September, a new federal law, P.L. 110-351 "Fostering Connections" brought us several new federal requirements related to notification of relatives when a child is placed in care, and guidance for involving school, medical providers, relatives and other services providers in providing a comprehensive plan for a child while in care, and at the time of transition to adulthood from care.

The second **Federal Child and Family Services Review (CFSR) took place in April 2008.** Although completed, we have not yet received the final report from this review. Based on information from the Exit Interview with the federal team, and from the preliminary report given to us last month, we did not reach "substantial conformity" (e.g. we did not pass). No state has yet passed the CFSR in either the first or second rounds of these federal reviews. We were noted in this round to have many strengths and a few challenges that will require a Performance Improvement Plan (PIP). The first Federal CFSR Review was completed in September 2001. Though North Dakota received the highest rating in the nation in that first review, all 50 states and two territories were found to be deficient and were required to negotiate a Program Improvement Plan (PIP). North Dakota successfully completed this program improvement plan in 2006.

In August 2008, North Dakota successfully "passed" the **Federal IV-E Audit.** Official notification of this is forthcoming; this official notification will provide us with additional information on how many cases were found to be in error. This audit is conducted every three

years. North Dakota successfully passed this audit in 2005 with only one error found in the 80 cases under review. In both the 2005 and 2008 audits around the nation, there were a number of states that did not achieve "substantial conformity" in these audits. Fiscal sanctions are applied when cases are found in error.

Family Preservation programs and prevention services (to prevent child abuse and neglect or to prevent child placement) continue to be a primary focus of the work of CFS. Foster care placements are down, when placements occur we have increased the number of children placed with relatives, and we have placed emphasis on reunification efforts to keep child connected with families and in close proximity to relatives.

The Village Family Services, in collaboration with the Department, was awarded a grant from the Bush Foundation to provide **Family Group Decision Making** in the State of North Dakota. These services have been available to county social services, the Division of Juvenile Services and the tribes. This service brings family members to the table to develop a plan for children who are either in foster care, at risk of being placed in foster care, or children who are being cared for by their extended family. This also brings significant people in the life of the child(ren) together to discuss how to maintain and build family connections. As of March 1, 2006 (through September 2008), Family Group Decision Making has had 352 referrals, with 225 completed conferences. As of December 2008, 235 families (including 327 children) have been served by this program.

Over the past two years we have worked very hard with our IT partners to develop a new component to our **child welfare data system**. This will allow us to take the current individual program applications, streamline and connect them. This will reduce duplication and create ease in using all the programs developed for safety, permanency and well-being together; enhancing program and data links. This will also support the generation of more usable data to assist with data-driven decision making for child welfare programs in the Division. This new component is in the testing phase now and will be ready for the counties to use for all child welfare programs in August 2009.

There are still significant challenges in the **availability of quality child care** across the state. In 2000, 90.1% of all North Dakota children lived with both parents or with a single mother, the largest proportion in the nation. In addition, the proportion of North Dakota mothers (with children ages 0 to 17) in the labor force was 81.2% in 2000, the 2nd highest proportion nationwide. The proportion of working mothers is slightly smaller for mothers with young children ages 0 to 5 (76.1%), but rises to 84.9% for mothers with older children (ages 6 to 17). Current national and state-level 2006 data indicate that these proportions have changed little since 2000. This has created a demand for assurances of quality and safety in childcare settings and the need to provide training opportunities for this 10th largest workforce industry in North Dakota. This industry includes workers in home-based and center-based care settings.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	2,140,960	548,707	2,689,667	(23,614)	2,666,053
Operating	5,746,214	(22,613)	5,723,601	(28,407)	5,695,194
Grants	113,233,761	4,852,747	118,086,508	(1,234,504)	116,852,004
Total	121,120,935	5,378,841	126,499,776	(1,286,525)	125,213,251
General Funds	21,918,091	4,755,429	26,673,520	(445,000)	26,228,520
Federal Funds	81,146,301	(1,003,487)	80,142,814	(661,578)	79,481,236
Other Funds	18,056,543	1,626,899	19,683,442	(179,947)	19,503,495
Total	121,120,935	5,378,841	126,499,776	(1,286,525)	125,213,251
FTE	17.0	1.0	18.0	-	18.0

Budget Changes from Current Budget to Executive Budget:

- The Salary and Wages line item increased by $548,707 and can be attributed to the following:
  - $234,044 in total funds of which $109,478 is general funds to fund the Governor's salary package for state employees.
  - $308,496 in total funds all of which are general funds to process background checks for childcare providers. Included are 4 temp staff, a .5 FTE Administrative Assistant position, and a .5 FTE Program Administrator position. It is anticipated that this group will process 9,000 background checks each year of the biennium.

- The remaining $6,167 is a combination of increases and decreases needed to sustain the salary of the 18.0 FTE in this area of the budget.

- The Operating line item decreased by ($22,613) and is a combination of the increases and decreases expected next biennium. Some of the significant changes are as follows:
  - A decrease in the county wide cost allocation fees ($644,053), due to contract negotiations with the vendor.
  - An increase in the Adoption Services contract, permanency for children who cannot return home, $328,887. Currently serving more children than outlined in the performance based contract and additional funds are needed to meet the anticipated demand for the 2009-2011 biennium.
  - An increase in the Family Preservation Services contract, in-home services designed to keep families together, for the 7%/7% provider inflation included in the Governor's budget - $169,589.
  - An increase in printing costs of $25,009 for printing projects for the Head Start and Early Childhood Services programs as well as to accommodate the 9% annual increase for OMB during the 2009-2011 biennium.
  - An increase in professional development of $60,849 which includes $57,600 for a $50 daily rate increase for those participating in the CFS reviews as increasing the number of reviewers from 8 to 12. The daily rate increase will aid in recruiting an adequate number of qualified staff to participate in the reviews.

- The Grants line item increased by $4,852,747 which can be attributed to the following:
  - Subsidized adoption is projected for 992 children per month for a total program increase of $4,210,886 of which $1,669,619 is general fund.
  - A decrease in the Foster Care caseload of 347 cases per month from the 2007-2009 biennium is offset by; the rate increase for family foster homes for the MARC Report (Minimum Adequate Rates for Children), which established guidelines for the payment of family foster homes, these providers will receive an increase from 23% to 46% depending on the age of the child placed in their home and will aid in the recruitment and retention of family foster homes, funding changes due to elimination of Targeted Case Management for foster care as a billable service to Medicaid, and the 7% inflationary increase for foster care providers each year of the biennium for a overall program decrease of ($1,898,323) of which $27,302 is general funds.
  - The 7% inflationary increase for family preservation services for each year of the biennium totals $584,957 of which $479,664 is general funds.
  - Increase of $708,511 of which $241,555 is general funds for 25 additional child abuse and neglect assessments per month.
  - The 7% inflationary increase for Child Abuse Services for each year of the biennium totals $558,513 all of which are general funds.

- An additional $300,000 was added to expand family preservation services to the Standing Rock and Spirit Lake Tribes.
- Attachment A lists the major grants and describes how the foster care budget has been developed.

House Changes:

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $7,754 general fund and $15,860 federal/other funds for a total of $23,614.

- The changes in operating are due to the House reduction of 50% of the department-wide travel increase, the CFS share of this decrease is $3,706 in total funds; $1,054 general fund, and the reduction of the inflationary increase for providers from 7% and 7% to 6% and 6% resulting in a decrease of $24,701 all of which are general fund in the operating fees and services line.

- The House reduction for inflationary increases from 7% and 7% to 6% and 6% for providers resulted in a decrease of $1,234,504 in the grants line of which $411,491 is general fund.

This concludes my testimony on the 2009 – 2011 budget requests for CFS. I would be happy to answer any questions.

See attachment A with testimony on 1-13-09

The foster care budget is built with the following trend data:

- Average number of children in family homes - 523 per month; average cost per child – $1,715 per month.
- Average number of children in RCCF/GH – 252 per month; average cost per child - $4,818 per month.
- Average number of children in therapeutic foster care - 242 per month; average cost per child - $1,111 per month.
- Foster care services – 196 children per month; average cost per child of $553.
- Subsidized Guardianship - 40 children per month; average cost per child - $477 per month.

C

HB 1012
Foster Care Payments
January 27, 2009

Same given to Senate

Jon Mielke & wife Carol
Licensed by Burleigh County for six years
Take children ages 0-2
President of local foster parent association & vice president of state association
Testifying in support of the foster care payment increases contained in HB 1012

As foster parents, we never know what the next phone call will bring
It might be a call in the middle of the night and we spend the next several hours going to the police department to pick up a child or two and then rocking a crying child to sleep while trying to explain why they can't go home. For the next day or two or more we try to console and comfort and reassure them.

In other cases the call from social services might result in a child coming into our home and our lives for several months or even years. Sometimes these kids are healthy but sometimes they come with oxygen tanks and tubes, heart and lung monitors, and breathing treatment apparatus. In one case, we received a little boy who was 10 months old and weighed only 10 pounds. Over the next 9 months we gave him breathing treatments 3 times a day and several different daily medications at various times throughout the day. He also had a total of 275 appointments during the next 9 months – things like family visits, medical appointments, and occupational and physical therapy.

The base rate for providing foster care to children age 4 and younger is $404 per month or 56 cents per hour. Please note that this amount is not the equivalent of net take home pay because foster parents use a portion of this stipend to pay for transportation to and from appointments, to buy things like diapers, and to pay babysitters when the parents need to get away for dinner or a movie.

You probably won't hear foster parents complaining because they are not in it for the money. It is, however, nice to be recognized for the services that we provide. North Dakota has a reputation of looking after the needs of its young people. This bill exemplifies this fact by providing acknowledgement to foster parents who are care givers to some of North Dakota's most needy children.

MEMORANDUM

March 10, 2009

To: Senator Ray Holmberg, Chair-Senate Appropriations
From: TaraLea Muhlhauser, Director-CFS, ND Department of Human Services

Re: Question on Foster Care data during CFS budget presentation

Attached is a report on the foster care data the Committee inquired about during my testimony. In the report you will find rates of child placement for the urban communities that are regional "centers". The rates of foster care are listed for these communities next to the child population of these same communities.

I am available to provide explanations, interpretations, or answer questions in regard to this data.

D

Testimony

House Bill 1012 – Department of Human Services

House Appropriations - Human Resource Division

Representative Pollert, Chairman

January 27, 2009

Same given to Senate

Chairman Pollert and members of the House Appropriations Human Resources Committee, my name is Leanne Johnson and I am employed by Catholic Charities North Dakota and serve as the AASK Director (Adults Adopting Special Kids). I am providing this written testimony in regards to the Adoption Contracts line item of House Bill Number 1012.

I'd like you to meet Brad. Brad is 13 years old and was in foster care for 8 years and has emotional and mental health disabilities, along with learning disabilities brought about by several years of parental abuse and neglect. This past year, the AASK program successfully recruited an adoptive family for Brad - a family to call his own. After many years of foster care, which included family foster homes and residential treatment services, Brad is now successfully living with his adoptive family. This is the heart of the services provided by AASK.

The AASK program is a collaborative program between Catholic Charities North Dakota (CCND) and PATH ND, Inc. (PATH) responsible for providing adoption services to children in the North Dakota foster care system and the families adopting these children. The Department of Human Services awarded the Outcomes Based Adoption Services Contract to CCND in July 2005. Children with "special needs" can mean different things. They may be older children, children placed along with a sibling for adoption, children with a mental, physical, emotional disability, or at risk of such a disability or children of minority race which make them difficult to place. Often, children meet more than one of these criteria. Parents adopting these children can be relatives, foster parents, or parents wishing to start, add to, or complete their family. Research shows that

managing special needs adoption cases requires skills and commitment above and beyond the traditional adoption case. The AASK Program serves these children in this manner throughout the state of North Dakota. Attachment A provides detail on staff location and service areas.

AASK provides a continuum of foster care adoption services, ranging from early permanency planning services to post-adoption services. Broadly speaking, AASK becomes involved in the planning for a foster child when adoption is being considered as a permanency option. Once adoption becomes the active goal, the AASK program will work to assess and prepare the child and the family. Should a child not have a potential adoptive resource, such as a relative or foster parent, the program will provide recruitment services to identify an adoptive family for the child. Services to assist birth parents to make informed decisions are made available as requested. The AASK program will assist families through the adoption assistance application process, the adoptive placement process, and provide post-placement services until the adoption is finalized. At any given time, the program is working with approximately 150 children in the early permanency planning stages, 90 children with an active goal of adoption, and 100 families in various stages of the adoption process. Once an adoption is finalized, the AASK program remains a resource to the family for information and support. Additional post-adoption services currently provided include assistance with communication agreements between birth and adoptive families and information and referral support. These past two years, the program has been able to provide scholarships for families to attend post-adoption family camps, and initiate a pilot project for formal post-finalization adoption services in the Fargo region.

The Outcomes Based Adoption Services Contract, initiated in July 2005, outlines 4 pay points at which the AASK Program received payment for its services. Those points are: 1) when a child is placed for adoption, 2) when a child's adoption is finalized, 3) a timeliness payment when the child's adoption is

finalized within twelve months of the termination of parental rights, and 4) a degree of difficulty payment for the extended recruitment services some children require. In all three years of the contract with CCND and PATH, the AASK program has met or exceeded many of these targets and the state has paid in excess of the budgeted amount each fiscal year. For this current fiscal year, it is anticipated that the program will exceed all four pay points as the program is serving more children than were proposed. Details on these specifics can be found in Attachment B. Finally, these past two years permitted the development of more formalized post-adoption services, a great need for our state. Preliminary results of this pilot project, however, show that more time, attention and funding is needed to provide the level of service needed for post-adoption services.

Permanency for children is not only a federal and state mandate – permanency is a need for all children which leads to better outcomes for the child throughout their life. When children cannot be safely returned to the birth home, permanency through adoption is often the next best option for many children - an option that will save the state money. It is noted that an average per child cost for a child in foster care per month is $3,266. This represents the average per child per month cost for a child placed in a family foster/ therapeutic foster home or residential or group home setting which has an average per child cost of $1,715 and $4,818 respectively. However, the average cost per child in a subsidized adoption is only $760 per month. This difference does not include the additional cost-savings to the state, such as reduced case management and court services and Medical Assistance costs that are realized when a child is discharged from foster care.

One of the greatest needs for families adopting children with special needs is the need for formalized post-adoption services. Children being placed for adoption have very challenging needs and can be draining on a family system -- emotionally and financially. This is a service area that the AASK program seeks

to further develop and right now there is simply not enough financial resources. The AASK program seeks an additional $200,000 dedicated to the adoptions contract line item so that a sufficient level of services can be provided to the children and families of North Dakota. Attachment C provides additional detail regarding this request.

In closing, I leave you with these thoughts:

- ☐ Adoption is a success: it is a success to the children who need permanency and cannot return to the birth home, a success to families, and a success to the state.
- ☐ Adoption saves the state money.
- ☐ Absolute dedication and attention to the life-long adoption needs of children with special needs in foster care and their families results in greater outcomes for all.
- ☐ AASK as a collaborative with CCND and PATH has achieved higher outcomes than all of the history of special needs adoption in North Dakota and continues to strive towards greater achievements.

Please consider Brad, and other children who are in the state's care, custody and control as you make your final budget recommendations. In order to provide quality services to the children and families of North Dakota, I ask that you fully fund the adoption contract line item of the Departments budget by increasing the funding by $200,000 for the biennium. Thank you for the opportunity to provide information to your committee. I am available to answer any questions either today or through my contract information listed below.

Healthy Families Legislative Testimony

RE: HB 1012

Submitted By: Janell Regimbal,

Vice President of Children & Family Services

Lutheran Social Services of North Dakota

Mr. Chairman and Members of the Committee, thank you for allowing me the opportunity to testify here today. My name is Janell Regimbal. I am here today to ask for consideration of legislative support to **amend the Department of Human Services budget to allow for the addition of funds for the Healthy Families Program serving the counties of Burleigh and Morton.**

I serve in the capacity of Senior Vice President of Lutheran Social Services of North Dakota, a multi-service, comprehensive human service agency offering programs statewide. We are proud to be a part of the collaborative effort that has brought the valuable prevention effort of Healthy Families to North Dakota. Our agency acts as the legal and fiscal home of Healthy Families. This program serves Grand Forks, Nelson, Burleigh and Morton Counties.

Healthy Families is a *voluntary* home visiting program that serves highly challenged families either prenatally or at birth until the child reaches age 3. The service is provided at no cost

to the families. The ultimate goal of Healthy Families is to prevent child abuse and neglect and the long-term effects that it causes.

Research tells us that the first three years of life are a period of incredible growth in all areas of a baby's development. A newborn's brain is about 25 percent of its approximate adult weight; but by age 3, it has grown dramatically by producing billions of cells and hundreds of trillions of connections between these cells. While we know that the development of a young child's brain takes years to complete, we also know there are many things parents and caregivers can do to help children get off to a good start and establish healthy patterns for life-long learning and effective interactions with the world around them. The trauma of abuse and neglect on the other hand has lasting implications for this development.

Given the critical importance of the first three years of life for brain development and its implications going forward, it is important to note that children from birth to age three continue to be the age group most likely to be victims of maltreatment. Most maltreated babies are under age one and more than 1/3 were harmed during their first week of life. These numbers help us to understand that we cannot wait to intervene, but must do all we can to prevent this from occurring in the first place.

About 1 in 50 U.S. infants are victims of nonfatal child abuse or neglect in a year. Here in North Dakota in 2007 there were 7,657 reports of child abuse and neglect. Of those, 3,583 families had full assessments and 1,288 children were actual victims.

It is because of these issues that community conversation began in 1998 by leaders in the Grand Forks area centered on imagining what we could do throughout our region to create a promising future for ourselves and our children and to help create families where children can grow and thrive without maltreatment. After researching several national models of child abuse and neglect prevention, the committee chose the Healthy Families America (HFA) model for this project because of the documented success it has had in other states throughout the country, as well as the technical assistance available to implement the project. The program has served the counties of Grand Forks and Nelson since 2000 and recently expanded into Burleigh and Morton counties in July 2008 due to our earlier successes and wanting to further prevention to other parts of North Dakota.

The cost of child maltreatment is borne not only by abused children, but by all of us. Research during the past twenty years demonstrates that an array of human and social problems resist solutions if we do not respond to the urgent need to prevent the abuse and neglect of our children. Young children

especially, who are being abused or neglected, often do not come to the attention of our system because they are isolated in the home. They are often not in child care or preschool. Thus much damage may be done to the child before they may come to the attention of someone who can intervene. Studies such as the Adverse Childhood Experiences (ACE) Study have found many short and long-term outcomes of these traumatic experiences including a multitude of adult health and social problems such as:

- Alcoholism and alcohol abuse
- Illicit drug use
- Suicide attempts
- Unintended pregnancies

1/3 of abused and neglected children will eventually victimize their own children. This is why it is critical for us to focus on primary prevention and stop the generational pattern of abuse and neglect that so clearly exists.

We all pay for our failure to prevent child abuse. We pay as taxpayers for the high cost of prisons, children in foster care, for increased special education needed for the scars left behind from abuse already experienced. As the table attached to this testimony illustrates, the United States spends billions of dollars a year on direct costs and billions-plus for indirect costs, to treat the numerous consequences of child abuse and maltreatment, as we do on the state level as well. Research shows that primary

prevention programs can ultimately save our state millions of dollars.

Although the economic costs associated with child abuse and neglect are substantial, it is essential to recognize that it is impossible to calculate the impact of the pain, suffering, and reduces to quality of life that victims of child abuse and neglect experience. These "intangible losses", though difficult to quantify in monetary terms, are real and should not be overlooked. Intangible losses, in fact, may represent the largest cost component of violence against children and should be taken into account when allocating resources.

Healthy Families is an effective way of addressing these issues of abuse and neglect – a way to effectively intervene before it occurs. Healthy Families reaches out to high-risk parents during pregnancy and immediately after a child is born to offer voluntary home visiting services. Weekly home visits support families' progress in three areas that are critical to preventing child abuse and neglect:

1. Teaching parenting skills - which includes skills for bonding with and dealing positively with the child, as well as understanding the child's development and needs;
2. Educating on healthy development - including good prenatal practices on the part of the mother and

appropriate health care and developmental intervention for the child;

3. Teaching tactics to reduce family stressors - such as job seeking or job training, substance abuse treatment, or assistance with mental health problems or domestic violence.

All parents of newborns in Burleigh and Morton counties of ND are currently eligible for the service. Participants receive different levels of services dependent on the challenges they face. Home visitors, referred to as Family Support Workers, go into the home on a weekly basis, focusing on the relationship between the child and parents. The worker brings curriculum that focuses on bonding and attachment, child development, discipline and safety. Most importantly, the staff person develops a trusting relationship with the parents. The parents are willing to listen to their worker regarding raising their children and developing skills for self-sufficiency. The worker also makes referrals to other resources in the community. (See Addendum E)

Healthy Families believe our outcomes tracked since the beginning of the program in 2000 speak to the success of the program and indicate why we chose to expand into the counties of Burleigh and Morton and why we need your support.

On behalf of the Burleigh/Morton collaborative offering Healthy Families I am respectfully requesting that $200,000 be added to the DHS budget to support the Burleigh/Morton site. The additional $200,000 needed for operations over the biennium will be raised through private sources.

All young children should be given the opportunity to succeed in school and in life just as all parents should receive the support they need to nurture their children's development. While vulnerable children may have greater challenges to overcome, we should not assume that those challenges can only be addressed with services later in life. Instead, we should invest in programs where our investment can have the biggest payoff and help prevent problems or delays that become more costly to address as they grow older.

Thank you for your time and for your commitment to our state's children and families as we know that strong families are the greatest asset of strong communities.

Prevent Child Abuse America
Chicago, Illinois

Total Estimated Cost of Child Abuse and Neglect in the United States

Ching-Tung Wang, Ph.D. and John Holton, Ph.D.

Child abuse and neglect are preventable, yet each year in the United States, close to one million children are confirmed victims of child maltreatment. An extensive body of research provides promising and best practices on what works to improve child safety and well-being outcomes and reduce the occurrence of child abuse and neglect. These efforts are essential as child abuse and neglect have pervasive and long-lasting effects on children, their families, and the society. Adverse consequences for children's development often are evident immediately, encompassing multiple domains including physical, emotional, social, and cognitive. For many children, these effects extend far beyond childhood into adolescence and adulthood, potentially compromising the lifetime productivity of maltreatment victims (Daro, 1988).

It is well documented that children who have been abused or neglected are more likely to experience adverse outcomes throughout their life span in a number of areas:

- Poor physical health (e.g., chronic fatigue, altered immune function, hypertension, sexually transmitted diseases, obesity);
- Poor emotional and mental health (e.g., depression, anxiety, eating disorders, suicidal thoughts and attempts, post-traumatic stress disorder);
- Social difficulties (e.g., insecure attachments with caregivers, which may lead to difficulties in developing trusting relationships with peers and adults later in life);
- Cognitive dysfunction (e.g., deficits in attention, abstract reasoning, language development, and problem-solving skills, which ultimately affect academic achievement and school performance);
- High-risk health behaviors (e.g., a higher number of lifetime sexual partners, younger age at first voluntary intercourse, teen pregnancy, alcohol and substance abuse); and
- Behavioral problems (e.g., aggression, juvenile delinquency, adult criminality, abusive or violent behavior) (Child Welfare Information Gateway, 2006; Goldman, Salus, Wolcott, & Kennedy, 2003; Hagele, 2005).

The costs of responding to the impact of child abuse and neglect are borne by the victims and their families but also by society. This brief updates an earlier publication documenting the nationwide costs as a result of child abuse and neglect (Fromm, 2001). Similar to the earlier document, this brief places costs in two categories: direct costs, that is,

This report was funded by The Pew Charitable Trusts

those costs associated with the immediate needs of children who are abused or neglected; and indirect costs, that is, those costs associated with the long-term and/or secondary effects of child abuse and neglect. All estimated costs are presented in 2007 dollars. Adjustments for inflation have been conducted using the price indexes for gross domestic product published by the Bureau of Economic Analysis (http://www.bea.gov).

Based on data drawn from a variety of sources, the estimated annual cost of child abuse and neglect is **$103.8 billion** in 2007 value. This figure represents a conservative estimate as a result of the methods used for the calculation. First, only children who could be classified as being abused or neglected according to the Harm Standard in the Third National Incidence Study of Child Abuse and Neglect (NIS-3) are included in the analysis. The Harm Standard requirements, compared to the Endangerment Standard requirements used in NIS-3, are more stringent (Sedlak & Broadhurst, 1996). Second, only those costs related to victims are included. We have not attempted to quantify other costs associated with abuse and neglect, such as the costs of intervention or treatment services for the perpetrators or other members of the victim's family. Third, the categories of costs included in this analysis are by no means exhaustive. As examples, a large number of child victims require medical examinations or outpatient treatment for injuries not serious enough to require hospitalization; maltreated children are at greater risk of engaging in substance abuse and require alcohol and drug treatment services; and youth with histories of child abuse and neglect may be at greater risk of engaging in risky behaviors such as unprotected sexual activities as well as greater risk of teen pregnancy. We were not able to estimate these types of costs as data are not readily available.

Although the economic costs associated with child abuse and neglect are substantial, it is essential to recognize that it is impossible to calculate the impact of the pain, suffering, and reduced quality of life that victims of child abuse and neglect experience. These "intangible losses", though difficult to quantify in monetary terms, are real and should not be overlooked. Intangible losses, in fact, may represent the largest cost component of violence against children and should be taken into account when allocating resources (Miller, 1993).

Total Annual Cost of Child Abuse and Neglect in the United States

DIRECT COSTS

Direct Costs	Estimated Annual Cost (in 2007 dollars)
Hospitalization *Rationale: 565,000 maltreated children suffered serious injuries in 1993[1]. Assume that 50% of seriously injured victims require hospitalization[2]. The average cost of treating one hospitalized victim of abuse and neglect was $19,266 in 1999[3].* *Calculation: 565,000 x 0.50 x $19,266 = $5,442,645,000*	**$6,625,959,263**
Mental Health Care System *Rationale: 25% to 50% of child maltreatment victims need some form of mental health treatment[4]. For a conservative estimate, 25% is used. Mental health care cost per victim by type of maltreatment is: physical abuse ($2,700); sexual abuse ($5,800); emotional abuse ($2,700) and educational neglect ($910)[4]. Cross referenced against NIS-3 statistics on number of each incident occurring in 1993[1].* *Calculations: Physical Abuse – 381,700 x 0.25 x $2,700 = $257,647,500; Sexual Abuse – 217,700 x 0.25 x $5,800 = $315,665,000; Emotional Abuse – 204,500 x 0.25 x $2,700 = $138,037,500; and Educational Neglect – 397,300 x 0.25 x $910 = $90,385,750; Total = $801,735,750.*	**$1,080,706,049**
Child Welfare Services System *Rationale: The Urban Institute conducted a study estimating the child welfare expenditures associated with child abuse and neglect by state and local public child welfare agencies to be $23.3 billion in 2004[5].*	**$25,361,329,051**
Law Enforcement *Rationale: The National Institute of Justice estimated the following costs of police services for each of the following interventions: physical abuse ($20); sexual abuse ($56); emotional abuse ($20) and educational neglect ($2)[4]. Cross referenced against NIS-3 statistics on number of each incident occurring in 1993[1].* *Calculations: Physical Abuse – 381,700 x $20 = $7,634,000; Sexual Abuse – 217,700 x $56 = $12,191,200; Emotional Abuse – 204,500 x $20 = $4,090,000; and Educational Neglect – 397,300 x $2 = $794,600; Total = $24,709,800*	**$33,307,770**
Total Direct Costs	***$33,101,302,133***

Total Annual Cost of Child Abuse and Neglect in the United States
INDIRECT COSTS

Indirect Costs	Estimated Annual Cost (in 2007 dollars)
Special Education *Rationale: 1,553,800 children experienced some form of maltreatment in 1993[1]. 22% of maltreated children have learning disorders requiring special education[6]. The additional expenditure attributable to special education services for students with disabilities was $5,918 per pupil in 2000[7].* *Calculation: 1,553,800 x 0.22 x $5,918 = $2,022,985,448*	**$2,410,306,242**
Juvenile Delinquency *Rationale: 1,553,800 children experienced some form of maltreatment in 1993[1]. 27% of children who are abused or neglected become delinquents, compared to 17% of children in the general population[8], for a difference of 10%. The annual cost of caring for a juvenile offender in a residential facility was $30,450 in 1989[9].* *Calculation: 1,553,800 x 0.10 x $30,450 = $4,731,321,000*	**$7,174,814,134**
Mental Health and Health Care *Rationale: 1,553,800 children experienced some form of maltreatment in 1993[1]. 30% of maltreated children suffer chronic health problems[6]. Increased mental health and health care costs for women with a history of childhood abuse and neglect, compared to women without childhood maltreatment histories, were estimated to be $8,175,816 for a population of 163,844 women, of whom 42.8% experienced childhood abuse and neglect[10]. This is equivalent to $117 [$8,175,816 / (163,844 x 0 .428)] additional health care costs associated with child maltreatment per woman per year. Assume that the additional health care costs attributable to childhood maltreatment are similar for men who experienced maltreatment as a child.* *Calculation: 1,553,800 x 0.30 x $117 = $54,346,699*	**$67,863,457**
Adult Criminal Justice System *Rationale: The direct expenditure for operating the nation's criminal justice system (including police protection, judicial and legal services, and corrections) was $204,136,015,000 in 2005[11]. According to the National Institute of Justice, 13% of all violence can be linked to earlier child maltreatment[4].* *Calculations: $204,136,015,000 x 0.13 = $26,537,681,950*	**$27,979,811,982**
Lost Productivity to Society *Rationale: The median annual earning for a full-time worker was $33,634 in 2006[12]. Assume that only children who suffer serious injuries due to maltreatment (565,000[1]) experience losses in potential lifetime earnings and that such impairments are limited to 5% of the child's total potential earnings[2]. The average length of participation in the labor force is 39.1 years for men and 29.3 years for women[13]; the overall average 34 years is used.* *Calculation: $33,634 x 565,000 x 0.05 x 34 = $32,305,457,000*	**$33,019,919,544**
Total Indirect Costs	***$70,652,715,359***
TOTAL COST	**$ 103,754,017,492**

Healthy Families America: A Program That Works

Healthy Families America has been providing supportive home visiting services designed to strengthen families since 1992. What started as a pilot project with 25 sites has grown into a nationwide effort defined by three overarching goals: promoting positive parenting, improving child health and development, and preventing child abuse and neglect. Healthy Families America helps parents provide a safe and supportive home environment, gain a better understanding of their child's development, obtain access to health care and other supportive services, use positive forms of discipline, and nurture the bond with their child, reducing the risk factors linked to child maltreatment.

The flexible approach of this home visiting program enables communities and states to define their target populations according to their needs. Participants are a diverse group of parents facing a number of challenges. Most participants are single parents—many are teen mothers. Some live in relative isolation and have no social network to support them. Others struggle with substance abuse, mental illness, current or past family violence, unstable housing, joblessness and poverty. In spite of these obstacles, participants are making positive changes in their parenting practices. Results from a number of site and state-level evaluations conducted throughout the ten-year history of the program demonstrate the program's effectiveness.

⊙ Promotes Positive Parenting Practices.
Home visitors work with parents to build on their existing strengths and minimize potentially harmful behavior. They educate parents about interacting with their child, help them understand their child's capabilities at each developmental stage, and teach them positive forms of discipline. Home visitors help parents build a strong parent-child relationship and develop skills to increase their sensitivity and responsiveness towards their children.

⊙ Improves Family Health.
Families enrolled in the program are healthier and use medical services more appropriately than members of the general population, accessing preventive health care services and achieving higher immunization rates. Because these programs typically serve low-income families with multiple challenges, the program's ability to motivate parents to access timely well-baby care is impressive. Furthermore, participants are more likely to seek prenatal care, leading to fewer birth complications and low birth weight babies than individuals who did not receive services.

⊙ Enhances School Readiness.
Multiple factors contribute to a child being ready to benefit from school: basic health and nutrition, proper stimulation, and an ability to listen and concentrate. An undetected developmental delay can limit a child's ability to learn. Children participating in Healthy Families America receive early developmental screenings and, if needed, are referred to appropriate services to address delays. Home visitors help new parents to provide children with experiences that stimulate healthy brain development and to develop strong, nurturing parent-child bonds, so that their children are more cognitively, emotionally, socially, and behaviorally ready to enter school.

⊙ Increases Self-Sufficiency.
The more stable the home environment, the stronger the foundation on which to raise a child. Healthy Families America programs have been effective in improving mothers' lives by facilitating their re-enrollment in school, making referrals for employment and housing, encouraging them to seek counseling for substance abuse and domestic violence. In addition, the program helps delay subsequent pregnancies. Mothers who are more successful in delaying subsequent pregnancies are generally in a better position to complete school, obtain employment, leave welfare and provide more positive child-rearing environments for their children.

Healthy Families America Works.
The program continues to expand as communities recognize the importance of providing parents with the information and skill-building opportunities they need to raise their children in a healthy, nurturing environment. Experience confirms that Healthy Families America is reducing child maltreatment and having a positive impact on families across the country.

Healthy Families America Helps Ensure Healthy Child Development[1]

Families are healthier, better insured, and use medical services more appropriately.
Research shows that families enrolled in Healthy Families America are healthier and use medical services more appropriately than comparable members of the general population. Among reported findings in this area, 94% to 100% of participating children and 86% to 96% of parents were linked to a primary medical provider.

Health care utilization and insurance

⊙ **Iowa:** Only 11 participating families (1.3%) reported having no health care coverage. This compares to Iowa's average uninsured rate of 17%. Of the 633 families who received program services, 84% utilized Medicaid.

⊙ **Maryland (Klagholz):** Ninety-six percent of participating mothers and 100% of babies had a medical home.

⊙ **New York:** Seventy-five percent of children participating in the program received the recommended number of well-baby visits by 15 months compared to 46% of children enrolled in New York State Medicaid managed care plans. In New York City, 78% of participating children had five to six visits vs. 36% of the Medicaid population.

Emergency room usage

⊙ **Michigan:** Emergency room use among the control group and the short-term intervention group was 42% and 21% respectively. Among program participants, emergency use was much lower (6.2%).

⊙ **Virginia (Galano 1):** Over a three-year period, home-visited families made fewer visits to the emergency room per year than families in the control group.

Healthy Families America families have higher immunization rates.
Of the 13 studies measuring this outcome, immunization rates ranged from a low of 73% to a high of 100% (only three programs reported rates below 90%). Studies that included comparison data found immunization rates among program participants to be consistently higher than rates among comparison groups. Because Healthy Families America programs typically serve low-income families with multiple challenges, the program's ability to motivate parents to access timely well-baby care is impressive.

⊙ **Florida (Nelson):** Ninety-nine percent (272 of 276) of target children were compliant with recommended immunization schedules by age two.

⊙ **Georgia:** At one year of age, 98% of the children in the intervention group receiving home visitation services were completely up-to-date on their immunizations. The statewide immunization rate is about 80%.

⊙ **Michigan:** Ninety-nine percent of the participating children were current on immunizations compared to 72% of the children in the control group.

⊙ **New York:** Immunizations were up-to-date at twelve months of age for 96% of the home-visited children compared to 80% of children statewide.

⊙ **Oregon:** Ninety-seven percent of children in higher risk families receiving intensive services for 24 months or more were appropriately immunized.

-over-

Healthy Families America mothers are more likely to seek prenatal care.
Women enrolled in Healthy Families America during the prenatal period experienced fewer birth complications, delivered a greater number of full-term babies, and had fewer low birth weight babies than individuals who did not receive prenatal home visiting services.

⊙ **New Jersey:** Premature infants of prenatally enrolled mothers had higher mean birth weights than those of postnatal enrollees (6.3 lbs vs. 5.3 lbs.).

⊙ **Oregon:** Sixty-eight percent of mothers received early, comprehensive prenatal care during their first pregnancy before entering the program. In contrast, while enrolled in the program, 88% received adequate prenatal care for their second pregnancies.

⊙ **Virginia (Galano 1):** Only 18% of participating mothers had infants born with one or more birth complication compared with 40% of control group mothers. Overall, 85% of participating mothers had no pregnancy risk factors compared with about 50% of control group moms.

[1] This report highlights findings from 18 studies conducted in 11 states over the past decade. The study designs range from pre-post analysis to statewide comparison and randomized trials.

Healthy Families America Helps Families Promotes Self-Sufficiency[1]

Healthy Families America promotes self-sufficiency.
Prevention activities help families succeed at home, in school and at work. Healthy Families America has been effective in improving mothers' lives by facilitating their re-enrollment in school, making referrals for employment and housing, encouraging them to find counseling for substance abuse and domestic violence, and helping them strategize about ways to decrease stress in their lives.

⊙ **Arizona (Holtzapple):** Healthy Families America participants spent 121 fewer days on Aid to Families with Dependent Children (AFDC), 200 fewer days on Food Stamps, and 73 fewer days on Medicaid than a comparison group who qualified for but were not enrolled in Healthy Families America services (this study was begun prior to 1996 welfare reform changes).

⊙ **Arizona (LeCroy):** Seventeen percent of participants were employed at the beginning of services compared to 31% at six months and 40% at 12 months.

⊙ **Florida (Nelson):** During the reporting year, 35% of families ended their dependence on public assistance, 19% obtained a GED/job training, 64% obtained employment and 41% obtained better housing.

⊙ **Iowa:** Thirty-five percent of participating Healthy Families America families ended their dependence on public assistance. Of those families participating in Iowa's program for at least six months, 63.4% reported improved or resolved issues concerning their living situation, and 69% reported improved or resolved issues concerning domestic violence.

⊙ **Maryland (Klagholz):** At the end of year four, 88% of mothers had positive employment/educational status.

⊙ **New Jersey:** Mothers employment rates increased from 10% to 34% between program intake and 12 months.

⊙ **New York:** Program participants assessed life course indicators between intake and 12 months. In this time, social isolation fell from 36% to 30%, relationship difficulties fell from 52% to 44%, and domestic violence fell from 25% to 14%. Housing problems declined from 35% to 19%, substance abuse fell from 14% to 4%, and alcohol abuse fell from 11% to 3%. In addition, 87% of participants said problem-solving skills improved, and 84% said their program helped them improve their ability to access needed services and improve the future planning skills. Fifty-five percent said they learned a lot about how to manage their lives on a day-to-day basis.

Healthy Families America helps reduce subsequent pregnancies.
Delaying subsequent pregnancies by at least 18 months can improve the health of expectant mothers and their children considerably. Mothers who are successful in delaying subsequent pregnancies are generally in a better position to complete school, obtain employment, leave welfare and provide more positive child-rearing environments for their children.

⊙ **Florida (Williams):** Ninety-five percent of mothers enrolled in Healthy Families Florida did not have a subsequent pregnancy within two years of the target child's birth (the goal was 85%).

⊙ **Maryland (Klagholz):** One hundred percent of teen mothers and 94% of adult mothers did not have a repeat birth.

⊙ **Virginia (Galano I):** The repeat teen birth rate was substantially lower among participating families (9.4%) compared to the citywide rate of 35.8% and statewide rate of 29.8%.

[1] This report highlights findings from 18 studies conducted in 11 states over the past decade. The study designs range from pre-post analysis to statewide comparison and randomized trials.

Healthy Families America Promotes Positive Parenting[1]

Healthy Families America promotes positive parenting by educating parents about ways to interact with their child, helping them understand their child's capabilities at each developmental stage, identifying and shaping their attitudes towards parenting, and teaching them positive forms of discipline. Home visitors help parents recognize the importance of building a strong parent-child relationship and help them develop skills to increase their sensitivity, responsiveness and nurturing capabilities towards their children.

⊙ **Arizona (LeCroy):** Improved scores were noted on six out of seven scales of the Parenting Stress Index: competence, attachment, feelings of restricted role, depression, social isolation and positive mood at six and twelve months post-enrollment.

⊙ **Florida (Nelson):** Families' average scores at a six month post-participation interview were not statistically different than their scores on the exit interview, indicating that the parental knowledge and skills developed or enhanced through participation in the program were retained six months later.

⊙ **Georgia:** Enrolled parents have more appropriate expectations of their children and are more empathetically aware of their children's needs than comparison families.

⊙ **Maryland (Klagholz):** At enrollment, 86% of parents had passing scores on the Knowledge of Infant Development, a widely used assessment tool. After six months of participation, that rate had increased to 94%.

⊙ **New Jersey:** A statistically significant difference was found in the scores related to the risk characteristics that contribute to parental stress. Scores decreased from 2.22 at enrollment to 1.88 at 12 months.

⊙ **New York:** Eighty-five percent of participants said their patience with their child had improved and they were better at dealing with their child's difficult behavior because of the home visiting program. Participants indicated an increase in knowledge about caring for their children. Seventy-eight percent learned about child growth and development, 73% about home safety, 73% about proper health care for their baby and 65% about feeding their baby.

⊙ **Virginia (Galano I):** Compared to their scores at the initial assessment, mothers participating in the program had higher scores in the areas of parent-child interaction, bonding, communication and care-giving after two years of participation, while the scores of mothers in the control group decreased during the same time period.

[1] This report highlights findings from 18 studies conducted in 11 states over the past decade. The study designs range from pre-post analysis to statewide comparison and randomized trials.

Healthy Families America Reduces Child Maltreatment[1]

Healthy Families America reduces child abuse and neglect and helps keep families together. Innumerable scientific studies have documented the link between the abuse and neglect of children and a wide range of medical, emotional, psychological and behavioral disorders. For example, abused and neglected children are more likely to suffer from depression, alcoholism, drug abuse and severe obesity. By reducing the risk factors that lead to abuse, Healthy Families America programs are reducing the incidence of abuse.

⊙ **Arizona (Davenport):** Only 3.3% of program participants versus 8.5% of comparison group members had substantiated reports of abuse.

⊙ **Florida (Edwards):** Ninety-nine percent of participants in Healthy Families Jacksonville had no reports of child maltreatment for the 12 months following the target child's birth. The goal was 95%.

⊙ **Florida (Nelson):** In FY 00-01, the maltreatment rate among program participants was 14 out of 875 (1.6%) cases. Maltreatment estimates for Pinellas County during that same time period were 4.9%.

⊙ **Florida (Williams):** Ninety-eight percent of children had no verified indication of child maltreatment within 18 months following successful program completion.

⊙ **Georgia:** Scores on the Child Abuse Inventory, an assessment tool, indicate program parents were significantly less at risk for abuse than parents who did not receive services.

⊙ **Hawaii (Breakey):** Of 1,738 high-risk children served, four children (0.2%) were hospitalized for maltreatment. Among 2,728 families who screened positive but were not served by the program, 38 children (1.4%) were hospitalized for maltreatment, a rate 5.89 times the rate for those served by the program.

⊙ **Hawaii (McCurdy):** Families receiving program services had significantly fewer substantiated cases of abuse or neglect (3.3%) compared to 6.8% from the control group. Between enrollment and 12 months of participation, there was also a significant reduction in scores that measure parental child abuse potential.

⊙ **Iowa:** With 826 families on the caseload in FY '00, 775 (93.8%) had no reports for child maltreatment.

⊙ **Maryland (Klagholz):** Healthy Families Maryland has only had a total of two indicated reports (both for neglect) out of 254 families served in its four years of program operation (.008 or 8 per 1,000 children).

⊙ **New Jersey:** From 1996-99 only 45 of 1,331 (3.4%) Healthy Families New Jersey families had substantiated reports of abuse or neglect. Having 96.6% of families free of child abuse and neglect exceeds the goal of 85%.

⊙ **Oregon:** The 1999 incidence rate of child abuse was lower for participating families (13 per 1,000 children age 0-2) than for non-served families in the same counties (25 per 1,000 age 0-2).

⊙ **Virginia (Galano 2):** All programs equaled or excelled the statewide goal of having no child abuse or neglect reports for 95% of families who received services for at least 12 months.

⊙ **Virginia (Barrett):** From October 1993 to March 1997 only 2% of participating children had a substantiated report of child maltreatment (and all were for neglect).

[1] This report highlights findings from 18 studies conducted in 11 states over the past decade. The study designs range from pre-post analysis to statewide comparison and randomized trials.

Healthy Families America Helps Ensure That Children are Ready to Learn[1]

Healthy Families America promotes healthy brain development.
Home visitors help new parents provide children with experiences that stimulate healthy brain development. Educating parents about ways to engage their child in play and stimulate their minds is a benefit to both parent and child. Parents develop a strong, nurturing bond and children are more cognitively, emotionally, socially, and behaviorally ready to enter school.

⊙ **Georgia:** Parents in Healthy Families America programs were more likely to have organized their children's home environment to promote optimal development and to provide their children with age appropriate play materials.

⊙ **Oregon:** 76% of higher risk participants read or looked at picture books with their year-old child at least three times a week.

⊙ **Virginia (Galano 1):** Home-visited families provided higher optimal levels of stimulation than families in the control group after both one and two years of participation in the program.

Participating children receive early developmental screenings.
Early identification of developmental delays is an important step in ensuring children get the best start in life. Healthy Families America staff are trained to utilize validated measures to determine if children are progressing at an appropriate pace. When necessary, referrals for educational services are facilitated.

⊙ **Arizona (Davenport):** Ninety-five percent of children were functioning at age-appropriate developmental levels at 48 months of age.

⊙ **Michigan:** Total child development scores were significantly better in the home-visited group than the control group.

⊙ **New York:** Ninety-nine point five percent of the sample received developmental screening and 92% of the participating children fell within the normal range of development. For children whose development was assessed as deviating from the norm, 95% were referred for services.

⊙ **Oregon:** Among higher risk families in the program, age-appropriate development is evident in 89% of children. Of those children who fall outside the normal development range, 93% received services.

[1] This report highlights findings from 18 studies conducted in 11 states over the past decade. The study designs range from pre-post analysis to statewide comparison and randomized trials.

Healthy family program

without this program I think I would be lost! Thanx to the great people I have more confidence in being a Mother. they have came in the middle of the night to help me when I was crying to so much pain I couldn't move. without the program I don't think I would have throw those nights. They have helped me grow as a person and I will be forever greatful. I have met some great people in this program. for fellow Mothers I would recomend this program, they help with any gestion or personal problem that comes up!

Alicia Bradley

Dear Sir or Madam,

I have been with Healthy Families for several months and they have been very supportive and helpful.

With my support Worker's help I have managed to keep my sobriety and sanity.

Healthy Families connected me with programs in the Community so I was able to give my family a Christmas.

I received food, toys and a new bed for my son.

I hope Healthy Families is around for many more years because I know that there are many more families that could use the support and benefit from their knowledge.

Shanna DeCotea

Healthy Families Evaluation Information

This information is gathered every 4 months and entered into the database.

- Regular well-child visits to a medical practitioner for children participating in the program.
  Data Collection: Parents will be asked if the child is current on check-ups, contact the clinic if the parent is uncertain, and document check-ups every four months.
  Evaluation Methodology: Family Compliance in completing well-child visits will be tabulated and compared with the American Academy of Pediatrics guidelines.
- Up-to-date immunizations for children participating in the program.
  Data Collection: Parents will be asked if the child is current on immunizations, document the status every four months, and review immunization records through the statewide-computerized record of immunizations for North Dakota children.
  Evaluation Methodology: The immunization status of program children will be compared with that of children in the general population.
- Utilization of formal and informal community supports by program participants.
- Data Collection: We will document family utilization of community supports every four month and conduct an
- Evaluation Methodology: Families will be monitored for consistency and frequency of community support use
- Enhancement of parenting skills in the areas of understanding normal child development and use of alternative methods of discipline for program participants.
  Data Collection: We will administer the Ages and Stages Development Questionnaire and Parent-Child Attachment Assessment to document parenting skills and to evaluate family competency.
    - Ages and Stages evaluates the child's development in Communication, Gross and Fine Motor skills, Problem solving and Personal-Social. Scores indicate if there appears to be a delay and allows for referrals to be made.
    - Parent Child Attachment Assessment indicates the attachment the parent has to the child. A score of 32 or higher indicates adequate attachment and 32 or lower suggests that attachment needs improvement. **Our families consistently score 38 or higher.**

  Evaluation Methodology: Behaviors of program parents will be measured over time using the referenced tools.
- Fewer referrals of program families for mandated Child Protection Services.
  Data Collection: The number of program families referred to Child Protection Services will be calculated by cross checking referrals of program families with referrals from the general population.
  Evaluation Methodology: The percentage of program families referred to Child Protection for services required will be compared with referrals form the general population

Supportive Testimony by Prevent Child Abuse North Dakota

For

Health Families Legislative Testimony

RE: HB1012

Same given to House and Senate

Submitted by: Constance J. Keller

Program Services Manager

Prevent Child Abuse North Dakota

Mr. Chairman and Members of the Committee, thank you for allowing me the opportunity to provide supportive testimony for the North Dakota Healthy Families home visiting program serving the counties of Burleigh and Morton.

My name is Constance Keller. My education includes a Bachelors and Masters of Science in Nursing with a specialty in Community Based Nursing. Throughout my 23 year career, I have worked in the private sector, local, state and federal levels advocating and promoting programs for families. Previously, at the state level, I served as the Director for the Optimal Pregnancy Outcome Program, North Dakota Sudden Infant Death program and as the North Dakota Home Visiting Coordinator and Committee chairperson. Currently, I serve as the Program Support Manager for Prevent Child Abuse North Dakota. Our mission is committed to a safe and nurturing environment, free from abuse and neglect, for all children.

We do this through:

- Public Awareness and Education
- Training and Technical Assistance
- Coordination of Services
- Strategic Partnerships
- Advocacy

We are a chapter of Prevent Child Abuse America, the nation's leading child abuse prevention organization. Prevent Child Abuse America launched Healthy Families America in 1992 in partnership with Ronald McDonald House Charities. Healthy Families is a research proven program that focuses on three equally important goals:

- To promote positive parenting
- To encourage child health and development
- To prevent child abuse and neglect

These goals remain constant from site to site. But, because of the flexibility of the Healthy Families program model, the programs:

- Are tailored to meet the specific and expressed needs of the families and communities they serve
- Adhere to proven best practice standards that ensure the highest quality of service delivery to families.
- Are implemented on the local level by public and private partnerships

With additional funding for Burleigh and Morton counties, our state would be have much needed resources to Healthy Families Home Visit community-based efforts to help prevent child abuse and neglect and to help promote healthy child development.

As noted in Janelle's testimony, **"We all pay for our failure to prevent child abuse."**

Prevent Child Abuse America released an economic impact study that conservatively estimates the cost of child abuse and neglect to the United States at a startling ***$103.8 billion*** each year. The report, ***Total Estimated Cost of Child Abuse and Neglect in the United States,*** documents the pervasive and long-lasting effects of child abuse on children, their families, and society as a whole. Child abuse and neglect is a public health issue that has never received adequate funding. This year alone, the federal government will invest

approximately $4,500 in research for every American with cancer or HIV/AIDS, but only $10 in prevention research for every reported case of child abuse and neglect.

The data in this report shows that a greater investment in prevention activities, such as Healthy Families, will decrease both the short and long-term costs to society.

Please remember:

- The first three years of a child's life are crucial for healthy cognitive, physical and emotional development, and abuse or neglect during this developmental stage can lead to permanent disabilities.
- Many new or expectant parents lack knowledge about parenting, do not have family or social support, or are unaware of important community resources.
- Parents in the aforementioned circumstances may be more likely to abuse or neglect their children, or to suffer from stress or depression that can lead to problems in relating to their children and others.
- Voluntary home visiting programs, such as Healthy Families America , improve family functioning by providing parents with the parenting advice and support they need and by assisting them in accessing helpful resources in their community.
- Voluntary participation in home visiting programs, such as Healthy Families America, has been shown to reduce the likelihood of child abuse and neglect and to result in a number of other benefits to children and families, including fewer emergency room visits, increased well-child visits, and higher immunization rates.

- Research has found that prevention programs, particularly home visiting programs, are cost-effective because they reduce the public costs associated with child protective services, healthcare, special education, loss of productivity, and the criminal justice system.

On behalf of Prevent Child Abuse America and our national network of 43 state chapters and over 400 Healthy Families America sites, I urge you to make the prevention of child abuse and neglect a priority this legislative session. Please consider amending the Department of Human Services budget to allow for additional funds for the Healthy Families Program serving the counties of Burleigh and Morton.

"Healthy Families America is a smart investment. If you want the biggest bang for your buck, you focus on childhood, on the things in childhood that will allow a child to have the best chance they can have."

- Bruce Perry, M.D., Ph.D., Chief of Psychiatry, Texas Children's Hospital

Date: January 27, 2009
Re: Funding for Healthy Families Programming
By: Jean Schafer, Principal, Fort Lincoln Elementary, Mandan, ND

- 40% of students enter kindergarten with language and math skills typical of two, three and four year olds. ~ Almost half of incoming students are one to three years behind their "average" peers on the first day of school. High performing five year olds enter kindergarten with language and math skills typical of eight year olds-they have made eight years of progress during their five preschool years at home. It is common to find within a kindergarten classroom a five-year range in children's literacy-related skills and functioning.
- Public schools create a year of growth during each year for most students.
- The focus of 21st century education reform is primarily to catch up the 40% of students who enter kindergarten behind, then stay behind year after year.
- The achievement gap has its origins in a child's early years, in the home. The home is really the child's first classroom.
- Between birth and age five is the most leveraged opportunity for schools and parents to prevent children from falling behind.
- When parents become skillful in preparing their children to enter kindergarten with age appropriate pre-literacy and pre-math skills, the achievement gap that haunts public schools will be greatly diminished.
- Parent/child education programs that focus on prenatal/birth to three or five years of age have been shown to significantly impact the achievement gap with children entering kindergarten.
- Children whose families participate in programs such as the Healthy Families Program, which teach parenting and healthy child development greatly impact this achievement gap. These children are exposed to far more language and interaction because of this parent/family education. These children enter school with millions more words in their vocabulary.
- Parent/child education programs are cost effective. School districts spend an additional $4,000 or more for each student in the lowest two quartiles every year. The number of students needing this level of intervention could be dramatically reduced. The cost of parent/child education programs are often far less per year than this per child amount, and the child(ren) in these programs benefit by coming to school better prepared to learn.

Healthy Families Legislative Testimony

Re: HB 1012

Submitted by: Janell Regimbal

Senior Vice President of Children and Family Services

Lutheran Social Services of North Dakota

Mr. Chairman and Members of the Committee, thank you for allowing me the opportunity to testify here today. My name is Janell Regimbal. I serve in the capacity of Senior Vice President of Children and Family Services of Lutheran Social Services of North Dakota, a multi-service, comprehensive human service agency offering a variety of programs statewide. I am here today to ask for consideration of legislative support to **amend the Department of Human Services budget to allow for the addition of $200,000 for the Healthy Families Program currently serving Burleigh and Morton counties.**

We are proud to be a part of the collaborative effort that first brought the valuable prevention effort of Healthy Families to the northeastern region of North Dakota in April of 2000. Healthy Families is a ***voluntary*** home visiting program that serves highly challenged families beginning either prenatally or at birth until the child reaches age 3. The service is provided at no cost to the families. The ultimate goal of Healthy Families is to prevent child abuse and neglect and the long-term effects that it causes.

Research tells us that the first three years of life are a period of incredible growth in all areas of a baby's development. The trauma of abuse and

neglect on the other hand has lasting implications for this development. Given the critical importance of the first three years of life for brain development and its implications going forward, it is important to note that children from birth to age three continue to be the age group most likely to be victims of maltreatment. Most maltreated babies are under age one and more than 1/3 were harmed during their first week of life.

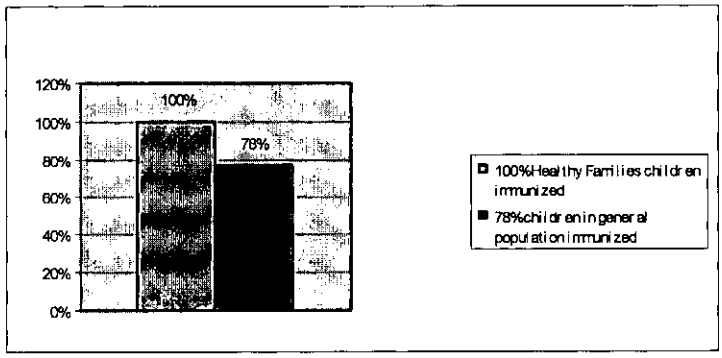
It is because of these issues that community conversation began in 1998 by leaders in the Grand Forks area centered on imagining what we could do throughout our region to create a promising future for ourselves and our children and to help create families where children can grow and thrive without maltreatment. After researching several models of child abuse and neglect prevention, the committee chose the Healthy Families America (HFA) model because of the documented success it has had in other states as well as the technical assistance available to implement the project. After several years of services provision, we too, found this program to be very successful here in North Dakota.

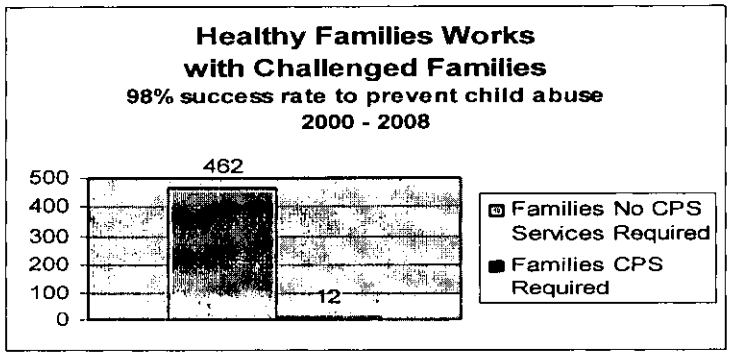
The Bush Foundation recognized this success and assisted us to expand the program to now also serve families in Burleigh and Morton counties. This expansion became a reality in July of 2008. As a committee of service professionals across a broad spectrum including health care, human services, education and corrections as well as parents, we strongly believe that these positive outcomes experienced over the past eight years demand serious consideration for replication. While private foundation dollars can be the spark needed to begin these expansion efforts, we must have additional support to sustain these efforts.

Healthy Families is an effective way of addressing abuse and neglect – by effectively intervening before it occurs. Healthy Families reaches out to high-risk parents during pregnancy and immediately after a child is born to offer voluntary home visiting services. Weekly home visits provided by highly trained paraprofessionals support families' progress in three areas that are critical to preventing child abuse and neglect:

1. Teaching parenting skills
2. Educating on healthy development
3. Teaching tactics to reduce family stressors

While this program tracks a variety of outcomes that help measure the programs success in areas that reflect a child's well being, two such numbers are especially profound. Here is a sampling of two of the outcomes tracked since the beginning of the North Dakota program:





We all pay for our failure to prevent child abuse. We pay as taxpayers for the high cost of prisons, children in foster care, for increased special education needed for the scars left behind from abuse already experienced.

All young children should be given the opportunity to succeed in school and in life just as all parents should receive the support they need to nurture their children's development. While vulnerable children may have greater challenges to overcome, we should not assume that those challenges can only be addressed with services later in life. Instead, we should invest in programs where our investment can have the biggest payoff by working to prevent problems or delays that become more costly to address as they grow older, not to mention the cost of trauma to the individual suffering its direct impact.

I and others whose written testimony I have also provided, as well as all those indicated as serving on our two local advisory committees where these programs operate, thank you for your time and hope that you will join with us in taking this proactive approach to a very serious and costly problem here in North Dakota. Please stand with us in a commitment to our state's children and families, as we know that strong families are the greatest asset of strong communities.

Testimony
Amendment to HB 1012 – Department of Human Services
Senate Appropriations
March 4, 2009

Chairman Homberg,I am submitting written testimony in support of amending the Department of Human Services budget to allow for the addition of $200,000 for the Healthy Families Program currently serving Burleigh Morton counties.

The Healthy Families Program has been serving Burleigh/Morton counties since last summer. This program provides voluntary supportive services for parents and their children. The purpose of the Healthy Families Program is to reach parents early in their child's life, either prenatally or immediate after birth and up to age three, to prevent child abuse and neglect. This is accomplished through home visits by well trained workers who offer one-on-on education and support in parenting skills, healthy child development and strategies for reducing stress within the family. These early intervention efforts are proven to reduce the incidence of child abuse and neglect.

The work provided by Healthy Families is of great benefit and a frequent source of referral for social service agencies. We speak often about supporting prevention services, particularly in the area of child welfare. Healthy Families is an excellent prevention program that works and I urge your support.

Shari Doe
Director
Burleigh County Social Services

FAMILY GROUP DECISION MAKING/INTENSIVE IN-HOME

FGDM is a strength based decision making process that brings family members, friends, service providers, and others together to create a care or protection plan for the permanency and/or reunification of children.

FGDM gets its strength and support from the belief that the tools for solving many family problems can be found within the parameters of the family itself.

Professionally trained FGDM facilitators are housed in regional Village sites throughout North Dakota. Facilitators travel to all areas of North Dakota to meet with conference participants and facilitate family meetings. On average, a facilitator spends about twenty six hours preparing for a family conference. Preparation time is influenced by the degree of conflict management and negotiation that takes place prior to a conference and the travel time across ND. Average Conference Length is 4.3 hours with conferences often occurring on weekends.

Intensive In-Home is a long term service with remarkable outcomes and great demand.

Target Population:
Children aged 0-18 and their families across the entire state of North Dakota.
Served by FGDM from March 2006-Dec 2008:
- Families- 235 Children-327
- 48% of the children resided in ND regional cities, 52% of the children lived in rural cities and towns
- 40.9 % children served been from ND minority populations including 23.7% Native American
- 40% of the children have had one or both parents incarcerated during their lifetime

Risk factors: abuse, neglect, supervision issues, substance abuse, lack of family involvement, divorce, incarceration, unstable living conditions, developmental/physical/mental health disabilities.

Goals of Programs:
Decrease the risk of placement/preventing placement and increased family placements
Build family connections
Increase father and father family involvement
Improve child wellbeing

Outcomes:
At intake, 69.2% of the children referred had a child protection report that either required or recommended services in the past year. 6 months post conference the number of child protection reports decreased to 14.8%. 2 years post conference there had been child protection reports in only 9.5% of the cases.

94.7% of the time one or both parents participated in the conference. 50.2% both mother and father participated. Often, paternal relatives participate even when the father does not, increased father and paternal family involvement is an important outcome. At 90% of the conferences, at least one relative participated, increasing family connections.

At the time of the initial conference, 62.5% of children were living with either parents or relatives. The family plan developed at the conference shows that in 84.3% of the cases participants planned for the children to live with parents or relatives. At six months post conference 83.6% of the respondents indicated that children were living either with parents or with relatives resulting in 21% fewer children being placed in foster care.

Estimated Cost Saving:
Using above outcomes, a 21% reduction in foster care placements of 327 FGDM children would mean 69 children were not placed in county/state care. If therapeutic foster care had been used @$1,111 per month per child times the 69 FGDM children, the cost would have been $76,659 per month ($459,954 for 6 months). If

residential/group home care had been used @ $1,715 for those 69 children the cost would have been $332,442 per month ($1,994,652 for 6 months). FGDM saves ND monetarily and is priceless for its children and families.
FGDM Funding:

2006-2009 Partnership between the ND Department of Human Services, the Village Family Service Center an the Bush Foundation to implement FGDM/expanded IIH across the state of North Dakota.

- Bush Foundation contribution- $1,162,131 for 2006-2008 and $661,968 from 2008-2009 funding 11 FTE's
- ND Department of Human Services contribution- $234,880 for 2006-2009 funding 3 FTE's
- Village contribution- $38,500 for 2006-2009

The Bush Foundation Funding will end in September 2009

The Department of Human Services submitted a 2009 OAR which was rejected. This OAR was for $2,342,810 of general funds, $238,295 of Federal funds and $18,077 from other funds for the next biennium.

Projected July 2009- June 30, 2011 FGDM/IIH Budget

Salaries: Coordinator/statewide supervisor, Facilitators, FBS therapists, Case Aides- 15 FTE's	$1,030,000
Benefits	$288,400
Contract Staff	$40,000
Supplies	$6,500
Telephone	$40,000
Postage	$22,000
Occupancy/rent	$65,000
Equipment/supplies	$20,000
Printing/publications/dues	$12,500
Mileage	$140,000
Advertising/marketing	$12,000
Depreciation	$4,000
Family conference expenses	$60,000
Professional liability	$12,000
Miscellaneous	$7,200
Administration costs	$175,960
Total costs (for 2 years)	$1,935,560

SENATE APPROPRAITIONS COMMITTEE

I AM SANDI ZALESKI OF THE STATEWIDE CHILD SERVICES AGENCY, THE VILLAGE. Thank you for giving me this opportunity to clarify the available funding for the Family Group Decision making Program.

The program partnership for this program began between the Department of Human Services, The Village and the Bush Foundation. IT WAS DEVELOPED WHILE SENATOR RICHARD BROWN WAS ON OUR BOARD. The fiscal contribution of the Bush Foundation has been $1,824,099 since 2006. The Department of Human Services contributed $234,880 in each of the last biennium.

In the Department of Human Services current budget for 2009-11, the amount of $234,880 has been designated for Family Group Decision Making. This amount will fund ONLY 2.6 FTE's.

This program will not be able to serve the entire state on the amount that has been designated for 2009-11. The Village has developed this program across the state. We have facilitators, case-aides and supervisors in all 8 human service region totaling 15 staff. We cannot continue serving kids and families statewide with only 2.6 FTE's.

Unless more funding is designated, Family Group Decision Making will not exist in the entire state. PLEASE AMEND HB 1012 ADD $1,9 MILLION AS NEEDED TO MAKE THE BUDGET ABLE TO SUPPORT SERVING CHILDREN AND FAMILIES STATWIDE.

Please ADD this funding WHICH WILL REPLACE THE BUSH FUNDING AND KEEP THE PROGRAM WHOLE. THIS IS NO PROGRAM EXPANSION.

This program will save the state money by reducing the states out of home placement costs.

THANK YOU.

Presented by Tim Mathern, 3.9.09 due to weather not permitting Sandi to attend.

Family Group Decision Making

THE village
FAMILY SERVICE CENTER

Five-year-old Chase and 7-year-old Craig lived in a world of methamphetamine and strangers. Their mother, Missy, and her friends used meth and drugs in front of them, and strangers were in and out of the house at all hours of the day and night. Whether they were with their mother, or a stranger she left them with, nobody paid much attention to whether Chase and Craig had eaten, bathed, gone to bed at a decent hour, or in Craig's case, made it to school.

The county removed Chase and Craig from the home and placed them in a foster home. For the 10 months they were there, it seemed as if the situation was working out well for the boys. The social worker visited the foster home on a Thursday and thought everything was fine. The very next day she received a call that the foster mom was leaving amid claims of domestic violence, and that someone had to pick up the boys.

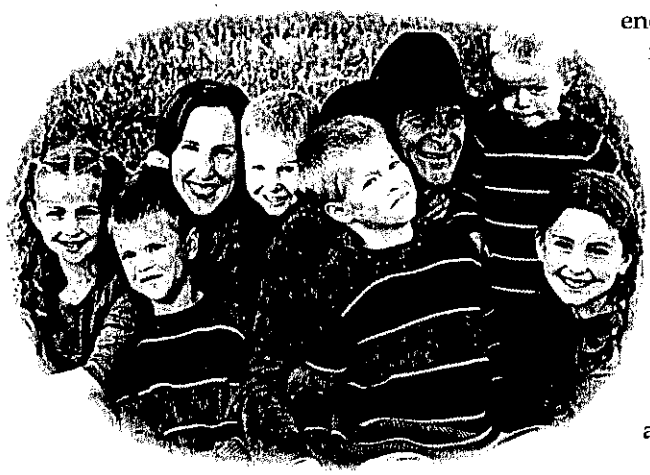
Chase and Craig were taken in by their mother's cousin, Troy, and his wife, Jana. Jana said, "At that time the boys had, and still do have, very challenging behaviors. Chase had rage attacks and would get violent. I had to restrain him 42 times in the first 60 days he was with us."

The situation was extra challenging because of the family connection. The boy's grandparents were committed to helping Missy get her act together so the boys could move back in with her. Jana could see that Missy wasn't showing up for meetings or making the changes she needed to make, but didn't feel she could share that information with the boys' grandparents. Confidentiality laws also prevented the social worker from sharing any of that information with the grandparents.

When the case was referred to Family Group Decision Making, the goal was to bring the situation to some kind of conclusion. After the first family group conference, Jana thought it was a total sham. "Everyone else in the family supported her getting her kids back no matter what the cost. After a 6-hour meeting, we left with a plan to support the mom so she could have the boys back with her." Jana was convinced the plan would fail and that they'd have to start all over at the next meeting.

Jana said, "I realize now that needed to happen. An outside person monitored Missy and it became very clear she didn't follow through with the plan. At the second meeting, the rest of the family could see what was really going on and how she was duping them. Family Group Decision Making was so helpful because it allowed us to put everything on the table and for everyone to know what was going on. We were able to invite all the friends and family, and everyone could see that the mom was not doing her part."

At the second meeting, Missy agreed to terminate her parental rights if the Solhjem's would adopt the boys. "We came back and had the next meeting and said we'd adopt, and then we laid out some contact limits. We were able to negotiate through FGDM so the expectations were all on the table. The grandparents were kind of in the dark and so weren't able to help make informed decisions about the boys. The family conferences helped them to see what was going on and to come to the realization that they wanted us to adopt. It helped our decision a lot to know that the birth grandparents would be very supportive."



"Without FGDM, I definitely think we would have ended up in a court battle. The grandparents would have forked over a ton of cash in order to fight the county. I also believe that if the mom had a good attorney, she would have won and got the boys back. They would have been in a cycle. If they went back to their mom we didn't know if we could take them back because of the additional damage that would be done."

Chase and Craig are now 8 and 10 and have been adopted by Troy and Jana. They have regular contact with their birth grandparents who live only two miles away. They are in school, eat and bathe regularly and have a regular bedtime. Most importantly, they are in an environment free of meth and other drugs.

P

TESTIMONY – PROTECTION AND ADVOCACY PROJECT

HOUSE BILL 1012 (2009)

HOUSE APPROPRIATIONS COMMITTEE -- HUMAN RESOURCES DIVISION

Honorable Chet Pollert, Chairman

January 27, 2009

Chairman Pollert, and members of the House Appropriations Committee Human Resources Division, I am Bruce Murry, a lawyer with the North Dakota Protection and Advocacy Project (P&A).

INTRODUCTION

P&A strongly supports the Governor's 2009 budget for the Department of Human Services. If HB 1012 were approved, P&A believes the Department would have adequate resources to address all of its current activities. HB 1012 contains many insightful reforms and initiatives that would deliver great outcomes for the investment. HB 1012 could also shift resources to address all or most of the constructive criticisms that follow.

PEOPLE WITH DEVELOPMENTAL DISABILITIES

"All persons with developmental disabilities have a right to appropriate treatment, services, and habilitation for those disabilities. Treatment, services, and habilitation for developmentally disabled persons must be provided in the least restrictive appropriate setting." North Dakota Century Code §25-01.2-02.

This statute was part of the resolution of the ARC vs. Olson lawsuit. North Dakota's Developmental Disabilities (DD) Waiver does not serve all persons covered by this mandate. P&A must report the state is not in compliance with NDCC § 25-01.2-02.

P&A has assertively advocated for individuals with significant DD but not "mental retardation" (MR)[1] to receive services under the DD Waiver. States and CMS build all waivers around eligibility for institutional care. North Dakota bases its

[1] A consensus is forming that the term "Intellectual Disability" will replace "MR" eventually. However, "ID" is not yet defined in state or federal law.

DD waiver upon Intermediate Care Facilities for people with MR (ICF/MR). ICF/MR is the basis of all or most DD waivers in the country.

Nationally, people who functionally have similar skills to a person with MR are eligible for ICF/MR services. For example, someone with severe symptoms of Autism Spectrum Disorders might have adaptive behaviors similar to a person with MR. Thirty years ago, the state would have institutionalized many of these people. They should be eligible for a DD Waiver. However, the Waiver agreement with CMS mentions a computerized screening program. The computer program requires a cognitive impairment for DD Waiver services. The Administration on Developmental Disabilities told P&A this requirement was North Dakota's idea. P&A acknowledges the Department disagrees and cites pressure from CMS. P&A appealed whether the computer program can carry the force of law in North Dakota. Our Supreme Court ruled that the DD Waiver agreement with CMS, including the computer program, carries the force of law as though it were in the Administrative Code. Therefore, people who would have been institutionalized thirty years ago now cannot get into the DD Waiver. We have not legally tested whether they can receive ICF/MR services under the Medicaid State Plan, as no clients have wanted more restricted living.

The 1999 US Supreme Court Olmstead decision ruled that states must offer institutional services in less restrictive settings. North Dakota needs to be sure its services to people with DD offer a reasonable alternative to institutions. Therefore, the Department should continue to seek new waivers to serve people with DD but not MR, such as the Children's Medically Fragile Waiver (2007) and the Autism Waiver (2009). The Department should continue to explore with CMS and the Administration on Developmental Disabilities whether the existing DD Waiver must include the cognitive impairment requirement. Active Treatment under a DD waiver continues to be the best way to serve people who could qualify for ICF/MR services. Meeting the terms of Olmstead, the ARC vs. Olson, and NDCC § 25-01.2-02 would require amendments to this budget. P&A can provide amendment language promptly if you so desire.

People with DD have a legal right to adequate services, which in turn require adequate staff. DD providers report turnover rates among their staff as high as 45%.

Such instability violates the legal rights of some people with DD. Similarly, failure to include critical care needs of people with DD violates their legal rights. Please renew this OAR in the final version of HB 1012.

P&A calls upon the Department to redouble its commitment to the State Developmental Center Transition to the Community Taskforce initiative. The Department and the Taskforce have committed to a census of 67 in 2011. The 2005 and 2007 Legislative Assemblies dedicated funds to this end. We should all expect adequate movement from institutionalization to the community.

You might wish to ask the State Council on Developmental Disabilities or the Governor's Olmstead Commission to study the adequacy of DD services, and report to the Legislature. P&A is represented on both bodies, but cannot speak for their time or resources to undertake these tasks.

PEOPLE WITH DISABILITIES DUE TO MENTAL ILLNESSES

P&A believes more funding is needed for community-based mental health services. We applaud and support the additional funding in the Department of Human Service's (DHS) budget for transitional living (TL) services for youth. There is no question that these funds are needed to properly serve this age group. This is a positive step towards increasing community-based supports and services to an adequate level for individuals needing mental health services.

Additional dollars also need to be provided for community-based services for adults. Individuals with mental illness are on waiting lists to get into transitional living placements and supported housing across the state. In the North Central Region, a waiting list is not kept for the transition living facility only because a lack of other community placements has essentially converted the TL facility into long term housing. There are also waits for some individuals in need of psychiatric and psychological services. JoAnn Hoesel testified in her overview of the Division of Mental Health and Substance Abuse that the Division continues its transition to a recovery approach in service delivery. Recovery cannot take place without an adequate continuum of placements and supports to move individuals towards health and integration into the community.

One cost-effective component of the recovery approach is training of peers to support those in treatment. Outcome measures for this program have been extremely favorable, including a 50% decrease in hospitalization rates. The existing funding for peer support services is provided through the Human Service Centers. Federal funding could become available for this program through an amendment to the State Plan. Funding for peer support services, while requested, was not included in the Governor's budget. We recommend that funding be provided to DHS to fund this critical component of an effective, person-centered recovery approach. Such funding might be effective starting at about $65,000 per region.

PEOPLE WITH ADULT ONSET DISABILITIES

The Senate Human Services Committee is hearing several policy initiatives, including one for people with moderate-to-severe brain injury.
In an effort to reduce the fiscal impact of the proposal, that committee is considering relying upon existing programs rather than dedicating money to services for people with brain injury.

The House Human Services Committee is considering a policy initiative to support more informal services to people with Alzheimer's disease and other dementias. This initiative relies upon existing services.

The Department of Human services has secured enhanced FMAP funding under the Money Follows the Person project for people to move out of institutions. However, the project does not create new permanent services.

These policy initiatives and the future balance of long term care in this state all rely upon strong Medicaid personal care (state plan) and SPED programs. Please maintain the health of these programs to delay the need for institutional care for many North Dakotans.

Thank you very much for your time and attention. I would be happy to answer any questions or provide any supplemental information.

TESTIMONY – PROTECTION AND ADVOCACY PROJECT
HOUSE BILL 1012 (2009)
SENATE APPROPRIATIONS COMMITTEE
Honorable Ray Holmberg, Chairman
March 9, 2009

Chairman Holmberg, and members of the Senate Appropriations Committee, I am Bruce Murry, a lawyer with the North Dakota Protection and Advocacy Project (P&A).

P&A strongly supports the Governor's 2009 budget for the Department of Human Services. If HB 1012 were passed as introduced, P&A believes the Department would have adequate resources to address all of its current responsibilities. HB 1012 contains many insightful reforms and initiatives that would deliver great outcomes for the investment. Please amend HB 1012 to include sufficient resources for the suggestions that follow:

I. State Developmental Center & Community Services.
II. Mental Health Peer Support.
III. Aging & Disability Resource Center.
IV. Home & Community Based Services to Avoid Premature Nursing Facility Placement – Personal Care & Guardianship.

I. STATE DEVELOPMENTAL CENTER & COMMUNITY SERVICES

"All persons with developmental disabilities have a right to appropriate treatment, services, and habilitation for those disabilities. Treatment, services, and habilitation for developmentally disabled persons must be provided in the least restrictive appropriate setting." North Dakota Century Code §25-01.2-02. P&A calls upon the Department to redouble its commitment to the State Developmental Center Transition to the Community Taskforce initiative. The Department and the Taskforce have committed to a census of "67 in 2011." The 2005 and 2007 Legislative Assemblies dedicated funds to this end. We should all expect adequate movement from institutionalization to the community. In the

process, our community system of services must be funded adequately to respond to individual needs with quality personnel.

II. MENTAL HEALTH PEER SUPPORT

One cost-effective component of the recovery approach is training of peers to support those in treatment. Peers include people who are successfully recovering from similar mental health situations. Outcome measures for this program have been extremely favorable, including a 50% decrease in hospitalization rates. The existing funding for peer support services is provided through the Human Service Centers. Federal funding could become available for this program through an amendment to the State Plan. Funding for peer support services, while requested, was not included in the Governor's budget. We recommend that funding be provided to DHS to fund this critical component of an effective, person-centered recovery approach. Such funding should be effective starting at about $75,000 per region.

III. AGING & DISABILITY RESOURCE CENTER.

Many good publicly funded services exist to help people stay in the community as long as possible. The single biggest obstacle is helping people who are still funding their own care to spend their money effectively. People then expend their savings and need public assistance sooner. An Aging and Disability Resource Center would help people direct their own resources more effectively.

At an Aging and Disability Resource Center (ADRC), a real person would help North Dakotans navigate the long term care maze. Assessments could be synched to collect compatible information, reducing needless paperwork. Social service agencies could cooperate while resolving issues of turf, blame, or workload. An ADRC could conduct outreach to ensure people know whom to contact in their area. No agency – counties, DHS, Centers for Independent Living, Senior Centers, P&A, etc. – would be a wrong door. Please fund a pilot regional ADRC effort near the Governor's request of $600,000.

IV. HOME AND COMMUNITY BASED SERVICES (HCBS) TO AVOID PREMATURE NURSING FACILITY PLACEMENT

HCBS – ALLOW HIGHER PERSONAL CARE SPENDING LIMITS

Current personal care services under Medicaid are limited to eight hours of personal care per day. People who need this level of service are likely to enter a nursing facility at a higher daily rate than the average. The Governor has proposed a new limit of about ten hours per day of services when necessary to prevent moving to a nursing facility. Please ask DHS to compare 10 hours QSP services to the corresponding level of acuity at a nursing facility. P&A believes this higher-level HCBS is cost effective and promotes quality of life.

HCBS – GUARDIANSHIP

Guardianship, carefully used as a last resort, is an important tool to extend someone's independence. For people who acquire disabilities as adults, DHS has only $40,000 to obtain guardianships (non-DD). This funds only eight guardianship petitions per year, and pays nothing toward ongoing guardianship costs. P&A asks the Senate to fund guardianship services by amending HB 1012 to include half of the amount recommended in SB 2028 (2005, Interim Criminal Justice Committee – Chapter 410 of 2005 Session Laws), as introduced, or about $350,000. Any intermediate increase would also help protect people who cannot protect themselves.

Thank you for your attention. I am happy to answer any questions, now or before the Subcommittee.

North Dakota Department of Human Services

Revised 1/7/09

B

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am JoAnne Hoesel of the Department of Human Services. I am here today to provide you an overview of the Developmental Disabilities Division (DD) for the Department of Human Services.

Programs

The Developmental Disabilities Division is made up of 7 FTEs who are responsible for the needs assessment, staff training, development of policy, quality assurance, compliance with federal oversight agency rules, and service monitoring functions relating to the provision of home and community-based services for individuals who have a developmental disability, as well as children who are at risk of developmental delays.

Staff interact regularly with the developmental disability staff at the regional human service centers, the Developmental Center, federal agency representatives, school systems, universities, consumer advocates, and a variety of public and private entities who play a part in the delivery system and monitoring of services.

Developmental Disability services are funded through the Medicaid state plan, three Medicaid Home and Community-Based Waivers, Part C of IDEA, and general funds.

Caseload / Customer Base

In SFY 2008, 5,185 individuals received developmental disability case management through the human service centers,

1,836 individuals received family support program services, including family subsidy, infant development, and family support,

2,131 individuals received residential and/or day services,

9,282 Right Track screenings were completed for infants and toddlers birth to three years of age at risk for developmental delays.

Note: The funding for the DD case management is contained in the regional human service center budgets. The community-based services for individuals and families are budgeted in the Long-Term Care section of the budget. Right Track Services are budgeted in the operating line of the budget.

Customer Base

According to the latest report from the University of Minnesota on residential services for persons with Developmental Disabilities, Status and Trends through 2007:

- The national average rate of placement in residential settings for persons with Intellectual Disabilities (ID)/Developmental Disabilities (DD) in 2007 was 145.1 persons per 100,000 of the general population. North Dakota ranked number one with 313.6 per 100,000 state residents.

- Nationally, the combined average Intermediate Care Facilities for the Mentally Retarded (ICF/MR) and Home and Community-Based Services (HCBS) utilization was 198.0 per 100,000 of the population. North Dakota ranked number one with 645.3 persons per 100,000 state residents.

- In North Dakota, there are 1,112 private provider settings which serve persons with 1 – 3 people; 38 settings which serve 4 – 6 people; 62 settings that served 7 – 15 persons; and only 2 settings serve 16 or more people.

- There were 1,112 people served in settings of 1 – 3 people, 214 were served in settings for 4 – 6; 501 were served in settings of 7 – 15, and 62 were served in settings for 16 or more persons.

Major Program Trends

Consumer Choice – The Division continues its 'self-directed supports' approach which allows families to manage their own services. The Division is proposing to add this feature for some

services in the traditional DD waiver which is currently being reviewed by the Centers for Medicare and Medicaid Services (CMS). Similarly, CMS also requires states to move toward increased portability of funds and increased service access in waivers based on consumer choice.

Developmental Center Transition - Transition efforts from the Developmental Center continue with collaboration between the regional human service centers, the One Center, advocates, DD providers, Medical Services, and the Division. One challenge is the DD providers' inability to find staff to serve the individuals in communities. The Department is working with DD providers to fully identify barriers to transition and the transition committee will use the data to address the challenges from a system view.

Services for young children with DD – Caseload growth continues in the number of young children with developmental disabilities needing support, which has put pressure on the family support budget.

Increased federal accountability requirements and oversight – CMS has placed greater emphasis on providing evidence of compliance with the six health & welfare assurances required in the waivers. CMS has become more prescriptive, requires more state reporting, and requires more oversight of providers on the part of the state.

DD Home & Community-Based Services Waiver Renewals - North Dakota's DD waiver renewals were submitted January 1, 2009 and are being reviewed by CMS. The renewed waivers will be effective April 1, 2009. The waiver submittals are the culmination of on-site visits by CMS, numerous CMS phone calls, numerous work groups including providers and advocates, and tracking the ebb and flow of federal regulatory decisions in Congress and CMS. CMS requires states to formalize their quality framework and track, trend, and train within the DD system.

DD/MI – Individuals with both a developmental disability and a mental illness continue to challenge the system, especially adolescents and those in transition to adult services. Either the youth are too low functioning for the mental health system or too high functioning for the developmental disabilities system. The Department is currently studying options for integrating treatment services.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase/ Decrease
Salary and Wages	860,672	965,013	104,341
Operating	4,400,076	4,971,878	571,802
Grants	816,403	464,125	(352,278)
Total	6,077,151	6,401,016	323,865
General Funds	2,440,426	2,806,110	365,684
Federal Funds	3,636,725	3,594,906	(41,819)
Other Funds	0	0	0
Total	6,077,151	6,401,016	323,865
FTE	7.00	7.00	0.00

The Salary and Wages line item increased by $104,341 and can be attributed to the following:

- $87,001 in total funds is to fund the Governor's salary package for state employees. The general fund portion of this increase is $45,737.
- The cost to continue the 4% salary increase for the last year of the 07-09 biennium is $49,827 of which $49,209 is general fund.
- The remaining decrease of ($32,487), of which ($2,959) is general fund is due to divisional restructuring.

Operating expenses show a net increase of $571,802 for a variety of reasons:

- Increase in travel of $88,109, of which $27,037 is general fund, reflects an increase of travel due to more staff travel time devoted to training and regulatory oversight.

- Increase of $46,179 for professional development, of which $1,479 is general fund to support early intervention services.
- Increase of $599,530 in operating fees and services of which $145,950 is general fund. The increases and decreases are as follows:
    - $257,741 increase in the Catholic Charities Guardianship contract which includes a correction of $49,209 in the contract that was omitted last biennium, $37,777 cost to continue year two increases plus $170,755 for the inflationary increase of 7% in each year of the biennium for this contract. This is all general funds;
    - $527,168 increase for Part C which reflects a shift from the grant line to operating fees and services of $449,636 for early intervention services, which is all federal funds;
    - Increase of $34,310 of federal funds for Right Track screenings due to an increase in assessments, which is all federal funds;
    - ($184,039) decrease in our fiscal agent contract, as last biennium was the original self-directed support work and was based on an estimate. This request reflects actual usage, of which ($103,354) is general funds;
    - ($35,650) decrease due to restructuring of division.

- Decrease of ($92,432) in various supplies, of which ($1,431) is general funds, the majority is being moved to cover increased travel and the Early Intervention program.
- Decrease of ($77,527) in equipment, of which ($361) is general funds, the majority is being moved to cover increased travel and the Early Intervention program.
- Decrease of ($8,163) in Information Technology communication services, of which ($78) is general funds.
- Decrease of ($11,951) in rent, of which ($4,033) in general funds due to staff being moved out of Prairie Hills Plaza building.
- Increase of $14,730 in printing, of which $2,517 is general funds, the majority being for Early Invention program.
- Increase of $13,327 in professional fees, of which $7,400 in general funds, the majority being for administrative hearings.

Grants resulted in a net decrease of ($352,278), of which $95,217 is an increase in general funds, for a variety of reasons with the major changes being:

- ($449,636) decrease reflects the shift from grants to operating for the Early Intervention program. This decrease is 100% federal funds. There was also a funding shift of $2,141 from general funds to federal funds.

- Increase of $97,358 in general funds for service payments for individuals who were no longer able to be served by the waiver due to CMS' required eligibility changes in the 05-07 biennium. These funds represent job supports and residential supports for these individuals.

This concludes my testimony on the 2009 – 2011 budget request for Developmental Disabilities Division area of the Department. I would be happy to answer any questions.

Total Population 1995-2008 by 2009 Transition Target

D

North Dakota Department of Human Services
Medical Services Division
Long-Tem Care Continuum

Developmental Disabilities (DD) Grants
HB 1012

Overview of Services for People with Developmental Disabilities

Adult Education Transition Services (AETS)

Refers to services provided to students 18 - 21 years of age who are eligible for developmental disabilities case management services and can benefit from residential and/or day services provided in the developmental disabilities system while they are still in school. This is a joint initiative between the Department of Public Instruction and the Department of Human Services. Services include Medicaid HCBS waiver residential and day services (day supports; extended services).

Congregate Care

Specialized group residential facility which provides programming for elderly individuals with mental retardation which will assist in the maintenance of the individual's current level of functioning. The health and medical conditions of the individuals are stable and they do not require continued nursing or medical care.

Day Supports

A day program to assist individuals in acquiring, retaining, and improving skills necessary to successfully reside in a community setting. Services may include assistance with acquisition, retention, or improvement in self-help, socialization, and adaptive skills; provision of social, recreational, and therapeutic activities to maintain physical, recreational, personal care, and community integration skills; and development of non-job task-oriented prevocational skills such as compliance, attendance, task completion, problem solving, and safety; and supervision for health and safety.

Extended Services

Supports provided for individuals employed in the community. Supports are provided as needed for each individual by a job coach. Initial job placement and

stabilization and training is provided through the Supported Employment Program and Extended Services is the long term follow up.

Family Subsidy

A program that reimburses a family for excess expenses related to their child's disability. Family Subsidy offers support to enable a family to keep their child in their home when lack of financial support would make it very difficult for the family to keep the child at home. The child may be eligible for Family Subsidy through age twenty-one.

Family Support Services

Family centered services which are provided for an eligible client in order for the client to remain in an appropriate home environment. Family Support Services provides: (a) short-term Respite Care when a specialized trained care giver is needed in order to meet the individual's needs. Respite Care is provided when the parents/primary care givers are absent, and can be delivered in the family home or in another location; (b) In-Home Support provides a specialized trained care giver to work with the parents/family when additional help is needed to meet the individual's needs; (c) Family Care Option is out-of-home support which is provided in a licensed family home.

Intermediate Care Facility for the Mentally Retarded (ICF/MR)

Group residential facility licensed as a certified health care facility for individuals with mental retardation and related conditions. A responsible direct care staff is on duty and awake on a 24-hour basis when clients are present. Each client receives a continuous active treatment program which includes training, health services and related services that help him/her function with as much self determination and independence as possible.

Infant Development

A home-based, family-focused service that provides information, support and training for families to assist them in meeting their child's needs. A child may be eligible for Infant Development up to age three.

Individualized Supported Living Arrangement (ISLA)

Residential service which provides support to individuals living in a home owned or leased by the individual. Services may include training and assistance in personal care, budgeting, shopping, laundry, etc. Levels and amounts of support may vary depending on the individual's needs. The individual is responsible to pay for room and board.

Minimally Supervised Living Arrangement (MSLA)

Community waiver group home or community complex setting which provides training in community integration, and social, leisure, and daily living skills.

Specialized Placement

Refers to a residence for people who are diagnosed as both mentally retarded and mentally ill and whose individualized programs address residential, psychosocial and psychiatric development prior to entry into less restrictive settings. Services are provided at one 5-bed and one 6-bed group home operated by Pride, Inc. in Bismarck.

Supported Living Arrangement (SLA)

Residential service which provides support to individuals living in their own home or apartment setting. Services may include instruction in budgeting, shopping, laundry, etc. Support is provided on an intermittent basis and is generally less than 20 hours per month. Individuals receiving SLA services generally need less support and assistance than individuals receiving ISLA.

Title XIX County Waivered Services

Refers to select services offered through the Aged & Disabled waiver service network to persons with developmental disabilities and included in the MR/DD Medicaid waiver. Services include homemaker; adult day care; adult family foster care; respite care for adult foster care provider; and county case management.

Transitional Community Living Facility (TCLF)

Community waiver group home which provides training for individuals in community integration, social, leisure, and daily living skills in a group environment.

Self-Directed Supports

The purpose of the program is to provide assistance for families with a member who requires long-term supports and services, or to individuals who require long-term supports and services, so that the individual may remain in the family residence or in their own home. Eligibility is limited to those individuals who require long-term supports at a level typically provided in an institution.

B

Testimony
House Bill 1012 – Department of Human Services
House Appropriations - Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Andrea Peña, Executive Director of the North Dakota State Council on Developmental Disabilities. I am here today to provide you an overview of the Council's budget request.

Programs

The State Council on Developmental Disabilities administers the federal Developmental Disabilities Act Basic State Grant allocated to North Dakota. The Council directs this funding toward projects and activities that advocate policies and support programs which promote choice, independence, productivity, and inclusion for North Dakotans with developmental disabilities.

Program Trends

For the 2009-2011 biennium, the Council intends to continue to award grants to state and local private, nonprofit agencies and organizations. Activities under these grants need to address at least one of four areas of emphasis identified as priorities in the Council's federally approved five-year plan. These priority areas include: Education and Early Intervention; Employment; Community Supports; and Quality Assurance. More specifically, grant-funded activities under these priority areas are intended to assist persons with Developmental Disabilities to:

- have access to services available in the community which affects their quality of life;
- obtain and keep employment consistent with their interests, abilities, and needs;
- reach their educational and developmental potential; and
- have the information, skills, opportunities, and supports needed to live free of abuse, neglect, exploitation, and violation of their human and legal rights.

Under its federally approved five-year plan for 2007-2011, the Council is responsible for tracking and annually reporting performance data on 26 outcome measures to the federal Administration on Developmental Disabilities. Among other performance outcome data, the Council reported the following accomplishments for FY 2007:

- 116 people were trained in inclusive education.
- 99 parents/guardians were trained in their child's educational rights.
- 109 people were trained in employment.
- 1,155 people were trained in formal/informal community supports.
- 22 buildings/public accommodations became accessible.
- 376 people received training in quality assurance.
- 55 self-advocates and family members were active in systems advocacy about quality assurance.
- 534 people were trained in leadership, self-advocacy, and self-determination.
- 1,230 public policymakers were educated about issues related to Council initiatives.

- An estimated 62,294 members of the general public were reached by Council public education, awareness, and media initiatives.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	177,742	150,373	(27,369)
Operating	49,825	55,054	5,229
Grants	763,517	812,514	48,997
Total	991,084	1,017,941	26,857
General Funds	0	0	0
Federal Funds	991,084	1,017,941	26,857
Other Funds	0	0	0
Total	991,084	1,017,941	26,857
FTE	1.4	1.0	(.4)

The DD Council's budget includes a request for 100 percent federal funding.

The Salary and Wages line item decreased by $27,369 which can be attributed to:

- FTEs have been reduced from 1.4 to 1.0 due to an in-kind allotment of administrative support provided to the Council by the Department of Human Services.
- The Council's Executive Director retired in 2008 and the new Executive Director's salary is less than the former director's.
- A $13,311 increase for the Governor's proposed salary package.

The Operating line item increased by $5,229, which can be attributed to:

- Additional travel costs for the new Executive Director to travel for federal programmatic training and technical assistance purposes.
- A slight increase to adjust for higher fuel costs.

The greatest share of the Council's proposed budget continues to be allocated to the Grants line item:

- The grants line item increased by $48,997 due to carry over monies from a grantee in the previous biennium who did not fulfill their contractual obligations. Due to unmet contractual goals, the money was not allocated to the organization and will be transitioned to another qualifying organization.

This concludes my testimony on the State Council on Developmental Disabilities 2009-2011 budget request. At this time I would be happy to answer any questions from the committee.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Andrea Peña, Executive Director of the North Dakota State Council on Developmental Disabilities. I am here today to provide you an overview of the Council's budget request.

Programs

The State Council on Developmental Disabilities administers the federal Developmental Disabilities Act Basic State Grant allocated to North Dakota. The Council directs this funding toward projects and activities that advocate policies and support programs which promote choice, independence, productivity, and inclusion for North Dakotans with developmental disabilities.

Program Trends

For the 2009-2011 biennium, the Council intends to continue to award grants to state and local private, nonprofit agencies and organizations. Activities under these grants will need to address at least one of four areas of emphasis identified as priorities in the Council's federally approved five-year plan. These priority areas include: Education and Early Intervention; Employment; Community Supports; and Quality Assurance. More specifically, grant-funded activities under these priority areas are intended to assist persons with Developmental Disabilities to:

- have access to services available in the community that affect their quality of life;
- get and keep employment consistent with their interests, abilities, and needs;
- reach their educational and developmental potential; and
- have the information, skills, opportunities, and supports needed to live free of abuse, neglect, exploitation, and violation of their human and legal rights.

Under its federally approved five-year plan for 2007-2011, the Council is responsible for tracking and annually reporting performance data on 26 performance outcome measures to the federal Administration on DD. Among other performance outcome data, the Council reported the following accomplishments for FY 2007:

- 116 people were trained in inclusive education.
- 99 parents/guardians were trained in their child's educational rights.
- 109 people were trained in employment.
- 1,155 people were trained in formal/informal community supports.
- 22 buildings/public accommodations became accessible.
- 376 people received training in quality assurance.
- 55 self-advocates and family members were active in systems advocacy about quality assurance.
- 534 people were trained in leadership, self-advocacy, and self determination.
- 1,230 public policymakers were educated about issues related to Council initiatives.

- An estimated 62,294 members of the general public were reached by Council public education, awareness, and media initiatives.

FTE	1.4	(.4)	1.0	-	1.0

Budget Changes from Current Budget to Executive Budget:

The DD Council's budget includes a request for 100 percent federal funding.

The Salary and Wages line item decreased by $27,369, which can be attributed to:

- FTEs have been reduced from 1.4 to 1.0 due to an in-kind allotment of administrative support provided to the Council by the Department of Human Services.
- The former executive director retired in 2008 and the new executive director's salary is less than the former director's.

- A $13,311 increase for the Governor's proposed salary package.

The Operating line item increased by $5,229, which can be attributed to:

- A slight increase in travel costs for the new executive director to travel for initial training and technical assistance purposes.

The greatest share of the Council's proposed budget continues to be allocated to the Grants line item:

- The grants line item increased by $48,997 due to rollover monies from a grantee in the previous biennium who did not fulfill their contractual obligations and the money was not allocated to the organization.

House Changes:

The House reduced 50% of the department-wide travel increase. The Council's share of this decrease is $4,446 in federal funds.

This concludes my testimony of the State Council on Developmental Disabilities 2009-2011 budget request. At this time I would be happy to answer any questions from the committee.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am JoAnne Hoesel of the Department of Human Services. I am here today to provide you an overview of the Developmental Disabilities Division (DD) for the Department of Human Services.

Programs

The Developmental Disabilities Division has 7 FTEs and provides management, monitoring, and oversight of the MR/DD Medicaid waivers. The Division is responsible for providing technical assistance, staff training, and developing policy for the Developmental Disability System and assures that early intervention services are delivered to children between the ages of birth to three who are at risk of developmental delays.

Developmental Disability services are funded through the Medicaid state plan, three Medicaid Home and Community-Based Waivers through the Centers for Medicare and Medicaid Services (CMS), Part C of the Individuals with Disabilities Education Act (IDEA) through the Office of Special Education Programs (OSEP), and general funds.

Caseload

In SFY 2008,

- 5,185 individuals received developmental disability case management through the regional human service centers,
- 1,836 individuals received family support program services, including family subsidy, infant development, and family support,
- 2,131 individuals received residential and/or day services, and
- 9,282 Right Track screenings were completed for infants and toddlers birth to three years of age who are at risk for developmental delays.

Note: The funding for the DD program management is contained in the regional human service center budgets. The community-based services for individuals and families provided by private DD providers are budgeted in the Long-Term Care section of the budget. Early Intervention Services are budgeted in the operating line of this Division's budget.

Customer Base

According to the latest report from the University of Minnesota on residential services for persons with Developmental Disabilities, Status and Trends through 2007:

- The national average rate of placement in residential settings for persons with Intellectual Disabilities (ID)/Developmental Disabilities (DD) in 2007 was 145.1 persons per 100,000 of the general population. North Dakota ranked number one with 313.6 per 100,000 state residents.

- Nationally, the combined average Intermediate Care Facilities for the Mentally Retarded (ICF/MR) and Home and Community-Based Services (HCBS) utilization was 198.0 per 100,000 of the population. North Dakota ranked number one with 645.3 persons per 100,000 state residents.

- In North Dakota, there are 1,112 private provider settings which serve persons with 1 – 3 people; 38 settings which serve 4 – 6 people; 62 settings that served 7 – 15 persons; and only 2 settings serve 16 or more people.

Major Program Trends

Increased federal accountability requirements and oversight

The Centers for Medicare and Medicaid Services (CMS) came to North Dakota in 2007 and completed an intense quality review of the DD Medicaid waivers. The review's purpose was to prepare the State for the upcoming DD waiver renewals and bring all states into a uniform renewal process. CMS is placing intense emphasis on documentable evidence of compliance in six health

& welfare assurance areas required in the waivers and is more prescriptive in how states arrive at compliance. CMS requires more reporting and more oversight. This is a change for the Division, the regional human service centers, and the private DD providers.

DD Home & Community-Based Services Waiver Renewals
The DD waiver renewals were submitted January 1, 2009 and are being reviewed by CMS. The renewed waivers will be effective April 1, 2009. Multiple work groups, meetings, and documents have been prepared for the renewal and the regional centers and providers have been included in all aspects of the process.

CMS requirements include increased and documented consumer choice of services, movement toward portability of funds, formalization of the quality framework, incident investigation and reporting, and the ability to track, trend, and train within the DD system.

Developmental Center Transition – Efforts to transition individuals from the Developmental Center continue with collaboration between the regional human service centers, the One Center, advocates, DD providers, Medical Services, and the Division. One challenge that continues to challenge these efforts is difficulty finding staff to serve individuals in communities. The Department is surveying DD providers and regional staff for individuals referred statewide to identify barriers to community

placements. The transition committee will use this data to address the challenges and identify specific strategies.

Services for young children with DD – Growth continues with the number of young children with developmental delays needing support. This has put pressure on the family support budget.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase/ Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	860,672	104,341	965,013	(10,522)	954,491
Operating	4,400,076	571,802	4,971,878	(67,710)	4,904,168
Grants	816,403	(352,278)	464,125	0	464,125
Total	6,077,151	323,865	6,401,016	(78,232)	6,322,784
General Funds	2,440,426	365,683	2,806,109	(38,190)	2,767,919
Federal Funds	3,636,725	(41,818)	3,594,907	(40,042)	3,554,865
Other Funds	0	0	0	0	0
Total	6,077,151	323,865	6,401,016	(78,232)	6,322,784
FTE	7.00	0.00	7.00	0.00	7.00

The Salary and Wages line item increased by $104,341 and can be attributed to the following:

- $87,001 in total funds is to fund the Governor's salary package for state employees. The general fund portion of this increase is $45,737.
- The cost to continue the 4% salary increase for the last year of the 07-09 biennium is $49,827 of which $49,209 is general fund.

- The remaining decrease of ($32,487), of which ($2,959) is general fund is due to divisional restructuring.

Operating expenses show a net increase of $571,802 for a variety of reasons:

- Increase in travel of $88,109, of which $27,037 is general fund, reflects an increase of travel due to more staff travel time devoted to training and regulatory oversight.
- Increase of $46,179 for professional development, of which $1,479 is general fund to support early intervention services.
- Increase of $599,530 in operating fees and services of which $145,950 is general fund. The increases and decreases are as follows:
    - $257,741 increase in the Catholic Charities Guardianship contract which includes a correction of $49,209 in the contract that was omitted last biennium, $37,777 cost to continue year two increases plus $170,755 for the inflationary increase of 7% in each year of the biennium for this contract. This is all general funds;
    - $527,168 increase for Part C which reflects a shift from the grant line to operating fees and services of $449,636 for early intervention services, which is all federal funds;
    - Increase of $34,310 of federal funds for Right Track screenings due to an increase in assessments, which is all federal funds;

- ($184,039) decrease in our fiscal agent contract, as last biennium was the original self-directed support work and was based on an estimate. This request reflects actual usage, of which ($103,354) is general funds;
- ($35,650) decrease due to restructuring of division.

- Decrease of ($92,432) in various supplies, of which ($1,431) is general funds, the majority is being moved to cover increased travel and the Early Intervention program.
- Decrease of ($77,527) in equipment, of which ($361) is general funds, the majority is being moved to cover increased travel and the Early Intervention program.
- Decrease of ($8,163) in Information Technology communication services, of which ($78) is general funds.
- Decrease of ($11,951) in rent, of which ($4,033) in general funds due to staff being moved out of Prairie Hills Plaza building.
- Increase of $14,730 in printing, of which $2,517 is general funds, the majority being for Early Invention program.
- Increase of $13,327 in professional fees, of which $7,400 in general funds, the majority being for administrative hearings.

Grants resulted in a net decrease of ($352,278), of which $95,217 is an increase in general funds, for a variety of reasons with the major changes being:

- ($449,636) decrease reflects the shift from grants to operating for the Early Intervention program. This decrease is 100% federal funds. There was also a funding shift of $2,141 from general funds to federal funds.
- Increase of $97,358 in general funds for service payments for individuals who were no longer able to be served by the waiver due to CMS' required eligibility changes in the 05-07 biennium. These funds represent job supports and residential supports for these individuals.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $3,455 - general fund and $7,067 - federal funds for at total of $10,522.

The House reduced 50% of the department-wide travel increase. Developmental Disabilities' share of this decrease is $40,511 total funds; $7,536 – general fund.

In Operating Fees and Services, the inflationary increase for the contract with Catholic Charities for guardianship services was reduced from the 7% & 7% increase to 6% & 6% resulting in a general fund decrease of $27,199.

This concludes my testimony on the 2009 – 2011 budget request for Developmental Disabilities Division area of the Department. I would be happy to answer any questions.

K

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Committee – Human Resources Division
Representative Pollert, Chairman
January 26, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, thank you for the opportunity to provide comment on House Bill 1012 – Department of Human Services' budget request for the 2009-2011 biennium.

My name is Dianne Sheppard. I am Executive Director for The Arc, Upper Valley in Grand Forks and an official spokesperson for The Arc of North Dakota. Our mission is to ensure that children and adults with intellectual disabilities (such as mental retardation, a term seldom used anymore) have the supports, benefits, and services they need, and are accepted, respected and fully included in their communities.

The North Dakota Department of Human Services' budget is a good budget. However, there are several critical areas that were identified as an OAR, but failed to be included in the budget or where funded at a lower level than needed.

We are asking you to fund these important areas of need:

1. The North Dakota legislative effort to increase direct support staff wages and benefits is commendable and should be continued. This biennium, community service providers are budgeted to receive increases of 7% in 2009 and 7% in 2010.

   DD Provider Wage Equity and Benefit Increase - A $2.00 per hour increase and a 3% increase in benefits.

   For thousands of people with disabilities of all ages, direct support professionals are the key to living successfully in their home communities.

Direct support professionals assist people with disabilities with medications, preparing and eating meals, dressing, mobility, and handling daily affairs. In 2008, North Dakota's direct support staff reached a statewide average wage of $9.77 per hour for this very demanding, often difficult work. Many workers find that they can earn higher hourly wages, and receive better benefits, in far less demanding jobs. As a result, people with disabilities experience continuous turnover of direct support workers or they find themselves unable to get workers at all. Unable to obtain adequate assistance, people with disabilities find their health and safety at risk.

A well-trained, adequately compensated workforce is essential to providing the necessary supports and services to our constituents, who constitute a very vulnerable population. Higher wages reduce employment turnover and is correlated with an increase in the quality of services.

We realize this is a big request; however, it is needed to turn the tide on staff turnover and eliminate the gap between wages paid to private employees and wages paid to public employees in the state.

General Funds	$14,194,510
Federal Funds	$24,189,780
Total Funds	$38,384,290

2. <u>DD Staffing to Meet Critical Needs</u>

As people age, often times their health care needs increase. When individuals do not receive the level of health care necessary to maintain their health, they are more susceptible to catastrophic events: falling and breaking a bone, developing infections, depression and other mental health issues, etc. Staffing increases have not been available from the DHS to adequately address the increased needs that people have when they age. Additional funding is required to provide for these complex behavioral and medical care needs.

General Funds	$2,336,365
Federal Funds	$3,981,551
Total Funds	$6,317,916

3. **Personal Needs Allowance -ICF/MR – for individuals who reside in an ICF/MR facility the budget will increase the allowance from $50 to $60 per month, this is not enough.**

We are asking you to increase the Personal Needs Allowance from $50 to $75 per month for people living in an ICF/MR facility. The importance of the Personal Needs Allowance for people living in an ICF/MR facility cannot be overstated; it directly impacts the quality of life of a majority of residents.

Residents need this allowance to fulfill various personal needs such as clothing, individual preferences on personal care items, social support (telephone, stationery, etc.) and occasional outings. In our consumer-oriented society, it is important for residents to have an adequate monthly Personal Needs Allowance to be able to participate on the most basic level. This is particularly true for residents who are isolated and have no family or friends to purchase personal items.

4. **North Dakota continues to over-utilize public and private institutions and large group homes.**

Large Group Homes: The 8 bed group home model that was favored when the DD system was being created back in 1980 is now outdated, and has been for quite some time. North Dakota has not changed with the times---while other states have---making our system an antique. What plans are in place to bring our system out of the 80's and into the current decade?

Institutions: We are asking you for a commitment to steadily reduce reliance on and ultimately close the North Dakota Developmental Center at Grafton.

Most professionals, family members and persons with intellectual and developmental disabilities believe that large group settings are no longer acceptable living arrangements because of the difficulty of personalizing services. Virtually every credible research study supports the assertion that people are well served in small community settings, including those with behavior issues, or people with complex medical needs.

As such, institutional placement cannot be justified on the programmatic needs of the people who are forced to reside in an institution in order to receive services. The long-term future of services to persons with intellectual and developmental disabilities in North Dakota is in community settings.

North Dakota's rate of utilization of its state-operated Developmental Center exceeded the comparison states (Idaho, Montana, South Dakota, and Wyoming) by a factor of two to one. An analysis revealed that since the District Court dismissed the *Arc v. Sinner* case in 1990 and closed the Court Monitor's office, the reduction in the census of the North Dakota Developmental Center slowed down dramatically, in fact, from 1995-2004 the census at the Developmental Center actually increased from 140 to 146 persons. North Dakota has recently reduced the census at Grafton from 146 persons in 2004 to 130 persons in 2008.

The Transition to the Community Task Force, chaired by Alex Schweitzer, Superintendent of the Developmental Center, has put together a transition goal for July 1, 2011 for a maximum of 67 people residing at the Center. This is a reasonable goal and should be supported with a budget that will meet that goal.

The closure of a state institution can generate savings for state government over time because it:

1) Eliminates the high fixed cost of operating a state-owned facility, originally built for many more residents than live there at the time of closure;

2) Shifts some fiscal responsibilities from state government tax revenues to federal Supplemental Security Income (SSI);

3) Increases the likelihood that individuals will engage in productive employment in a local community because they now live closer to employment markets;

4) Utilizes less costly social, educational, religious, and recreational resources in the community rather than the relatively expense, specialized services provided in the institution; and,

5) By renting/leasing residences, the expensive institutional capital construction and remodeling costs necessary for most institutions to remain open and certified for receipt of federal reimbursement are avoided.

North Dakota has a healthy budget surplus, and this would be the ideal time to invest in our community service delivery system. People are confined to the Developmental Center in Grafton in part because of the lack of appropriate resources in the community. We are having problems downsizing large group homes because of the lack of appropriate resources in the community. When the state has the resources to provide those services in the community and fails to commit the money, it is difficult to conclude that the state has a real commitment to community services and the least restrictive environment as required by state and federal law.

Attached are two reports where you will find information on the structure, financing, and quality assurance of residential and community services, and 10 key issues associated with the potential closure of the Developmental Center at Grafton.

Developmental Disabilities in North Dakota: 2009
Executive Summary

Funding for this report was provided by the North Dakota State Council on Developmental Disabilities.

I would be happy to answer any questions you may have.

Thank you.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Ray Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, thank you for the opportunity to provide commentary on House Bill 1012 – Department of Human Services' budget request for the 2009-2011 biennium.

My name is Dianne Sheppard. I am Executive Director for The Arc, Upper Valley in Grand Forks, and an official spokesperson for The Arc of North Dakota. Our mission is to ensure that children and adults with intellectual disabilities (such as mental retardation, a term seldom used anymore) have the supports, benefits, and services they need, and are accepted, respected and fully included in their communities.

The North Dakota Department of Human Services budget relative to developmental disabilities and community services is a good budget. We would like to see it adopted as presented along with other critical items that were identified as an OAR, but failed to be included in the budget or where funded at a lower level than needed. We would also like you to tighten-up the Amendment to Section 25-04-05 – Qualifications for admission to state facility.

<u>Please consider the following</u>:

1. The North Dakota legislative effort to increase direct support staff wages and benefits is commendable and should be continued.

   This biennium, DD community service providers were budgeted to receive increases of 7% in 2009 and 7% in 2010. We are asking you to approve these increases.

In addition, we are asking you to approve a pass-through raise of $2.00 per hour and a 3% increase in benefits for DD community service providers.

For thousands of people with disabilities of all ages, direct support professionals are the key to living successfully in their home communities. Direct support professionals assist people with disabilities with medications, preparing and eating meals, dressing, mobility, and handling daily affairs. In 2008, North Dakota's direct support staff reached a statewide average wage of $9.77 per hour for this very demanding, often difficult work. Many workers find that they can earn higher hourly wages, and receive better benefits, in far less demanding jobs. As a result, people with disabilities experience continuous turnover of direct support workers or they find themselves unable to get workers at all. Unable to obtain adequate assistance, people with disabilities find their health and safety at risk.

A well-trained, adequately compensated workforce is essential to providing the necessary supports and services to our constituents, who constitute a very vulnerable population. Higher wages reduce employment turnover and is correlated with an increase in the quality of services.

We realize this is a big request; however, it is needed to turn the tide on staff turnover and eliminate the gap between wages paid to private employees and wages paid to public employees in the state.

General Funds	$14,194,510
Federal Funds	$24,189,780
Total Funds	$38,384,290

2. **DD Staffing to Meet Critical Needs**

Staffing increases have not been available from the DHS to adequately address the increased needs that people have when they age.

As such, we believe people are being admitted to the Developmental Center instead of receiving the support they need to stay in the community.

As people age, often times their health care needs increase. When individuals do not receive the level of health care necessary to maintain their health, they are more susceptible to catastrophic events: falling and breaking a bone, developing infections, depression and other mental health issues, etc.

Additional funding is required to provide for these complex behavioral and medical care needs.

General Funds	$2,336,365
Federal Funds	$3,981,551
Total Funds	$6,317,916

3. **Increase the Personal Needs Allowance for individuals who reside in an ICF/MR facility from $50 to $75 per month**

We are asking you to increase the Personal Needs Allowance from $50 to $75 per month for people living in an ICF/MR facility. The importance of the Personal Needs Allowance for people living in an ICF/MR facility cannot be overstated; it directly impacts the quality of life of a majority of residents.

Residents need this allowance to fulfill various personal needs such as clothing, individual preferences on personal care items, social support (telephone, stationery, etc.) and occasional outings. In our consumer-oriented society, it is important for residents to have an adequate monthly Personal Needs Allowance to be able to participate on the most basic level. This is particularly true for residents who are isolated and have no family or friends to purchase personal items.

4. **North Dakota continues to over-utilize public and private institutions and large group homes.**

Large Group Homes: We are asking that plans be developed to bring our system out of the 80's and into the current decade.

The 8 bed group home model that was favored when the DD system was being created back in 1980 is now outdated, and has been for quite some time. North Dakota has not changed with the times---while other states have---making our system an antique.

Institutions: We are asking you for a commitment to steadily reduce reliance on and ultimately close the North Dakota Developmental Center at Grafton.

Most professionals, family members and persons with intellectual and developmental disabilities believe that large group settings are no longer acceptable living arrangements because of the difficulty of personalizing services. Virtually every credible research study supports the assertion that people are well served in small community settings, including those with behavior issues, or people with complex medical needs.

As such, institutional placement cannot be justified on the programmatic needs of the people who are forced to reside in an institution in order to receive services. The long-term future of services to persons with intellectual and developmental disabilities in North Dakota is in community settings.

North Dakota's rate of utilization of its state-operated Developmental Center exceeded the comparison states (Idaho, Montana, South Dakota, and Wyoming) by a factor of two to one. An analysis revealed that since the District Court dismissed the *Arc v. Sinner* case in 1990 and closed the Court Monitor's office, the reduction in the census of the North Dakota Developmental Center slowed down dramatically, in fact, from 1995-2004 the census at the Developmental Center actually increased from 140 to 146

persons. North Dakota has recently reduced the census at Grafton from 146 persons in 2004 to 130 persons in 2008.

The **Transition to the Community Task Force**, chaired by Alex Schweitzer, Superintendent of the Developmental Center, has put together a transition goal for July 1, 2011 for a maximum of 67 people residing at the Center. This is a reasonable goal and should be supported with a budget that will meet that goal.

The closure of a state institution can generate savings for state government over time because it:

1) Eliminates the high fixed cost of operating a state-owned facility, originally built for many more residents than live there at the time of closure;

2) Shifts some fiscal responsibilities from state government tax revenues to federal Supplemental Security Income (SSI);

3) Increases the likelihood that individuals will engage in productive employment in a local community because they now live closer to employment markets;

4) Utilizes less costly social, educational, religious, and recreational resources in the community rather than the relatively expense, specialized services provided in the institution; and,

5) By renting/leasing residences, the expensive institutional capital construction and remodeling costs necessary for most institutions to remain open and certified for receipt of federal reimbursement are avoided.

5. **Amendment – Section 25-04-05. Qualifications for admission to state facility.**

Admissions and readmissions to the Developmental Center is a long standing problem. The language changes as proposed, are not helpful.

There are two different issues raised.

First, there needs to be a prohibition against admitting anyone to the Developmental Center if the person can be served in any existing community program, or if a community program can be established to serve the needs of the person recommended for admission.

Second, there is a fundamental conflict in allowing the Developmental Center staff to make the determination as to admission. In most cases, Developmental Center staff will conclude that the person is eligible for admission because the Center needs admissions to survive. There should be a screening process at the regional level first, since the regional staff has better knowledge of what programs are in the community and might prevent admission to the Center. The regional staff should include representatives from the DD community service providers and an advocate from the North Dakota Protection and Advocacy Project and a member of the individual's family and the person being considered. Regional staff should be involved in the identification of services that might be needed and are missing at the community level. If they determine that Developmental Center admission should be considered because of the absence of services in the community, regional staff could then get involved in the expansion or creation of programs that might help to prevent admissions.

Preventing admissions through the statute is a good first step, but adequate funding for community services is the long term answer.

Conclusion:

North Dakota has a healthy budget surplus, and this would be the ideal time to invest in our community service delivery system. People are confined to the Developmental Center in Grafton in part because of the lack of appropriate resources in the community. We are having problems downsizing large group homes because of the lack of appropriate resources in the community. When the state has the resources to provide those services in the community and fails to commit the money, it is difficult to conclude that the state has a real commitment to community services and the least restrictive environment as required by state and federal law.

Attached are two reports where you will find information on the structure, financing, and quality assurance of residential and community services, and 10 key issues associated with the potential closure of the Developmental Center at Grafton.

DEVELOPMENTAL DISABILITIES IN NORTH DAKOTA: 2009

EXECUTIVE SUMMARY

A report on the structure, financing, and quality assurance of residential and community services

David Braddock, Ph.D.
Richard Hemp, M.A.

Department of Psychiatry
University of Colorado

January 2, 2009

Contents

Structure and Financing of Residential and Community Services 2
Quality Assurance 9
Conclusion 14
References Cited 17

Listing of Figures and Tables

Figure 1: Percentage of State Spending for Six-Person or Fewer Residential and Community Services: FY 2006 3

Figure 2: Institutional Census Per Capita in North Dakota and the Mountain West/Plains States: 1990-2006 4

Figure 3: Average Annual Residential Services Spending for I/DD Recipients in Four New England States Closing Their Institutions, 1991-2006 8

Figure 4: Most deficient standards for 28 agencies' recent survey and in 2008 surveys 10

The executive summary of study results is presented in two parts. The first provides findings and recommendations specific to the structure and financing of residential and community services. The findings/recommendations pertain to: 1) utilization of institutional and 7+ person group home settings; 2) accessing federal funding for expanding Home and Community Based Services; and 3) continuing the enhancement of wages and benefits for community services staff.

The second part of the executive summary provides an overview of the quality assurance component of the study. Quality assurance challenges in North Dakota include deficiencies on critical standards in accreditation surveys conducted by The Council on Quality and Leadership in Supports for People with Disabilities and Medicaid ICF/MR survey/certification reviews. Although North Dakota has continued to perform generally well in terms of national and regional comparisons, the State faces significant continuing challenges in providing services in integrated environments, connecting participants to natural supports, promoting participation in community living, and insuring health and safety.

In summary, this analysis of the structure, financing, and quality assurance of North Dakota's intellectual and developmental disabilities service system has identified continuing issues as well as some recent advances. Although North Dakota has made some progress during 2006-08, much remains to be done. To be addressed are continued reliance on public and private institutional settings and large group homes. This is manifest in the State's over-utilization of federal-state funding for Intermediate Care Facilities/Mental Retardation (ICFs/MR), and its comparative underutilization of the federal-state Home and Community Based Services (HCBS) Waiver program. North Dakota's rate of utilization of its state-operated developmental center exceeded the comparison states (Idaho, Montana, South Dakota, and Wyoming) by a factor of two to one. North Dakota has recently slightly reduced the census at Grafton from 146 persons in 2004 to 130 persons in 2008. The State, however, had previously increased the census of persons with I/DD at Grafton during 1995-2004. Census reduction at Grafton has plateaued since the April 15, 1990, closing of the Court Monitor's office.

A key issue is the fact that the Accreditation Council is accrediting the North Dakota Developmental Center even though the facility does not comply with the

Council's community integration standards. In fact, compliance with the Court Order of 1989 was tied to compliance with "ACDD standards." The Arc of North Dakota and other organizations representing disability interests in North Dakota should reconsider whether failure to enforce compliance with the Council's integration standards represents appropriate practice for individuals with I/DD currently residing at the North Dakota Developmental Center at Grafton.

Part I
Structure and Financing of Residential and Community Services

Total I/DD Spending Increases Negligibly in North Dakota During 2006-08

1. ***Total I/DD spending essentially plateaued during 2006-08, when adjusted for inflation.***

   - Total adjusted I/DD spending increased only one percent during 2006-08. However, 16+ public and private facility spending declined nine percent during this period. Community spending increased by three percent.
   - North Dakota's fiscal effort also increased negligibly (1%) during 2000-08. Institutional fiscal effort declined nine percent, and community services fiscal effort for persons in 1-15 person settings increased three percent.

Over-Utilization of Institutional 16+ Person Settings and 7+ Group Homes Continues

2. ***North Dakota continues to over-utilize public and private 16+ institutions and 7+ group homes as well. Resource commitments should be enhanced for smaller, family-scale settings for six or fewer persons.***

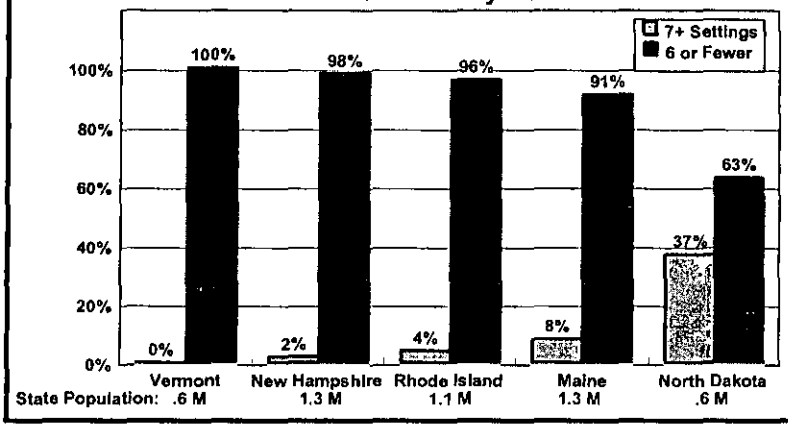
   - During 2006-08, the average daily census of residential settings for 16 or more persons declined by from 325 to 293, a 10% reduction.
   - The decline was made up of a nursing facility reduction of seven persons (- 6%), a decline of seven persons at the North Dakota Developmental Center at Grafton (- 5%), and a decline of 20 persons in private 16+ residential settings (- 27%).
   - During 2007-08, however, the census of 16+ residential settings increased by four persons. Grafton reduced its population by three persons, but nursing facilities increased by six persons and the Anne Carlsen Center ICF/MR increased by one person.

- Persons in 7+ group settings declined by 16 persons (- 3%) during 2006-08. This entailed a reduction of eight persons in 7+ ICFs/MR (- 3%) and a reduction of eight persons in group homes (- 4%).
- After the momentum of the 1980-93 Arc lawsuit diminished, census reduction at the North Dakota Developmental Center at Grafton stalled, and actually increased during 1995-2004.

North Dakota ranked 9th nationally in 2006 in state-operated institutional utilization per 100,000 of the general population among the 41 states that still financed state-operated institutions. Nursing facility utilization in North Dakota also ranked 9th highest nationally. Only New York ranked higher than North Dakota in 7-15 person facility utilization. (North Dakota ranked 2nd nationally.) North Dakota also significantly lags the dominant national trend in the proportion of resources dedicated to six or fewer person settings, ranking 44th in 2006.

Figure 1 compares North Dakota on utilization of six or less and 7+ person measures to four New England states with roughly the same state general population as North Dakota which in 2008 had a 0.6 million general population. North Dakota's proportion of I/DD spending committed to larger settings of seven or more persons was four times that of each of the New England comparison states in 2006.

Figure 1
Percentage of Spending for 6-Person or Fewer Residential and Community Services: FY 2006

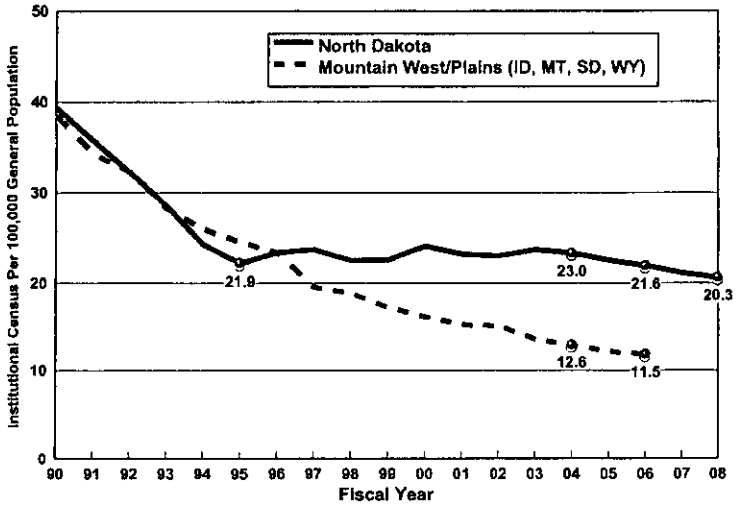


The Mountain West/Plains states are an even more useful comparison group of states than the New England region. These four states include: South Dakota (0.8 million population), Wyoming (0.5 million), Montana (1.0 million), and Idaho (1.5 million). Each of these states, like North Dakota, also has one remaining institution. Their 2006 I/DD institutional censuses were 77 (MT), 90 (ID), 88 (WY), and 162 (SD),

compared to 137 in North Dakota. Although South Dakota's census in 2006 was larger than North Dakota's, all four of these comparison states had lower institutional utilization rates per capita (per 100,000 of the state general population).

The four mountain west/plains comparison states diverged significantly from North Dakota in institutional utilization in 1997, as shown in ***Figure 2***. In 2006, North Dakota's institutional utilization rate exceeded the aggregate of the four comparison states by 88% (21.6 vs. 11.5). Moreover, each of the four comparison states committed a considerably larger share of total I/DD spending to six-person or fewer residential and community services (91-100%) compared to only 63% in North Dakota. North Dakota's utilization rate for state-operated institutional care has been essentially stable during 1995-2008. However, there was modest census reduction in North Dakota during 2004-08.

Figure 2
Institutional Census Per Capita in North Dakota and the Mountain West/Plains States: 1990-2006



On a highly positive note, in 2007 North Dakota received $8.9 million for a "Money Follows the Person" grant from the Centers for Medicare and Medicaid Services (CMS). Effective June 2008 through September 2011, the grant is designed to move approximately 110 persons with mental and physical disabilities from nursing facilities and ICFs/MR to community-based settings. In the case of individuals with I/DD, this involves movement of 30 persons from ICFs/MR (Lipson et al., 2007; North Dakota Department of Human Services, 2008).

Home and Community Based Services Waiver Expansion is Recommended

3. ***Although HCBS Waiver spending in North Dakota surpassed ICF/MR spending in 2007, the State still lags behind most states in Waiver spending. Expansion of the HCBS Waiver should continue.***

- The HCBS Waiver in North Dakota was the means by which much of the progress in developing new six person or fewer residential settings and providing family support funding was accomplished during 2006-08.
  - The census of six person or fewer residential settings increased by 222 persons during 2006-08 (19%).
  - Private ICFs/MR for six or fewer persons increased by 22 persons during 2006-08 (17%); six person or fewer group homes increased by 106 persons (101%), and supported living increased by 95 persons (10%).
- Also during 2006-08, North Dakota's adjusted HCBS Waiver spending increased 10%, and the number of Waiver participants increased by 123 persons (4%).
- Total adjusted ICF/MR spending during 2006-08 decreased by 11%, and the number of ICF/MR recipients increased by eight persons (1%), primarily due to an increased number of persons in six person/fewer private ICFs/MR, coupled with declines in the Developmental Center and in 7+ person ICFs/MR.
- Due to the 2006-08 Waiver spending increase and the ICF/MR spending reduction, North Dakota's HCBS Waiver spending surpassed ICF/MR spending for the first time in 2007.
- Waiver spending per participant, adjusted for inflation, declined from $19.8 thousand in 2006 to $19.1 thousand in 2008 (- 4%).

In 2006, North Dakota ranked 38th among the states in federal-state Waiver spending as a percentage of total I/DD spending, a decline from the rank of 33rd in 2004. North Dakota HCBS Waiver spending only surpassed ICF/MR spending in 2007. (In 2006, only nine states and DC had failed to attain this benchmark. Four of these states and DC are expected to do so in 2008.) The HCBS Waiver is the principal means of expansion of individual and family support, community residences, and related community support services throughout the State. North Dakota should continue to expand the number of HCBS Waiver participants vigorously.

4. ***North Dakota should consider preparing an application for the HCBS "Supports Waiver."***

Supports Waivers have relatively low dollar caps on the services authorized for each beneficiary, but they have flexibility in the selection of services utilized within the cap, and there is the expectation that unpaid family caregivers will provide significant support to Waiver participants. Currently, 18 states have Supports Waivers emphasizing employment services, support brokers, financial management services, and person-directed goods and services. (Smith, Agosta, & Fortune, 2007). The 18 states are: Alabama, Colorado, Connecticut, Florida, Illinois, Indiana, Louisiana, Missouri, Montana, Nebraska, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Tennessee, Texas, and Washington State. Nationwide Supports Waivers information can be accessed at **http://www.hcbs.org/** (use search term "supports waivers").

Strengthen Programs and Funding in Supported Living, Supported Employment, and Family Support

5. ***Adjusted for inflation, spending for supported living in North Dakota declined from 2002 to 2008. Continuing the growth of this vital program is strongly encouraged.***

Supported Living

- During 2006-08, supported living spending (adjusted for inflation) increased one percent. The number of participants increased by 95 persons, however.

North Dakota is a national leader in the implementation of supported living and personal assistance services. In 2006 North Dakota ranked eighth in the nation in supported living spending and fifth in the number of participants supported per capita (per citizen of the general population). However, total inflation-adjusted supported living spending declined by three percent from 2002 to 2008. Growth in supported living spending continues to be needed in North Dakota to provide residential support services for individuals exiting 16+ person public and private institutions and 7+ person group living arrangements and also some individuals with I/DD completing special education programs.

- The HCBS Waiver financed 100% of supported living and supported employment spending, and 94% of family support spending in North Dakota in 2008.

6. ***Programs in supported employment and family support should continue to be strengthened.***

Supported Employment

- Supported employment spending, adjusted for inflation, declined by seven percent during 2006-08. However, the number of workers supported increased by 85 workers (a 28% increment).

North Dakota's spending for supported employment in 2008 remained below its adjusted 1996 level. The HCBS Waiver finances 100% of supported employment spending. The Balanced Budget Act of 1997 authorized Waiver-reimbursed supported employment services. Despite this Waiver support, adjusted overall spending for supported employment declined two percent per year during 1997-2008.

Family Support

- During 2006-08, adjusted family support spending increased by 33%, but the number of families supported declined by three percent.
- Adjusted cash subsidy spending declined 43% during 2006-08, and there was a reduction of 59 families supported.
- Non-subsidy family support spending, adjusted for inflation, increased by 15% during 2006-08 and the number of families supported increased by 39.

Implications of Closing the North Dakota Developmental Center at Grafton

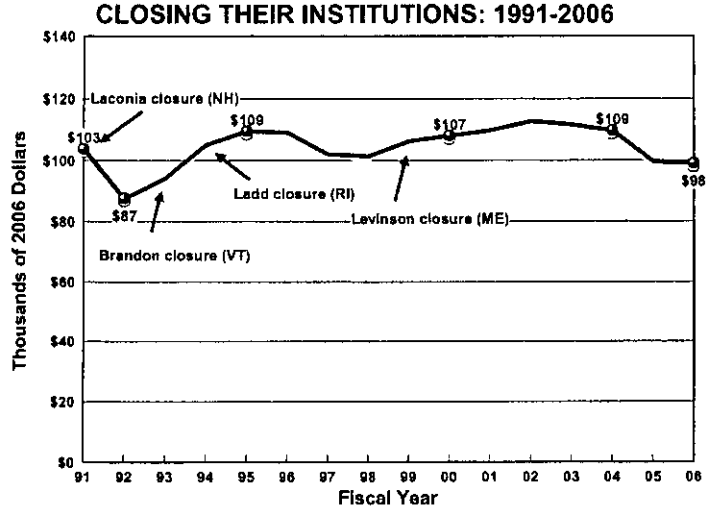
7. What are the implications of possibly closing the North Dakota Developmental Center at Grafton?

Four New England states (Maine, New Hampshire, Rhode Island, and Vermont) offer historical perspectives on post-closure costs of providing community services in lieu of institutional care. These states closed their I/DD institutions during 1991-99. New Hampshire closed Laconia in 1991, Vermont closed Brandon in 1993, Rhode Island closed Ladd in 1994, and Maine closed Levinson in 1999 (Braddock et al., 2008).

We updated through 2006 our previous 1991-2004 analysis of I/DD spending trends after institutional closures in the four New England states (Braddock, 2006). From the dates of the first closure (Laconia in 1991) through 2006, annual spending per statewide residential recipient in the four New England states declined from $103,000 to $98,000 in constant 2006 dollar terms (***Figure 3***). In addition, the number of aggregate

I/DD recipients served in the four states increased by 91% during 1991-06. The number of recipients post-closure increased by 156% in Maine, by 88% in New Hampshire, by 73% in Vermont, and by 47% in Rhode Island.

Figure 3
AVERAGE ANNUAL RESIDENTIAL SERVICES SPENDING FOR I/DD RECIPIENTS IN FOUR NEW ENGLAND STATES CLOSING THEIR INSTITUTIONS: 1991-2006



The closure of a state institution can generate savings for state government over time because it: 1) eliminates the high fixed cost of operating a state-owned facility, originally built for many more residents than live there at the time of closure; 2) shifts some fiscal responsibilities from state government tax revenues to federal Supplemental Security Income (SSI) and, in some cases, to local government sources; 3) increases the likelihood that individuals will engage in productive employment in a local community because they now live closer to employment markets; 4) utilizes less costly social, educational, religious, and recreational resources in the community rather than the relatively expensive, specialized services provided in the institution; and, 5) by renting/leasing residences, the expensive institutional capital construction and remodeling costs necessary for most older institutions to remain open and certified for receipt of federal reimbursement are avoided.

Continue Wage and Benefit Enhancements for Community Staff

8. The North Dakota legislative effort to increase direct support staff wages and benefits is commendable and should be continued.

Wage and benefit deficiencies for direct care staff working with children and adults with intellectual and developmental disabilities is a critical issue across the

country. Higher wages reduce employment turnover and is correlated with an increase in the quality of services. In 2006 and 2007, North Dakota's direct support staff benefited from legislatively sanctioned hourly increases and reached an average statewide wage of $9.77 in 2008. The average direct support wage still lags the North Dakota Developmental Center wage by an estimated $2.00 per hour, and remains three percent below the 2008 U.S. poverty wage for a family of four.

Aging Caregivers Stimulates Demand for Services

9. ***Demand for community I/DD services in North Dakota will continue to be driven by: a) youth aging out of special education; b) individuals in public and private 16+ person institutions seeking alternative placement in community living settings; c) growing supported employment and family support needs; and d) increasing numbers of individuals with I/DD residing with aging caregivers, and requiring residential supports in the future.***

During the 2007/09 biennium, approximately 350 students with intellectual disability, autism and brain injuries will complete special education programs in North Dakota's public schools. An estimated 1,627 individuals with intellectual and developmental disabilities currently live with family caregivers who are aged 60 years or older (see ***Figure 9***, page 16 of the full report). A total of 780 persons in North Dakota currently reside in 7+ person public and private residential facilities. Thus, demand for community and family supports and supported living will continue to grow in the foreseeable future.

Part II
Quality Assurance

Section II of the report analyzed data sets on quality assurance in: 1) Accreditation by The Council on Quality and Leadership in Supports for People with Disabilities; 2) ICF/MR survey and certification surveys; 3) Incidents of substantiated abuse, exploitation, and neglect; and, 4) LRE performance measures for special education districts across the State.

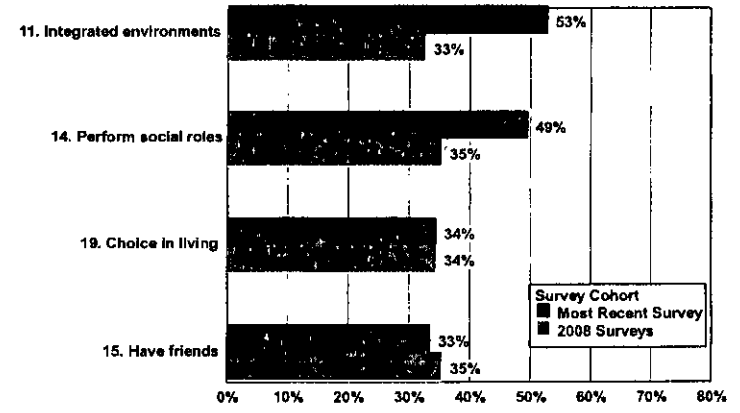
Analysis of Accreditation Results

There were four standards on which both the cohort of North Dakota agencies surveyed in 2008 and the 28 agencies' "most recent surveys" cohort were found deficient on more than 30% of consumers' outcomes/supports (***Figure 4***).

- ***The standards integrated environments, perform social roles, choice in living, and have friends were problematic for more than 30% of the 28 agencies' most recent surveys and for the six 2008 surveys.***

One of these standards, *integrated environments*, was the most problematic for agencies surveyed in North Dakota and also those agencies surveyed nationally by The Council. The standards that proved problematic for North Dakota agencies' participants, in addition to *integrated environments*, were *perform social roles*, *choice in living*, and *have friends*. These standards relate to making connections to other people, choice about with whom time is spent, participation in community environments, and in events such as church, sports, retirement centers, and beauty shops.

Figure 4
NORTH DAKOTA
MOST PROBLEMATIC STANDARDS FOR 28 AGENCIES' RECENT SURVEYS AND 2008 SURVEYS*



*Note: Standards are the four that exceeded 30% deficient for both the most recent cohort of 28 agencies, and for the six agencies surveyed in 2008.

It should be noted that although only six agencies were surveyed in 2008, there was some apparent improvement compared to the cohort of all 28 agencies' most recent surveys during 2004-08 (see ***Appendix 5*** of the full report). These were the standards *integrated environments* and *perform social roles*. There was no difference in the deficiency percentage for *choice in living*; and, for the six agencies surveyed in 2008, there was a slight regression in the standard *have friends*. The North Dakota accreditation

scores in these areas point to a continuing need for the State to expand integrated residential, work, and other support services. Community agencies must also continue to expand opportunities for individuals to interact with people without disabilities.

Analysis of ICF/MR Surveys and Certification

Sixty-eight ICFs/MR in North Dakota, and four units at the North Dakota Developmental Center, were compared to ICFs/MR in CMS Region 8 (Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming) and in the nation as a whole on their surveys in 2006-08 (see ***Appendix 6*** of the full report). "Problematic program and life-safety code requirements" were those on which 10% or more North Dakota ICFs/MR were found deficient, and (simultaneously) on which North Dakota's deficiency percentages were greater than both the regional and national averages.

In 2008, six program requirements and four life-safety code (LSC) requirements were problematic for North Dakota facilities both absolutely (i.e., 10% or more North Dakota ICFs/MR deficient) and relative to the Region and the United States (i.e., deficiency percentage greater than both the Region and the U.S.).

- ***Three program requirement deficiencies related to health and safety.***

  - *Individual medication administration record for each client* (14% North Dakota deficiency)
  - *All drugs administered without error* (21%)
  - *Infection control, active program* (11%)

- ***In addition, three program deficiencies related to the effectiveness of training programs, the interaction of staff with residents of the ICF/MR, and individual program planning.***

  - *Treatment program implemented when Individual Program Plan (IPP) formulated* (36% North Dakota deficiency) (Note: This requirement was a *Condition of Participation* in the Medicaid program.)
  - *Promote the growth, development and independence of client* (21%)
  - *Dine according to developmental level* (32%)

It should be noted that five program requirements were no longer problematic deficiencies in the current study compared to our 2007 study: 1) *treatment risk, can refuse*; 2) *report alleged abuse, neglect immediately;* 3) *individual program planning and*

continuous active treatment; 4) *train for privacy and independence;* and 5) *individual program plan data in measurable terms.*

- ***The four life-safety code deficiencies problematic for North Dakota facilities addressed physical plant health and safety issues.***

- *Corridor doors* (14% North Dakota deficiency)
- *Hazardous areas - separation* (25%)
- *Remote exits* (11%)
- *Other (surveyor did not specify)* (61%)

Review of Trends for Incidents of Abuse, Exploitation, and Neglect

Reports on abuse, exploitation, and neglect from the North Dakota Protection and Advocacy organization are, as previously noted, no longer identifiable by agency or program site. The following is a list of the most frequently cited incidents, across all sites during 1996-2008. It should also be noted that data for 2008 were for a partial year (through August 2008 for the Developmental Center and through May 2008 for other programs). There were seven categories: day programs, group homes, ISLA/SLA, family support, developmental center, supported employment/extended employment (SEP/EP), and community. Some of the reported trends may be an artifact of these missing data (see ***Appendix 8***).

- ***Seven categories of neglect and four categories of abuse were cited 45 times or more during 1996-2008. They are listed in rank order by category.***

Neglect

- *Personal safety* (432 incidents)
- *Medication errors* (366 incidents)
- *Personal care* (265 incidents)
- *Habilitation/discharge planning* (126 incidents)
- *Other* (91 incidents)
- *Failure to provide medical treatment* (68 incidents)
- *Written habilitation plan* (45 incidents)

Abuse

- *Physical* (144 incidents)
- *Verbal* (97 incidents)
- *Restraint/isolation/seclusion* (73 incidents)
- *Threats of retaliation* (48 incidents)

The number of incidents in one category of abuse--*verbal abuse*—increased nearly three-fold from 2006 to 2007 (from 8-22). Moreover, the number of reported incidents based on partial data for 2008 (11) is likely to meet or exceed the number of *verbal abuse* incidents reported for the full year 2007. There were no incidents in four categories of abuse during 2006-08 (*threats of retaliation*, *sexual abuse*, *inappropriate/excessive meds*, or *involuntary/aversive behavior therapy*). Three categories of neglect, *personal safety, medication errors* and *personal care,* have been reported consistently over the years of our analysis, and they continued to increase in 2007. There was a decline in the number of reported abuse incidents for *habilitation/discharge planning*. In addition, there were 50 substantiated incidents of *exploitation: financial* across all sites during 1996-08.

Special Education District Performance Reports

In this 2009 report, as noted, we received North Dakota Special Education District Performance "Report Cards" for 189 districts across the state. There were 156 districts large enough for data to be published (i.e., more than 10 special education students). We calculated summary statistics on Least Restrictive Environment (LRE) placements of special education students across the state.

Regular Classroom:

- Sixteen of the 156 districts reported that 100% of their special education students remained in their regular classroom 80% or more of the day;
- The statewide average regular classroom percentage of participation was 79%;
- Ninety of the districts, in addition to the 16 with 100% regular classroom attendance, exceeded the statewide average;
- The remaining 50 districts that were below the statewide average had student participation rates in regular classrooms ranging from 31-78%; and
- Nineteen districts' students had regular classroom participation rates below 70%.

Separate Classrooms:

- More than half, 84 of the 156 special education districts, reported no LRE placements in separate classrooms (i.e., no students were removed from regular classes for more than 60% of the day);
- The statewide average for use of separate classrooms was 4%;

- For the 72 districts that utilized separate classrooms, rates ranged from 1-18%; and
- Forty-five districts exceeded the statewide average for separate classroom placement rate, and in 16 districts separate classroom usage was 7% or greater.

Separate Facilities:

- Fifty-three of the 156 North Dakota special education districts reported using "public or private separate schools, residential placements, or homebound or hospital placements";
- The statewide average for use of separate facilities was 2%;
- Thirty-nine of the 53 districts were above the statewide average;
- The rates for the 53 districts using separate facilities ranged from 0.7-13%; and
- Fourteen districts had in excess of 5% of their special education students in separate facilities.

Conclusion

The nation is now facing many economic and budgetary challenges. Forty-one states confront budget shortfalls in this fiscal year (FY 2009) and/or the next. The total projected nationwide budget gap in 2009 is $72 billion--12.2% of the states' general fund (McNichol & Lav, 2008). North Dakota is not one of the 41 states projecting fiscal year 2009 or 2010 budget gaps. In fact, in 2008 North Dakota posted a $740 million budget surplus, "a staggering figure for a state that ranks 48th in population and whose general fund budget is about $1.2 billion a year" (Fehr, 2008, p. 1).

> North Dakota's cheery circumstance...can be explained by an odd collection of factors: a recent surge in oil production...; a mostly strong year for farmers...; and a conservative, steady, never-fancy culture that has nurtured fewer sudden booms of wealth like those seen elsewhere...and also fewer tumultuous slumps (Davey, 2008).

North Dakota's fiscal year 2009 began with a $366 million balance, and the State projects an ending 2009 balance of $116 million (National Governors Association, 2008). Moreover, as noted, North Dakota in 2008 lead all states in economic momentum (Federal Funds Information for States, 2008).

North Dakota has responded positively in the past to challenges to improve the capacity and quality of intellectual and developmental disabilities residential and community services. North Dakota has a remarkably strong state budget with which to address pending service needs. In this context, principal priorities for North Dakota in I/DD services are as follows:

1. Continue to prioritize growth of HCBS Waivers, including possibly a Supports Waiver, to finance community residential and related support services;
2. Replace outdated eight-bed group homes with more family-scale individualized living arrangements in community settings;
3. Increase family support and supported employment programs;
4. Continue to enhance wages and benefits for direct support staff; and
5. Steadily reduce reliance on and ultimately close the North Dakota Developmental Center at Grafton. Develop appropriate individualized community residential services and supports such as Individualized Supported Living Arrangements (ISLA) and similar options. Analysis revealed that since the District Court dismissed the *Arc v. Sinner* case in 1990 (Chronology, 1990) and closed the Court Monitor's office, the reduction in the census of the North Dakota Developmental Center at Grafton slowed down dramatically. In fact, from 1995-2004 the census at the Developmental Center actually increased from 140 to 146 persons.

Quality Assurance Challenges

North Dakota agencies and facilities compare reasonably well to others in the region and across the nation. However, quality assurance data analyzed in this report reveal significant and recurring problems in key areas, and at individual facilities. The accreditation standards *integrated environments* and *perform social roles* were problematic for nearly 50% of all consumers in agencies' most recent surveys. Deficiencies for ICFs/MR included *individual medication administration records, administering drugs without error*, and *infection control.* Incidents of abuse, exploitation or neglect including *verbal abuse, personal safety, medication errors*, and *personal care* were also noted. Problematic areas revealed in critical accreditation standards, ICF/MR deficiencies, and in abuse, exploitation, and neglect incident investigation procedures are also priorities for direct support staff and manager training programs.

As noted in our 2007 study, critical accreditation standards in *choice in living, choice in work* and *integrated environments* represent a lack of resources in supported employment and supported living, and the congregate-care orientation of many North Dakota residential settings. The analysis of Medicaid ICF/MR certification requirements also pointed to the need for consumers to be more integrated into local communities. Part I of this report focused on limitations in the structure and financing of services. The findings of the quality assurance component of this study remain, as in our previous

studies, consistent with those fiscal limitations noted. Although modest progress has been achieved in North Dakota during 2006-08, program development and funding challenges in I/DD services in North Dakota remain quite similar to those noted in our study of two years ago.

E

TESTIMONY
HOUSE BILL 1012 – DHS Appropriations
Developmental Disabilities - LTC Continuum
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 26, 2009

Chairman Pollert, members of the House Appropriations Human Resources Division, I am Barbara Murry, Executive Director of the North Dakota Association of Community Providers. I am here today to testify on the developmental disabilities section of the long term care continuum in HB 1012, DHS appropriations.

Today, as a part of NDACP's testimony, you will hear from Sandi Marshall, Executive Director of Development Homes, Inc. in Grand Forks, Jon Larson, Executive Director of Enable, Inc. in Bismarck, and Cindy Vollmer, a parent of a young lady with developmental disabilities.

The North Dakota Association of Community Providers is made up of 26 organizations across the state. We represent approximately 4,500 staff, 3,900 of whom are Direct Support Professionals, or DSP's. We serve approximately 4,800 individuals with developmental disabilities. Services are most often, lifelong. Services may be delivered in an all inclusive service and payment source, such as the Intermediate Care Facility for the Mentally Retarded (ICF/MR) group homes, or through Home and

Community Based Waiver services, which includes Individualized Supportive Living Arrangement (ISLA), some group home settings, In-Home Family Support Services, and others.

Ninety-nine percent of the typical provider funding comes through the Department of Human Services. In addition to people with developmental disabilities, many Providers serve other populations, including people with mental illness, traumatic brain injury, the elderly, children and families, and people with substance abuse. Twelve providers are licensed as agency QSP's. This means that Provider's are paid primarily with Medicaid dollars. In DD, Providers receive referrals from the Department of Human Services Developmental Disabilities Program Management System. Services are funded through individual contracts with the DD Division or through purchase of service agreements. Rates are set by the DD Division and are not subject to provider control as market conditions change.

<u>Providers are requesting support for five main areas.</u>

I will address inflationary increases, wage equity, benefits, and critical staffing needs. Jon Larson will follow up with comments on ISLA, Transition to the Community, and the Personal Needs Allowance. Attachment (A) is NDACP's platform, with the dollar amount from the corresponding OAR, if there was one developed.

1. <u>The first is an inflationary increase of 7% each year of the biennium</u>. This increase is contained in the Governor's budget. The cost is a total of 28.5 Million dollars, of which 10.5 Million is in General Funds. We are a very staff intensive industry. Approximately 80% of provider costs fall in the area of salary and benefits. Providers pass along wage increases in one of several ways.

   a. The most common method is to give all staff the full percentage increase allocated by the Legislature in base pay, this year proposed at 7%.
   b. Some providers use a merit pay methodology. They may, for example, give out 5% to all staff, retaining the remainder for merit pay for high achievers.
   c. Some providers have a set pay schedule within their company and the base hourly salary increases on that schedule.

Providers have had significant compression within their pay scales. During 2002, 2003, & 2004, there were no inflationary increases. Attachment (B), developed by DHS. That may mean that staff who have worked at an agency for five years, six years, or seven years, respectively, all make the same wage. The longevity difference in other years may be as little as $.10 per hour.

The 7% increase would apply to all areas within the provider budget. This includes the 33% benefits, insurances, gas, etc. Providers typically give out wage increases, based on the increase granted by the legislature, before funding benefit increases. Providers use the base reimbursement to develop a pay scale for their organizations.

To give us a representative sample, one of our largest providers calculated the average wage at their organization for DSP's, regardless of longevity. The average DSP wage is $11.38 per hours. The average DSP reimbursement to Providers by the state is also $11.38, which indicates that all wage increases provided by the legislature are being passed along to staff. Most often, the inflationary increase doesn't cover the cost of rising health benefits. Providers continue to have to reduce health benefits to staff. For this reason, we have asked to have fringe benefits increased from 33% to 36%.

2. <u>Providers are requesting a $2.00 per hour market adjustment / equity increase for all staff in the organizations.</u>

   a. <u>Low Wages</u> - A wage study completed in June of 2008 (Attachment C) shows that the provider starting wage of $9.08 is $2.28 behind our competitors. Attachment (D) shows the percentage of all staff, DSP's and professional, in various wage categories. Twenty-five percent of

provider staff earn less than $10 per hour. Seventy-eight percent of provider staff earn less than $12.49 per hour, and ninety percent of staff earn less than $14.99 per hour.

b. Turnover – Providers are experiencing critical market shortages. Attachment (E). After receiving the 4% inflationary increase and $.60 per hour equity increase from the 2007 Legislature, turnover decreased to 41%, the lowest since we began tracking turnover in 2001-2002. However, with increasing market pressure for employees in North Dakota, the decrease didn't hold and turnover has increased to 48.5% for the first quarter of this year. Approximately 1,600 DSP's left our industry last year. There were approximately 250 vacancies at any point in time. Open shifts must be covered by other staff, incurring significant overtime for providers.

Providers are looking to deal with the critically high turnover on several fronts, in additional to asking the Legislature for increased salary dollars. We continue to develop and offer quality training to staff. Management and supervisory training is coordinated by our Association. Programmatic skill training to DSP's and professional staff is developed at Minot State University through the Center for Persons with Disabilities, who have a

contract with the DD Division for module development and updates. This module training is part of a career ladder established through MSU. Upon completion of the module curriculum, they will complete the special education requirement for the Associate in Science. If they choose, they may apply that coursework to a Bachelor's of Science, as well.

We have also begun discussion with the Department of Commerce to be a part of the Governor's Talent Initiative. We anticipate serving as a Beta testing site and will undertake Talent Pipeline Mapping to develop better methodology to look at where we are recruiting most staff, where they go upon leaving our industry, and where we can make the greatest impact in the system, to reduce turnover.

Profile of staff: Because the organizations located in university towns do hire students, many have the misconception of our industry being one of college students who will leave regardless of our efforts to slow turnover. However, our statistics show that our average staff is significantly older.

3. Critical Needs Staffing – Funding for this concern can be found in an OAR's developed by the Department. The acuity needs of individuals currently living in the community has not been addressed with adequate staffing needs. As you heard in the testimony by Alex Schweitzer, Superintendent of the Developmental Center, new admissions related to

the community's lack of resources continues to be an issue. The Department completed a survey to determine the level of staffing that would be required to meet the critical needs of individuals with significant medical or behavioral concerns. The total cost of this OAR is 6.3 million, of which 2.3 million is general funds. Dan Howell, Executive Director of the Anne Carlson Center for Children will expand on the issue of critical need staffing.

Chairman Pollert, this concludes my testimony. I would be happy to answer any questions.

Testimony on HB 1012
House Appropriations Committee – Human Resources Division
Representative Chet Pollert, Chair
January 26, 2009

Chairman Pollert, members of the Human Resources Division, I am Sandi Marshall, President of the North Dakota Association of Community Providers (NDACP), and Chief Executive Officer of Development Homes, a large non-profit DD provider agency in Grand Forks. Thank you for the opportunity afforded to NDACP to provide information today relative to the needs of our industry, particularly on behalf of both the people we serve and the many citizens of North Dakota that we employ to provide those services.

I have had a unique opportunity in this state to serve in a variety of positions within the community system that serves people with developmental disabilities in North Dakota over the past 32 years, both in state government and in the private sector. These experiences included 18 years with the Department of Human Services, including managing one of the first group homes in the state beginning in the mid-70's, then overseeing the regional DD service development and deinstitutionalization in Grand Forks during the 1980's, and serving as the DD Division Director in the late 80's through mid-90's, a time of reaching major milestones in the development of community services in the state, through the conclusion of the Arc Lawsuit. I am proud of what we created together, and what you supported to bring our services from some of the least supported in the country to ones we can be proud of. As a state, we have accomplished a great deal, but we are now at a pivotal point as we look to the future and move to the next level of community care for all of our citizens with disabilities.

Now, serving on the private provider side, I can truly say that I have gained a new and enormous respect for my colleagues in this industry, and for the immensity of the work involved, and for the many people who provide these services at all levels within our organization. The day to day reality is more than I ever had imagined. This is an industry that serves the most vulnerable people in the state, from the very young to the very old. The sheer responsibility for maintaining safety, while promoting maximum independence in the lives of the people we serve is awesome. We serve people who are some of the most medically fragile in the state, and some who have emotional and behavioral challenges that need constant, intense staff support to be safe from self-harm.

I also have been struck by the amazing dedication of the over 4,500 employees of DD providers across the state who provide care and support, 24 hours a day, 7 days a week. Every day, I see committed staff who work many overtime shifts, or work for more than one provider agency, many, many hours per week, because they care, because they feel a responsibility to cover shifts, and because they need to work more than one job to make a living. As an example, one of our residential managers at DHI works two full-time jobs to get by and support her family, one for our agency and one for another DD provider. Staff holding multiple jobs is a common phenomenon across our industry.

The economic impact of the DD industry is great. By far our largest expense is for our workforce; for salaries and benefits. We purchase in our local communities, and we give back to North Dakota. Additionally, many of the

people we serve work in the communities across North Dakota, and contribute to our local economies, filling a workforce need.

And yet, the crisis our industry faces is the difficulty in maintaining a stable, consistent workforce. While our state has enviable low unemployment, the reality for providers is that we cannot provide a competitive wage that retains our workforce. With low unemployment, we may be able to attract people to our jobs, but once they find out the degree of skill and risk involved, we have a hard time keeping them when they can go to competing businesses and get a job for the same wages with much less responsibility.

Our industry also faces another crisis; and that is potential stagnation. We have people living in institutions who could be served in the community, and people waiting for services who are already in the community. We have increased needs as the people we serve age and lose skills, or as medical conditions deteriorate. However, the current, outdated reimbursement restrictions do not allow for new, critical client needs to be met with increased staffing in a very responsive manner, sometimes resulting in agencies providing for more services than are reimbursed.

So today, we are here to support the provisions in the Department of Human Services' budget that help to address these both of these crises. We are pleased that the budget contains funding for 7% inflationary increases each year of the biennium. This will go a long way towards helping to address ever-rising costs, such as those for health benefits, food, transportation and utilities, and to pass on necessary cost-of-living raises to our employees. Just as our costs of serving clients has been impacted by rising costs of

living, so have those for our employees. Employees have had to pick up a larger share of their medical costs, for example, as health insurance coverage is eroded as a result of the impact of rising premiums on our organizations.

We also urge you to consider funding a catch-up raise of $2 per hour for our employees. Evidence shows that we are behind our competitors and that an increase beyond an adjustment for inflation is necessary in order for this industry to be competitive in the marketplace, and to entice people to stay and make this work not only their passion but their profession.

We support funds that will help providers to break even on the administrative costs of caring for people with high needs in Individualized Supported Living Arrangements. The Department of Human Services budget includes those provisions, and we are grateful for their acknowledgement of these needs. My organization is a large provider of ISLA services, with over 50 individuals in this service, many with complex behavioral and medical needs. Without the proposed reimbursement changes, we would continue to lose money on administration of this service, which we only are able to cover through our charitable gaming revenues.

We also support additional funds to serve people who will transition from schools and from the Developmental Center. The community provider system stands ready to serve these individuals, given increased allocations to our regions to meet their needs.

However, in addition to more slots to serve people in the DD Home and Community Based Waiver programs, new and innovative programs must be

developed to build community capacity. We are operating on service models created in the 1980's. In order to truly stay on course with the national direction of services, we need to embrace technologies and new ways of supporting people in the community that are different than what we have done so far.

One potential way to support innovation in service development and to build community capacity for further deinstitutionalization, would be through the re-establishment of the DD Loan Fund. The availability of very low interest loans could help to support innovative projects that would strengthen our service system, while serving as a one-time funding strategy. As an example, my organization has just been awarded a $720,900 HUD grant to construct a facility to serve 5 young adults with Autism in Grand Forks. The grant covers much, but not all, of the construction costs. A one-time construction or equipment loan or grant could reduce ongoing expenses.

Again, thank you for the privilege of addressing you today, and for your past and continued support. I would be happy to answer any questions you have.

G

Testimony on SB 1012
House Appropriations
Sub Committee on Human Services
January 26, 2009

Chairman Pollert and members of the committee, my name is Jon Larson. I am the executive Director of Enable, Inc, a licensed service provider for people with developmental disabilities in Bismarck and Mandan. I am also here today to testify on behalf of the North Dakota Association of Community Providers (NDACP).

I have been in my present position at Enable for nearly 25 years and during that time I have seen a lot of changes in the developmental disability system. I have seen the system take on what seemed to be an impossible task to create community services for people who at the time we thought would be extremely difficult to serve. We have expanded the service delivery system in creative and flexible ways that serve people's unique needs in a wide variety of community settings. We have provided appropriate community settings for a lot of people who prior to this expansion were institutionalized inappropriately. We have developed a service delivery system in North Dakota that we all can be proud of.

There remains much more to be done. The developmental disability system faces some daunting challenges.

- There are more people in our institutions that need community placement.
- Provider staff turnover continues at an unacceptable rate.
- Workforce shortages make maintaining appropriate staffing difficult.
- Low wages require much of our workforce to take more than one job.
- Health Insurance premium increases are eroding the coverage our staff receives.
- Our reimbursement system needs to encourage more creativity.

DD Providers are working with the Department of Human Services to address these challenges.

Several providers participate on the Transition to the Community Task Force that is chaired by Alex Schweitzer. This task force consists of developmental center staff, case management staff, central office staff, community provider representatives and representatives from advocacy and consumer groups. We have met several times and studied the complexities involved in continuing to place people from the developmental center and established several goals and recommendations. One of our goals is to place people at the developmental center into appropriate community settings. To meet this goal we need to be able to assure that we can continue to have adequate numbers of well trained direct support professionals. We also need to have some changes in our reimbursement procedures to encourage providers to serve people with challenging needs.

Some of these issues were addressed by the Department and are contained in the executive budget and some are contained in optional adjustment requests. We are pleased to see that the governor included a 7% inflationary increase in each year of the biennium. This is necessary to meet the ever increasing cost of doing business and will assist us in meeting the increased cost of gasoline and utility costs, food costs, insurance premium increases, and increased medical supply costs. This inflationary increase will also be used for wage increases for staff.

We are also appreciative of the Departments work on the ISLA administrative reimbursement issue and are glad that it was included in their budget. This change corrects a long standing problem that resulted in a disincentive to serve people with high needs in ISLA settings. The new system will base administrative reimbursement on the needs of the person receiving services by creating five levels of administrative reimbursement instead of two. This should allow providers to cover their administrative cost allocation and minimize the losses that have been occurring in this area. It removes one of the barriers providers have faced in trying to serve people from the Developmental Center in Grafton.

As has been mentioned by others, we also need the increase in wages and benefits that were included in the DHS optional budget requests. This is needed to more adequately pay our staff for the invaluable work that they do. I want to describe for you the "typical" direct support professional employed at our agency.

The average age of our employees is 36 ½ years and the average length of service at Enable is 5.8 years. 80% of our employees are women. I felt it was important to mention this to you so you can understand that we are not simply providing entry level jobs to people. The jobs that we have require extensive training and a lot of dedication from our staff. For most of them this is the career they have chosen. Unfortunately, many of them need to work more than one job to make ends meet.

We have been in front of you before with similar requests and we are appreciative of the support you have provided. I know that one of your questions is what do providers do with the increases we provide? There are a number of factors that a provider must consider when determining wage increases, such as merit, longevity, training, and benefit increases. Each provider may do thing slightly differently but you can be assured that those increases are being used for wages and benefits. Enable has provided the wage increases to our employees as the legislature has designated but one of the issues we continue to struggle with is that the cost of our group health insurance premium consistently increases at a higher rate than our inflationary increase and the result is an erosion of the benefit our employees receive. Last July, our employees received a 5% wage increase but they also had to pay a larger portion of their health insurance premium.

In order to meet the challenges ahead of us we need to provide a competitive wage and benefit package for our staff to attract and retain sufficient numbers of well qualified employees to meet the needs of the people we currently serve and the people who are waiting to be served in the community.

Finally, I would like to voice my support for the increase in the personal needs allowance that was included in the executive budget. The people we serve try to live rich and rewarding lives in the community on a very limited income. Although this increase is very modest it will help with some of their expenses.

Thank-you for this opportunity to testify today. I would be glad to answer any questions you may have.

Jon Larson, Executive Director Enable, Inc.
North Dakota Association of Community Providers (NDACP)

TESTIMONY
HOUSE BILL 1012 – DHS Appropriations
Developmental Disabilities - LTC Continuum
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Barbara Murry, Executive Director of the North Dakota Association of Community Providers. I am here today to give very brief testimony on the developmental disabilities section of the long term care continuum in HB 1012

The North Dakota Association of Community Providers is made up of 26 organizations across the state. We represent approximately 4,500 staff, 3,900 of whom are Direct Support Professionals, or DSP's. We serve approximately 4,800 individuals with developmental disabilities. Services are most often, lifelong. Ninety-nine percent of the typical provider funding comes through the Department of Human Services.

We are requesting your support in a number of areas of this bill. I will be glad to provide more information when you conduct the public hearings before the subcommittee.

1. Inflation and Equity Increases. We are requesting your support for an inflationary increase of 7% each year of the biennium. Providers are also requesting a $2.00 per hour equity increase for all staff in the organizations. We additionally request that you remove the 90th percentile application of the wage increase included by the House, as this will create

significant personnel problems due to wage compression and inequity between 26 different agency pay scales throughout the state.

2. We ask that your support the five level administrative payment structure to providers of ISLA services, as described in Brenda Weisz' testimony. This will increase services to people with the most severe disabilities.
3. Critical Needs Staffing and intense medical needs for children and adults - The acuity needs of individuals currently living in the community has not been addressed with adequate staffing. This results in new admissions to the Developmental Center, at a much higher cost to the state. We ask that you support the funding included in DD grants for this children in family homes and adults served by providers. Critical needs staffing will be addressed further by the Anne Carlson School.
4. We also ask that you support the funding in the Developmental Center budget for increased community placements.
5. We ask that you support the increase to the Personal Needs Allowance in the Governor's budget, and the increase from $50 to $75 which was included by the House for those in ICF/MR services.

Chairman Holmberg, this concludes my testimony. I look forward to the opportunity to expand on these issues before the subcommittee or at another time. I would be happy to answer any questions.

Testimony on SB 1012
Senate Appropriations Committee
March 09, 2009

Chairman Holmberg and members of the committee, my name is Jon Larson. I am the executive Director of Enable, Inc, a licensed service provider for people with developmental disabilities in Bismarck and Mandan. I am also here today to testify on behalf of the North Dakota Association of Community Providers (NDACP).

I have been in my present position at Enable for nearly 25 years and during that time I have seen a lot of changes in the developmental disability system. I have seen the system take on what seemed to be an impossible task to create community services for people who at the time we thought would be extremely difficult to serve. We have expanded the service delivery system in creative and flexible ways that serve people's unique needs in a wide variety of community settings. We have provided appropriate community settings for a lot of people who prior to this expansion were institutionalized inappropriately. We have developed a service delivery system in North Dakota that we all can be proud of.

There remains, however much more to be done. The developmental disability system faces some daunting challenges.

- There are more people in our institutions that need community placement.
- Provider staff turnover continues at an unacceptable rate.
- Workforce shortages make maintaining appropriate staffing difficult.
- Low wages require much of our workforce to take more than one job.
- Health Insurance premium increases are eroding the coverage our staff receives.
- Our reimbursement system needs to encourage more creativity.

DD Providers are working with the Department of Human Services to address these challenges.

Several providers participate on the Transition to the Community Task Force that is chaired by Alex Schweitzer. This task force consists of developmental center staff, case

management staff, central office staff, community provider representatives and representatives from advocacy and consumer groups. We have met several times and studied the complexities involved in continuing to place people from the developmental center and established several goals and recommendations. One of our goals is to place people at the developmental center into appropriate community settings. To meet this goal we need to be able to assure that we can continue to have adequate numbers of well trained direct support professionals. We also need to have some changes in our reimbursement procedures to encourage providers to serve people with challenging needs.

Some of these issues were addressed by the Department and are contained in the executive budget and some are contained in optional adjustment requests. We are pleased to see that the governor included a 7% inflationary increase in each year of the biennium. This is necessary to meet the ever increasing cost of doing business and will assist us in meeting the increased cost of gasoline and utility costs, food costs, insurance premium increases, and increased medical supply costs. This inflationary increase will also be used for wage increases for staff. The House reduced this inflationary increase to 6% and 6%. We hope that you will consider restoring this inflationary increase to the 7% and 7% as provided in the executive budget.

We are appreciative of the Departments work on the ISLA administrative reimbursement issue and we were happy to see it included in the executive budget. This change corrects a long standing problem that resulted in a disincentive to serve people with high needs in ISLA settings. The new system will base administrative reimbursement on the needs of the person receiving services by creating five levels of administrative reimbursement instead of two. This should allow providers to cover their administrative cost allocation and minimize the losses that have been occurring in this area. It removes one of the barriers providers have faced in trying to serve people from the Developmental Center in Grafton.

We also need the increase in wages and benefits that were included in the DHS optional adjustment requests. This is needed to more adequately pay our staff for the invaluable

work that they do. The House funded half of this request by allowing for an increase of $1.00 an hour to 90% of our staff. We hope the Senate will consider adding to this increase.

In an attempt to dispel the myth that we only provide entry level jobs for people, I thought you might find it interesting to hear what a "typical" direct support professional employed at my agency looks like. 80% of our employees are women, the average age of our employees is 36 ½ years and the average length of service at Enable is 5.8 years. The needs of the people we serve in community settings are quite complex and the jobs that we have require extensive training and a lot of dedication from our staff. For many of them this is the career they have chosen. Unfortunately, many of our employees need to work more than one job to make ends meet.

In order to meet the challenges ahead of us we need to provide a competitive wage and benefit package for our staff to attract and retain sufficient numbers of well qualified employees to meet the needs of the people we currently serve and the people who are waiting to be served in the community.

I would also like to voice my support for the increase in the personal needs allowance that was added by the House. This change would allow the people we serve in our ICF/MR group homes to keep $75 a month to pay for personal items, clothing and community activities. The people we serve try to live rich and rewarding lives in the community on very limited incomes.

We have been in front of you before with similar requests and we are appreciative of the support you have provided. We hope that you will consider, in these interesting economic times, to make an investment in the future of some of our most vulnerable citizens.

Thank-you for this opportunity to testify today. I would be glad to answer any questions you may have.

Jon Larson, Executive Director Enable, Inc.
North Dakota Association of Community Providers (NDACP)

F

Amy B. Armstrong
North Dakota Center for Persons with Disabilities (NDCPD)
at Minot State University
North Dakota Medicaid Infrastructure Grant (ND MIG)
Testimony - HB 1012
House Appropriations Committee - Human Resources Division
Representative Chet Pollert, Chairman
Monday, January 26th, 2009

Chairman Pollert and members of the Appropriations Committee - Human Resources Division, I am Amy Armstrong, Project Coordinator for the North Dakota Medicaid Infrastructure Grant (ND MIG) at the North Dakota Center for Persons with Disabilities (NDCPD) at Minot State University. Thank you for the opportunity to present testimony in favor of House Bill 1012. In particular, I would like to express support for the proposed 7% & 7% increase for Qualified Service Providers (QSPs) and other providers as recommended in the Governor's budget; funding for the development and implementation of an Aging and Disability Resource Center (ADRC); and support for increased home and community based services (HCBS) for the elderly and people with disabilities of North Dakota.

There is a plethora of current and past research that supports HB 1012. Attachment A lists various studies and reports that have been issued regarding long-term care and HCBS. These reports contain an abundance of recommendations to drawn upon as North Dakota considers ways to improve its continuum of care system. Several noteworthy themes throughout these reports include *recurring* recommendations for improving access to case management, development of a streamlined single point of access to services or an ADRC; and assuring that consumers have informed options and better access to services, particularly home and community based services and qualified services providers (QSPs).

In addition to these recommendations, it is well documented that ND's seniors and people with disabilities desire of to remain living and working in

their homes and communities for as long as possible. Without the continued and increased support for ND's HCBS, QSPs and DD providers; many ND's will not be able to maintain their independence and community employment.

In 2008, the ND MIG project disseminated surveys and participated in meetings with ND QSPs. QSPs expressed their thoughts, concerns, and recommendations for improving their work. Specifically, concerns and recommendations regarding consistent reimbursement increases; consideration for travel costs; access to affordable health insurance and benefits; and access to training are all important issues to QSPs. Also apparent was the QSPs' dedication to the ideals of home and community-based care.

After careful analysis of past and more current data, including the surveys of QSPs, surveys of other HCBS providers and analysis of state HCBS data; this information was used to develop the report, *At a Crossroad, North Dakota Home and Community Based Services – An Overview and Recommendations,* compiled by Dave Zentner, Consultant for the ND MIG[1]. The recommendations of this report, as highlighted in Mr. Zentner's testimony, also support HB 1012.

Again, I urge the committee to support HB 1012; in particular the proposed 7% & 7% increase for QSPs and other providers, funding for ADRCs, and increased funding for HCBS.

Thank you for your time. I would be happy to answer any questions.

Senate Appropriations
Tom Alexander – Testimony
North Dakota Medicaid Infrastructure Grant (ND MIG),
North Dakota Center for Persons with Disabilities (NDCPD)
at Minot State University
House Bill 1012

Chairman Holmberg and members of the committee, my name is Tom Alexander. I am the Project Director for the ND Medicaid Infrastructure Grant (NDMIG) with the North Dakota Center for Person with Disabilities at Minot State University. I greatly appreciate the opportunity to present testimony on HB 1012.

The purpose of my testimony is to ask you to reinstate a portion of the DHS's OAR for the Peer Support Program into the Human Services Budget. The following information will briefly explain the Peer Support Program and Services.

Peer Support Services refer to support provided *by* people with mental illness *to* others with mental illness. They are consumer-centered services with a rehabilitation and recovery focus. They are designed to promote skills for managing and coping with symptoms while facilitating the use of natural resources and the enhancement of community living skills. *Peer Support Services* are provided by a person who has progressed in their own mental health recovery and is working to assist other people with mental health issues. These individuals are called *Peer Support Specialists*. Because of their life experiences, *Peer Support Specialists* have expertise that professional training cannot replicate. Peer Support Services are an integral piece of current state-wide efforts to create a Recovery-oriented, evidence based, consumer-driven Mental Health system of

care.

Peer Support Specialists provide specific interventions including support and assistance with:

- Identifying individual strengths, resources, preferences, and choices;
- Identifying existing natural supports for development of a natural support team;
- Developing crisis management plans;
- Identifying risk factors related to relapse & development relapse prevention plans & strategies;
- Promoting self-advocacy & participation in decision-making, treatment, & treatment planning;
- Building a natural support team for treatment and recovery; and
- Developing functional, interpersonal, coping, and community living skills that are negatively impacted by the person's mental illness.

In the fall of 2007 NDDHS submitted a proposal to the Substance Abuse and Mental Health Services Administration (SAMHSA) titled, "Transformation Transfer Initiative (TTI)." ND was fortunate enough to be one of ten states selected to be funded for the initiative. The TTI project supported new and expanded efforts to improve the capacity and effectiveness of mental health systems that foster recovery and meet the multiple needs of consumers.

A variety of consumers, stakeholders and professionals were invited in January 2008 to be a part of the TTI – Peer Support Initiative. The purpose of the initial work group was to meet, provide an overview and a timeline for the initiative, form sub-groups, schedule meetings, and complete the Project Management Plan.

The main goal of the Project Management Plan *is "Initiative will prepare people with mental illness to become Peer Support Specialists, using their shared experience to guide others toward recovery."* The management plan also has eleven objectives to accomplish the goal and they include:

1. Develop a Peer Support Initiative Work Group (a.k.a. Stakeholder Committee and/or Steering Committee) and Sub Groups which included:
   - Technical Support and Research
   - Stakeholder
   - Stakeholder-System Partner Training/Peer Support Specialist Training
   - Psychosocial Rehab Centers
   - Peer Support Curriculum
   - 1915i Amendment
2. Conduct Stakeholder Input Meetings
3. Complete an initial Project Management Plan, and update as necessary until project is completed.
4. Design the Research and Outcomes Plan
5. Design Technical Support Plan
6. Develop Peer Support Certification Curriculum
7. Provide Training to Stakeholders within the Mental Health System to educate, inform, and increase readiness for peer involvement in the formal service delivery process.
8. Define the Recovery Principles Approach within the 8 Regional Psychosocial Rehabilitation Centers
9. Complete and submit the 1915i Amendment & Explore Options for Additional Funding
10. Evaluate Project and Submit the Final Report
11. Develop a Training & Employment Plan for Peer Support Specialists.

The management plan was submitted SAMHSA in September of 2008 with all objectives complete. It is important to note that this plan would provide peer support services to Medicaid eligible and non-Medicaid eligible individuals.

Currently, Northwest Human Services Center (Williston) and North Central Human Service Center has a very successful peer support specialist projects funded through the human service center at approximately $65,000. South Central Human Service Center has received $25,000 to begin a Peer Support Specialist program. The $25,000 is a good start but will not sustain the program.

Western Sunrise, Inc., a consumer-run, nonprofit organization in Williston, N.D., is an example of a successful consumer-directed peer support model currently operating in North Dakota. Outcome data for the *Peer Support Program* is extremely favorable. Outcome measures indicate: 50% decrease in hospitalization rates; 50% of consumers gained employment; volunteerism rates increased; and 94% of consumers indicated that their quality of life improved. Many of the consumers in the program began to rely less on other more expensive services.

The existing *Peer Support Programs* are funded through the Human Service Centers. There are options for federal dollars as well. Through an amendment to the State Plan, Medicaid can become a partner in funding *Peer Support Services*. More North Dakotans with a mental illness can benefit from *Peer Support Services* by making the program available state-wide. No one has to live feeling recovery is impossible; *Peer Support Services* makes recovery a reality. Other states have experienced great successes by employing *Peer Support Specialists* to work in multiple settings such as medical, corrections, employment, and housing, as well as other areas where people with mental health needs receive services.

As part of the management plan the ND Department of Human Services submitted an OAR which did not make Governor Hoeven's proposed budget to the assembly.

The DHS, consumers, stakeholders and mental health professionals completed a great deal of work to develop the Peer Support Services Project Management Plan. This work should not go unrecognized. Therefore, I would like to recommend a two-step process to fund this initiative. The first step would include adding an additional $600,000 for the biennium into the 8 regional human service centers budgets, which would provide $75,000 per human service centers for the biennium to provide peer support services to individuals who are not Medicaid eligible. The second step would include the NDDHS to submit a revised state plan amendment to CMS under the Rehab Option and 1915 (b)4 Waiver. This would allow the management plan to be implemented and allow the peer support program to blossom prior to CMS's approval for a state plan amendment.

As of June 2008 the total statewide Severe Mental Illness population was approximately 2,153. It is estimated that about 20% (432) of these individuals would need Peer Support Services. About half of those individuals (216) would receive Peer Support Services for a year and the other half would receive Peer Support Services for 6 months. The total number of individuals receiving this service over a year's time would be approximately 648. It is estimated that a Peer Support Specialist would have about 12 people on their caseload. That would require 36 new Peer Support Specialists thus creating 36 new jobs in ND that currently do not exist. Not only will this program create these new jobs, but it

also creates a system that keeps people who receive Peer Support Services healthy, out of the hospital and potentially employed in their communities. As stated earlier individuals receiving Peer Support Services have a higher rate of gainful employment. This is economic development and a win win situation for ND.

This is a project that needs to be funded for many reasons which were stated earlier. The bottom line is Peer Support Projects work. The current state projects and the national data indicates that as well. This is an opportunity that should not be missed! Thank you for your time and I would be happy to answer any questions that you may have.

E

TESTIMONY BEFORE THE HOUSE APPROPRIATIONS COMMITTEE
HUMAN RESOURCES DIVISION
REGARDING HOUSE BILL 1012
JANUARY 26, 2009

Chairman Pollert, members of the committee, I am David Zentner and I was a consultant for Minot State University/North Dakota Center for Persons with Disabilities (NDCPD) North Dakota Medicaid Infrastructure Grant: In May 2008 I completed a report entitled "At a Crossroad, North Dakota Home and Community Based Services". The report was an effort by many stakeholders to provide a guidepost to ensuring that North Dakota will have a continuum of long term care services to meet the needs of our elderly and people with disabilities for the next 20 years.

The number of elderly citizens in North Dakota will increase dramatically over the next decade to about 150,000 by 2020. In addition, the number of individuals over age 85 will increase by 59% in just 15 years. It is imperative that we have a strong home and community based care system to meet the needs of these citizens given that the vast majority of the elderly wish to remain in their own homes and communities as long as possible.

The report presented six recommendations regarding the provision of Home and Community Based Services (HCBS) in North Dakota. It is gratifying to learn that HB 1012 contains many provisions that support the recommendations contained in the report.

The first recommendation concerned the need for a coordinated single point of entry or a no wrong door process into the long term care process. States that have been successful in developing a strong HCBS infrastructure use these tools to ensure citizens have the needed information to make informed decisions regarding care options that are available in their communities. This bill contains funds to develop an Aging and Disability Resource Center that can act as a single point of entry into the long term care continuum.

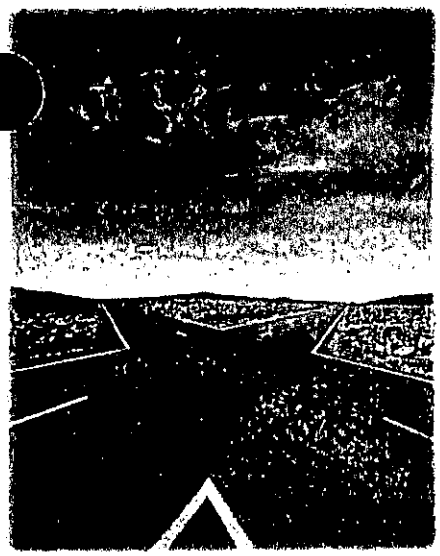
The second recommendation concerned the need for more flexibility in the delivery of HCBS services. This bill contains funds to expand personal care services, reduces the payment schedule for individuals eligible for SPED and provides additional payment for family foster care providers. These provisions will allow for additional flexibility in the delivery of HCBS in our state.

The third recommendation concerned the need for ongoing funding in order to attract and retain an adequate number of care givers to meet current and future needs. This bill does provide increases for Qualified Service Providers and it is important that these individuals and agencies continue to receive yearly increases to ensure an adequate supply of providers. By state law, nursing facilities receive increases each biennium and if we intend to have a strong HCBS delivery process such increases should also be considered for HCBS providers.

The last recommendation in the report concerned the need to increase the medically needy income level. At present a one person household can retain $500 a month to meet their household maintenance needs and a two person household $516 per month. The income level has not been increased since 2003. Individuals who receive Supplemental Security Income payments because they have not have an earned Social Security benefit are allowed to retain their entire check to meet their maintenance needs whereas those who have worked all their lives have much less to meet their needs. If we are going to maintain individuals in their own homes they do need adequate funds to meet their basic needs. This bill contains a substantial increase in the medically needy income levels.

I urge this committee to retain all the provisions put forth by Governor Hoeven to improve the delivery of HCBS for the elderly and people with disabilities citizens of our state.

I would be happy to respond to any questions you may have.



"The demographic time bomb regarding the number of elderly in our state looms large as the baby boomers age and our citizens over 85 increases dramatically ... It is now time to take action to strengthen the availability of HCBS in order to avoid drastic increases in expenditures for long term care services in the very near future."[3]

Comprehensive Employment Systems

At a Crossroad, A Brief Overview of the North Dakota Home and Community Based Services Report

September 2008

North Dakota (ND) is at a crossroad and needs to decide what direction to take in its effort to provide a continuum of long term care services to the elderly and people with disabilities. By the year 2020, the number of citizens in North Dakota over age 65 will be approximately 150,000 and the number of individuals over age 85 will increase to approximately 24,300, a 59 percent increase in just 15 years.[1]

Today services in North Dakota are provided through a variety of programs that are funded by federal, state and county funds for individuals who do not have the resources to meet their long term care needs. In addition, the AARP Public Policy Institute estimates that in 2006 ND had approximately 56,000 unpaid caregivers that provided the equivalent of $550 million in care.[2] This brief supports the recommendations taken from *At a Crossroad, North Dakota Home and Community Based Services* report.[3] The report delineates the need to ensure that adequate and appropriate services are available to the elderly and people with disabilities in the near future.

Moving Beyond the Crossroad

North Dakota needs to move beyond the crossroad in an effort to provide a continuum of long term care services to the elderly and people with disabilities. The need for policy changes to occur within the HCBS system for people with disabilities and North Dakota's aging population is evident. These recommendations will assist in assuring that consumers receive what they want which is to remain in their homes and live independently for as long as they are able.

The issues surrounding the delivery of continuum of long term care services has been studied and discussed in North Dakota for more than 20 years. The ND demographics clearly show that the need for additional services will increase dramatically as the number of individuals over age 85 grows in the next decade. .Now is the time to take action to strengthen the availability of HCBS in order to avoid a drastic increase in expenditures for institutional long term care services in the very near future.[3]

*Case scenarios are based on a variety of situation that North Dakotan's face in regards to continuum of care services but do not represent specific case's.

Amy B. Armstrong
North Dakota Center for Persons with Disabilities (NDCPD)
at Minot State University
North Dakota Medicaid Infrastructure Grant (ND MIG)
Testimony - HB 1012
Senate Appropriations Committee
Senator Ray Holmberg, Chairman
Wednesday, March 4, 2009

Chairman Holmberg and members of the Senate Appropriations Committee, I am Amy Armstrong, Project Coordinator for the North Dakota Medicaid Infrastructure Grant (ND MIG) at the North Dakota Center for Persons with Disabilities (NDCPD) at Minot State University. Thank you for the opportunity to present testimony in favor of House Bill 1012 as proposed by the Governor.

In 2008, the ND MIG project contracted with Mr. Dave Zentner to complete a report titled "At a Crossroad, North Dakota Home and Community Based Services." I have included a summary of this report with my testimony. This report was an effort by many stakeholders to provide a guidepost to ensuring that North Dakota will have a continuum of long term care services to meet the needs of our elderly and people with disabilities for the next 20 years. This report was developed through careful analysis of past and more current data and reports, including surveys of QSPs, and HCBS providers.

The report contains six recommendations regarding Home and Community Based Services (HCBS) in North Dakota. HB 1012 contains many provisions that support the recommendations contained in this report.

The first recommendation concerns the need for a coordinated Aging and Disability Resource LINK –No Wrong Door process. This process has been successfully implemented in 45 states. A streamlined system for accessing services is important in order to assure that North Dakotans are aware of *all* of their long-term care options and thus are able to make informed decisions about their care. The purpose of an ADRC is not to set up a new bureaucracy, but to help those service agencies and providers that are currently in existence to work together, streamline their work, and make accessing long-term support services a simpler and less confusing process for North Dakotans. Implementing an ADRC will help North Dakotans learn about all of their long-term care options and then make informed decisions about their care. Being able to make informed decisions, means seniors and adults with disabilities are better equipped to make sound financial decisions about their current and future care needs.

The second recommendation concerns the need for more flexibility in the delivery of HCBS. This bill contains funds to expand personal care services, reduces the payment schedule for individuals eligible for SPED and provides additional payment for family foster care providers. These provisions will allow for additional flexibility and availability in the delivery of HCBS in our state.

The third recommendation concerns the need for ongoing funding in order to attract and retain an adequate number of in-home caregivers to meet current and future needs. HB 1012 provides increases for Qualified Service Providers. It is important that these individuals and agencies continue to receive yearly increases to ensure an adequate supply of providers. It is also important that

QSPs be included in the $1.00 "wage pass-through" currently recommended for DD and Nursing Home providers. If QSPs are not included in this increase, the gap among providers will become wider and potentially cause an increased shortage of QSPs. In 2008, the ND MIG project disseminated surveys and participated in meetings with ND QSPs. QSPs expressed their thoughts, concerns, and recommendations for improving their work. Specifically, concerns and recommendations regarding consistent reimbursement increases; consideration for travel costs; access to affordable health insurance and benefits; and access to training are all important issues to QSPs. Also apparent was the QSPs' dedication to the ideals of home and community-based care.

The fourth recommendation concerns the need to provide incentives to develop, and subsidies for affordable accessible housing with services for low and moderate-income elderly and people with disabilities. ND should consider implementing subsidies for assisted living facilities and other similar congregate settings that would include reasonable limits on the monthly payment. ND should consider tax and loan fund incentives to developers who are willing to build congregate housing that is comfortable but affordable for individuals with moderate and low incomes. It is imperative that ND develops an adequate number of affordable housing options for the elderly and people with disabilities that include apartment and congregate settings. Without affordable housing options, individuals and families will be forced to look to institutional care to meet their long term care needs.

The last recommendation in the report concerns the need to increase the medically needy income level. At present, a one-person household can retain

$500 a month to meet their household maintenance needs and a two person household $516 per month. The income level has not been increased since 2003. Individuals who receive Supplemental Security Income payments because they have not earned Social Security benefit are allowed to retain their entire check to meet their maintenance needs whereas those who have worked all their lives have much less to meet their needs. If we are going to maintain individuals in their own homes, they need adequate funds to meet their basic needs. HB 1012 contains a substantial increase in the medically needy income levels.

It is well documented that ND's seniors and people with disabilities desire of to remain living and working in their homes and communities for as long as possible. Without the continued and increased support for ND's HCBS, QSPs; a streamlined continuum of care delivery system, and affordable accessible housing; many ND's will not be able to maintain their independence *and* community employment. These issues are not only human service and quality of live issues but also economic issues. Increased access to HCBS will help seniors and people with disabilities to stay healthy and delay more costly alternative care. In addition, when they are able to maintain their independence, they are better able to live and work in their communities. I urge this committee to retain all the resources put forth by Governor Hoeven to improve the delivery of HCBS for the elderly and people with disabilities of ND.

Thank you for your time. I would be happy to answer any questions.

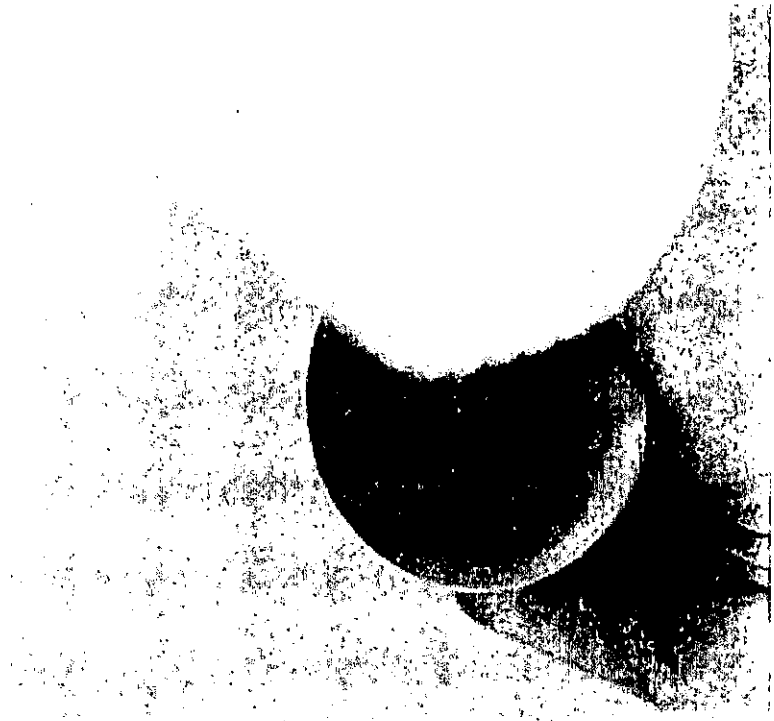
Some handout given to House on 1-26-09

Recommendation

Ensure that each individual needing long term continuum of care services receives adequate information to make informed decisions regarding how to access available services through the implementation of an assessment/screening tool using a coordinated single point of entry or no wrong door process.

- ND needs to take steps to implement a single point of entry and/or a no wrong door process to ensure that elderly and people with disabilities make informed choices that will allow them to remain in their homes and communities for as long as possible.
- It is imperative that consumers know that a wide array of services are available to both private and public pay consumers.
- A specific process must be implemented before consumers decide whether they will select nursing facility or alternative less restrictive Home and Community Based Services (HCBS) care to meet their long term care needs.



"There are good, qualified, trained people, who are very helpful; unfortunately most of us don't even know where they are."
~Family member[4]

Case Scenario*:

My mother is 83 years old with a variety of health care needs. She currently receives no assistance in her rural home. However, her health is slowly diminishing and she could use help. I live in another state and am not able to care for her. I am not sure where to go to get her help, nor am I completely certain of all her care needs. I am afraid to leave her at home by herself, yet she doesn't have enough money to live in assisted living and 24 hour care is not yet necessary. I went to one place to get help but they told me that she was not eligible. They sent me to someone else. It would be helpful if there was someone that would help with this process rather than send you on again. I have asked her doctor but he was also confused about where to turn stating the system is always changing.

Recommendation

Ensure that long term continuum of care programs and services have the flexibility necessary to ensure that consumers receive the needed services to remain in their communities.

- It is imperative that a simple method be developed that can allow Qualified Service Providers (QSPs) to assist in the distribution of medications without jeopardizing consumer safety.
- Consideration should be given to providing more flexibility to meet consumer needs. Ongoing communication among case managers, ND Department of Human Services staff, and QSPs is important to help address specific issues regarding flexibility of services.
- Consideration should be given to improving the process in which adult foster care-respite care is approved and paid.
- Action should be taken to allow more flexibility in the manner in which HCBS are delivered in ND including the concept of consumer directed care.

"I'd love to be at home but the shots that I get for my Multiple Sclerosis are so expensive, in here [nursing home] I get them for free. I have a house; I'd rather be at home... I have [children] ... still living at home."

~ Younger nursing home resident[1]

Case Scenario*:

I am 72 years old. I took care of my wife for over 2 years. I had to do everything. I did all the cooking, cleaning, laundry, bathed and dressed her, took her to the doctor. I was so exhausted, frustrated, stressed and confused. I needed help but didn't know where to turn. Sharing information is so important because I am not trained and don't have any idea where these services are or what is even available. I found out about some services from one of my neighbors that had used the services. Unfortunately, it wasn't soon enough.

Recommendation

Provide additional ongoing funding in order to attract and retain an adequate number of Qualified Service Providers (QSPs) to meet current and future needs.

- Consideration should be given to some type of a payment differential for QSPs that must travel over a set number of miles, or a set time period in urban areas, in order to ensure that consumers can continue to receive needed services.
- If ND wishes to have the direct in-home care worker staff ready to provide those services to the elderly and people with disabilities of our state they must provide adequate rates to attract individuals and agencies to this profession.
- If ND is serious about putting HCBS on equal footing with nursing facility services, it is imperative that funding for rate increases for these services be considered just as important as nursing facility services. Consideration should be given to providing ongoing yearly rate increases similar to what is provided to the nursing facility industry. Also, some mechanism needs to be developed to provide additional monetary support for QSPs that must travel in rural areas to provide services.

The system is too focused on documentation, financial issues, etc. and less focused on meeting the needs of elderly and disabled clients."

~ Agency QSP[5]

Case Scenario*:

I am 25 years old and live in a rural community. I have found it difficult to find a job here where I don't have to drive to the nearest large city, that provides benefits and pays a decent wage. I have looked at providing personal care services to my neighbors, family members and friends so that they could remain in their home and community, however I could not make a living on the current reimbursement that I would receive as a QSP. It is important to create incentives and adequate reimbursement to attract people to do in-home direct care work. I currently drive 60 miles a day to a job that pays a decent wage, health insurance, retirement, vacation and sick time. If QSP's received adequate reimbursement, provided some health insurance benefits, and reimbursed for some travel expenses; I would consider choosing a career as a QSP in my rural community. This would allow me to work in my community and help care for my fellow community members, which is what I really want to do.

Recommendation

Establish a task force that will make recommendations on how best to encourage individuals and agencies to become QSPs by improving recruitment, retention, training and recognition for this important group of providers.

Approximately 78.8% of agency Qualified Service Providers (QSP) indicated that at some level QSP staff has been requested to provide additional services to clients while in the home, however the QSP was unable to provide the additional services for various reasons most commonly including time, travel, and reimbursement.[5]

- If the number of caregivers does not increase over the course of the next decade, both nursing facilities and HCBS programs will have difficulty meeting the needs of ND's elderly and people with disabilities.
- A task force could provide recommendations to the state for ways to encourage individuals to consider care giving as a career.
- Some changes should also be considered based on the issues raised by QSPs in the recently conducted surveys to improve job conditions and make QSP work more appealing. If there are not sufficient workers in ND, recruitment outside of the state may be required.
- A task force could examine all aspects of this issue and make recommendations that could alleviate the looming shortage of caregivers in ND.

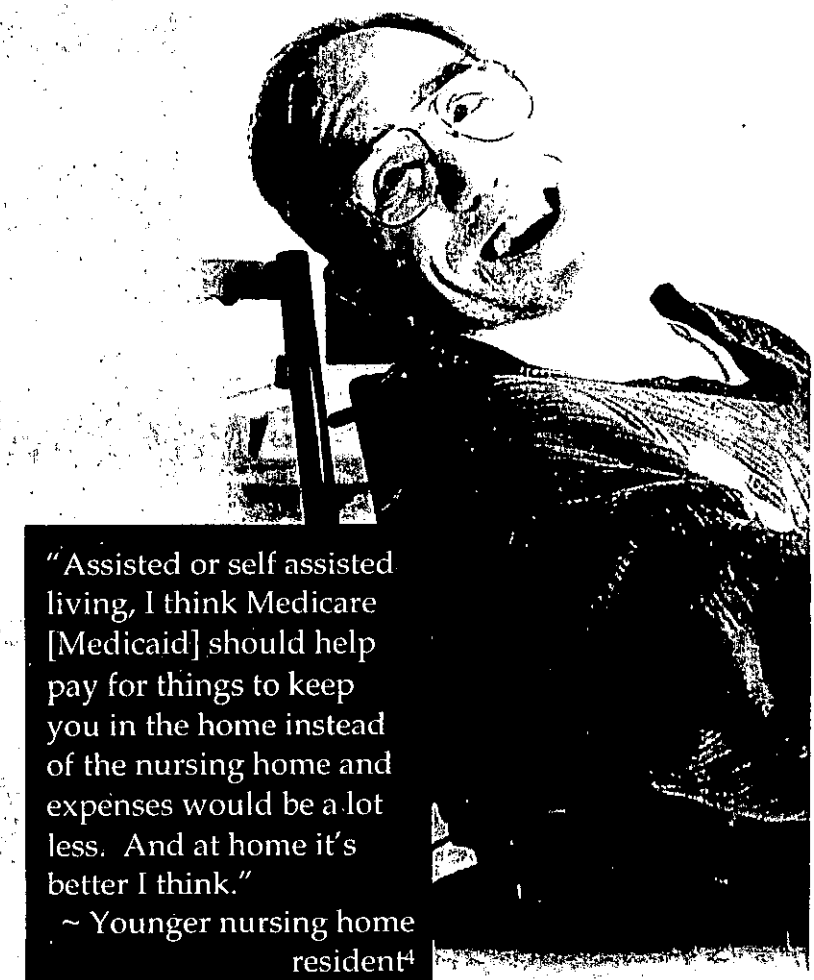
Case Scenario*:

I have been an in-home direct care worker for over 20 years. In a previous state, I would call in my hours for reimbursement, be evaluated once per year by a case manager, had higher wages, and belonged to an association with healthcare and vacation benefits. In ND, I find it very difficult to receive QSP reimbursements in a timely manner, travel time and cost is not reimbursed, I have no healthcare or vacation benefits, and the paperwork is difficult. In addition, training would be very helpful, however it is not reimbursed and it would require me to pay another caregiver, which would put me in a financial deficit. I love my job and know how important it is to the consumers I serve. However, this job is not an easy one and with so many barriers, something must be done in order to make this job more appealing to others.

Recommendation

Provide incentives to develop affordable accessible housing with services for low and moderate income elderly and people with disabilities. Provide housing subsidies for affordable accessible housing with services to low and moderate income elderly and people with disabilities.

- ND should consider implementing subsidies for assisted living facilities and other similar congregate settings that would include reasonable limits on the monthly payment.
- ND should consider tax and loan fund incentives to developers who are willing to build congregate housing that is comfortable but affordable for individuals with moderate and low incomes.
- It is imperative that ND develops an adequate number of affordable housing options for the elderly and people with disabilities that includes apartment and congregate settings.
- Without affordable housing options, individuals and families will be forced to look to institutional care to meet their long term care needs.



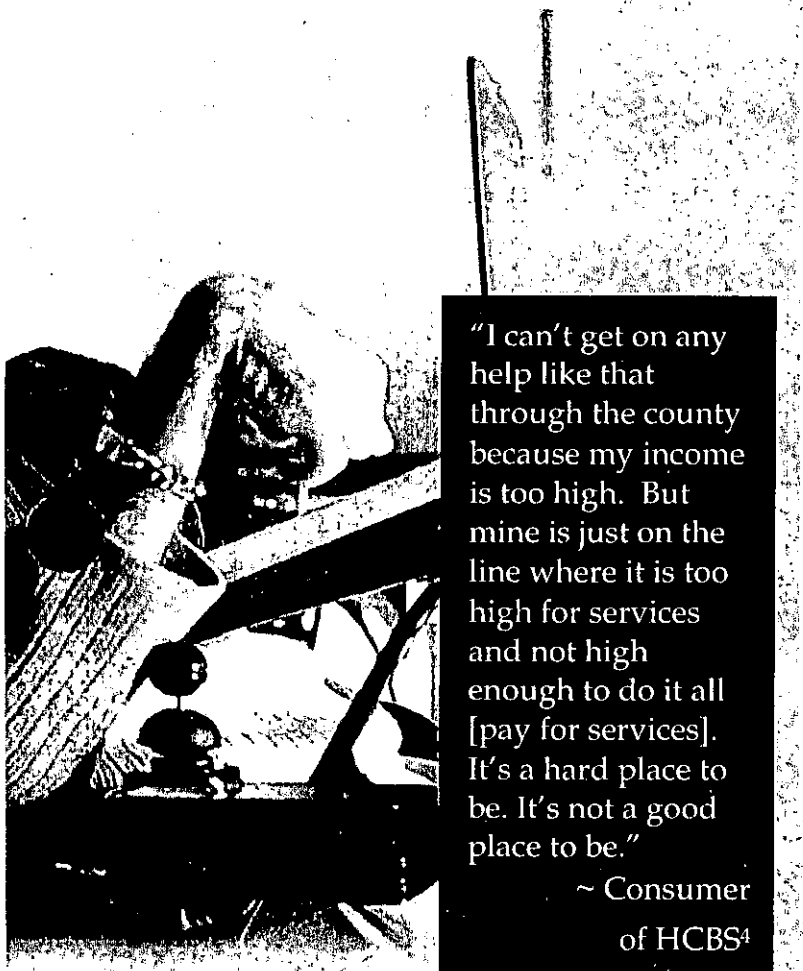
"Assisted or self assisted living, I think Medicare [Medicaid] should help pay for things to keep you in the home instead of the nursing home and expenses would be a lot less. And at home it's better I think."
~ Younger nursing home resident[4]

Case Scenario*:

I am 35 years old with Multiple Sclerosis (MS). I have been looking for an affordable and accessible place to live, however my income level is too high to qualify for assistance using a Section 8 voucher but not high enough to pay for rent and all of my medical expenses. It is extremely difficult to find somewhere to live that would work for my needs, both in terms of accessibility and affordability. My income may decrease as my ability to work decreases and I may need some additional financial assistance and personal care. I wish I had more choices regarding where I live within my limited income.

Recommendation

Increase the Medically Needy (Medicaid) income levels to at least match the amount received by individuals that receive Supplemental Security Income (SSI) and/or permit more access to Service Payments for the Elderly and Disabled (SPED) funding for individuals who would otherwise have a high recipient liability through the Medicaid program.



"I can't get on any help like that through the county because my income is too high. But mine is just on the line where it is too high for services and not high enough to do it all [pay for services]. It's a hard place to be. It's not a good place to be."

~ Consumer of HCBS[4]

- It will be six years or more before deserving elderly and people with disabilities could receive an increase in the amount of money they have available to meet their everyday living expenses. An increase will happen only if the ND Legislature provides additional funding during the 2009 Legislative Assembly.
- While it would be very costly to raise the medically needy income levels to that of Social Security Administration – SSI program, efforts should be made to raise the levels over time with the goal of matching the SSI income levels by the year 2020.
- If raising the medically needy income levels is not financially feasible then consideration should be given to allow the elderly and people with disabilities to receive personal care services through the SPED program even though they qualify for enrollment in the ND Medicaid

Case Scenario*:

In July of 2008, the Social Security Retirement Benefits my wife and I receive is a combined total of $1061 per month. We are eligible for the Medically Needy Program (Medicaid) however, the amount allowed to us as a couple is only $516 per month, plus a $20 disregard. This amount is subtracted from our SSI amount and leaves us with $525 per month in recipient liability. This $525 is used to pay for medical care that we receive. That means that we have only $536 each month to pay for non-medical bills such as, rent, electricity, food, and fuel for our car.

Testimony in reference to House Bill 1012: particularly the Early Intervention Autism Waiver
January 26, 2009

My name is Shannon Grave. I live in West Fargo with my husband Brian and our two children. Our daughter, Janessa, is 9 and our son, Carsen, is 7. While originally from ND, I lived in Minnesota for about 10 years. Our family moved to West Fargo two years ago. This move was prompted and influenced by our son's special needs.

I have been called an "expert" in the area of autism in the context of my professional and educational accomplishments and experiences. This is because I work in the field of mental health providing therapy services in the home, school, and community for children birth to 18 and their families. Many of the families with whom I work have children with a type of autism. I also provide mental health consultation to Head Start. After completion of the Autism Spectrum Disorders certificate program at the University of North Dakota, I was asked to serve as Adjunct Instructor for the Methods for ASD course for graduate students. But I am far from what I would consider an "expert on autism". However, I would define myself as an expert in one context. I am the parent of a seven year old boy with a diagnosed Autism Spectrum Disorder.

Our Journey

Just before my son's second birthday, he showed numerous signs of having an autism spectrum disorder. He was non-verbal and when he needed something he would flap his hands, cry, scream, fold himself in half, drool, and sometimes get so upset he would vomit unless we correctly guessed his need. Every day life was a constant struggle. Given my professional training and experience working with children ages birth to three, I knew something was amiss.

I contacted the Birth to Three program in our town and arranged for an evaluation. Right after he turned two, a team convened to fully assess our son. A licensed psychologist used the term "autism spectrum disorder". We *knew* in our hearts before she even uttered the words. At the time, in Minnesota, a diagnosis of autism would preclude him from receiving services so the private Occupational Therapy we had started would have been discontinued. We had to be very careful who we shared the psychologist's report with, lest we lose the necessary therapies we had begun.

Autism is a pervasive developmental disorder affecting all parts of life

Thus began our journey of intensive, comprehensive treatments and lifestyle alterations. For several months we found ourselves driving one hour in each direction, twice a week for a half hour Occupational Therapy session to address Carsen's sensory based and motor planning differences. This was all paid out of pocket on our part as his parents. In addition to the monetary and time commitments of driving Carsen to OT, we participated in the services provided by the Early Intervention Team. It was our job as his parents to coordinate everything on a day to day basis working to implement all of the recommendations given to us with all of his care givers including his daycare provider. The preparation required to go on the most mundane of outings involved immense effort on our part. We did this all while balancing full-time professional careers and caring for two young children.

Families need support

I am blessed to have a wonderful husband who has encouraged me and truly partnered with me as I continue to pursue my passions and hone my professional skills. Like many families who have children with special needs, my work and home life becomes increasingly intertwined. Many families with autistic children do not have the luxury of living in a two parent home. The divorce rate for families with

an autistic child is disparagingly high. It is significantly higher for families affected by autism than it is for the general population or even for families having a child with another disability. Families need comprehensive systems of support.

Families need information

I had the opportunity to attend graduate school to earn my master's degree in special education with a strong emphasis in autism spectrum disorders. I read everything I could get my hands on with regards to treatments for autism. My husband and I attended any conferences we could afford to attend. Most families do not have the resources to do this. I am blessed to have a professional job that encourages my further specialization in the field of autism. I am blessed to have a supportive life partner. I am blessed to have the financial and intellectual means to pursue higher education. Not all families of children with autism have this. Families need information that is of sufficient depth and breadth. They need information on a variety of research supported methods as well as those that are considered promising so they can be informed, active team members in all aspects of service delivery for their young children.

Waivered services need to be expanded

Since moving to North Dakota, our son has qualified for case management through Developmental Disabilities due to his IQ. This means he has Medicaid as a secondary insurance to the Blue Cross/Blue Shield insurance my husband and I purchase through our employment. He now only requires intermittent short-term therapy services to help us readjust our approaches and refocus our efforts. Through his DD case manager our family receives a small number of respite hours each month. My husband and I use these hours as a "date night" to maintain a strong relationship. We can do this because we know the providers are well trained and that he is safe. Prior to receiving respite, we could not go anywhere as a couple because we could not trust anyone else to provide care for him. Many families who have a child with autism cannot access DD services because their child's IQ is considered to be "too high". This is where the services provided under a waivered system can be very beneficial.

Time is of the essence

Our son has been called a "poster child for early intervention". This is indeed an accurate description of him. I could tell many stories about him in his toddler and preschool years that would likely bring tears to your eyes, but I will instead allow a few pictures to tell the story.

Thank you

I thank you for your time and consideration of this bill. With shocking national prevalence rates, we need to do something now. We know that early intervention is the key to reducing costs as the child ages. By front-loading services, the cost savings will be felt for years to come. This bill to provide waivered early intervention services is a great first step in providing comprehensive care to children and their families. Please do not let your most vulnerable constituents down.

Public Comment
Human Resources Division of the House Appropriations Committee
January 26, 2009

Chairman Pollert and members of the Human Resources Division:

My name is Mike Ahmann, and I am the executive director of BECEP (Bismarck Early Childhood Program). The Bismarck Public Schools is the Fiscal Agent for this program which provides Infant Development Services to eligible infants and their families in Region VII.

Because, the North Dakota Early Intervention system uses a program called Infant Development, which is part of the DD grants under the Home and Community Based Waiver, I am here today to ask you to support an increase to funding for all DD providers through a 7%/7% provider inflation increase which is included in the Governor's budget proposal. In addition, I would ask you to consider funding towards optional adjustment requests that were not included in the governor's budget: an increase for Infant Development salaries ($1.7 million) and a wage and benefit increase ($2 per hour and 3%) for DD providers.

Because of the scope of the work in Infant Development that needs to be accomplished, several critical components need to be fiscally supported. These include:

- An experienced, highly qualified workforce with knowledge in infant and toddler development, family systems, and assistive technology;
- Adequate supervision and technical assistance for staff;
- A professional development system, both pre-service and continuing skill development;
- Mechanisms to insure that all children in all parts of the state have access to equal services (i.e. travel, technology based communication, contracted staff, etc.)
- A comprehensive quality assurance system.

One of the difficulties that Infant Development has struggled with is having adequate budgets and an appropriate funding mechanism that insures the above noted components are in place. Presently, the Infant Development providers are working with the state office to reconsider options for a funding mechanism. What remains to be true is salaries for professionals such as physical therapists, occupational therapists, speech therapists, and educators in the general market are significantly greater than those that

can be offered in Infant Development. In a market analysis that was conducted, an average starting salary for these professional disciplines was $22.43 an hour. The starting salary range for professionals employed in Infant Development was from $12.98 to $20.21. In addition, working in Infant Development means a twelve month contract, working non-traditional hours (i.e. evenings), and requires vast professional development in the field of early childhood and special needs.

The increase for providers that is presently included in the governor's budget will help Infant Development narrow the gap, but additional assistance towards salary equity is critically needed. Many of the providers experience difficulty in recruiting and hiring experienced professional staff. Service delivery can be diluted and consultation with specific professional disciplines is not always available, especially in the rural areas. There are more demands for supervision due to additional accountability standards and increased caseloads.

Within my programs at BECEP, I pay professionals less in my infant development program who have the same training and experience as their counterparts who work with the same students when they turn age three, due to the different funding mechanisms. This disparity of payment has caused a constant problem in recruitment and retention of these highly qualified professionals for our Infant Development program.

Infant Development services are one of the hidden gems in North Dakota. It's a small program serving 935 infants and toddlers with disabilities across the state. These 935 children are some of the most vulnerable children with special health care needs and disabilities. We are lucky in our state to have maintained state funding support. We have the mechanisms in place to impact children and their families but we need adequate staffing.

Thank you for your consideration of this request for funding and my comments.

January 26, 2009

Chair Pollert and members of the House Human Resources Division, my name is Tom Newberger and I am the Director for Red River Human Services Foundation in Fargo. Our agency supports approximately 525 people with developmental disabilities in Residential, Day and Social programs. The focus of my testimony today is related to the latter – social programs.

Red River Human Services operates the Activity Center in Fargo. The Activity Center has been operating since the late 1970's and has filled a void for services to people with disabilities. People with disabilities go to the Activity Center to recreate, socialize and to find a place where they can receive services that are not always available to them through our residential and day programs. I have been in this business for 23 years and I have seen where our traditional services come up short and not able to give people a the choices they want. This is where the Activity Center and the LISTEN CENTER play a vital role.

The Activity Center adds meaning to people's lives by being a common place where people come together to learn and develop social skills, friendships and how to access the community. It also acts as a safety net when other support systems have failed. For example, last winter a member of the Activity Center called and said she had been sick to her stomach for 3 days and was out of toilet paper, medicine and nearly out of food. Our staff went to her apartment, bought her the items she lacked and possibly saved her life. While this is an extreme example, it shows what we do for the less fortunate.

More common activities include going camping, to ball games and to the park. These activities add meaning to people lives by getting them involved rather than sitting in a group home that is not staffed adequately. We have 4 group homes in West Fargo each with 5 people living in them for a total of 20 people. Each home usually has 1 DSP in the evenings and it's not possible for the staff to take someone to the park, drop them off, take another person to a movie and work with 3 people at home at the same time. This again is where the Activity Center fills a void by providing staff for these different functions.

The story of the Activity Center is long and winding due to funding constraints. The Activity Center has nearly closed and numerous occasions, most recently 6 years ago when Lutheran Social Services cut the program because of the financial drain. The Activity Center was picked up by Red River Human Services Foundation and we lose $30,000-$40,000 per year operating it. We have operated without state funds and now ask for your support. Our Charitable gaming has filled these losses in the past, but now our charitable gaming is down like the rest of the industry. Please support the Activity Center and the LISTEN Center by funding $50,000 per year per Center or $200,000 for the Biennium. Thank you and I'll be happy to answer any questions.

RED RIVER HUMAN SERVICES FOUNDATION

Together we can help.

June 9, 2004

The Honorable John Hoeven
Governor of North Dakota
600 East Boulevard
Bismarck, North Dakota 58505

Re: FUNDING SOCIAL AND RECREATIONAL PROGRAMS FOR PEOPLE WITH DEVELOPMENTAL DISABILITIES

Dear Governor Hoeven:

We, the Board of Directors of Red River Human Services Foundation and L.I.S.T.E.N. Inc, (Love Is Sharing The Exceptional Needs), request that you include in your 2005/2007 biennial budget $200,000 for programs providing social and recreational services for people with developmental disabilities. These funds would support the nearly 400 people who use Red River Human Services Foundation's **Activity Center** in Fargo and the 575 people who use the **L.I.S.T.E.N. Center's Drop-In Program** in Grand Forks.

The **L.I.S.T.E.N. Drop-In** and the **Fargo Activity Center** have existed since the early 1970's. The ARC lawsuit thrust over 600 additional people into these programs ***without any support from the State of North Dakota.*** This has placed a difficult financial burden on these facilities. For example, the LISTEN Center had an attendance level of 3,800 in 1978; today that number is over 14,000. In 1978, 138 people with disabilities were using the Drop-In Program; today that number is over 800 with over 575 having disabilities. There are also 167 children participating. You can see this explosion in attendance has created a very real problem.

The State of North Dakota has done a wonderful job of supporting the social and recreational needs of people with mental illness (MI), but has not funded the same programs for people with Developmental Disabilities. The MI social centers have been funded for approximately 10 years while the DD social centers have struggled to make ends meet for the last 20 years. Evidence of this struggle appeared when Lutheran Social Services decided to terminate its ownership of the struggling Fargo Activity Center. This would have been a real tragedy if it were not for Red River Human Services Foundation who saw the value and need for such a program and decided to continue the program.

You have an opportunity to correct this disparity and continue to provide services to 975 people who see these programs and the services they provide as valuable and necessary. If you would like to discuss our request, please contact Tom Newberger from Red River Human Services Foundation at 701-235-0971 or Charlie Bremseth from the L.I.S.T.E.N. Center at 701-746-7840.

TESTIMONY
HOUSE BILL 1012 – DHS Appropriations
Developmental Disabilities – LTC Continuum
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 26, 2009

Chairman Pollert, members of the House Appropriations Human Resources Division, I am Cindy Vollmer, proud Mom of Amber Vollmer. I'm here today to speak on Amber's behalf. Amber is a delightful 28 year old who lives with a housemate in one half of a duplex. She and her housemate pay rent, split the other household bills, come and go sometimes together but most times separately to different destinations. Amber enjoys meaningful activities during her day, spends leisure time at home, out in the community for entertainment, the church of her choice, recreation, and of course shopping – all the things most 28 year olds do. Like most 28 year olds, she no longer thinks Mom is the center of her universe. She no longer thinks her parents are the most interesting, coolest people to live with.

The thing that makes Amber's life different than most 28 year olds is that she needs full supports to do all the above and all other activities of daily living. Amber needs total help for eating, bathing, dressing, repositioning, mobility, toileting – everything except smiling and enjoying a life independent of her

parents. Her lifestyle did not evolve in the same way as many young people. We have planned and worked closely with her Developmental Disability case managers, community services provider, and prior to her moving away from home, the team at the Anne Carlsen Center in Jamestown. Amber spent her high school years at the Anne Carlsen Center to help prepare her for many things including being away from Mom and Dad, having multiple care providers, and how to communicate her wants and needs in her own way. We utilized their comprehensive services to help prepare her for life in the big world such as many of you prepare your children for college or living on their own. Amber has demonstrated for the past 6 years what a lot of planning, working together, and commitment on our part and most importantly the part of her community service provider team can achieve – a well rounded, successful, meaningful, safe life in her home town. People know Amber, watch out for her, respect her for herself – this is her safety net. This can only be achieved when people who are vulnerable live, work and play in their home community. My biggest concern for many years was what would happen to Amber if I dropped off the face of the planet. She is an only child. Who would care how she was being treated. I sleep better at night these past years because I know that Amber has a circle of support, people who

know her, value her and will make sure that her life will continue to be safe and satisfying even if I'm gone.

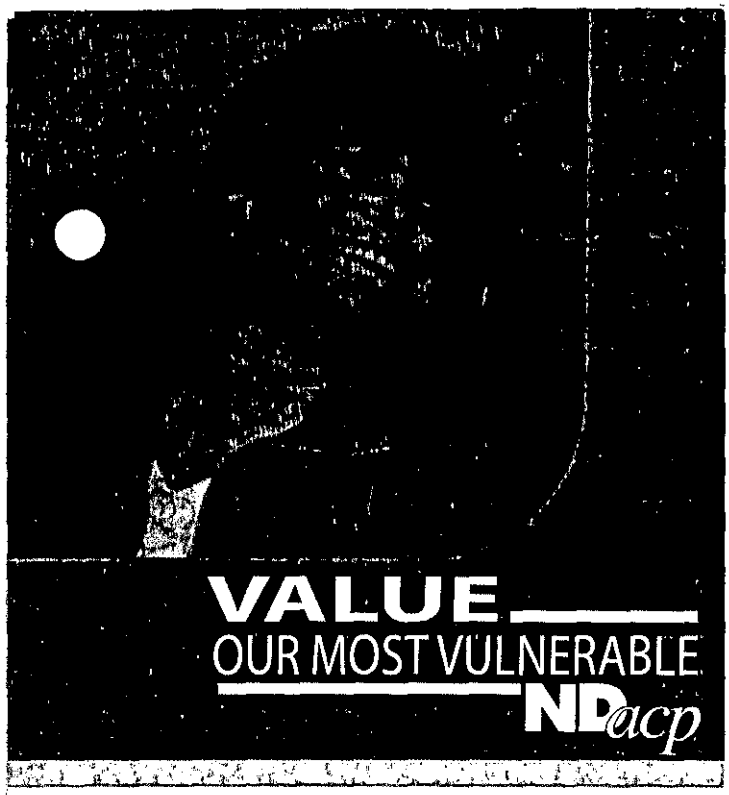
Now with all that said, my main concern and request to you, the folks who make the decisions on where and how state funds will be portioned out, is to consider a substantial increase in funds for wages for direct care community service providers. For many years we have requested an increase in pay for the people that are most critical for the wellbeing and care of our daughter – the direct care providers. These individuals are dedicated, caring and very hard working. Unfortunately, most of them cannot make a career out of direct care service because the pay and/or benefits are so low. They are not making a living wage doing some of the most intense, intimate care for people that cannot take care of themselves. This leads to recruitment and most of all retention problems. Frequent changes in staff seriously affects Amber's emotional health, her care, quality of life and security. It takes time to trust a care provider for help with her most intimate needs, to learn her style of nonverbal communication, her likes and dislikes. When that person leaves it not only seriously impacts Amber's emotional health but her physical and medical wellbeing. Each time a trusted, well trained care provider leaves we must start over. Her quality of care is often affected due the length of time to transfer information and train new staff. This can lead to

misunderstanding of what Amber is trying to convey and as well as many other types of errors. There is also the extra expense and wasted training dollars due to the large, frequent turnover of direct care staff.

We appreciate that past sessions of legislators have upped the pay for direct service providers but the amounts were very small and certainly did not keep up with the cost of living nor provide wages that would entice most people to enter this most valued field of work.

Please consider including a substantial pay increase for direct care workers in this session's budget. We need to acknowledge the work these fine folks do by paying them a fair wage so this will become a chosen field. We need to entice people who have the desire and heart to work in this field by rewarding them with a wage that they can live on, pay their bills and have a well rounded meaningful life so they can help Amber continue to have the same.

Thank you for your time and consideration.



Meet Amber – a young lady from Bismarck who has cerebral palsy and requires a team of caregivers to support her daily activities. In 1988 Amber's family began using In-home Supports to assist her. In 2002 Amber graduated from school and moved into an apartment with support from the ISLA program. This is Amber's home today. Caring staff help Amber with her shopping, laundry, chores and all the simple daily things we take for granted.

Without the qualified and dedicated staff, Amber would not be the happy, social and healthy young lady that she is. She loves living independently and her family credits the outstanding direct support professionals who support her needs each and every day.

Our goal is to provide continuity and consistency for Amber and the thousands of additional people who need daily assistance. Amber and others in the same situation thrive and live fulfilling lives when there is consistency in the care and services provided.

Amber is supported by Enable in Bismarck.

Support an equity and inflationary increase in wages for developmental disabilities employees.

VALUE OUR MOST VULNERABLE

NDacp

North Dakota Association of Community Providers

Support a 7% inflationary increase and a $2.00 per hour equity increase for Employees working with the Developmentally Disabled.

Support a $2.00 per hour equity increase to become competitive with the labor market in North Dakota.

We are more than 4,800 employees in North Dakota living in 80+ communities who provide support services for thousands of people with developmental disabilities. Our average employee is 37 years old and has a family to support.

Our goal is to continue giving quality and consistent support for people with developmental disabilities. Providing competitive wages will enable us to decrease employee turnover leading to better outcomes for the people we support. Current turnover rates for DD providers are nearly 50%.

Hourly Wage Comparison

Average Competitor *(retail, food industry)*	$11.36
Average DD Provider	$9.08
Increase Needed	**$2.00**

Current turnover rates for DD providers are nearly 50%.

Testimony in Support
HB 1012

Mr. Chairman and members of the committee. Hi, my name is Kris. I am here to give a testimony. I have friends and my friend's name is Rachel. I want her to get a raise for helping me. Thank you.

Kris Langlie

N

Betty Heuchert
ND Independent Qualified Service Providers (QSP's) Testimony
House Appropriations – Human Resources Division
Representative Chet Pollert, Chairman
January 26, 2009

Good Morning Chairman Pollert, and members of the House Appropriations – Human Resources Division: My name is Betty Heuchert from Grand Forks, ND. I have been a full-time independent QSP for almost 10 years. I also am a Nurse Trainer for new QSP's entering the program.

1. **Usage and Availability of Services:** I get referrals from Options Resource Center for Independent Living, County Social Services, physicians, word of mouth and former clients. Other QSP's may advertise in grocery stores, churches and Senior Centers.

   The clients want to remain at home for as long as possible, which is often their biggest goal. However, when a person passes on, or needs institutional care in a nursing facility, it abruptly affects my income. This necessitates the need to always be looking for additional work. I want to continue working full-time as a QSP, however, there needs to be a more consistent way of obtaining referrals. Most QSP's don't get enough work, which means they are forced to eventually find other jobs and quit providing QSP services.

2. **Future Increases:** I would highly support the 7 & 7% increase as recommended in the Governor's Budget for House Bill 1012 for the QSP rate increase. While past increases have helped, future increases would be necessary in consideration of the fact that QSP's are independently employed and receive no benefits such as health insurance, sick time, vacation and mileage reimbursement.

3. **Personal Story:** I'm in this business because most individuals prefer to remain in their own home for as long as possible, where they are happiest. Many elderly and disabled clients have expressed a desire to have as few people coming in and out of their home as possible. They do not want to have to train multiple people to care for them on a regular basis. Clients want to get to know their caregivers and be able to trust them. As us baby-boomers age in ND, the need for QSP's will only increase!

Thank you for the opportunity to share this information and I would be happy to answer any questions you may have.

Sincerely,

Betty Heuchert
1922 Willow Dr.
Grand Forks, ND 58201-8111
701-741-9531

Chairman Pollert, Members of the House Appropriations Human Resources Committee

My name is Diane Melby. I am writing in support of the 7%/7% within HB 1012 for QSP's, which stands for Qualified Service Provider. I have been a QSP for over 25 years and enjoy providing this service to those in need, like a lot of other QSP's. QSP's have experienced a higher cost of living. In order to provide service to the clients in their homes, we need to have a dependable vehicle, and vehicles are costly to maintain. When I first moved to Bismarck this was my only source of income, so with the high cost of living it just wasn't affordable. So I had to look for a second job that would pay for health insurance and other benefits. This required me to work 14-16 hours a day between the two jobs.

If you are single it is impossible to make a living on QSP's wages alone. QSP's also have to provide their own social security tax's at the rate of 15.3 % of their income.

I want you all to think about something today; what if you or a loved one were to become disabled, wouldn't you want to be able to stay in your own home rather then be placed in an institution? There are a lot of young adults who are disabled in some way here in Bismarck alone. No matter what your age is it's always better to stay in your own home. The disabled residents that can stay in their homes also cost the state less in the long run.

So we ask you today for your continued support on HB 1012, so we can retain the QSP's we have and attract others to help us provide services to the disabled residents that live in their homes; and provide QSP's with an adequate income and health benefits. Thank you for your support on HB 1012.

Sincerely,

Diane Melby 6YBZ

January 16, 2009

HUMAN SERVICES COMMITTEE TESTIMONY

RE: House Bill 1012

Kimberly Ternes-North Dakota Constituent

Mr Chairman, and members of the committee, my name is Kimberly Ternes voter from Mandan. I want to thank you for this opportunity to add my support to the House Bill No.1012.

I urge your support of the House Bill No.1012. This bill is critical to the Qualified Service Providers (QSP) who provide their time, commitment, services, support and loving care to their recipients. Without the care of the QSP's in North Dakota many of the recipients would be taken from their homes, their quality of life and loved ones and placed in expensive nursing facility which many recipients feel is the last stepping stone in their lives. By making it possible for the recipients to remain in their homes, and rewarding the QSP's adequately financially for their abilities and time, both become winners as well as the State.

I, myself, became a QSP for my son, Scott Thomas, December of 2007. I had to leave my farm home, northwest of Mandan, and move into Bismarck so my husband and I could determine if we could make ends meet on just one of my salaries. Needless to say this was a very hard decision for us to make. My employer did offer the work at home program but there was no adequate internet support for me to work from our farm. I moved into Bismarck, which did offer secured internet service for my work, prior to bringing Scott home. After working in town for 5 months we decided that if I could find just a small second job (babysitting) to help pay for my loss of health insurance, we could

afford to have Scott and I move home to the farm. It has been a financial struggle but the rewards are in having my son home with us receiving the loving care of his family and getting to know his nieces and nephews who find it easier to see their uncle in a home rather than an institutional setting. Scott has prospered also and is off his medication, Nuerontin.

I pray all of you look into your hearts and put yourselves in the QSP's positions. What is the amount you would pay to have your loved ones cared for by loving, caring Qualified Service Providers?

Thank you for your attention to this important issue and your commitment to the aging and disabled members of our great state. I know that you will be guided by your beliefs to make the best decision for all.

Kimberly Ternes

Testimony
North Dakota Disabilities Advocacy Consortium
HB 1012
House Appropriations-Human Resources Committee
Chairman Representative Chet A. Pollert

Chairman Pollert and members of the House Appropriations Human Resources Committee, my name is James M. Moench, Executive Director of the North Dakota Disabilities Advocacy Consortium (NDDAC). The Consortium is made up of 23 member organizations concerned with addressing the issues that affect people with disabilities. (See attached list of members).

NDDAC supports House Bill 1012 – The Department of Human Services Budget. We were very pleased with the funding levels proposed in the Governor's budget in most cases and we support those levels with some enhancement that I will detail later in my testimony. First though, let me state that the Department of Human Service's open dialogue with stakeholders and the process used to determine the scope of the requirements and the resources needed to provide human services in North Dakota was the best that our members have witnessed to date and we wish to complement both the Governor and DHS management and staff for their efforts on behalf of the less fortunate in North Dakota.

There is much NDDAC member organizations wish to support in both the number chosen and the Governor's proposed funding levels of the OAR's presented to him by the Department. NDDAC vigorously supports raising the Medically Needy Income Level to 83% of the poverty level. The positive impact of adopting this change on low-income elderly and persons with a disability cannot be overstated. A person who currently is trying to survive on $500.00 per month for shelter, food, utilities, clothing, and transportation etc will be allowed to keep $720.00 per month. A couple would be allowed $969.00 per month for their needs. Not a

princely sum by any standards. The adjustment is long overdue and will change the lives of many North Dakotans.

NDDAC supports increasing Health Steps (also known as S-CHIP) program eligibility to 200% of net income. One of our state's highest priorities must be the goal of health care coverage for all the state's children. The payoff in quality of life from early detection and the later savings on treatment are well documented.

We wish to acknowledge the positive steps in HB 1012 as introduced in three major areas. One, the bill seeks to provide more opportunity for North Dakotans to access Home and Community Based Services and remain in their homes and communities for as long a possible, Second, providing a third tier of personal care expanding the hours a client is eligible for from eight to ten hours and Third, the bill's many enhancement of services for children both at home and in foster care. Revising the SPED fee schedule and providing funding for the Autism Spectrum Disorder Waiver for children up to five (5) years of age are two enhancements that we would especially like to highlight and support. Serving the 30 children projected to be served in the waiver will be most welcome as North Dakota steps up its efforts to combat the growing and perplexing problem of Autism.

While we were pleased that the Department was able to decouple ICF/MR from nursing homes and propose raising the Personal Needs Allowance from $50 to $60. We believe that level is still too low. We urge the Committee to raise the Personal Needs Allowance for those individuals in an ICF/MR to $100.

NDDAC supports funding for the Aging & Disability Resource Center (ADRC) pilot project. The one-stop concept of the ADRC has proven both to enhance services and help clients cut thought bureaucracy in other states.

Due to the shortage of affordable facilities for individual who could remain independent with some reasonably priced services, we would support including the OAR to provide for an assisted living room & board subsidy.

In the area of mental health, we support funding the OAR for Peer Support Services for persons with mental illness. Peer support is consumer-centered with a rehabilitation and recovery focus. Peer support services are provided by a person who has progressed in their own mental health recovery and is working to assist other people with mental health issues. Because of their life experiences, peer support providers have expertise and insights that professional training simply cannot duplicate.

Lastly, we support the proposed 7% & 7% inflation adjustment for Medicaid service providers. Service providers were promised catch-up adjustments during the sessions when budgets were tight. Now seems the time for adopting the adequate reimbursement rates that are needed for DD and QSP service providers to compete in the job market for talent and continue to provide quality services. We would further support up to an additional $2.00 per hour for both DD workers and QSPs.

Thank you for your attention today and we urge your favorable consideration of HB 1012.

Example for 3rd Tier Personal Care

A 49 year old female was injured in a car accident 15 years ago. She is a quadriplegic (paralyzed from the chest down) and lives in her own home. She is totally dependent on her motorized wheelchair and controls the movement of the chair with a cheek control device. She can swallow and breathe on her own.

The individual scored a 3 on a scale of 0 to 3 in all ADL's (activities of daily living) which includes bathing, dressing/undressing, eating, toileting, transferring in/out of bed/chair. A score of 0 means able to do without help and a 3 means unable to do.

The individual scored a 2 (unable to do) in the following IADL's, (Instrumental activities of daily living); meal preparation, housework, and laundry.
She scored a 1 (with help) in the following IADL's; shopping, taking medication, transportation, money management, and telephone/communication.

The client is receiving the maximum units of personal care of 960 units per month under the Medicaid State Plan.

Her QSP's bathe her daily, frequently turn her to prevent skin breakdown, and assist her at mealtime, and with transferring her from the bed to her wheelchair. This is a primary role of the QSP and the majority of their approved units are assigned to these tasks.

The individual is never left alone and lives with her elderly father who is unable to carry out the bathing, transferring and turning tasks due to his own health restrictions. She and her care givers are extremely diligent and cautious about skin care. She did not have any skin breakdowns for the past 3 years, which is evidence of the high quality of care.

In the past 6 months, the individual was hospitalized due to pneumonia and now has to have continuous oxygen. Her physical needs have increased.

The individual would benefit from additional personal care hours now that her condition has changed.

This is an example of a situation that demonstrates the need for the additional hours that would be provided with a 3rd tier for personal care. More units could be allotted for the need for frequent turning to maintain good skin integrity, additional time for assistance with eating etc. The additional 2 hours per day would extend the time in which the individual would be able to stay in her own home versus moving to a nursing facility.

PROPOSED AMENDMENTS TO HOUSE BILL NO. 1012

	General	Federal/Other	Total
To address critical needs with with enhanced staffing [from OAR priority #5]	$ 438,900	$ 747,957	$ 1,186,857

NOTE: This proposed amendment represents reimbursement to all private DD providers to help partially reimburse them for their losses in caring for critical needs clients. Adequate funding for this critical needs staffing throughout the system is vital to providing adequate care for the state's most vulnerable individuals, all of whom are either medically fragile or behaviorally challenged.

HB 1558 is a Bill that would study and correct this reimbursement disparity so the Center and other DD facilities serving these complex populations would not need to return to the Legislature each session seeking to be covered for some of their losses due to the existing DHS rate setting structure.

Testimony
North Dakota Disabilities Advocacy Consortium
HB 1012
Senate Appropriations
Senator Ray Holmberg, Chairman

Chairman Holmberg and members of the Senate Appropriations Committee, my name is James M. Moench, Executive Director of the North Dakota Disabilities Advocacy Consortium (NDDAC). The Consortium is made up of 24 member organizations concerned with addressing the issues that affect people with disabilities. (See attached list of members).

NDDAC supports House Bill 1012 – The Department of Human Services Budget. We were very pleased with the funding levels proposed in the Governor's budget in most cases and we support those levels with some enhancement that I will detail later in my testimony. First though, let me state that the Department of Human Service's open dialogue with stakeholders and the process used to determine the scope of the requirements and the resources needed to provide human services in North Dakota was the best that our members have witnessed to date and we wish to complement both the Governor and DHS management and staff for their efforts on behalf of the less fortunate in North Dakota.

There is much NDDAC member organizations wish to support in both the number chosen and the Governor's proposed funding levels of the OAR's presented to him by the Department. NDDAC vigorously supports raising the Medically Needy Income Level to 83% of the poverty level. The positive impact of adopting this change on low-income elderly and persons with a disability cannot be overstated. A person who currently is trying to survive on $500.00 per month for shelter, food, utilities, clothing, and transportation etc will be allowed to keep $720.00 per month. A

couple would be allowed $969.00 per month for their needs. Not a princely sum by any standards. The adjustment is long overdue and will change the lives of many North Dakotans.

NDDAC supports increasing Health Steps (also known as S-CHIP) program eligibility to 200% of net income. One of our state's highest priorities must be the goal of health care coverage for all the state's children. The payoff in quality of life from early detection and the later savings on treatment are well documented.

We wish to acknowledge the positive steps in HB 1012 as introduced in three major areas. One, the bill seeks to provide more opportunity for North Dakotans to access Home and Community Based Services and remain in their homes and communities for as long a possible, Second, providing a third tier of personal care expanding the hours a client is eligible for from eight to ten hours and Third, the bill's many enhancement of services for children both at home and in foster care. Revising the SPED fee schedule and providing funding for the Autism Spectrum Disorder Waiver for children up to five (5) years of age are two enhancements that we would especially like to highlight and support. Serving the 30 children projected to be served in the waiver will be most welcome as North Dakota steps up its efforts to combat the growing and perplexing problem of Autism.

While we were pleased that the Department was able to decouple ICF/MR from nursing homes and propose raising the Personal Needs Allowance from $50 to $60. We believe that level is still too low. We urge the Committee to support at least the $75.00 level the House adopted for the Personal Needs Allowance for those individuals in an ICF/MR.

NDDAC supports funding for the Aging & Disability Resource LINK (formally ADRC) pilot project. The No-Wrong-Door

concept of the ADR-LINK has proven both to enhance services and help clients cut thought bureaucracy in other states.

Due to the shortage of affordable facilities for individual who could remain independent with some reasonably priced services, we would support including the OAR to provide for an assisted living room & board subsidy.

In the area of mental health, we support adding funding of the OAR for Peer Support Services for persons with mental illness. Peer support is consumer-centered with a rehabilitation and recovery focus. Peer support services are provided by a person who has progressed in their own mental health recovery and is working to assist other people with mental health issues. Because of their life experiences, peer support providers have expertise and insights that professional training simply cannot duplicate.

Lastly, we support the proposed 7% & 7% inflation adjustment for Medicaid service providers. Service providers were promised catch-up adjustments during the sessions when budgets were tight. Now seems the time for adopting the adequate reimbursement rates that are needed for DD and QSP service providers to compete in the job market for talent and continue to provide quality services. We would further support up to an additional $2.00 per hour for Long Term Care worker, DD workers and QSPs. Long Term Care and DD worker were given $1.00 per hour by the House, QSPs were not included. We believe this oversight must be corrected.

Thank you for your attention today and we urge your favorable consideration of HB 1012.

Developmental Disabilities

3,900 ND Direct Support Professionals

Our economic stability also depends on jobs that don't require shovels!

Investing in the DD Direct Support Professional Workforce will:

- ✓ **Get money quickly into the hands of low wage workers who will spend it locally.**
- ✓ **Stabilize a critical part of our health care infrastructure.**
- ✓ **Ensure that people with disabilities get the care they need.**

TESTIMONY
HOUSE BILL 1012 – DEPARTMENT OF HUMAN SERVICES
HOUSE APPROPRIATIONS – HUMAN RESOURCE DIVISION
REPRESENTATIVE POLLERT, CHAIRMAN
January 26, 2009

Chairman Pollert, members of the Committee, my name is Dan Howell and for the past 9 years, I have had the privilege and honor to be the Chief Executive Officer of the Anne Carlsen Center (ACC) located in Jamestown, North Dakota. I continue to serve in the shadows of our namesake, Dr. Anne Carlsen. Dr. Anne Carlsen, is one of only 36 individuals who have received the prestigious Teddy Roosevelt Roughrider Award. She has been the driving force and inspiration for over 67 years as the ACC has taken on the challenge of caring for the State of North Dakota's most challenging children and now adults with special needs.

I am here today to testify in support in support of HB 1012, as well as Optional Adjustment Request (OAR) #5. Specifically, in OAR #5, the line item addressing DD staffing to meet critical needs. The issues overview summary, which we have handed to you, outlines this OAR request in greater detail for the ACC, as well as other providers around the State of North Dakota. Chairman Pollert and members of the Committee, in my testimony today I wish to cover three (3) items.

During the 2007 legislative session, the ACC made a promise to the North Dakota Legislature. That promise that if indeed providers around the State of North Dakota, as well as the ACC would be recognized financially for serving children, as well as adults with complex special needs that the ACC would explore alternatives for providing care to the State's most voluble.

The ACC began its community-based services for medically complex and behaviorally challenged children and adults in April of 2008. The Board of Trustees of the ACC allocated over $500,000 from our foundation for this new venture. We choose the community of Grand Forks to launch these home and community based services. Within 2009, we will begin offering these services in the Fargo and Bismarck areas. These services consist of two (2) programs: In-home supports and adult day supports. The in-home support program has served 11 clients, and our adult day support program has served 8 clients. Our hope going into these programs was that these programs would be a less costly alternative than providing residential care, as well as providing services close to or in many cases within the communities that the child or adult reside in. These programs today have kept families intact and our in-home support programs in some cases have eliminated or at least delayed the entry into a residential program.

Today, in the gallery is a mother of one of our adult day clients. If you turn to Tab 8 in the packet of materials that was set forth in front of you, you will read the story about Jenny. Jenny is a recent high school graduate who with the support of the ACC has been allowed to stay within her home community of Cooperstown, North Dakota. As Jenny approached her 21st birthday, there were many individuals who believed that Jenny could not stay in Cooperstown, but would need group home and residential placement in a community outside of Cooperstown. Although Jenny would be well taken care and would have a very fulfilling life in another community, Jenny nor her parents wanted her to leave the community of Cooperstown.

With Jenny continuing to live at home, the ACC is now providing a 1:1 day support program where Jenny volunteers in a number of businesses within the community. Jenny is now enjoying a great social network, loves her work opportunities, and on a daily basis is becoming a more independent person with disabilities.

If Jenny were to have gone a residential setting outside the community of Cooperstown, would be approximately $100,000 for her residential care. We are pleased to report that the cost to the State of North Dakota for keeping Jenny in her home community

and being an active part of the community of Cooperstown is a far less costly alternative.

Even though the community support program that we began in April is in its infancy, the early results have shown great satisfaction from parents, as well as clients, and as importantly, the costs of keeping individuals out of other more restrictive environments has been greatly reduced.

Mr. Chairman, as indicated earlier, the ACC supports HB 1012 but specifically is looking for support for OAR #5 and more critically and importantly the line item which is titled DD staffing to meet critical needs.

In 2003, the Department of Human Services wrote a letter to all providers taking a position that due to budget issues there would be no additional staffing enhancements granted. There were some exceptions to this, but for the most part, most providers have not received staffing enhancements to meet the needs of complex individuals under their supervision. Three (3) years ago, the Department asked each provider to look at where the gaps were for critical needs staffing. From that request came the $6,317,916 within that OAR. The ACC is approximately 37.5% of that dollar amount of $2,495,288 in the biennium.

44 of the 52 children on our campus have a behavioral related disorder. 28 of the 44 or 63.7% of the children and young adults are classified at the highest level in our scoring matrix. Children with behavioral support plans have increased 159% over the past 12 years. The ACC uses the Oregon Scoring Criteria, which the Department of Human Services has recognized as an appropriate tool to gauge severity in children with behavioral complexities. In 2003, the average score for a child at the Center was 94, and in 2008 the average score was 133. This represents a 42% increase in severity. All the while, approved fulltime equivalents (FTEs) at the Center rose only 4 FTEs or 4.5%. The ACC staffs today at 114 FTEs for children with behavioral challenges. We are reimbursed for 88.64 FTEs. This 25.36 FTE variance equates to $713,691 per year.

The other population when considering critical staffing needs is children with great medical fragility. The State of North Dakota has adopted the Oregon Scoring Criteria as valid criteria to measure the complexity and acuity of children with great medical fragility. The ACC has 20 students that meet the definition of medical fragility. The average score for a child with medical fragility in 2005 at the ACC was 30.56. In 2008, the average score was 42.6. However, the top 10 children today had an average score of 60.9. That has risen approximately 20% over this past year. The ACC staffs for 28.4 nursing professionals to meet the complex

needs of clients being served. The Department of Human Services reimburses at 21.3 FTEs. It is interesting to note that other states such as South Dakota, Illinois, Florida and Alabama to extinguish acuity and severity in their reimbursement methodologies for medically fragile clients.

The difference in how ACC staffs for medical fragility and what are allocated for reimbursement by the Department is 7.1 FTEs or $473,166 per year.

Mr. Chairman, and members of the Committee, once again the investment that our Board has made for the two programs; the behaviorally challenged program and the medical fragility program, was $1,186,857.

A Wiseman once said, "When there is an elephant in the room it is best to introduce it." The elephant in the room for the ACC is our Foundation. The Center has been blessed and privileged over the past many years to receive generous one time gifts, as well as many end of life gifts towards the care of children at the Center. This has given the Center a unique position, as well as responsibility towards accepting children with great medical and behavioral complexity regardless of adequate reimbursement. Other providers around the State of North Dakota will take children and adults with complex needs, but need to be assured that there is adequate reimbursement for these individuals.

Without adequate reimbursement, it would sadly become a financial hardship on many of these organizations. For providers around the State of North Dakota to adequately serve the growing complexity with respect to the clients that we serve, it is imperative that funding for critical staffing needs is placed in HB 1012.

I also recognize that additional dollars going into the 2009-11 budget may be difficult. Therefore, we are asking support for one-half of the OAR or $3,158,958. Of which $1,168,182 is general funds with the remainder being federal funds.

Mr. Chairman, and members of the Committee, this is the third session that I have come before you to ask for additional funding for medically fragile and behaviorally challenged funding. While I enjoy and respect each and every one of you, I am most certain that our request for enhanced funding at times gets old. That is why we have submitted HB 1556 which is a resolution for an interim study to collect the methodology and calculations for the rating setting structure used by the Department for clients who are medically fragile and behaviorally challenged. This would include children and adults in both the ICR/MR and home and community based setting.

My hope is that systemic change occurs so the ACC finds it no longer necessary to continue to come to the Committee asking

for additional funding for the medically fragile and behaviorally challenged populations.

Mr. Chairman and members of the Committee, I thank you for the job that each of you and at this time, I will answer any questions that you may have.

Thank you.

Introduction

Anne Carlsen CENTER

The Anne Carlsen Center has a rich tradition of providing compassion and expert care to children and adults with developmental disabilities.

Founded in 1941, our name honors Dr. Anne Carlsen who, despite being born with partial arms and legs, overcame her disability and excelled in her life and career. A former teacher, principal and administrator at the Center, Dr. Anne worked to help individuals with disabilities become as independent as possible and enjoy a higher quality of life. That quest for independence is at the heart of all we do here.

Our highly-trained staff supports individuals and families affected by disabilities and conditions that include: autism, cerebral palsy, traumatic brain injury, and medical fragility. On our Jamestown, N.D., campus, we meet a variety of educational, residential, medical and therapeutic needs. In 2008, we expanded our community-based services to offer more supports to more parts of the state. We are branching out to communities large and small, offering experience, knowledge and hope to children, adults and families.

As we meet these critical needs, we are faced with financial concerns similar to many other organizations that work with children and adults with developmental disabilities. The resources it takes to provide quality care and support are considerable. We look to the state to help adequately fund the care and services ACC provides and address the current gap in funding.

Dr. Anne once said, "Independence is the greatest reward a person can have." We are dedicated to helping that dream become a reality for individuals across the state. By providing individualized services, supports and training, we equip and empower all those we come in contact with. We have a passion for providing choices, guidance and hope in the journey of life.

Anne Carlsen
CENTER
Nurturing abilities. Changing lives.

HISTORY

1922: The Evangelical Good Samaritan Society was granted state licensure of incorporation for a fee of $5.

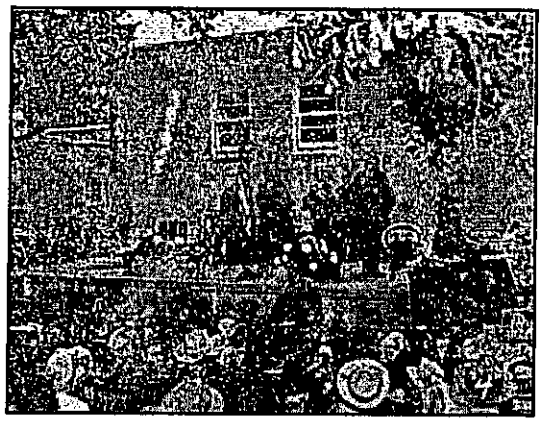
1923: The first Good Samaritan Society home was opened in Arthur, N.D., with 13 residents.

1932: A former Presbyterian college in Fargo, N.D., was offered to the Good Samaritan Society for the Crippled Children's School. Lelend Burgum was superintendent.

1938: Rev. W.B. Schoenbohm joined the Good Samaritan Society as superintendent. Anne Carlsen, a quadruple congenital amputee, joined the staff as a high school teacher.

1940: Lutheran Hospitals and Homes Society purchased the Crippled Children's School and moved it to Jamestown, N.D. Construction began in the fall at Horseshoe Park on six acres purchased for $450.

1941: Despite inclement weather, nearly 1,000 people gathered Sept. 21 to help dedicate the new school. The original building cost $58,000 to construct and was paid for entirely with private donations. It opened its doors to 18 students on Sept. 22. The School included two modern classrooms, a craft room, library, therapy room, dining hall, recreation room, and dormitory for 35 children.



1943: A new sunroom was dedicated Sept. 5.

1946: Anne Carlsen earned her master's degree in education from Colorado State University in Greeley.

The School purchased additional acreage to the east and west of the school.

1948: Anne Carlsen was named the school principal. The School purchased additional acreage to the northwest.

1949: The Easter Seal Wing, dedicated May 29, included three classrooms, rooms for occupational therapy, physical therapy, hydrotherapy, speech correction, storage, and exercise and a dormitory for 32 boys. Additional remodeling provided a junior high school room, a staff dining room and additional medical isolation facilities.

Anne Carlsen completed the doctoral program at University of Minnesota and was named child guidance director of the School.

A summer session called the Cerebral Palsy Training Program and Parents Conference was started in cooperation with the N.D. Easter Seals Society.

1950: Dr. Anne Carlsen was named superintendent after Rev. W.B. Schoenbohm resigned to take a new position in Iowa.

1953: Two classrooms and a laundry unit were added to the growing facility. The School's enrollment climbed to 59.

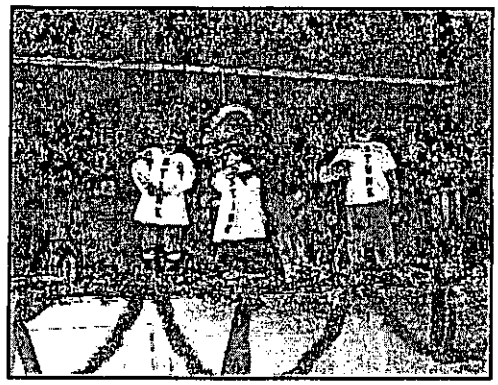
A postgraduate business education course started to offer young people with disabilities a chance to prepare for office jobs. It was discontinued in 1968 when two commercial colleges in the state were on ground level and accessible to those with disabilities.

1955: Students of the high school and commercial department started the first all-school yearbook, the Island Echo.

1958: A Ford Foundation grant for $33,200 and Hill-Burton Funds approved by the N.D. State Health Planning Commission provided money for construction of the industrial arts department, homemaking department, and new kitchen and dining room facilities.

Dr. Anne Carlsen received the President's Trophy as Handicapped American of the Year. The award is given annually to the person who has helped to advance the cause of the employment of the physically disabled.

1962: The new occupational therapy department and all-purpose auditorium/ gymnasium, with a seating capacity of 400, was dedicated in May. The auditorium included a permanent, handicap-accessible stage area.



Today children use the auditorium for physical education class, recreation, and performing in events like their annual Christmas program.

1965: A new heating plant, physical therapy department and speech therapy department with a special classroom for the hearing impaired were added.

1966: North Dakota Governor William Guy honored Dr. Anne Carlsen with North Dakota's highest honor, the Theodore Roosevelt Roughrider Award. The award is given to persons who have brought credit to the state by achieving national recognition in their fields of endeavor.

1968: The new limb and brace department was constructed. A vocational evaluation program, sponsored jointly by the School and the Vocational Rehabilitation Division, started and continued through 1973. The prevocational classroom for students not academically inclined but able to benefit

from further practical training and therapy, was kept as part of the program.

1971: The Crippled Children School dedicated a new modular dormitory designed to house 32 students. Thousands of gifts, matched by a 46 percent grant from Hill-Burton Construction Funds, supported the project.

1975: Dr. Anne Carlsen was inducted into the National Teachers Hall of Fame at Fullerton (Calif.) College.

1976: A second modular dormitory was added.

1980: The name of the school was changed to Anne Carlsen School, in honor of Dr. Anne Carlsen who had served as teacher, principal and administrator for more than four decades.

1981: Dr. Anne Carlsen retired from her administrative position and took a part-time consulting job with the School. She continued to maintain office hours and serve as a consultant and mentor to staff and students until the time of her death.

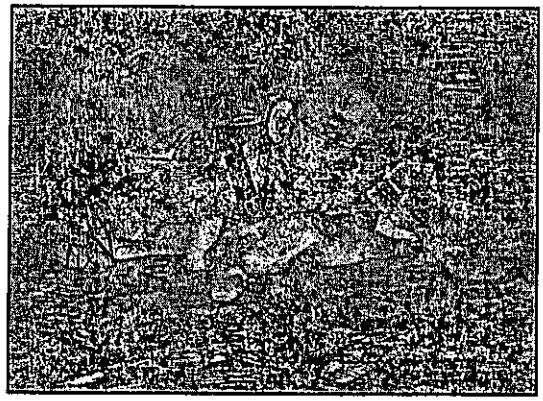
Dr. Anne received the W. Clement Stone Foundation Endow-a-Dream Award, given each year to honor an individual who has used a positive mental attitude to overcome adversity and make contributions to the betterment of humanity. A check for $50,000 was given to the School for its endowment fund.

Henry Edwards was named the school's administrator.

1983: An extensive remodeling project updated the staff and student dining areas, hallways and one dormitory.

President Ronald Reagan appointed Dr. Anne Carlsen vice-chair of the President's Committee on Employing the Handicapped.

1984: The focus of the Center's programs expanded to include young people with severe multiple disabilities.



All the children benefit from the warm-water swimming pool during gym class, in therapy sessions, and for open swim time in the evenings.

1985: The therapeutic swimming pool and whirlpool were completed so students could begin benefiting from physical, recreational and social therapy. The pool floor can be raised and lowered to any water depth between zero and five feet.

A statue of Dr. Anne Carlsen and a child was dedicated at the front entrance of the school.

1986: The School's program was expanded to include services and placement for children with autism.

1987: A Communication and Mobility Assessments program began. As part of the program, a team of therapists evaluates children within and outside the School to recommend more appropriate

communication and mobility programming.

ACC started its program for children with autism and behavior-related disorders.

1988: Anne Carlsen Center was licensed as an Intermediate Care Facility for the Mentally Retarded.

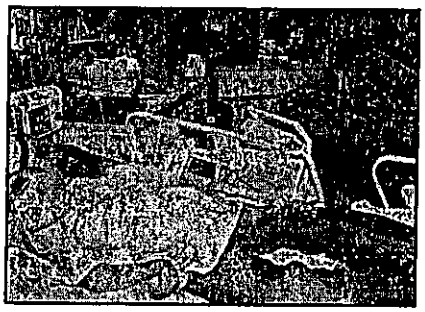
The local Head Start program relocated in the school building, giving young children with and without special needs a chance to interact with each other.

The Community Integration and Vocational Development Program began providing young adults with disabilities valuable work experiences as trainees in local businesses.

1989: The Therapeutic Equestrian Program began offering horseback riding for children with disabilities. The program uses physical, speech and occupational therapies while the children ride.

1990: Michael J. Numrich was named Administrator.

The Advanced Care Unit opened, providing state-of-the-art medical care and skilled personnel for medically fragile youngsters.



The advance care unit provides hospital-level medical care to the most medically-fragile children.

1991: The Center celebrated its golden anniversary with a year-long series of events, including a staff-alumni reunion and celebration banquet.

The program offering daily living skills and vocational experience for young adults with disabilities was named Transitional Services.

1992: The Center's education services received accreditation as an elementary school from the prestigious accrediting agency, North Central Association.

Fundraising began for the Resource Center, a regional focus of information training and equipment for children with disabilities and their families.

The Store Room opened its doors with consigned crafts and goodies. Kids gained work experience there before they moved to jobs in the community.

Dr. Anne Carlsen was chosen as one of 22 North Dakotans to serve on Governor-elect Ed Schafer's transition team and she was named Psychologist of the Year by the North Dakota Psychological Association.

The School received a President's Grant from Lutheran Health Systems to develop and put in place a system of providing rehabilitation services to children from all Lutheran Health Systems facilities throughout the nation.

1993: The name of the school was changed to Anne Carlsen Center for Children to better reflect its broader scope of services.

1995: Dr. Anne Carlsen and the Center celebrated her 80th birthday. Contributions honoring her totaled more than $25,000 and helped purchase a handicapped-accessible van.

1997: Mike Gillen was named administrator.

The Center began a five-year renovation project to enable it to better meet the needs of its children.

1998: The Anne Carlsen Tree of Life was dedicated, revealing 700 names of those who had contributed at least $5,000 to the Center.

1999: The Nature Trail's bridge was completed, thanks to Eagle Scout John Goetz who constructed the bridge as part of his scouting project.

The Guest House, which serves as a home-away-from-home for visiting families, was re-sided.

2000: Dan Howell was named administrator.

The Center's parent company, Lutheran Health Systems, merged with Samaritan Health System of Phoenix, Ariz., to create Banner Health System.

2001: The Center celebrated its 60th anniversary with a number of events including: a ribbon-cutting ceremony which culminated a five-year, $1.6 million remodeling project, an alumni reunion where over 70 graduates of the Center gathered, and a gala event highlighted with a benefit concert by acclaimed pianist Lorie Line and her Pop Chamber Orchestra. Over 1,500 people attended the performance which raised more than $20,000 for Center programs.

The Council on Quality and Leadership in Supports for People with Disabilities gave the Center its highest accreditation rating - three year with distinction. Less than 10 percent of organizations accredited by The Council receive this grade.

2002: The Center's namesake, Dr. Anne Carlsen, passed away on Dec. 22.

2003: On July 1, the Center became an independently-owned organization operated by a governing board of directors.

Construction began on a residential expansion and remodeling, adding three residential cottages to the campus and remodeling the existing dorm area, increasing the Advanced Care Unit from six to 16 beds.

2004: In July, 16 students moved into new homes located just yards from the main campus when two of three houses were completed in the first phase of a major remodeling and expansion project designed to enhance the living environment to better meet the needs of today's residents.

The gardening program is created at the Center, allowing students to grow their own vegetables and fruits. Students also produce market and sell homemade salsa.

2006: The Chaplaincy Program is created, as Pastor JoAnne Moeller is available to students, their families and Center staff for all spiritual needs.

2008: The name of the Center is changed to the Anne Carlsen Center, to better reflect the wide variety of ages the Center serves.

The Center expands its community-based services, offering more supports in more

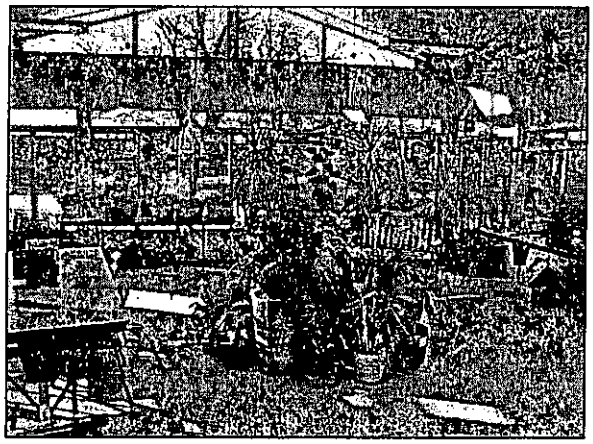
(2008 continued)

parts of the state. As part of the expansion, the Center begins to serve individuals over the age of 21.

Medically-fragile students are allowed to continue residing at the Center following graduation.

In April, the Center holds the first of four major autism-related conferences in 2008. ACC invites nationally-recognized speakers to educate families and professionals from across the state.

The remodeling project in the home living areas of the Jamestown campus is completed, increasing the Center's ability to serve medically-fragile children and behaviorally-challenged children in less-restrictive environments. State-of-the-art, highly-accessible features allow students to be engaged and comfortable in their home environments.



The Solarium project is completed, thanks to the generosity of ACC donors. The new structure, complete with features like non-slip floors, full-spectrum growth lights, and radiant floor heating, expands the gardening program to year-round. Students grow vegetables and flowers from seed for their gardens.

The Sunroom, built in 1943, undergoes a major renovation. New ceramic tile, cabinets, furniture and appliances have made this space more comfortable and convenient for home economics class, Girl Scouts and family visits.

Dr. Anne Carlsen's legacy is celebrated in ACC's new logo. The logo incorporates the authentic signature of the Center's namesake, as well as a redesigned butterfly.

ACC opens a Community Services office in Grand Forks and begins providing In-Home Supports and Day Supports to individuals and families in Northeast North Dakota.

ISSUES OVERVIEW

COMMUNITY SERVICES

Background

Throughout our nearly 70-year history, Anne Carlsen Center (ACC) has been a leader in providing residential, therapeutic, and educational services to children with a wide array of disabilities. Over time, the Center has further developed its expertise to meet critical and diverse needs, nurturing abilities while changing thousands of lives.

In 2008, the Center began a major expansion of our community-based services. We now provide client-centered, multi-disciplinary care to children with developmental disabilities living with their families, and adults with developmental disabilities living in communities throughout North Dakota.

Through our Community Services, ACC helps individuals with disabilities and their families build a home life of dignity, freedom and well-being. Our expert staff provides **In-Home Supports** for children (birth to 21) and their families. We nurture abilities, enhance independence, and measure progress through a series of goals and objectives. As part of a team, we help children communicate more effectively, learn safety skills, understand how to make choices, develop social skills, and advocate for themselves. ACC also teaches critical skills and routines to parents and caregivers.

We also offer **Personal and Community Supports** (Day Support Services) for adults (age 21 and over). ACC empowers individuals by helping each person create a unique plan for independence and community involvement. Our highly-trained staff provides community access, individualized skill training, community-based programming, guidance in daily living activities, and special assessment of areas of need.

As part of our Community Services, we provide Program Coordination/Family Support Services for all clients. We also offer training and education on developmental disabilities, including autism, for families, providers and advocates, among others. Four major autism conferences, which brought national experts together with parents and professionals, were hosted by ACC in 2008.

The ACC Campus in Jamestown, N.D., will always be a critical component of our service delivery. For some individuals, the specific care they need to live a full life will mean the best option is receiving services at the Center. In other cases, where children and young adults may be able to stay in their homes and/or communities, we are equipped to provide vital services and supports. The Anne Carlsen Center brings our resources and expertise to people ... *where they are.* As a result, the outcomes are often better, families stay together, and—in the end— our efforts save the state money.

Value of ACC's Community Services:

- Greater access to communities.
- Increasing social roles.
- Keep families together/closer.
- Provide meaningful activities, vocational experiences.
- Better functioning in the home.
- Improved access to familiar schools.
- Reducing challenging behaviors.
- Improving program plan outcomes for clients and families in community-based services.
- Increasing participation in community-based services.
- Less risk of negative/costly outcomes.
- Reducing children's institutional placements and costs.
- Less overall cost to the state.

Bottom line ...

Children and young adults stay in their communities.

Less cost. Better outcomes.

Positive Behavior Support Plan

Name: TT
Date of Birth:
Age: 16
Diagnosis: Mental Retardation,
Severe Articulation Disorder, Intermittent Explosive Disorder,
Pervasive Developmental Disorder—Not Otherwise Specified (PDD-NOS)
Program Date:
Approval Date:

I. Purpose:

The purpose of this Positive Behavior Support (PBS) plan is to recommend techniques that may be beneficial in any setting where TT may be interacting such as school, volunteer sites or home. PBS is a collaborative, assessment based process to develop effective individualized interventions for individuals with challenging behavior. Support plans focus on proactive and educative approaches. PBS plans include multiple interwoven strategies and generally prescribe 1) proactive strategies for changing the environment so triggering events are removed, 2) teaching new skills that replace problem behaviors, 3) eliminating or minimizing natural rewards for problem behavior, 4) maximizing clear rewards for appropriate behavior. PBS planning emphasizes improving the overall lifestyle quality as an integrated part of behavior support.

II. Background:

III. Behaviors to Increase (Alternative Behaviors):

What socially appropriate behaviors/skills does the person have or can learn, which may achieve the same outcome or function as the problem behavior: List for each target behavior:

- **Communicating when he is frustrated and asking for a break** (& receiving one).
- **Learning when he is agitated** then…
- **Using calming techniques or walking away to an area to calm himself** when upset.

IV. Behaviors to Decrease (Target Behaviors):

- **Distracting others from their tasks** – poking at other students, laughing or engaging in other inappropriate behavior and looking to see if others are watching or attempting to make sure others are watching his behavior.
- **Refusal to do required tasks** – Refusal to participate in tasks such as going to school, going to bed, going to the next class, putting away an activity.
- **Self-injurious behavior** - banging his head on the table or floor, picking at his skin
- **Physical aggression toward others** – Slapping with an open hand, pulling hair, pinching to the point of hurting but no marks are left, kicking at another person.
- **Object aggression** – Using an object to hit at a person or intentionally or not intentionally throwing or kicking an object in anger (even if not toward a person).

V. Previous Interventions

- A token economy has been used in the high school previously but it was reported that it was likely not used consistently and not used with proper reinforcement timing. TThas a tendency to satiate on reinforcers so they must be changed frequently.

VI. Functional Assessment Summary:

The functional assessment for this positive behavior support plan (10-23-08) is based on information obtained from TT's foster parents, special education teacher, IEP review, and observations at home and the partial hospitalization school. In addition, a Functional Analysis Screening Tool (FAST) was completed. The target behaviors are primarily maintained by the provision of attention, access to preferred items/activities (to get something he wants), escape from demands, and frustration due to the inability to get what he wants to say across to other people (lack communication skills).

Environmental Variables:

TT has been sleeping very little in the evenings. At times it has been 3-4 hours a night. To help him adjust to his environment, TT will have a daily schedule for school and the afternoon with Anne Carlsen integrated programming. TT is allowed or able to make choices on a daily basis (food, clothing, social

companions, leisure activities, daily schedule, chores) where applicable. He will require a 1:1 paraprofessional assisting him in the school setting and a 1:1 direct support staff after school.

It is best to not tell TT "no" when working with him. Say "Stop" instead. If he cannot do something at a particular time, let him know what he can do at that time and when he can do the activity he wants to do. Use a normal matter of fact tone of voice when working with TT. A threatening, aggressive rather than assertive tone of voice will trigger a behavior for TT.

It would be best to cover pictures or not watch videos that may depict violence or aggression. Pictures, even historical pictures, displays of aggression or violence, or seeing a parent discipline a child in an area where TT is going to be doing an activity could be a trigger to aggression. Be mindful of this when working with him and cover or remove these items from the area. Also, be mindful of your own body language and verbal tone when working with TT or asking him to complete a task or to calm, so that he does not infer anger or agitation. Be sure to provide positive attention to TT. Usually 12 to 1 is a good positive ratio of attention to redirection.

TT has obsessive tendencies. He gets ideas about things and will obsess and perseverate over them. Over the Christmas holiday, he has had some difficulty in past years and obsesses and may have some aggression.

It appears when TT is ill he is more likely to become agitated and aggressive.

Communication Variables:

TT has a motor speech disorder and a receptive/expressive language delay. He uses primarily one-syllable words, which are usually intelligible to the familiar listener. He primarily uses gestures, sign language, and speech, when communicating his thoughts, but he continues to grow in the use of a communication binder/folder, a twenty-location voice output device, and a four-location task specific voice output device. He will spontaneously point to pictures and he will sometimes say the words while pointing to the symbols. He is good at finding a picture if he cannot find the exact item.

TT follows simple one step verbal commands. He can follow a very limited amount of two-step commands. TT can imitate a task if it's demonstrated. He is able to understand, respond to, and indicates "yes" or "no".

Compliance Variables:

If TT has a 1:1 paraprofessional available to provide attention, humor is used or a teaching session is made competitive in some way, TT would likely be more compliant and less disruptive. In comparison, if TT is left alone and a teacher was giving attention to other students in the classroom and only talking to TT a few minutes out of the hour, he would likely be less compliant to finish his class work

Antecedent Variables:

At this time, the hyper-agitation is more likely to occur in the evenings. In addition, agitation and aggression occurs when TT is challenged with tasks he doesn't understand how to do or doesn't like to do. It does not appear that a particular setting would matter. At home, if other people are in his home he is more likely to become agitated or hyperactive. TT is more likely to become aggressive when he doesn't get to engage in the activity or get the item that he wants. In addition, TT can become frustrated at times when he is feeling that someone is not understanding what he is trying to tell them and can become agitated or aggressive. TT will more likely become aggressive if there is violence in a TV show he is watching or if he sees violence in person or sees another person in his vicinity or on the computer being scolded or reprimanded.

Aggression is least likely to occur in TT when his communication is understood, he is watching shows with no violence, and he feels that he is doing the activities he has chosen or has some control. In addition, if he enjoys competition and humor. If tasks are presented in ways that he feels he is competing or are presented with humor he is more likely to be less aggressive and to comply.

a. **Summary:**

In summary, the target behaviors are primarily maintained by the provision of attention, access to preferred items/activities (to get something he wants), escape from demands, and frustration due to the inability to get what he wants to say across to other people (lack communication skills). Due to the

function of TT's behavior, it is best to provide one to one paraprofessional or staffing when working with TT at this time. If TT is left alone and a teacher was giving attention to other students in the classroom and only talking to TT a few minutes out of the hour, he would likely be less compliant to finish his class work of engage in disruptive behavior. It is also important to remember to use the communication devices that TT understands to prevent agitation or aggression. TT has a motor speech disorder and a receptive/expressive language delay. TT follows simple one step verbal commands. Furthermore, TT can imitate a task if it's demonstrated. TT is more likely to comply if tasks are presented in ways that he feels he is competing or are presented with humor.

It would be best to cover pictures or not watch videos that may depict violence or aggression. Pictures, even historical pictures, displays of aggression or violence, or seeing a parent discipline a child in an area where TT is going to be doing an activity could be a trigger to aggression. TT is more likely become aggressive if there is violence in a TV show he is watching or if he sees violence in person or sees another person in his vicinity or on the computer being scolded or reprimanded.

To help TT adjust to his environment at school, community and home, TT will have a daily schedule for school and the afternoon with Anne Carlsen integrated programming. It is best to not tell TT "no" when working with him. Use a normal matter of fact tone of voice when working with TT. A threatening, aggressive rather than a calm assertive tone of voice will trigger a behavior for TT.

b. Medications the person is taking (meds are changing frequently – check with physician or parents for updated listing):

- **Neurontin 100 mg, 3 times per day (6 am, 7 pm):**
- **Seroquel 50 mg every morning & 100 mg (4 pm):**
- **Clonidine .1 or .2 mg at night:**
- **Propranolol 160 mg 2 times per day (6 am & 6 pm):**

- **Side-effects which may affect the person's target behavior:**
  - **Neurontin 100 mg, 3 times per day (6 am, 2 pm, 7 pm):** Drowsiness, dizziness, unsteadiness, fatigue, vision changes, weight gain, nausea, **dry mouth**, or constipation may occur.
  - **Seroquel 50 mg every morning & 100 mg (4 pm):** Constipation, drowsiness, dizziness, headache, stomach pain/upset, tiredness, weight gain, nasal congestion, or **dry mouth** may occur.
  - **Propranolol 160 mg 2 times per day (6 am & 6 pm):** Dizziness, lightheadedness, or tiredness may occur as your body adjusts to the medication. Nausea/vomiting, stomach pain, vision changes, trouble sleeping, and unusual dreams may also occur.
  - **Clonidine .1 or .2 mg at night:** Dizziness, lightheadedness, drowsiness, **dry mouth**, or constipation may occur as your body adjusts to the medication.

- **Medical conditions or complications:** Obsessions

- **Psychiatric diagnosis (if applicable):** Mental Retardation, Severe Articulation disorder, Intermittent Explosive Disorder R/O, PDD NOS R/O

VII. Steps of Intervention/Recommendations:

a. Environmental Restructuring:

- **It is better to not tell TT about activities too far in advance, as he will obsess about them.**
- Keep TT's desk as free from distraction as possible. Have his work items set aside in tubs or something where he cannot see them to be distracted by them. Give him the one item at a time with only the necessary tools to use at that time.
- Have him face away from other students or be seated in the front of the class so that the other students do not distract him. Another solution would be to have a cubicle type of seating area for him so that others do not distract him.
- A way to keep TT focused on a task is to put a small amount of work into a folder and then when he finishes the folder he can move onto the next. A timer can be used if necessary to help him know when he will be done and the reinforcer will be earned.
- A timer can be used in a couple of different ways. One is to give him time before he has to engage in a task or activity. He can set the timer for 15 minutes and then he must go to bed or go do the desired activity. The second is to set the timer for the amount of time he has to complete an activity.

Use small amounts of time (maybe start with 5 minutes) since he has very little attention span and have him see if he can get the work done appropriately, but "beat the clock."

b. **Antecedent/Proactive Measures:**
- Utilize the **Premack Principle** when you can. This is simple reinforcement at its finest (i.e., "TT, you can have (what he wants), after you (do his task)."
- **Only reprimand TT about an incident at the exact/immediate time of the incident (only if necessary).** Otherwise, reprimands at a later time or day will **trigger aggression**.
- Redirect TT when he is beginning to engage in distractions/laughing or other target behavior.
- To gain compliance, during difficult times, try and build a **behavioral momentum** by asking him to do "high probability" activities/tasks prior to asking him to do the "low probability" ones.

c. **Educational Components (Visual Supports, etc.):**
- Promote independence and communication skills by having him use his communication book and signs to get his needs/wants across to others throughout his day.
- Have a separate daily schedule for TT to use each day. It can either be picture or a few words. Include a time every day to practice relaxation skills and have it be a check off list for him.
- When disciplining another child, warn TT ahead of time and help him to understand this is a learning time for the other person.

d. **Reinforcement Procedures:**
- **Reinforcement needs to be immediate** and broken into small segments of time in his day every day.
- The current token system may continue to be used at this time. He is currently earning a sticker for appropriate work every 15 minutes. After two hours of work he could earn 8 stickers if he earns 1 per 15 minutes. At the end of the two hours, TT can choose one of the reinforcers from a picture list or out of a special reinforcer box. If it is an item, he can take 5-10 minutes (a timer should be set) to interact with the item and then return to his scheduled activity. If he returns to his activity on time, he can earn another sticker.

Reinforcers:
  - Pop tends to be the most reinforcing for him at the moment (use small amounts at a time)
  - Juices
  - Looking at pictures/Pictures of himself
  - Taking pictures
  - Magazines & Catalogs (medical, sears, toys)
  - Medical Items (e.g. Scrubs, stethoscopes, blood pressure monitor, movies)
  - Visiting amusement parks
  - Vegetables (green/broccoli)
  - Catching a fish
  - Visiting his grandmother
  - Being hugged/kissed
  - Dressing in costume (e.g., medical costume, pirate)
  - Getting mail out of the mailbox
  - Talking on the phone
  - Going swimming
  - Going out to eat (McDonalds, Subway, Applebees)
  - Running errands (grocery's, shopping)
  - Getting new clothes
  - Visiting his biological parents

VIII. Calming Activities, when an adult notices that TT is getting agitated or more active...

- Have TT engage in weight lifting or some push-pull type [Thera-band] of activity first thing in the morning (or a time the gym is available at school). For TT, it can calm his senses enough to help him work but not agitate him.
- Give him two handed hand "hugs" or hand massage.
- Practice relaxation techniques at times when he is not agitated at least once or twice a day. This should be built into his schedule. For example, counting, muscle relaxation, blowing bubbles, blowing a tissue, etc.
- Go for walks.
- Ask him to do push-ups on the floor or pushing against the wall.
- Ask him to carry heavy objects, climbing on monkey bars, or swimming, which are resistance type of activities.

- Have TT sit in a beanbag chair.

IX. De-escalation Procedures: (or Reactive Strategies)

- Using humor or competition to get him to comply.
- Break his tasks into smaller parts.
- Use the **Premack** principle (First/Then): First we will do _____ and then we can do _____ (which the second thing is a fun thing to do).
- If TT is obsessing on a subject, have him talk to you for a few minutes (can set a timer if necessary) and then let him know he can talk about the subject again at a specified time.

Once a target behavior has occurred, what is the plan of action – outline in steps from least to most intrusive as clearly as humanly possible. Address each target behavior.

- If TT gets too close and seems agitated, ask him too move back.
- If he is attempting to hit his head on the table or wall, ask him to move his chair away from the area until he is calm and ready to work.
- If necessary, TT's hands can be held by staff against his body or theirs to keep him from hitting.
- If TT is agitated and does pull hair, first ask him to remove his hand from your hair then back away from him and ask him to move back. If he does not let go use the Therapeutic Techniques to remove his hands as trained at Anne Carlsen Center.
    - He can then be asked to use the calming techniques such as taking deep breaths, etc. to calm in a quiet room/area and he can let you know when he is ready to resume the previous activity.
- If TT hits or kicks at staff, staff will step back, and ask TT to step back. In addition, staff can let TT know that he is upset and it is time to calm down before any type of activity can be done.
    - He can then be asked to use the calming techniques such as taking deep breaths, etc. to calm in a quiet room/area and he can let you know when he is ready to resume the previous activity.
- If the above techniques do not work to assist TT to calm then, when TT engages in striking staff or others, kicking, hitting, or clearing objects or throwing objects in the area, a Therapeutic Techniques approved basket hold may be used to assist TT to calm and be safe in the environment.
- Staff can also call Julie Lombardi at school in the mornings on extension 106 and at noon on extension 869 in the school for backup assistance.
- TT's foster father should only be called in extreme emergency situation.

X. <u>Risk vs. risk analysis</u>

What are the risks of the plan vs. the risks of not having the plan – risks of medications versus not taking them – risks of rights restrictions vs. not having them etc?

- Current rights restrictions as identified within TT's program and his rights restrictions require approval by his guardians or parents, team, and the Human Rights Committee and reviewed at least annually.
- TT is on medication that is prescribed and monitored by his physician, Dr. ----- and Altru medical center. The risks of not being able to attend school, out of home placement, and injury to him and others outweigh the risk of being on the medication and having this plan in place.

XI. <u>Team consensus and staff training</u>

Prior to this plan being implemented, parent or guardian approval is required. Parents, teachers, and staff were consulted during the writing of the plan and their input proved to be invaluable. As for staff training, each staff person that works with TT will be required to read this program and it will be discussed at subsequent meetings and with classroom staff. The Behavior Analyst and the Family Resource Coordinator will do further training and monitoring of the program being implemented.

XII. Data Collection System:

Data will be collected with regards to the frequency of TT's targeted behavior (if not over the entire day, at least during specified intervals where the behavior has a history of occurring). Data will be collected daily in both the classroom and in-home support settings. Data will be reviewed at the end of each month by the Behavior Analyst and reviewed quarterly at TT's team staffing.

ISSUES OVERVIEW

MEDICALLY FRAGILE FUNDING REIMBURSEMENT

Background

The Anne Carlsen Center (ACC), based in Jamestown, N.D., is an ICF-MR facility licensed by North Dakota. We provide hospital-level care to a majority of the state's most medically-fragile children. Of our 55 licensed beds, 20 are occupied by children and young adults who are medically-fragile.

To care for these children, ACC is staffed 24/7 by caregivers specializing in pediatric care including a pediatrician, RNs, LPNs, respiratory therapist, and LSAs (direct care providers), a social worker, and behavioral specialist. Supporting our staff are a consulting clinical psychologist, psychiatrist, as well as medical specialists including pediatric neurologists, physiatrist, pulmonologist, and cardiologist.

Medically-fragile students at the Anne Carlsen Center have a variety of complex diagnoses including congenital myelomalacia of the spinal cord, hypoplastic lungs and thorax, seizure disorder, brain atrophy, tracheostomy, gastrostomy and ventilator dependency, and congenital facial abnormalities.

The Anne Carlsen Center uses the **Oregon Scale** to determine the level of medical support needed for each child and young adult.

- Developed by the Oregon Department of Human Services, the Oregon Scale is an assessment tool recognized by the state of North Dakota.
- The baseline score to be considered medically fragile is 15. The higher the score, the more medically fragile an individual is.
- Scores are based on a system-wide evaluation (respiratory, cardiovascular, neurological, gastro-intestinal, urinary, metabolic and overall) in which 73 care elements are assessed and assigned a number of points depending on the level of intervention needed.

The Need

- Since the 2007 session, the number of medically-fragile residents has increased from 19 to 20, requiring even more expenses to meet their specialized care needs.

- DHS currently reimburses ACC at an interim rate of $482.47 per child/day. The four-person average (representing a range of mild to severe medical needs) for the cost of care for our medically-fragile students is $683.

- For reimbursement purposes, the N.D. Department of Human Services (DHS) treats funding of medically-fragile residents the same as all other children and adults in ICF-MR facilities across the state, *including those with no physical disabilities.*

- Other states (e.g., South Dakota, Illinois, Alabama, Florida) distinguish their medically-fragile children from adults and children who are not medically-fragile, and that is reflected in funding enhancements for their care.

- Because of the complexity of the medical needs of many of our students, we currently need 28.4 FTEs in our nursing area. We are reimbursed 21.31 FTEs. That's a shortfall of 7.1 FTEs.

- Reimbursement for a medically-fragile child at a neonatal or pediatric ICU hospital (e.g., Mayo) is approximately $2,000 per day.

- To cover the annual gap in funding reimbursements, ACC must access its donated Foundation funds, which it relies on for capital improvements and modernization as well as support of student activities that help residents have normal childhood experiences like prom, summer camp at Elk's Camp Grassick, and trips to baseball games.

- The ND Legislature granted ACC interim funding in the 2007 session to help the Anne Carlsen Center in its investment in the lives of North Dakota children with medical fragility. In the biennium, it granted ACC $832,870 in severely medically fragile funds. Yet, greater compensation for our high-level of care is still needed.

- Without adequate funding reimbursement, ACC may be faced with the need to refuse admission of medically-fragile children or risk financial harm to the whole organization. Anne Carlsen Center will not reduce the level of care medically and legally required to serve children currently under our care be cause of our nearly 70-year tradition to serve and empower these individuals.

- If North Dakota's most medically-fragile children are not at ACC, they would likely be in nursing homes or at specialty hospitals like Mayo, which are the only other places equipped to provide the level of skilled nursing these children require. ***This would be at significantly higher costs to the state.***

Comparative Cost vs. Reimbursement for ACC Medically-Fragile Children

December 9, 2008

Medically-fragile students at the Anne Carlsen Center have a variety of complex diagnoses including congenital myelomalacia of the spinal cord, hypoplastic lungs and thorax, seizure disorder, brain atrophy, tracheostomy, gastrostomy and ventilator dependency, and congenital facial abnormalities. To care for these children, ACC is staffed 24/7 by caregivers specializing in pediatric care including a pediatrician, RNs, LPNs, respiratory therapist, and LSAs (direct care providers), a social worker, and behavioral specialist. Supporting our staff are a consulting clinical psychologist, psychiatrist, as well as medical specialists including pediatric neurologists, physiatrist, pulmonologist, and cardiologist.

Anne Carlsen CENTER

TRINITY

Age 6

Diagnosis

Trinity is a 7-year-old girl who sustained a massive brain injury after a near drowning in June 2008. She has emerged from a coma, and is now recognizing faces, responding to simple directions, and learning again to move her body. She has a tracheostomy, and is fed through a gastrostomy. She has a baclofen pump delivering medication to her spine to decrease the severe muscle spasms caused by the brain injury.

Cost of daily care
$925.19

DHS daily reimbursement
$482.47

(continued)

Comparative Cost vs. Reimbursement for ACC Medically-Fragile Children

ACC STUDENT WITH INTENSE MEDICAL NEEDS Age 4	**Diagnosis** Complicated spina bifida, ventilator dependent, abnomalities of brain stem, paralyzed from the shoulders down.	**Cost of daily care** $712.86 **DHS daily reimbursement** $482.47
ACC STUDENT WITH MODERATE MEDICAL NEEDS Age 11	**Diagnosis** Cerebral palsy, baclofen pump delivering medicine to body, respiratory concerns requiring antibiotics and treatments, fed through gastrostomy.	**Cost of daily care** $558.34 **DHS daily reimbursement** $482.47
ACC STUDENT WITH MILD MEDICAL NEEDS Age 11	**Diagnosis** Spina bifida, uses wheelchair, staff carefully monitors medical needs.	**Cost of daily care** $535.89 **DHS daily reimbursement** $482.47

FOUR-PERSON AVERAGE
Cost of daily care $683.07 **DHS daily reimbursement** $482.47

ISSUES OVERVIEW
BEHAVIORALLY CHALLENGED FUNDING REIMBURSEMENT

Background

The Anne Carlsen Center (ACC), based in Jamestown, N.D., is an ICF-MR licensed by North Dakota. Since 1987, the Center has provided comprehensive care for children and young adults with Autism Spectrum Disorder (ASD) and other advanced behavior-related disorders.

Of its 55 licensed beds, 44 are occupied by children and young adults with behavior-related disorders. To care for these children, ACC is staffed 24/7 by caregivers specializing in pediatric care including a pediatrician, RNs, LPNs, and LSAs (direct care providers), a social worker and behavioral specialist. Supporting our staff are a consulting clinical psychologist, psychiatrist, pediatric neurologists, and a physiatrist.

The Need

- The number of children at ACC on positive behavior support plans has significantly increased from 17 to 44 in the past 12 years while the number of DHS-approved direct-care FTEs has recently gone down one FTE.

- Ten of ACC's medically-fragile residents also have behavioral challenges, critically compounding care requirements.

- Based on Oregon scoring criteria, which is recognized by the ND Department of Human Services, the levels of behaviors of our residents has increased dramatically in the past 12 years. Of the 44 children and young adults currently on behavior support plans, 28 are classified at a Level 3—the highest, most severe level in the scoring matrix.

Behavioral Classifications

The Anne Carlsen Center currently uses two tools to determine the severity of the behavioral issues for the individuals we serve: the Oregon Scale and the Supports Intensity Scale (SIS).

* **The Oregon Scale**

Developed by the Oregon Department of Human Services, the Oregon Scale is an assessment tool recognized by the state of North Dakota. Based on the Oregon Scale Criteria, the Anne Carlsen Center (ACC) not only determines a score based on that Criteria, but also classifies each individual into different levels based on the amount of support that person needs because of his or her behavioral symptoms/issues. The Oregon Scale is typically used to determine the behavioral needs of children but can be modified for adults with disabilities.

The Levels/Behavioral Classifications are as follows:

Level 1 (mild level of staff support):

- Problematic behavior includes: learned helplessness, noncompliance, mild symptoms associated with ADHD, various forms of self-stimulatory behavior.

- Individuals require **"stand by" or indirect supervision** with minimal level of direct supervision (.5 staff for each child).

Level 2 (moderate level of staff support):

- Problematic behavior includes: significant symptoms associated with ADHD, mild forms of self-injury (e.g., hand-biting), mild forms of aggressive behavior where risk of injury is minor on non-existent, and mild property damage (e.g., ripping, clearing a table, etc.).

- Individual requires **line-of-sight supervision** with moderate level of direct supervision (.75 staff for each child).

Level 3 (significant level of staff support):

- Problematic behavior includes: Elopement/AWOL, significant forms of self-injury (e.g., head-banging), significant forms of aggressive behavior where risk of injury is major, significant property damage (e.g., throwing appliances, putting holes in walls, breaking doors/windows, etc.), and sexually acting out behavior.

- Individuals require a **high or constant level of direct supervision** (1 staff member for each child) for guidance, training, and safety.

* **Supports Intensity Scale (SIS)**

The second screening tool used to determine level of support needed is the Supports Intensity Scale (SIS). It is a scientific assessment tool designed to measure the level of practical support requirements of a person with an intellectual or developmental disability. It is used to determine support needed for individuals ages 16 and over, and is composed of three sections:

Section 1 – relates to Home Living, Community Living, Life-long Learning, Employment, Health and Safety, and Social activities.
Section 2 – relates to Protection and Advocacy Activities.
Section 3 – relates to Exceptional Medical and Behavioral Support Needs, and includes medical conditions and problem behaviors that typically require increased level of support, regardless of the person's relative support needs in other daily life activities.

The support needs for each life activity are examined based on three measures of support needed: Frequency, Daily Support Time, and Type of Support.

The Levels/Support Classifications are as follows (*The higher the **Level**, the higher the level of support needs)*:

Level 4 = 116 or more
Level 3 = 100 – 115
Level 2 = 85 – 99
Level 1 = 84 or less

- For reimbursement purposes, the N.D. Department of Human Services (DHS) funding allocations for staffing do not support the children's actual staffing needs. In order to appropriately meet the needs of our students with complex behavioral and medical needs—and meet the Oregon conditions criteria—the Anne Carlsen Center currently has 114 FTE (full-time equivalents) for direct care staffing. DHS-approved direct care staffing is only 88.64 FTE. That is a shortfall of 25.36 FTEs.

- With an average salary of $13.53 per hour (not including benefits) for our direct-care staff, ACC has an annual reimbursement gap of $713,691 for the care and support of children and young adults with behavior disorders.

- To cover the annual gap in funding reimbursements, ACC must access its donated Foundation funds, which it relies on for capital improvements and modernization as well as for support of student activities that help students have normal childhood experiences like prom, summer camp at Elk's Camp Grassick, and trips to baseball games.

- Without adequate funding reimbursement, ACC may be faced with the need to refuse admission of children with high-level behavioral needs or risk financial harm to the whole organization. Anne Carlsen Center will not reduce the care medically and legally required to serve children currently under our care because of our nearly 70-year tradition to serve and empower these children.

- Other group homes in the state have denied admission to some of our current students and clients because they could not adequately afford to support the staffing needs of the individuals.

- In 2007, the ND Legislature provided a 4-percent increase in funding *(due to inflation)* in the first year of the biennium, and a 5-percent increase in the second year of the biennium. Lawmakers also approved a 60 cent/hour wage increase for employees. Progress has been made, but more is still needed for ACC to continue to provide quality care to those who need it most.

- If North Dakota's most severely behaviorally-challenged children were not at ACC, they would likely be in facilities out-of-state, at a far greater cost to North Dakota.

ANNE CARLSEN CENTER
Positive Behavior Support Plan

Name: M.L.
Date of Birth: November 3rd, 1995 **Age:** 12 years, 10 months
Date of Review: October 8th, 2008 **Approved Through:** October 31st, 2009

Diagnosis: Autism and Moderate Mental Retardation

Background: M.L. is a 12 year old boy who resides in the Horseshoe Park Neighborhood and attends school at ACC.

Positive Behaviors: M.L. is an affectionate young boy who has a wonderful smile/laugh. Over the past couple of years, his verbal speech has increased significantly. M.L. enjoys helping others and takes pride in his work. He is tidy and likes to have things in "their place" and organized. M.L. loves being outdoors.

Targeted Behaviors:
1. Aggression towards others – defined as attempting to bite, grab, slap, or kick others.
2. Aggression towards self (SIB) – defined as biting hands, hitting his head, and banging his head against hard-surfaces.
3. Elopement – defined as wandering away from others (safety issue).

Previous Interventions:
Medication
Time-out
Structure and Routine
Specialized Diet
Physical Restraint
Communication Training

Functional Analysis:
1. **Environmental Variables:**
   - **a. Medications the person is taking and potential side effects:**
     - i. Medications:
       1. Risperdal (0.625mg in the am, 0.375mg at 12pm, 1mg in the evening) and 0.25mg every 24 hours if needed for agitation.
       2. Paxil (20mg at hs) for OCD type behavior.
     - ii. Most common side effects for both medications may be:
       1. Insomnia, Agitation, Anxiety, Extrapyramidal Symptoms
       2. Somnolence, Dizziness, Insomnia, Constipation, Headache, Diarrhea, Asthenia, Impotence
   - **b. Medical conditions or complications:**
     - i. (None)
   - **c. Psychiatric diagnosis:**
     - i. (None)
   - **d. Sleep patterns:**
     - i. M.L. generally sleeps okay. Typical his bedtime is 9pm. M.L. is usually awake between 5-6am. He is woken up at 2am to use the bathroom and then goes back to sleep.
   - **e. Unusual diet, eating routine, or food preferences:**
     - i. M.L. is on a Gluten free / dairy free diet.
     - ii. Please consult meal card for technique, strategy, and other considerations..
   - **f. Typical schedule of activities (when she goes to bed, wakes, up general routine):**

i. In the neighborhood, M.L.'s day is not set or formally structured. He does have set times/activities built into his day (e.g., mealtime, bedtime, etc.), but in a 24-hour plan format.
ii. At school, M.L. has a set daily schedule. He utilizes visual supports to assist with letting him know what comes next.

g. Predictability of daily activities (does the person know what will be happening and when):
i. As stated above, when at school, M.L.'s day is very predictable. It should be noted however, that at times, if there is an interruption to his routine/schedule, it can be very difficult on him.
ii. Schedule changes should be avoided whenever possible. When not, utilize priming to help make that change/transition less difficult.

h. To what extent is the person allowed or able to make choices on a daily basis (food, clothing, social companions, leisure activities, daily schedule, chores, etc.)?
i. During free/break times, M.L. is able to choose what item/activity he would like to do. He often makes these choices independently.
ii. When using the First...Then... (grandma's rule) paradigm, M.L. is often allowed to choose the "then" activity.
iii. M.L. can make choices by using his voice and by making choices using pictures/symbols.

i. How Many other persons are in their home and work/day setting:
i. There are seven students (including M.L.) in the classroom along with a special education teacher, a regular education teacher, and 4 paras. M.L. gets along well with all of them.
ii. In the neighborhood, shares a room with his brother and one other peer. There are a total of 14 individuals residing in the neighborhood. As for staffing, there are supposed to be 10 staff on working with the 14 children/young adults. M.L.'s room is supposed to be staffed with 3 staff.

j. Staffing Pattern and quality of staff interactions:
i. Listed directly above.

k. Nature of Demands placed on person (consider the number, how demands are made, tone of voice, body language, when demands are made, timing of the demand, ratio of positive interaction requests-especially important in escape/demand situations):
i. When working with M.L., it is important to gain his visual attention before given the demand or expecting compliance..
ii. When asking him to do something, use as simple statements (as few words as possible).
iii. If M.L. is having a difficult time, it is beneficially to use a firm but fair voice tone.

2. **<u>Functional Alternative Behaviors:</u>**

a. What socially appropriate behaviors/skills does the person have which may achieve the same outcome or function as the problem behavior?
i. <u>Aggression towards others</u> - The following is suggested:
1. M.L. can use his voice and or PECS symbols to communicate with others. This is being worked on in ST, the classroom, and the residential setting.
ii. <u>Aggression towards self (SIB)</u> - Same as above.
iii. <u>Elopement</u> – M.L. can use his voice and or PECS symbols to communicate with others as to where he would like to go or what he wants to go see.

b. Describe the person's communication abilities (complex speech, simple words or phrases, etc.)?
i. M.L.'s expressive communication skills are at a lower level than his receptive skills. He however, continues to improve with his expressive language ability.
ii. M.L. often communicates with others using vocalizations, facial expressions, body language, and verbalizations. He may also use negative behavior to communicate.

iii. ST is working on a picture exchange communication book (also using a sentence strip with the carrier phrase "I want").
iv. M.L. is encouraged by staff to use his words.
v. He often speaks softly, so he needs encouragement to speak louder.
vi. M.L. continues to display echolalia as well.

c. Describe the sorts of communication for the following areas?

i. To ask for help – will take the hand of a staff person and say "help please".
ii. To ask for attention – lying his head on the lap of staff, holding hands, sit down next to someone, eye contact, and smiling.
iii. To ask for a break – by saying "all done", leaving an area, vocalizing loudly, or wringing his hands.
iv. To show you something or someplace – taking you to the item.
v. To indicate pain or discomfort – by using communication symbols, crying, vocalizing, or self-abuse.
vi. To protest or say no – communication cards, verbalizing "yes" or "no" or simple accepting or rejecting.

d. Does the person follow verbal requests?

i. Yes...usually, as long as you have M.L.'s attention when making the request and he understands what you are asking him to do.

e. Can the person imitate a task if it is demonstrated?

i. Yes

f. How does the person respond to gestures or physical prompts?

i. M.L. does respond to gestures, but he is more likely to do so if it is paired with a verbal prompt.
ii. M.L. responds well to physical prompting unless he is in the middle of a meltdown.

g. How does the person indicate "yes" or "no"?

i. Yes – verbalize, acceptance, communication symbol.
ii. No – verbalize, rejection, communication symbol.

h. What things can you do to make the person more cooperative and to improve a teaching session?

i. Keep it simple/familiar.
ii. Follow a routine.
iii. Utilize a work station.
iv. Soft but firm voice tone.
v. Utilize priming.
vi. Utilize visual supports (e.g., schedule, First...Then...,etc.).
vii. First...Then... (alternate between work/fun)
viii. Limit distractions (work station).
ix. Need to establish limits/expectations (e.g., stay seated, definite end to a task, etc.).
x. Utilize sensory techniques/strategies to set the occasion for work.
xi. Consider lowering (not eliminating) expectations when not feeling well or having a difficult day.

i. What things can you do which would lead to noncompliance or disrupt a teaching session:

i. Give directions or expectations that he cannot understand or is not familiar with.
ii. Using the word "NO!" You need to correct responses/behavior by using words/phrases that do not use the word "No".
iii. Introduce change in schedule.
iv. Setting is too warm.
v. Requiring him to wait and not given materials or attention to help with the "wait-time".
vi. Not providing something to look forwards to or nothing to work for.
vii. Not establishing definable limits or expectations.
viii. Not using sensory strategies when struggling.

j. **What things tend to be positive, enjoyable or reinforcing for the person (e.g., events, activities, objects, people)?** *The following is a non-exhaustive list of preferred activities/objects:*

i. PLAYING OUTSIDE!
ii. FAMILY!
iii. Swinging (must be controlled or he can become over-stimulated)
iv. Water play / swimming (especially at the YMCA)
v. Food
vi. Going out to eat
vii. Favorite books
viii. Watching TV/Movies (likes to rewind on VCR)
ix. Computer (emerging)
x. Being around his peers
xi. Various sensory activities
xii. Having his shoes off
xiii. Bouncing on large therapy balls
xiv. Puzzles
xv. Gross-motor room
xvi. Home-economics (cooking)
xvii. Delivery chores/jobs
xviii. Snow-sledding
xix. Gym activities
xx. Matching games
xxi. Going for walks

3. **Antecedent Variables:**

a. What time of day is the target behavior(s) most likely to occur?

i. Aggression (others) – No specific time.
ii. Aggression (self) – No specific time.
iii. Elopement – No specific time..

b. What time of day is the target behavior(s) least likely to occur?

i. Aggression (others) – No specific time.
ii. Aggression (self) – No specific time.
iii. Elopement – No specific time.

c. Where is the target behavior most likely to occur?

i. Aggression (others) – Nowhere specific.
ii. Aggression (self) – Nowhere specific.
iii. Elopement – When outside and he perceives nobody is watching him.

d. Where is the target behavior least likely to occur?

i. Aggression (others) – In the pool or on the playground.
ii. Aggression (self) – In the pool or on the playground.
iii. Elopement – When inside and engaged in an activity.

e. With whom is the target behavior most likely to occur?

i. Aggression (others) – Can occur with anyone.
ii. Aggression (self) – Can occur with anyone.
iii. Elopement – Can occur with anyone.

f. With whom is the target behavior least likely to occur?

i. Aggression (others) – Can occur with anyone.
ii. Aggression (self) – Can occur with anyone.
iii. Dropping – Can occur with anyone.

g. What activities are most likely to lead to a target behavior?

i. Aggression (others) – Nothing specific.
ii. Aggression (self) – Nothing specific.
iii. Dropping – Nothing specific.

h. What activities are <u>least</u> likely to lead to a target behavior?

i. <u>Aggression (others)</u> – While swimming, playing outside, or during break-time.
ii. <u>Aggression (self)</u> – While swimming, playing outside, or during break-time.
iii. <u>Elopement</u> – While engaged in a preferred activity and nothing else "catches his eye".

i. Are there particular situations or events, which "set off" the target behavior?

i. <u>Aggression (others)</u> – Transitioning to an activity that he may not want to do or that is "out of routine.". This is especially true when transitioning from a very preferred activity (e.g., playing outside). This behavior is also more likely if he is not feeling well.
ii. <u>Aggression (self)</u> – Transitioning to an activity that he may not want to do or that is "out of routine.". This is especially true when transitioning from a very preferred activity (e.g., playing outside). This behavior is also more likely if he is not feeling well.
iii. <u>Elopement</u> – Is more likely if staff attention is taken away from him and there is water close by.

j. Are there any particular situations or events, which never (or almost never) lead to the problem behavior?

i. There are no guarantees, however, as stated above, if engaged in a very preferred activity such as playing outside, it is unlikely that he will have a meltdown or engage in the targeted behaviors.

4. <u>Consequence Variables:</u>

a. **Based on the above analysis as well as interview and observation – what do you think is the function of the target behavior? List for each target behavior.**

i. Based on interview information, observation, and the Functional Analysis Screening Tool, M.L.'s aggressive behavior towards himself or others serve the primary function of escape or task avoidance. That being said, there are also components of his diagnosis of Autism that also come in to play in that he has significant sensory issues, difficulty communicating, and is resistant to change. Also, there is almost always an increase in aggressive behavior when he is not feeling well.

<u>Behavior Change Procedures</u>

1. <u>Prevention of identified Behaviors:</u>

a. What are the best bets for preventing the target behavior based on the above information? Be as clear as humanly possible. Address each target behavior.

1. <u>Aggression (others)</u> - Utilize the following:
    1. Utilize Priming.
    2. Utilize Social Reinforcement (i.e., praise and high-fives) and affection.
    3. Utilize Premack (First...Then...)
    4. Be aware/cognizant of his not feeling well. Notify nursing to see if there is something that can be given for pain or illness.
    5. Stick to his schedule/routine.
    6. Provide access to preferred activities when possible.
    7. Stick to dietary guidelines.
    8. Utilize sensory calming strategies (especially before school each day).
2. <u>Aggression (self)</u> - Utilize the following:
    1. Same as above.
3. <u>Elopement</u> -
    1. Be very aware of his likelihood or possibility to engage in this behavior. This is especially true when outside and if there is water around.
    2. Stay within arms reach of M.L. when in this type of situation.
    3. Follow the outdoor strategies listed at end of this document.

2. **Enhancement or alternative (positive) behaviors:**
    a. **What's the best bet for making sure the alternative behaviors, which will be replacing the target behavior, occur? Be as clear as humanly possible. Address each target behavior.**
        1. Aggression (others) –
            1. As stated throughout this document, staff are working with M.L. so that he can communicate choices, desires, acceptance, rejection by either using his voice and or PECS symbols.
            2. When M.L. is starting to get upset, encourage him to use his voice or provide him with picture symbols so he can let you know what he wants.
        2. Aggression (self) –
            1. Same as above.
        3. Elopement –
            1. Same as above.

3. **Reaction to identified behaviors:**
    a. **Once a target behavior has occurred, what is the plan of action – outline in steps from least to most intrusive as clearly as humanly possible. Address each target behavior.**
        1. Aggression (others) – Utilize the following:
            1. Verbal prompt to stop and block attempt to strike out at you with his hands, feet, or mouth. ***(Encourage M.L. to use his voice to tell you what he wants or what is wrong)***.
            2. If necessary, hold-his hands briefly while repeating your verbal prompt to stop.
            3. Utilize sit-n-watch timeout procedure:
                a. He is to sit calmly in a chair for 3-minutes to regroup. Utilize a visual timer to help indicate "the end".
                b. If M.L. is really struggling, it may be beneficial to reducing the time criterion. If so, just make sure he is calm for at least 30-seconds.
            4. As a last resort, utilize a baskethold (safety restraint) as instructred in Therapeutic Intervention (T.I.). Remember to document its use on a restraint log and deliver to nursing and behavior analyst as soon as possible.
        2. Aggression (self) – Utilize the following:
            1. The same process is used for his self-injury as for the aggression towards others. The only difference is:
                *a. Unless he is hitting his head with his hand-very hard, biting to a point where he is breaking the skin, or if he is banging his head...**ignore the behavior** when possible for a couple of minutes as it will often stop on its own.*
        3. Elopement – Utilize the following:
            1. Provide a verbal prompt for M.L. to "STOP" and run after him.
            2. Have him come back to where he took off from. Utilize a come-along to escort him back to where he was supposed to be if necessary.

In addition to the above, there are protocols developed for both swimming and when outdoors. They are as follows:

Swimming:

- Give M.L. a choice of whether or not he wants to swim. You can ask him for a verbal response, but you will get a more reliable response if you use a YES / NO card.

a. If he is upset while walking down to the pool or once he is ready but isn't in the pool yet...don't push it. Give him time to calm or perhaps avoid the pool all together.
b. If he chooses not to swim during P.E., he can do another structured activity (e.g., riding bike) in the gym.
c. If he chooses not to swim during evening swim, give him some other activity options.

- If M.L. chooses to swim, he is expected to follow these rules (please review them with him prior to getting into the pool):
  d. No climbing on people.
  e. No rough play.
  f. No grabbing people.
  g. No running if he gets out of the pool.
- M.L. is expected to remain in the pool area for at least 10-minutes. If he makes it through 10-minutes, he is expected to do another 10-minutes (keep increasing by 10 minute intervals). Although it is our goal, he doesn't need to remain in the pool for 10-minutes, just in the pool area.
- If he gets out of the pool during the 10-minute interval or if he is very agitated while in the pool, he is expected to sit nicely (Cool Down Time).
  h. This can be done on a chair, or preferably the mat that will be made available for him (it will be located right next to the drinking fountain).
  i. Encourage him to have a cold drink as the heat does affect him.
  j. Use the visual timer to indicate the 10-minute intervals.
  k. If he gets out of the pool for a while and is behaving well and then decides he wants to get back in the pool, please let him.
- If M.L. is getting out of the pool and running around or keeps getting in and out of the pool, ask him to go Cool Down and if necessary, escort him there. Do not chase him around the pool. There is usually one person sitting on each side of the pool, so just stop him as he goes by.
- Also keep a large towel next to the pool. If he is ever in a meltdown while in the pool or pool area, do not attempt a physical intervention/hold in the pool. Assist him out of the pool, dry him down with the towel and do a baskethold on dry land. When doing a baskethold, either do it in a chair or while seated on the ground...and make sure that someone is holding his legs. When trying to secure the legs, be careful when trying to get a hold of them as he kicks hard. Always watch a person's head as well (don't have it within striking distance of your head).

Outdoors / Off Campus:

- Structure outside walks and off campus outings so that there are other staff in the immediate area. When going in a group, stay with the group. M.L. can continue to go to the ACCC playground with a staff person that knows him well but that staff person needs to be engaged in what M.L. is doing and not just let him wander.
- M.L. should be highly supervised when walking with a group through potential hazard areas. "Sandwich" M.L. between staff and hold his wrist and/or hand to get past potential hazards. [For example but not limited to, crossing a street or crossing the railroad tracks, when walking around bodies of water]
- When approaching a potential hazard, verbally prepare M.L. in the following way: "M.L., I need to hold your hand to keep you safe because we are walking by _____ and this can be dangerous." After: "Thanks you for letting me hold your hand and help keep you safe from danger."
- When walking on sidewalks have M.L. walk on inside and staff on street side and try to anticipate what might catch his attention or things that he might impulsively run toward.
- Staff who know M.L. and his programming well should be assigned to him when going out on walks or off campus. His direct staff assignment in this situation should not be a new staff that has not been specifically trained on his programming or has not passed employment probation period.
- M.L. needs to have a staff directly assigned to him when outside. He should not be pared with another student outside around potentially dangerous situations due to his impulsiveness and lack of safety skills.
- The use of a tether (try and conceal) can also be used when the staff to student ratio is not ideal.

k vs. risk analysis: What are the risks of the plan vs the risks of not having the plan – risks of dications versus not taking them – risks of rights restrictions vs. not having them etc.?

- It is important that M.L.'s inappropriate, aggressive behavior, and his attempts at hurting himself decrease by providing him the support that he needs to develop alternative/appropriate replacement behaviors and/or increase his expressive communication skills. Therefore, efforts need to focus and teaching him alternative ways to communication frustration, when he needs a break, etc.. Efforts are also being made to meet his sensory needs and getting him to become more tolerant or less resistive to change.
- Current rights restrictions as identified in M.L.'s IHP are seen as necessary for learning and safety. These restrictions are approved by his parents, team, and Human Rights Committee and reviewed at least annually.

Fading: Some of the restrictive procedures utilized in this PBS (i.e., level of supervision, physical redirection, and come-along, physical blocking, holding of hands, and baskethold) will be assessed for the possibility of reducing/eliminating them from his program if/when the frequency of his negative behavior (i.e., aggression and elopement) decreases to zero (or near zero) levels for 3 of 4 months.

Generalization and Maintenance: To promote Generalization of skills, M.L.'s program will be followed by all staff at ACC that work with him. To assure maintenance of skills, the supports will continue in his program as needed.

Team consensus and staff training: Prior to her plan being implemented, parent/guardian approval is required. Staff were consulted during the writing of the plan and their input proved to be invaluable. As for staff training, each staff person that works with M.L. will be required to read this program and it will be ıssed at subsequent classroom meetings as necessary.

Data collection: Data will continue to be collected with regards to the frequency of M.L.'s target behavior as well as more detailed data collection if/when a physical safety restraint is performed.

Thomas Gaffaney, Behavior Analyst

Anne Carlsen Center
Positive Behavior Support Plan

Name: S.S.
Date of Birth: October 29th, 1990 **Age:** 18 years, 1 month
Date of Approval: December 3rd, 2008 **Approved Through:** December 31st, 2009

Diagnosis: Moderate Mental Retardation, Pervasive Developmental Disorder, Anoxic Brain Injury and Encephalopathy due to Hypoxic Ischemic Insult at birth, Seizure Disorder (by history.

Background: S.S. is a 18-year old young man who moved to the Anne Carlsen Center on April 1, 2003.

Positive Behaviors: S.S. is generally a pleasant young man who is fun to be around. He has a great sense of humor and a likeable personality around those that he is comfortable with. S.S. has a dynamic vocabulary and good word usage. He is very expressive through the use of his verbal communication as well as his body language.

I. **Targeted Behaviors**

a. Invasion of Personal Space – involves, touching others (with the obvious exceptions of tapping a person's shoulder to get their attention, shaking hands, and hugging family members), and/or sitting/standing to close to someone.

b. Aggression – hitting self or others with his hand, pinching and scratching directed towards others, and disrupting property.

c. Sensory Overload (Extreme Negativism) – Making negative comments about people, places, and activities.

II. **Previous Interventions**

- Medication.
- Picture Symbol and Word Schedule (both group home and school)
- Timeout

III. **Functional Analysis**

a. **Environmental Variables**

- **Medications the person is taking and potential side effects:**
  - Zyprexa (2.5mg @ 7am, 3.75mg @2pm, and 10mg @ 8pm). Medication is used for behavioral control. Side-effects can include: lethargy, agitation, insomnia, headache, nervousness, hostility, tremors, dizziness, motor restlessness, weight gain, and Tardive Dyskinesia.

  - Depakote (375mg @ 7am, 2pm, and 8pm). Medication is used for seizure control and mood. Side-effects can include: sedation, nausea, vomiting, anorexia, tremors, drooling, and elevated liver enzymes.

- **Medical conditions or complications:**
  - S.S. had complications at birth due to the lack of oxygen and a brain hemorrhage resulting in brain injury. As a result, has a seizure disorder and has learning and emotional difficulties. These include:
    - Executive brain functions (direction and organization of all behavior...both emotional and cognitive).

    - Auditory processing delays (takes extra time to process what is being said to or asked of him.

- Right visual field impairment.
- Leg length discrepancy which can lead to poor balance.

- **Psychiatric diagnosis if the person has one:**
  - None.

- **Sleep patterns:**
  - S.S. is generally a good sleeper. He usually goes to bed between 8:00-8:30pm and wakes up between 7:30-8:00 am.

- **Unusual diet, eating routine, or food preferences:**
  - S.S. is usually a good eater. If he doesn't like what is being prepared, he can assist staff in making something else. He is currently on a regular diet and can have seconds if he desires. S.S.'s sweets are limited, he is to have only 100% juice, small portions of desserts, and please limit products with artificial sweeteners.

  - S.S. has Breakfast and Snack menus in the cottage from which he can make choices.

- **Typical schedule of activities (when go to bed, wake up, general outline of week):**
  - S.S. has a daily schedule in the classroom where his day is broken down into 30-minute intervals. He also has a Daily Planner, where his activities are written down in the order in which they occur. This list is done on a ½ day interval. S.S. is also starting to use a Daily Activity Planner.

  - In the home setting, S.S. uses the same TO DO LIST, where he and staff review what activities he has to do and wants to do (choices) and again, they are written down in the order in which they will occur. He has some "free time in the cottage (more so on the weekends), but much of is day is scheduled to help provide structure and routine. Some set daily activities in the home setting include:
    - Laundry.
    - Chores.
    - Exercise (1-3 times per day).
    - Bath/Shower in the morning.
    - Calming time before bed.
    - Church (each Sunday with mom).

- **Predictability of daily activities (does the person know what will be happening and when):**
  - As stated above, most of S.S.'s "classroom day" and much of his "home day/evening" is scheduled and very predictable. If any changes occur, S.S. needs to know about them as soon as possible (preferably 1-2 days in advance if possible).

- **To what extent is the person allowed or able to make choices on a daily basis (food, clothing, social companions, leisure activities, daily schedule, chores):**
  - Some of S.S.'s activities associated with his schedules are set. However, others aren't necessarily, and he can have some flexibility with regards to the order.

  - S.S. is allowed to choose snacks, what he eats at meals, etc. with some restrictions based on calories, sweets, etc..

- S.S. is allowed to choose what to do during free time and for most of his leisure activities. Staff encourages his participation with others.
- He is allowed to choose the clothes that he wears.

- **How many other persons are in their home and work/day setting:**
  - Residential – S.S. has his own bedroom in the Summer Cottage but resides with a group of seven other children/young adults. At any given time (during non-sleeping hours) there are five staff working in the home.
  - Classroom – S.S. is one of seven students in his classroom. There are five staff who work in the room.

- **Staffing pattern and quality of staff interactions:**
  - S.S. has direct supervision to line-of-site during waking hours.

- **Nature of demands placed on the person (consider the number, how demands are made, tone of voice, body language, when demands are made, timing of the demand, ratio of positive interaction requests – especially important in escape demand situations):**
  - When working with S.S., please use a calm voice.
  - It will be helpful to utilize the Premack Principle (IF…THEN), especially if you are working on a "less-preferred" activity.
  - Utilize a timer, so S.S. knows how long he needs to work on something.
  - Priming

b. <u>Functional Alternative Behaviors</u>

- **What socially appropriate behaviors/skills does the person have which may achieve the same outcome or function as the problem behavior:**
  - S.S. <u>is learning</u> the social rules and personal space boundaries but doesn't always follow them. Therefore, he will require reminders, especially when over-stimulated and/or distressed.
  - At times S.S. is able to communicate frustration verbally as opposed to being aggressive towards himself, others, and property.
- **Describe the person's communication abilities (complex speech, simple words or phrases):**
  - S.S. is able to communicate verbally with others at times. However, it may take him longer to process what you say to him and longer for him to put together the idea or sentence that he wants to say to you. Please be patient. He also tends to talk softly, so you may need to respectfully ask him to repeat what he said and to use a louder voice.
  - S.S. is beginning to develop the ability to communicate a range of feelings/emotions. At the present, he often requires curing or modeling to recognize/label the appropriate feeling.
- **Describe the sorts of communication for the following areas:**
  - <u>To ask for help</u> – verbal ("I need help").

- To ask for attention – verbal/physical (will tap you on the shoulder or just start talking).
- To ask for a break – verbal, but may also display a negative behavior.
- To show you something or some place – verbal or gesture (will often point or lead you to something)
- To indicate pain or discomfort – verbal.
- To indicate frustration – verbal or negative behavior.
- To protest or say "no" – verbal or negative behavior.

- **Does the person follow verbal requests or instructions:**
  - Yes, when stated in simple terms and given time to process what is asked of him. It may be beneficial to also use gestures, written word, etc. to communicate with S.S.

- **Can the person imitate a task if it's demonstrated?**
  - Yes, but depends as he does have poor hand-eye coordination. He needs reminders to use his right hand.

- **How does the person respond to gestural or physical prompts?**
  - Does fine with gestures.

- **How does the person indicate "yes" or "no"?**
  - Verbally states "yes" and "no".

- **What things can you do to make the person more cooperative to improve a teaching session?**
  - Respect S.S.'s feelings and recognize that at times he has difficulty controlling his emotions. Do not get frustrated or angry when S.S. gets upset, emotional, cries, etc.. Acknowledge this behavior (i.e., ask him what is wrong) and work through it.
  - Utilize a calm voice.
  - Utilize Premack
  - Utilize Priming (e.g., "We have to stop this and do ____ in a two minutes.").
  - When you are doing more than one work activity, give S.S. a choice of which one he wants to do first if possible…this gives him some control.
  - Alternate between work and play/leisure activities.
  - Utilize a timer to indicate completion of the work time when applicable.
  - Quiet setting.
  - Respect S.S.'s physical workspace.
  - Follow the steps listed in *attachment #3.*
  - Use fewer words, rather than more.
  - Be as positive, pleasant as possible and encouraging.

- **What things can you do which would lead to non-compliance or disrupt a teaching session?**
  - If you are too firm, negative, you will have difficulty with S.S.
  - Work, work, work….with no play.
  - Noisy work environment is not conducive for S.S. to focus.
  - Large groups do not go as well as small group or individual instruction.
  - If the work session is too long (try to keep it to 15-20 minutes maximum).

- Too much verbal prompting with not enough time to process what you said to him.
- Sarcasm…viewed as mocking.

- **What things tend to be positive, enjoyable or reinforcing for the person (events, activities, objects, people)?**
  - Spending time with family
  - Computer
  - Music (hip/hop)
  - Keyboard
  - PBS television shows
  - Eating
  - Reviewing weather information via the internet, newspaper, or TV
  - Visiting/interacting with others
  - Journal entries (positive statements only…not referencing negative behavior)
  - Animated movies

c. <u>Antecedent Variables</u>

- What time of day is the target behavior **most** likely to occur?
  - Nothing specific, can occur at anytime.
- What time of day is the target behavior **least** likely to occur?
  - Nothing specific, can occur at anytime.
- Where is the target behavior **most** likely to occur?
  - School, more demands.
- Where is the target behavior **least** likely to occur?
  - Community and home setting.
- With whom is the target behavior **most** likely to occur?
  - No one specifically.
- With whom is the target behavior **least** likely to occur?
  - No one specifically, although less likely to occur with his mother.
- What activities are **most** likely to lead to a target behavior?
  - Exercise and Gym times.
- What activities are **least** likely to lead to a target behavior?
  - Computer time and watching movies.
- Are there particular situations/events, which "set off" the target behavior?
  - The following can set off some negative behaviors:'
    - Crowded setting (lots of people).
    - Noisy environment.
    - Some transitions (use Premack and priming to help).
    - New activities or schedule changes.
    - Sarcasm – S.S. perceives this as mocking him.
    - Using too many words or directives given together.
    - Using too complex of sentences.

- Are there particular situations or events, which never (or almost never) lead to the problem behavior?
  - Watching movies.
  - Computer time.

d. <u>Consequence Variables</u>

Based on the above analysis as well as interviews and observations – what do you think is the function of the target behavior? List for each target behavior.

- Invasion of personal space – Function appears to influenced by impulse control issues, attention seeking behavior, lack of understanding appropriate behavior, and asserting control.
- Aggression – impulse control, issues, task-avoidance, frustration, and asserting control.
- Sensory overload (extreme negativism) – difficulty with emotional regulation, and a response to anxiety.

IV. Behavior Change Procedures

a. Prevention of identified behaviors

- **Invasion of personal space –**
  - Review S.S.'s social rules with him (attachment #2). Post them so that he can read them to you as opposed to you reading them to him.
  - Role-play appropriate social behavior throughout the day and praise S.S. when is appropriate.
  - Review Social Story (attachment #1). Again, have S.S. read it.
  - Sex Education and social skills training.

- **Aggression –**
  - Utilize S.S.'s schedule (Daily Planner).
  - Alternate between "less preferred" and preferred activities.
  - Utilize priming and Premack strategies.
  - Use calm voice. Do not get upset with S.S..
  - Do not use sarcasm with him; he perceives that you are mocking him.

- **Sensory overload (extreme negativism) –**
  - This behavior is difficult to predict as typically there is no forewarning. He can be in a great mood one second and then go to the other extreme the next.

b. Enhancement of alternative behaviors

What's the best bet for making sure the alternative behaviors, which will be replacing the target behavior occur? Be as clear as humanly possible.
Address each target behavior.

- **Invasion of personal space** – in addition to what is listed directly above, the following may be helpful:
  - Reminders and role play on how to great and interact with others such as shaking a persons hand and interacting at arms length without touch.
  - Sex Education and social skills training.
  - Allow S.S. private time in his room if he desires.

- **Aggression –**
  - Prime S.S. that if he needs a break to ask for one.
  - Encourage S.S. to express his emotions verbally as opposed to physically and praise him when he does. He has made improvements in this area over the past year and we want this to continue.
  - Do Problem Solving Sheets

- **Sensory overload (extreme negativism) –**
  - Allow S.S. some time to calm/regroup and then:
  - Do Problem Solving Sheets

c. Reaction to identified behaviors

Once a target behavior has occurred, what is the plan of action – outline in steps from least to most intrusive as clearly as humanly possible. Address each target behavior.

- **Invasion of personal space –**
  - Verbal prompt to stop the behavior (calm voice). Praise if he stops the behavior.
  - Role-play what he should have done instead.

- **Aggression -**
  - Verbal prompt to redirect the behavior.
  - Praise if she stops the behavior and review what he should have done rather than being aggressive towards self, others or property.
  - If he doesn't stop it can be helpful to send S.S. on a mission or task. Often transition from the current activity/setting helps him calm.
  - It can be helpful to introduce a new staff person (although this person needs to be familiar to S.S.) to work with S.S.
  - If Aggression continues, you may have to hold his hands.
  - Once the behavior is over and S.S. is calm, have a teaching interaction (what he could have done instead...such as verbally stating his frustration).
  - Role-play appropriate behavior.

- **Sensory overload (extreme negativism) –**:
  - Verbally interrupt the behavior and redirect to a positive or neutral discussion.
  - Again, a new setting (mission) or new person may break the behavior chain.
  - Develop an action plan and review it. Utilize Premack in doing so. Problem Solving worksheets as well once calm (or at least not as negative).

Risk vs risk analysis: The potential result of some of S.S.'s behavior is that of social isolation and at times a safety concern for those who live and work with S.S. Therefore, this program is designed to try and prevent these behaviors by continued promotion of S.S. using verbal communication, problem solving skills and structuring his environment in such away that he can be successful. There are some restrictive measures within the plan (holding his hands) as well as his rights restriction document (supervision level). At this point, these strategies are seen as appropriate steps to be taken.

Team consensus and staff training: Prior to this plan being implemented, parent approval is required. Staff were consulted during the writing of the plan and their input proved to be invaluable. As for staff training, each staff person that works with S.S. will be required to read this program and it will be discussed at subsequent Cottage/home meetings and with classroom staff. Further training and monitoring of the program being will be done by S.S.'s Teacher, Home Coordinator, and his Home Team Leader.

Data Collection: Data will continue to be collected with regards to the frequency of S.S.'s target behavior as well as extreme mood swings.

Thomas Gaffaney, Behavior Analyst

[redacted]ttachment #1

[redacted]OCIAL STORIES

Greeting others

- When I greet people, I say "hi and am friendly to others.
- I ask people their names when I don't know who they are (e.g., "Hi, my name is ____, what is your name?").
- I shake a new friend's hand when I am being introduced to them.

TOUCH

- I do not kiss or hug people that I just met, or my roommates, or my classmates or those that work with me. I also keep my hands to myself except for when I shake someone's hand.
- I do not touch people on their heads or faces because they may not like that.
- I do not lean on people or stand too close to them (arms distance). If I am tired, I should sit down in a chair.
- I do not ever touch people in their swimsuit or private part areas.
    - For girls, a swimsuit would cover their chests and on the front and back of their bottoms. I should not touch them there.
    - For boys, a swimsuit would cover the back and front of their bottoms. I should not touch them there.

[redacted]NG FRIENDS

- I will greet my friends with a nice smile, hello, and a handshake. I do not hug my friends.
- We do fun things that we both enjoy, and we take turns deciding what we are going to do.
- I am nice when I am with my friends, and don't get upset with, scream at, or hit out at my friends.
- When our time together has ended, I will say thank-you and good-bye until next time.

GOOD TOUCH AND RESPECTING OTHER'S PERSONAL SPACE (Social Story)

- I know it is important for me to keep my hands to myself and where they belong.
- I know my hands do not belong on other people.
- I should be respectful of other people's personal space.
- To Respect Other's Personal Space: I must keep my hands to myself. I do not touch others unless I am shaking hands or hugging a family member like my mom. I also do not stand too close to or lean on other people.

Attachment #2

HOUSE/COTTAGE RULES

- I do not go into others' bedrooms.
- I do not invite or take other students into my bedroom.
- I do not wander into areas of the home/cottage where I have not been invited.
- I do not talk about private parts to others.
- I do not touch the private parts of others.

[redacted]ttachment #3

WHEN WORKING WITH S.S., IT IS HELPFUL IF:

- Get rid of boredom. Plan the evening on S.S.'s PLANNER and work with him to make choices of activities.
- Go with S.S. to use the restroom every 60-90 minutes.
- Realize if you are frustrated with S.S., he can sense that and chances are he is also frustrated with you. Switch with another staff if you have to.
- Give choices and keep S.S. activity/busy. Reduce your verbal commands/directives and when talking to S.S., give him at least 15 seconds processing time to respond. And please leave him in his room by himself when he is behaving inappropriately as your presence/interaction can escalate the behavior.
- If you know that S.S. is being inappropriate, calmly redirect him to be "appropriate" (using that term) for the current activity. If necessary, tell him ways that are appropriate.
- Don't let him get in staff or peers personal space. He does not need to touch anyone's hair, lean on them, etc.. He can give an appropriate handshake and respect other's personal space.
- Be positive, do not show frustration, and plan creative activities that grab his interest.

Jenny Maertens and her Life Skills Assistant Amber Olson look at movies and books at the Cooperstown Library. Trips to the library and other fun activities are built into each day, balancing the time Jenny is at work and helping to create a fulfilling life.

Close to Home

ACC Opens Doors of Opportunity for Cooperstown Woman

It was an exciting time for a social, outgoing young woman. Jenny Maertens had just graduated from high school. But anticipation was quickly replaced by frustration.

When Jenny graduated this past May, she was no longer a child with a disability—she was an adult with a disability. This meant there were limited age-appropriate programs or services available for the 21-year-old in her hometown of Cooperstown.

The choices presented to her and her family were not that appealing. Jenny could move away from her mom, her dad, a handful of siblings, a grandma, and the only community she had ever known, or remain in Cooperstown and receive no help.

Jenny was born with a cognitive disability. Though she possesses wonderful qualities and many abilities that allow her to perform a wide variety of tasks, she does require some assistance.

A meeting in May, which put Jenny's Special Education director in contact with the Anne Carlsen Center, proved to be life-changing for Jenny.

Putting the Pieces into Place

Jenny has a larger-than-life personality. She seeks out conversation and connections with other people. Her mother says that

(continued)

Jenny puts the finishing touches on a cake she baked in her apartment. With supervision, she is able to learn a wide variety of kitchen skills.

was the most discouraging part about her daughter's situation. Jenny is someone who could create a fulfilling life, if just given the chance.

"It is fun working right now," said Jenny. "Oh yeah, it is really fun. I make coffee and do towels and washcloths. And I walk the dogs and lots of stuff."

ACC staff met with Jenny and her family at the end of August, crafting schedules that would play to the young adult's strengths and get her involved in her community. ACC Community Program Coordinator Laurie Skadsem visited businesses in Cooperstown, and found a variety of employers eager to work with Jenny.

"I tried adding incentives at each business and, of course, social interaction," Skadsem added. "At the nursing home, if she finishes with the towels and washcloths by 11 a.m., Jenny joins the exercise group there. Then from 11:30 a.m. to 1 p.m., she makes her own lunch, cleans up, and gets ready for her afternoon schedule."

The final piece of the puzzle fell into place when Amber Olson was considered to be Jenny's Life Skills Assistant (LSA). LSAs assist someone in performing everyday tasks, and they administer health and personal cares during therapeutic, educational, vocational, recreational and leisure activities.

"I help individuals get to know their community and communities to get to know individuals," said Olson. "With it, you don't have to uproot anyone from their community. And you can tell the community is 100-percent behind Jenny. When they see her, they always smile and say hi and ask her how it is going. They are thrilled."

Looking to the Future

Jenny's parents hope eventually their daughter can live with a roommate, though she will probably always require a certain amount of support. However, having a roommate would allow her a greater measure of independence during evenings and weekends.

And hopefully this success story acts as a springboard for others.

"I'm very, very pleased with the staff support. It has been wonderful," said Sharon of the ACC staff. "They have really made it feel like getting Jennifer in a program is a high priority. I hope Jennifer is cutting a path for others. It is so valuable for her as a person. They have really done something, and with the community being so open, I have to give Cooperstown a lot of credit, too."

A chance at a productive, fulfilling life is something the Center believes is every individual's right.

"Every kid at her age is expected to leave home and branch out on their own," added Sharon. "The Anne Carlsen Center is giving Jennifer the ability to do that, just like anyone else."

Jenny selects towels from a closet while at her apartment. The 21-year-old is learning many skills that will help her lead a more independent life.

After Trinity was severely injured in a swimming pool accident, she spent more than a month in the hospital before coming to ACC. Here, she enjoys a bedtime story read by Kristen Nagel, a nurse at the Center.

From Trauma to TLC

ACC helps Bismarck girl following devastating swimming accident

It wasn't easy keeping up with Trinity. The Bismarck youngster was the picture of good health — full of energy, full of life, and full of love for her family.

The six-year-old loved singing and dancing, Tae Kwon Do lessons, and playing games with her sister, Angel. She was getting ready to enter the first grade and was being recommended for the gifted reading program. Never one to cry or complain, she stifled the tears when she broke her collar bone while playing.

"Always smiling, dancing and singing," is the way her father, Brandon, describes her. "A quick learner ... very quick ... soaked everything up like a sponge."

On June 13, 2008, Trinity went to a Mandan swimming pool with her summer daycare program. It was supposed to be a day of fun in the sun, but it took a tragic turn. Trinity was seen standing at the edge of the pool before getting knocked in. She was under water for a dangerously long time — it's estimated between four to seven minutes — before being rescued.

Severely injured in the accident, she was hospitalized at St. Alexius Hospital in Bismarck for over a month. Her accident resulted in an anoxic brain injury (lack of oxygen to the brain). On July 23,

(continued)

she came to the Anne Carlsen Center (ACC) in Jamestown for rehabilitation services as an emergency admit.

The Center applied to be licensed for an additional bed in order to accommodate Trinity. ACC staff knew the injured girl would have had no other place to go. With her extensive medical needs, she couldn't return home. Staying at St. Alexius wasn't an option either, with hospital care costing thousands of dollars each day.

Trinity was comatose for about two months after arriving at ACC. She occasionally suffered from thalamic storming — she'd start perspiring, her heart rate would dramatically increase, and she would clench her hands. Because of her injuries, she was extremely sensitive to sensory input. Staff kept lights low to help calm her. She became anxious when surrounded by people, so they carefully monitored the number of people in her room at one time.

After those first weeks — much to the delight of her family and ACC staff — Trinity started responding to touch. She also started to smile, turn and stretch.

"I was excited — it brought tears to my eyes," says Stacy Jaegar, one of Trinity's nurses at ACC. "I cried the first time I saw her smile. Her personality is really shining through."

ACC staff provide Trinity with 14 hours of nursing care a day (monitoring of vital signs, rocking, feeding, administering medication, assessment) and twelve hours of care each day by a Life Skills Assistant (dressing, rocking, freshening, oral care, repositioning). She also receives 16 hours of therapy each week, which includes physical therapy, occupational therapy, speech therapy and respiratory therapy.

Trinity isn't able to eat solid foods right now — she is fed formula through a tube. Staff also administers a dozen different vitamins and medications to her.

"If it wasn't for the Anne Carlsen Center, I literally would have had to stay at home with Trinity and hire a nurse," says Brandon. "It would have been extremely difficult to care for her and take care of her sister at the same time."

In November, Trinity was feeling well enough to dress up like a princess and participate in a special event for a fellow classmate. She has started

This fall, Trinity began to come out of her coma. She started to smile, turn, stretch, and respond to touch.

leaving her room more often to spend time with fellow students, usually on a one-on-one basis. When presented with choices, such as which color crayon she likes or what shirt she wants to wear, she is able to firmly grasp the preferred item.

"It was extremely difficult in the beginning, but the more I see her, the more I am encouraged," says Brandon. "When I look in her eyes, I see the daughter I know. There is hope. She is making so much progress."

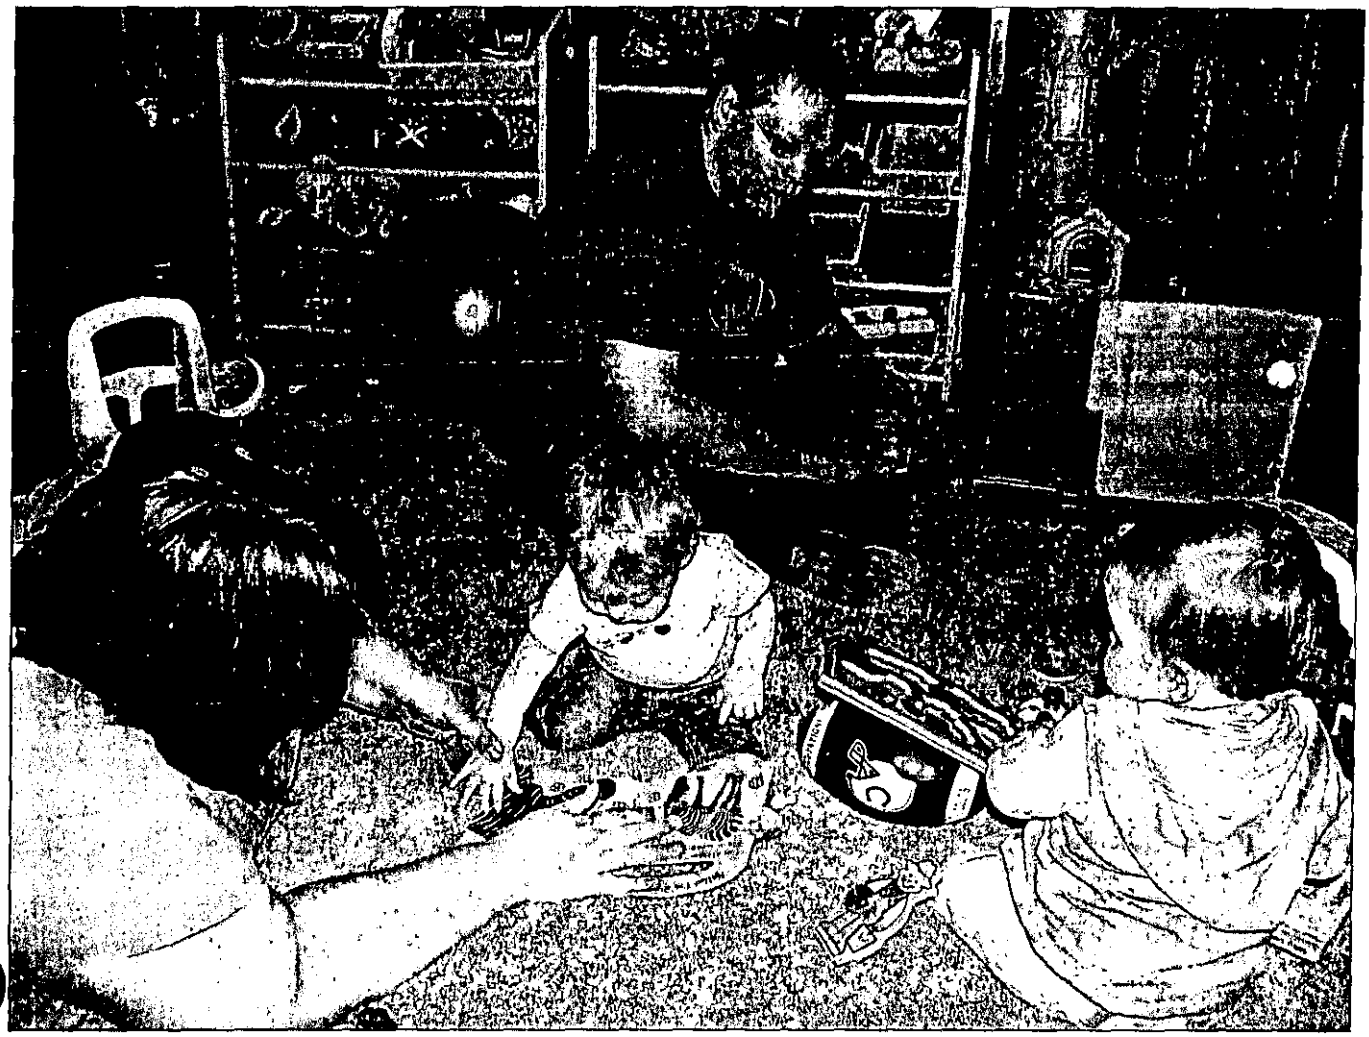
"She is very sweet and fun-loving," says Leann Gumke, a nurse at ACC. "We enjoy telling her jokes because she'll look at us and smile. She loves it when we talk about kittens or Strawberry Shortcake."

Sharon Olson, a Special Education teacher in the Early Childhood classroom at ACC, spends time each morning with Trinity. Olson visits Trinity's room with a basket full of learning tools and craft projects. Trinity will be joining her friends in the classroom in January.

The extent of the brain injury from the near-drowning isn't known. But staff members are working diligently to help restore the little girl's health and strength.

"She loves challenges," says Brandon. "The more she is challenged, the more she excels. I know she is determined to get better."

This brave little girl continues to amaze those around her with her strength and will power, spreading hope each day with every smile.



It's playtime at the Schneider house as Jennifer and Dusty spend some quality time with their twins, Jaleigh and Jaxon. The children were born nine and a half weeks early and each survived major health scares.

Hope at Last

ACC helps toddlers, parents through troubled times

The smiling faces of twins, a boy and a girl, were hiding a variety of health problems.

Jaxon and Jaleigh were born nearly 10 weeks premature. Throughout the months of health scares, their mother, Jennifer, was not able to be at her job. After a year of medical challenges for both children, she was in danger of losing her job.

Meanwhile, the twins' dad, Dusty, was trying to supplement his family's income with his construction job. Going to work with broken bones in both feet, he was struggling to make it through the work day, much less care for his children who required some extra attention. The Jamestown family was hanging on — barely — but without some kind of assistance, things were looking bleak.

In October 2007, an ear, nose and throat doctor examined Jaxon, and the little boy was rushed into surgery. Jaxon's airway was

(continued)

Jaxon investigates bubbles with Ann Albrecht, a speech language pathologist with the Anne Calrsen Center. Albrecht visits the Schneiders each week, providing care in their home.

being restricted by scar tissue that had formed around his trachea.

"The doctor told us on the outside, Jaxon looks healthy," said Jennifer. "Until you listen to his lungs. He is a fragile little boy."

The Anne Carlsen Center was called and began providing services for the family. Jaxon started attending class at the Center during the day because health problems prevented him from joining his sister at a Head Start program. This allowed Jennifer to return to work and finish out the school year. More importantly, she was now able to retain her job.

Jaxon attended ACC for just over a month, earning a measure of celebrity status there with staff through his overpowering smile and easy-going nature.

"Everyone was so nice," said Jennifer. "They'd take pictures of what they were doing in the classroom and send them home. You could just see he was so happy. I learned a lot."

Once the school year ended and Jennifer was at home full-time for the summer, the Center continued to help the family. Therapists provided in-home supports, giving the children specific attention for speech, eating and respiratory issues.

Today, the Center and the Schneiders still enjoy a relationship that sees Jaxon and Jaleigh making strides. Experts from the Center meet with the toddlers a few times a week to work on speech therapy. Both children are still experiencing some health problems, but those issues are more manageable now and no longer life-threatening. The family is optimistic about the future.

"I think back to 12 or 13 months ago," said Dusty. "I never thought we'd be at this point."

"We didn't get the perfect dream, the perfect situation," Jennifer said. "But we wouldn't trade it for anything."

Jaxon and his mom, Jennifer, read a book together. After many struggles, the future is brighter now for this Jamestown family.

Every Tuesday, Chris LaCroix folds more than 200 pizza boxes at Domino's Pizza in Jamestown. At the Anne Carlsen Center, vocational training begins at age 14.

Training for Tomorrow

Teen rises above adversity in preparation for adulthood

It's 11:30 a.m. and the mouth-watering aroma of cheese and pepperoni fills the air. At Domino's Pizza in Jamestown, N.D., half a dozen employees keep busy taking orders, spreading toppings, and sliding discs of delectably-covered dough into an enormous oven. When each pizza is finished baking, it's tucked into an appropriately-sized box—and chances are, on this day, into a box assembled by Chris LaCroix, a 17-year-old student at the Anne Carlsen Center (ACC).

"He is very energetic and very focused," says Frank Jensen, owner/franchisee of Jamestown's Domino's. "He never quits."

Others are benefitting from Chris' hard work and determination. As part of ACC's vocational training program, Chris spends time each week at two other Jamestown businesses, as well as an area church.

The contributions Chris is making in the Jamestown community are significant. Even more impressive is how far he has come in order to perform successfully in each of these settings.

Chris has autism, a complex developmental disability that typically appears during the first few years of life. It is the result of a neurological disorder that impairs an individual's ability to communicate and relate to others. Today, one in 150 individuals is diagnosed with autism.

Over the years, Chris has had difficulties with communication—verbal and non-verbal—and with social interactions. He has exhibited physical over-activity, self-abusive behaviors, tantrums, ob-

(continued)

It was a dream fulfilled when Chris LaCroix was confirmed in November at The Basilica of St. James in Jamestown. His parents, Arlene and Jerry, were beaming with pride throughout the entire ceremony.

sessive attachment to objects, and low tolerance for abrupt changes. As a child, Chris was constantly in motion ... climbing cupboards and shelves, banging his head on floors and walls, and throwing his body repeatedly to the ground.

Since becoming a student at the Anne Carlsen Center in December 2006, Chris has made significant improvements in many areas. Teachers, therapists, and other staff members have used a highly-individualized program to help Chris become more comfortable and compatible with his surroundings.

A Community Life for Chris

"His behaviors have gone way down," says Rachel Coppin, a speech/language pathologist at ACC. "He has a greater tolerance of the things that happen to him. His ability to cope has improved."

Chris is developing social and communication skills that are helping him function well during the school day—and out in the community.

That is encouraging for Chris' parents, Arlene and Jerry LaCroix of Bottineau, N.D.

"Chris needs to have a job that can get him satisfaction each day of his life," says Jerry. "We don't want him just sitting in a room watching television. He has so much to offer the world."

For most of Chris' childhood, encounters with the outside world had brought pain and disappointment. "Sometimes, when we'd go places, Chris would have a meltdown," Arlene remembers. "People didn't understand that something in Chris' environment had caused him to act that way. They would never see him for who he really was."

With the guidance of ACC staff, Chris has learned to handle most any situation in public, which has become readily apparent—and appreciated—during visits home.

Reaping the Rewards

One of the most memorable experiences happened over the summer, when the LaCroixs were able to attend a sporting event together—for the first time in many years. Chris' younger brother, Mark, was playing in a baseball tournament. Before, either Jerry or Arlene would have had to stay at home with Chris. A baseball game would have been too overwhelming for him; the sensory overload likely causing outbursts of negative behavior. But on this occasion, Mark's parents and his big brother were there to support him and cheer him on.

And while they have enjoyed watching Chris become more accepted in the community, one of their biggest dreams for their son has been to see him acknowledged in the community of the church.

"It's something we have always worked for," says Arlene. "But when we went to church, Chris would scream or stand up in the middle of the service. We'd go home and feel defeated."

On Nov. 16, that all changed. Chris, along with three other ACC students, was confirmed at The Basilica of St. James in Jamestown. He looked calm and confident as he took a major step in his journey of faith.

"It was a long wait, but a special part of his life has finally come together," said Arlene with tears in her eyes. "We didn't think this would ever happen. Chris is a member of a church now. He belongs."

The LaCroixs say they hope Chris, now 17, can live semi-independently following graduation. They picture their son having a roommate and working at a job he finds interesting and fulfilling.

"Nothing is impossible when you are working with someone who believes in you," says Arlene.

"The groundwork has been laid," adds Jerry. "Someone else knows our dreams and is working towards those dreams. We are all seeing a response. We are all growing."

Annual Loss	-$713,691

Total Annual Loss	**-$1,186,857**

TESTIMONY
HOUSE BILL 1012
SENATE APPROPRIATIONS
SENATOR RAY HOLMBERG, CHAIRMAN
March 4, 2009

Chairman Holmberg, members of the Committee, my name is Dan Howell and for the past 9 years, I have had the privilege and honor to be the Chief Executive Officer of the Anne Carlsen Center (ACC) located in Jamestown, North Dakota.

I am here today to testify in support of HB 1012, as well as Optional Adjustment Request (OAR) #5. Specifically, in OAR #5, the line item addressing DD staffing to meet critical needs. The issues overview summary, which we have handed to you, outlines this OAR request in greater detail for the ACC, as well as other providers around the State of North Dakota. Chairman Holmberg and members of the Committee, in my testimony today I wish to cover three (3) items.

<u>Community-Based Services</u>

During the 2007 legislative session, the ACC made a promise to the North Dakota Legislature. The promise was that if indeed providers around the State of North Dakota, including the ACC would be fully recognized financially for serving children, as well as adults with complex special needs, that the ACC would explore alternatives for providing care to the State's most vulnerable.

The ACC began its community-based services for medically complex and behaviorally challenged children and adults in April of 2008. The Board of Trustees of the ACC allocated over $900,000 from our foundation for this new venture. We choose the community of Grand Forks to launch these home and community based services. During 2009, we will also begin offering these services in the Fargo and Bismarck areas. These services consist of two (2) programs: in-home supports and adult day supports. The in-home support program is currently serving 13 clients, and our adult day support program is currently serving 9 clients. Our expectation is that these two programs will be a less costly alternative than providing residential care, as well as providing services close to or in many cases within the communities in which the child or adult resides. These new programs today have kept families intact and our in-home support programs in some cases have eliminated or at least delayed the entry into a more costly residential program.

If you turn to Tab 8 in the packet of materials that was set forth in front of you, you will read the story about Jenny. Jenny is a recent high school graduate, who with the support of the ACC has been allowed to stay within her home community of Cooperstown. As Jenny approached her 21st birthday, there were many individuals who believed that Jenny could not stay in Cooperstown, but would need residential placement in a community outside of Cooperstown. Although Jenny would be well

taken care and would have a very fulfilling life in another community, neither Jenny nor her parents wanted her to leave the community of Cooperstown.

With Jenny continuing to live at home, the ACC is now providing a 1:1 day support program where Jenny volunteers in a number of businesses within the community. Jenny is now enjoying a great social network, loves her work opportunities, and on a daily basis is becoming a more independent person with disabilities.

If Jenny were to have gone to a residential setting outside the community of Cooperstown, the cost would be approximately $100,000 for her residential care. We are pleased to report that the cost to the State of North Dakota for keeping Jenny in her home community and being an active part of the community of Cooperstown is a far less costly alternative-perhaps about one-third of the cost of residential care.

Even though the community support program that we began in April is in its infancy, the early results have shown great satisfaction from parents, as well as clients, and as importantly, the costs of keeping individuals out of other more restrictive environments has been greatly reduced.

Behaviorally Challenged Clients

Mr. Chairman, and Committee members, as indicated earlier, the ACC supports HB 1012 but specifically is looking for support for OAR #5, which is titled DD staffing to meet critical needs.

In 2003, the Department of Human Services sent correspondence to all providers taking the position that due to budget issues there would be no additional staffing enhancements granted. There were some exceptions to this, but for the most part, most providers have not received staffing enhancements to meet the needs of complex individuals under their supervision since 2003. Three (3) years ago, the Department asked each provider to look at where the gaps were for critical needs staffing. From that request came the $6,317,916 within that OAR. If granted, the ACC would be entitled to approximately 37.5% of that dollar amount or $2,495,288 in the new biennium.

Your colleagues in the House passed this portion of the OAR with a greatly reduced fiscal amount. The House of Representatives reduced the funding from over $6.3 million in OAR #5 to $1,168,000. Today, I stand before this Committee asking for reinstatement of the full request from OAR #5 for $6,317,916.

44 of the 52 children on our campus have a behavioral related disorder. 28 of the 44 or 63.7% of the children and young adults are classified at the highest level in our scoring matrix. Children with

behavioral support plans have increased 159% over the past 12 years. The ACC uses the Oregon Scoring Criteria, which the Department of Human Services has recognized as an appropriate tool to gauge severity in children with behavioral complexities. In 2003, the average score for a child at the Center was 94, and in 2008 the average score was 133. This represents a 42% increase in severity. Approved fulltime equivalents (FTEs) at the Center rose only 4 FTEs or 4.5% during that same time. The ACC staffs today at 114 FTEs for children with behavioral challenges. We are reimbursed for only 88.64 FTEs. This 25.36 FTE variance equates to $713,691 per year.

Medically Fragile Clients

The other population when considering critical staffing needs is children with great medical fragility. The State of North Dakota has also adopted the Oregon Scoring Criteria as valid criteria to measure the complexity and acuity of children with great medical fragility. The ACC has 20 students that meet the definition of medical fragility. The average score for a child with medical fragility in 2005 at the ACC was 30.56. In 2008, the average score was 42.6. However, the top 10 children today had an average score of 60.9, a 20% increase over this past year. The ACC staffs for 28.4 nursing professionals to meet the complex needs of clients being served. The Department of Human Services reimburses at 21.3 FTEs. It is interesting to note that other states, such as South Dakota,

Illinois, Florida and Alabama, to utilize acuity and severity models for their reimbursement methodologies for medically fragile clients. The difference in how ACC staffs for medical fragility and what is allocated for reimbursement by the Department of Human Services is 7.1 FTEs or $473,166 per year.

Mr. Chairman, and members of the Committee, once again the investment that our Board has made for these two programs; the behaviorally challenged program and the medical fragility program, is $1,186,857annually or $2,373,714 biannually.

A colleague of mine once said, "When there is an elephant in the room it is best to introduce it." The elephant in the room for the ACC is our Foundation. The Center has been blessed and privileged over the past many years to receive generous one time gifts, as well as many end of life gifts towards the care of children at the Center. This has put the Center in a unique position, as well as responsibility towards accepting children with great medical and behavioral complexity regardless of adequate reimbursement. Other providers around the State of North Dakota will accept children and adults with complex needs, but need to be assured that there is adequate reimbursement for these individuals. Without adequate reimbursement, it would sadly become a financial hardship on many of these organizations. For providers around the State of North Dakota to adequately serve the growing complexity with

respect to the clients that we serve, it is imperative that funding for critical staffing needs is placed in HB 1012.

Mr. Chairman, and members of the Committee, this is the third session that I have come before you to ask for additional funding for medically fragile and behaviorally challenged clients. While I enjoy and respect each and every one of you, I am most certain that our request for enhanced funding at times gets old. That is why we have submitted HB 1556 which is a Bill for an interim study to collect the methodology and calculations for the rating setting structure used by the Department for clients who are medically fragile and behaviorally challenged. This would include children and adults in both the ICR/MR and home and community based setting.

My hope is that systemic change occurs so the ACC and other providers find it no longer necessary to continue to come to the Committee asking for additional funding for the medically fragile and behaviorally challenged populations.

Mr. Chairman and members of the Committee, I thank you for the job that each of you does, and at this time, I will answer any questions that you may have.

Thank you.

Dan Howell, Chief Executive Officer
Anne Carlsen Center

Issues Overview

Critical Needs Staffing

- **$6,317,916 – staffing needs in the biennium for providers around North Dakota to meet complexity of clients being served – in OAR, but not in budget**

- **ACC has 37.5 % of total dollar amount = $2,373,714 in the biennium**

A. Behaviorally Challenged Staffing

- **44 of 55 children on campus have behavioral related disorder (80%)**
- **28 of 44 or 63.7% of children and young adults are classified at level 3 -the most severe level in scoring matrix**
- **Children with behavioral support plans have increased from 17 to 44 in past 12 years or a 159% increase**
- **ACC currently staffs at 110 direct care FTEs to deal with complexity of children and young adults**
- **Number of approved FTEs for direct care staff from Department willing to reimburse has only increased from**

    - **2003 – 84.63 FTEs**
    - **2004 – 84.79**
    - **2005 – 86.70**
    - **2006 – 87.48**
    - **2007 – 87.48**
    - **2008 – 88.64**

- **4.5% increase in approved FTEs, but a 42% increase in severity/acuity of clients**
- **4.01 FTE increase in 5 years**

Staffed - 114.00 FTEs
Reimbursed - 88.64 FTEs
Variance 25.36 FTEs

25.36 FTE x $13.53 (salary and benefits) = $713,691 per year loss

B. Medically Fragile Staff

- **20 children at the ACC meet the definition of medically fragile as defined by the Oregon Scoring Criteria adopted by the Department of Human Services**

Medically Fragile Clients Served by ACC:

- **2005 - 19 students, a cumulative total of 489 (Oregon Scoring)**
- **2006 - 20 students, cumulative total of 650**
- **2007 - 18 students, cumulative total of 664**
- **2008 - 20 students, cumulative total of 852**

Top Ten Medically Fragile Clients Supported by ACC:

- **2005 - a cumulative total of 413 (Oregon Scoring)**
- **2006 - a cumulative total of 429**
- **2007 - a cumulative total of 481**
- **2008 - a cumulative total of 609**

Average Scores Overall:

- **2005 - 30.56**
- **2006 - 32.50**
- **2007 - 34.97**
- **2008 – 42.60**

Average Score Top Ten:

- **2005 - 41.3**
- **2006 - 42.9**
- **2007 - 48.1**
- **2008 – 60.9**

- **Other states (South Dakota, Illinois, Florida, Alabama) distinguish acuity and severity in reimbursement methodology for medically fragile clients**
- **ACC staffs 25 nursing professional FTEs to meet the complex needs of clients being served.**
- **The Department of Human Services reimburses for 18.9 FTEs**

Staffed - 28.4 FTEs
Allocated - 21.3 FTEs
Variance - 7.1 FTEs

7.1 FTEs x 32.04 (salary and benefits) = $473,166 per year

Summary

1. Critical staffing needs for behavioral challenged program (loss)	**$ 713,691**
2. Critical staffing needs of medically fragile program (loss)	**$ 473,166**
TOTAL LOSS PER YEAR – FTE Staffing only	**$ 1,186,857**

MONEY FOLLOWS THE PERSON

Developmental Disabilities

Program Information and Transition Services

What is the Money Follows the Person Demonstration Grant?

The Money Follows the Person Demonstration Grant (the MFP Program) is a special program developed by the federal government that provides participating states (like North Dakota) with funding that the State uses to assist people to leave the North Dakota Developmental Center or other intermediate care facility for persons with mental retardation (ICF/MR, institution) and move to their own home in the community.

Who is Eligible to Participate in the MFP Program in North Dakota?

The MFP Program is limited to persons residing in ICFs/MR (institutions) who are Medicaid eligible, who have resided in an institutional setting for at least six months, and who meet the requirements for at least one of the following programs:

- MR/DD waiver (Meets ICF/MR Level of Care, Requires supports for Health & Safety, and needs can be met through specific services for individuals with mental retardation),
- Self Directed Supports for Families or Adults waivers (Meets ICF/MR Level of Care, Requires support for Health & Safety, Needs can be met through specific services for individuals with mental retardation, Person lives with a primary caregiver who is capable of self directing services or Person lives with a primary caregiver or independently and is Capable of self directing services)
- Medically Fragile Children waiver (Determined to meet nursing facility level of care, 3 to 18 years of age, Greatest need as determined through a Level of Need ranking process, Requires support for Health & Safety, Needs at least one waiver service quarterly to remain in family home setting, Child lives with a primary caregiver capable of self directing services).

Persons who are not Medicaid eligible or who have resided in an institutional setting for less than six months may be assisted with transition from an institution by Developmental Disabilities case management staff through other programs, as appropriate.

How Does MFP Work?

The MFP Program can assist individuals interested in leaving an ICF/MR by providing:

- Information to help them make an informed choice regarding transition and participation in the MFP Program;
- Access to transition services and assistance from a transition coordinator through North Dakota's Centers for Independent Living;
- Payment for some one-time moving costs or activities; (rental deposits, home furnishing, household supplies) and
- Post-discharge follow-up to ensure the move is satisfactory and the individual's needs are being met.

What Housing Choices Will Money Follows the Person Offer?

The MFP grant will operate throughout the state of North Dakota and will transition individuals into a qualified residence, such as:

- The individual's home or a family home;
- A shared home, where no more than three other (four total) unrelated individuals reside;
- An adult foster care home (AFCH) where no more than three other (four total) unrelated individuals reside;
- An apartment, including those in HUD subsidized housing complexes or congregate housing complexes.

When is the Money Follows the Person Program in Effect?

The MFP program will operate in North Dakota beginning June 20, 2008 and will end September 30, 2011.

MFP will provide services to individuals participating in the program for 365 days after transition to the community. After that, individuals will continue to receive needed services from the State without interruption.

If you, or someone you care about, lives in an ICF/MR and would like to learn about options available to return to the community please contact: Your local Human Service Center or Jake Reuter, MFP Program Administrator at 701-328-4090.

Total endind caseload		778

The computations are based on ISLA authorizations as of March 2008 plus anticipated caseload growth for the 09/11 biennium, which are 44 high school graduations (22 each year) and 17 from the Developmental Center (year 1 -9; year 2 - 8). The growth for the remainder of the 2007 - 09 biennium was not factored in.

The ending number for this estimate is short from the anticipated ending caseload of 805.

"Spenddown Sheet" - average caseload - 790.
Calculated as follows:

Beginning Caseload	775
Ending Caseload	805
Total caseload	1580
Divide by 2 = average caseload	790

North Dakota Centers for Independent Living

January, 2009

Senate letter to Senate

Members of the North Dakota House Human Resources Division:

This letter represents continuation of the efforts initiated during the last legislative session that would increase the four Centers for Independent Living (CIL's) ability to provide services across the State. While the increase received during the last session is appreciated, there remain many areas of the state that are underserved or unserved. If the funding request were realized it would mean that all areas of the state would have a CIL presence.

The Independent Living program in North Dakota has been in existence for nearly 30 years offering the citizens of the State a local resource point from which to identify the many services available to them so that they can become productive members of society and learn the skills needed to move forward from a life of dependency. During the last 30 years gradual progress has been made in creating a system whereby every person with a disability has access to CIL services however, statewide presence is still far from a reality.

The Center Directors have determined that in order to have sufficient staff presence, each CIL would need about $600,000 per year, or $1.2 million per biennium. For that to be realized, we would need an additional $1.89 million per biennium. With this amount of funding, staff and offices would be added in various communities, creating a physical presence across the State. Once staff are hired, trained and proficient it would be anticipated that service levels would increase 40%.

Your assistance would be greatly appreciated. We feel strongly that this is a good investment for our state, as over 98,000 people identify themselves as having a disability, and this number is projected to grow as our population ages.

Thank you for your time and attention. If you'd like more information, please give any of us a call.

Sincerely,

Royce Schultze	Steve Repnow	Nate Aalgaard	Randy Sorensen
Dakota CIL	Independence, Inc.	Freedom RCIL	Options RCIL

SUMMARY OF FUNDING REQUEST
NORTH DAKOTA CENTERS FOR INDEPENDENT LIVING

The Center for Independent Living (CIL) directors estimate that in order to have a presence and availability of core services in every county of the state, they would need $1.2 million per biennium each. Each of four Centers for Independent Living are designated to serve a quadrant of the state (see Future expansion areas, page 5).

Current biennial budget, including state and federal funds: $2,905,814
Estimated total amount needed for statewide availability: $4.8 million
Additional funds needed to provide services statewide: $1,894,000 per biennium
Governor Hoeven's budget recommendation: $800,000

Services:
All Centers for Independent Living are required to provide four core services, which are: **Independent Living Skills Training, Individual and Systems Advocacy, Peer Counseling**, and **Information and Referral**. They also provide many others, such as nursing home relocation and prevention, community education, technology, and recreation.

How is independent living unique among disability organizations?

- A commitment to systems changes, whereby the long-term goal is a society where everyone with a disability has the opportunity to be a vital and productive member of the community in which they choose to live.

- Availability for any person with any type of disability of any age, geographic location, or economic status to access services.

- North Dakota Centers for Independent living are consumer-driven community organizations. A majority of our staff, board and management staff are people with disabilities from the areas we serve, who use their personal experience as a basis for the services that are provided based on the needs of the area as reported by the people.

- CIL's make use of volunteers with disabilities to provide peer support to other people with disabilities, but also to use their personal experiences as a base for our organizational and advocacy direction. This personal experience with disability sets CIL's apart from other traditional service providers.

- Centers for independent living promote self-determination and empowerment for people with disabilities through direct one-to-one and group services including skills training, individual advocacy, information and referral, and peer support. Independent Living has the concept of consumer control, whereby people with disabilities coming to them for services have the final say in what it is they want to accomplish. Consumers are responsible for their own actions.

Rationale for funding request

- The Independent Living program is part of the state/federal rehabilitation system. It is authorized by both state and federal law. The full array of services is not, however, available to every citizen of the state who would be eligible due to lack of resources. As a service-based industry, more staff are needed in order to reach unserved and least served areas of the state.

- It is cost effective. Independent Living is part of the solution to the ever-increasing costs of long-term care. Centers provide information to people about community resources, and are actively involved in helping people either avoid institutional placement, or relocate from nursing facilities or other institutions to the communities of their choice.

Fiscal Year 2008 funding levels for North Dakota Centers for Independent Living

	Dept. of Education	ND Dept of Human Services	Total
Dakota Center for Independent Living, Bismarck	373,246	64,859	438,105
Independence Inc., Minot	116,284	221,778	338,062
Freedom Resource Center, Fargo	173,910	164,715	338,625
Options Resource Center, Grand Forks	121,439	216,676	338,115
Total IL funds			$1,452,907 per year ($2,905,814 Per biennium)

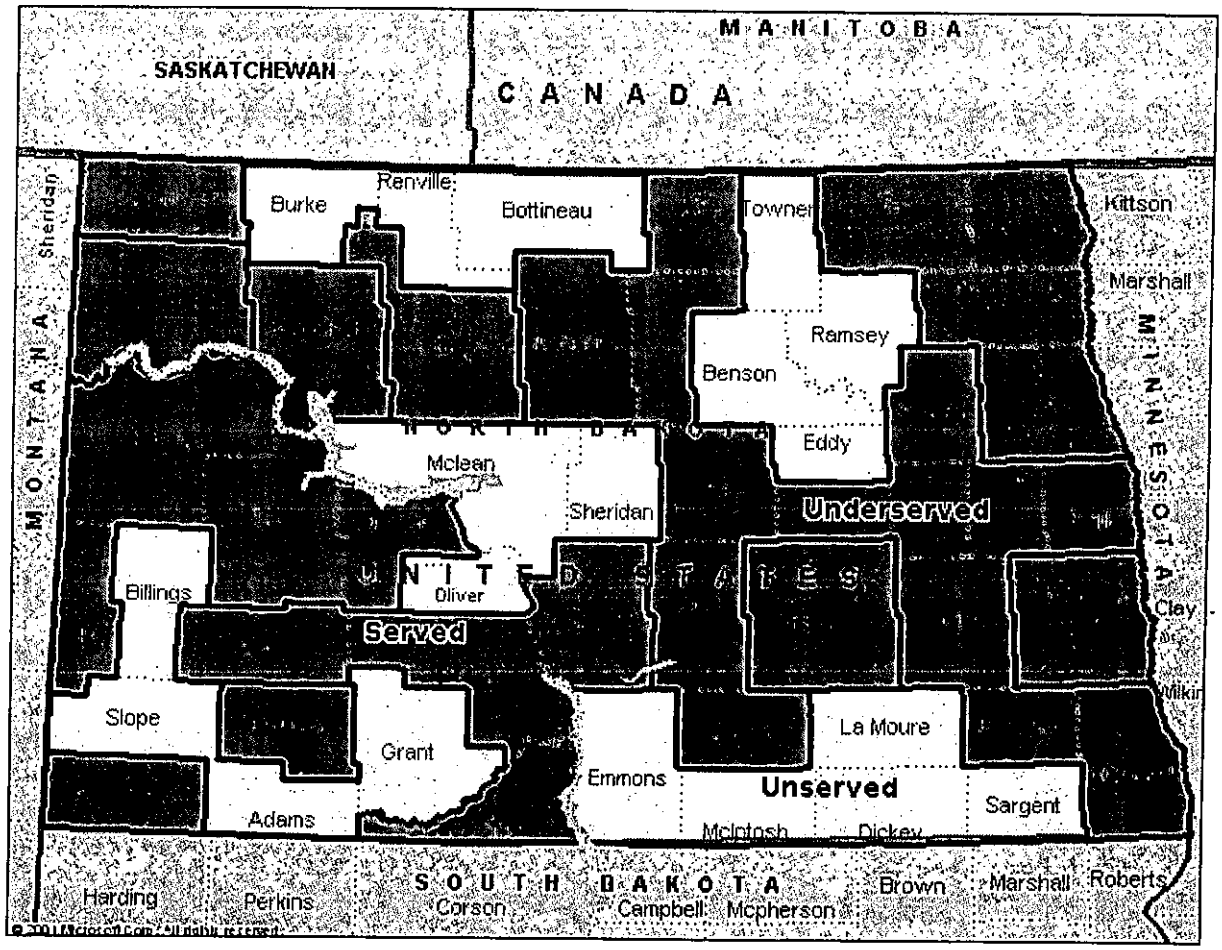
The Centers for Independent Living are committed to providing a statewide system whereby IL services are available throughout the state. To do this, more funding is needed.

Funding request

With a base level of $600,000 per year in funding, the Centers for Independent Living estimate they would have a presence in every county of the state. This would total $2.4 million per year, or $4.8 million per biennium. Funding per year needed to get to that level:

$1,894,000 per biennium.

Current availability of Independent Living services

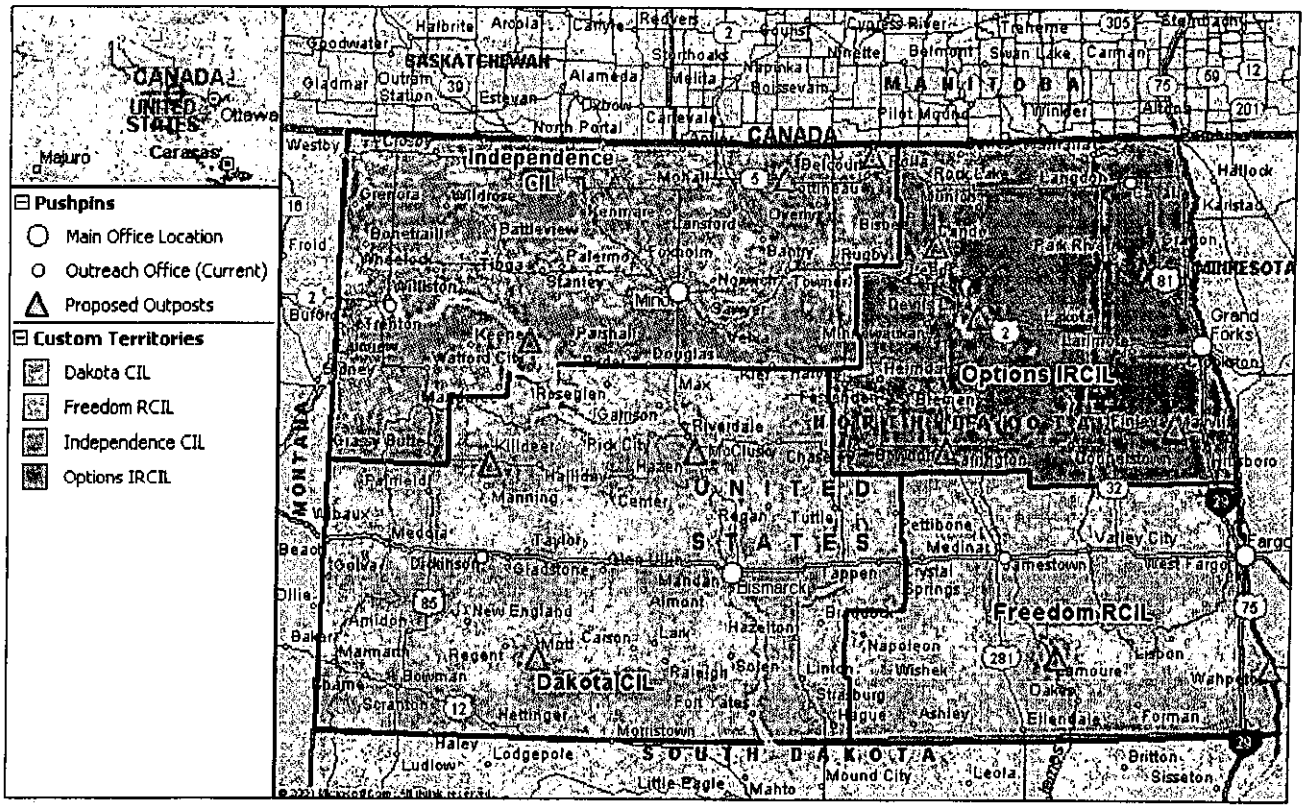


13 counties served (purple)

21 counties underserved (orange)

19 counties unserved (yellow)

Future expansion areas



The blue triangles indicate communities where the Centers for Independent living would add staff and/or branch offices. All of those counties and surrounding areas are currently unserved or underserved by the Center, meaning that a full array of core Independent Living services are not available. These include skills training, advocacy, peer mentoring, and information and referral.

Progress made with 2007 – 09 additional appropriation of $250,000

The additional $250,000, 2007-09 biennium increase for Center for Independent Living services, was allocated in order to initiate balance between the disparity of funding realized by each CIL and to increase services for the unserved/underserved. Independence CIL (northwest quadrant) received 73% ($182,692) of the funding the remaining 27% ($67,308) of the funding was dispersed between Options Resource CIL (northeast quadrant) and Freedom Resource CIL (southeast quadrant) This brought the three lowest funded Centers to levels that are similar.

During the last two years strides were made to expand services for people with disabilities in unserved and underserved areas of North Dakota. Options Resource CIL and Freedom Resource CIL utilized the funding for program enhancements to increase services for rural residents while Independence CIL expanded to the Williston area.

In October of 2007, Independence CIL found a location for the opening of an outreach office. The lease was secured in January of 2008. During the months of January and February an outreach specialist was hired, training initiated, and services delivered as competencies were acquired. An outreach plan was implemented that included informing area service providers, the general community, and people with disabilities of the availability of services as well as collaborative activities with area providers and stakeholders. Service information unique to the area is being identified along with input from area residents of the areas needs as it pertains to people with disabilities in order to design service enhancements that will meet the need of the area. All data collection, need identification and service capacity enhancements are designed in order for the local staff person to raise their level of competency so that they can provide service in the most effective manner possible both in cost and efficiency. Historically, it takes three years to raise the level of competency of a staff person in order for them to be proficient due to all the service system information they must learn and unique elements inherent to the area they serve. Forty-six consumers have been served thus far with one hundred and twenty-eight individuals benefiting from community education services.

In addition to the person hired in Williston, a .75 FTE was added to the main office located in Minot. This staff person is responsible for assisting the residents of the quadrant with information, referral and assistance services and completing consumer intakes. As with the aforementioned position training has been taking place, building competencies in order to increase consumer contact. Fifty-nine consumers have been served as competencies have been acquired. In addition to the training activities time is being spent ramping up systems for the collection and the easy retrieval of resources that callers will need and the position will be required to manage.

Both Options Resource CIL and Freedom Resource CIL have used the money made available to them to enhance service capacity. Prior to the increase by the North Dakota Legislature both Centers had experienced years of flat funding or reductions in funding due to Federal budget constraints. As a result, line items were cut or not increased during that time which had a direct affect on the provision of services to people with disabilities. One of the main line items that had been restricted was travel. Considering the ruralness of North Dakota and the lack of transportation it is vital that staff be able to go to the communities in which people reside. The additional funding during the 2007-09 biennium has allowed both Freedom Resource CIL and Options Resource CIL to continue outreach and community education, increasing the overall numbers served from 2007 to 2008. Another line item that suffered was in the area of salaries. Pay freezes caused the Centers to lose their ability to be competitive. If the Center is not competitive it becomes a training ground for entry level human service workers who once they have gained experience move on to locations where they can receive greater pay and benefit packages. This results in inefficiencies because the resources are never utilized for maximum benefit to the people it is allocated to serve instead it is used to further professional carriers.

- Assisted Iraq war veteran with post-traumatic stress disorder and Parkinson Disease to obtain new rep-payee; an accessible apartment; obtain transit tickets; coordinated services with county; budgeting skills; obtained legal representative; applied on-line for classes and located a Parkinson support group. Consumer is living independently with her children and graduated from college with an Associate Degree.
- Assisted 21-year old woman with learning disabilities and mental illness to attended CIL Youth Leadership Training. Through this experience she had the opportunity to meet new people with disabilities who had similar life experiences. Since completing the training, she has participated as a speaker on a Youth Panel at "Discovering the Magic Conference" in Minot, sharing her story and addressed the Jamestown Mayor's Partnership Committee on accessibility concerns within her community. She continues to be employed and looks forward to more opportunities to help empower others with disabilities.
- CIL's assisted one hundred and ninety-eight Medicare recipients with researching and enrolling in Medicare D Programs that best met their medication needs.
- Assisted two consumers to obtain SSDI benefits, write Plans to Achieve Self-Support (PASS) with Social Security to purchase vehicles in order for them to maintain their employment and to understand social security work incentives for them to seamlessly move from public services to becoming independent.
- Helped a 67-year old homeless man who is deaf and has traumatic brain injury that was evicted from apartment. Assistance involved finding apartment, setting up a household, and obtaining assistive technology to live independently.
- CIL collaborated with a fraternity at a University to sponsor a fundraiser, purchase building materials and built a ramp for an individual with a disability in a two-week time span.
- A man in his mid 20's, with a degenerative vision impairment, was assisted in order for him to keep his job. Skills were taught that enabled him to use public transportation to get to work and assistive technology (Sense-View lighted magnifier) in order for him to complete his job duties.
- CIL assisted an individual who had been involved in a car accident to coordinate services in his hometown and funds for a ramp, which enabled him to remain in his hometown.
- Program information was provided in addition to assistance in applying in order for a child to access services through the Medicaid "buy in" program for children.
- CIL provided assistance to area families/students in learning how to utilize the Capitol Area Transit system.
- Twelve consumers who needed rep-payees as determined by Social Security met with CIL staff to learn how to budget, pay bills and balance their accounts. Two consumers have been able to take over their own accounts.
- CIL assisted homeless couple living in their car to locate an apartment, secure money for a deposit, obtain a gas voucher, food commodities, essentials for their apartment, and learn to budget. The couple is currently looking for employment to remain independent in their home.

COMMUNITY EDUCATION AND OUTREACH (CEO)

Durable Equipment Loan Program: Two CIL's have established loaner programs, while persons wait for program eligibility or delivery of their own equipment.

Dental Access: In NE North Dakota, the CIL collaborated with other entities to start a dental clinic that provides services to those on Medicaid or without dental insurance.

Long Term Care: Provided training to members of the long term care association on the rights of individuals regarding service animals, and also collaborated with them on the newly enacted Money Follows the Person (MFP) program. Collaborated and participated with DHS in the assisted living policy and procedure work group.

Education: Provided advocacy skills trainings and disability awareness trainings to high school aged (transition) and university students. Participated with parents in IEP meetings with school officials.

Transportation: Collaborated with local and state transportation and transit providers to provide enhanced local access, availability and affordability to the elderly and those with disabilities.

Domestic Violence: NW North Dakota CIL collaborated with local domestic violence services to advocate for the rights and safety of those with disabilities in domestic violence situations.

Recreation: Provided recreational outings such as fishing, hunting, dances and other leisure time activity for youth and adults with disabilities.

Accessibility: Provided technical assistance to architects, builders, business and individuals with regard to accessability regulations.

POTENTIAL INSTITUTIONAL CARE COSTS SAVED BY NORTH DAKOTA CENTERS FOR INDEPENDENT LIVING

Part of the mission of independent living centers is to assist persons with disabilities in either leaving or preventing their placement in institutions. This effort by the four centers for independent living in North Dakota has the potential to save the state $ 536,181.62. This potential savings is the difference between what it costs for individuals to live independently using Home and Community Based Services verse the increased cost that North Dakota would spend on institutionalized care.

The figure was computed using the average nursing home cost (FY 2007), adjusted for room and board, and the average cost of Home and Community Based Services for the 26 individuals who the Centers assisted in moving from institutional care during FYs 10/01/06-9/30/08.

$ 159.96	**AVERAGE NURSING HOME COST PER DAY**
x 80%	**ADJUSTMENT FOR ROOM AND BOARD @ 20%**
$ 127.968	**ADJUSTED COST PER DAY FOR NURSING HOME CARE**

$ 127.97	**ADJUSTED NURSING HOME RATE**
x 365	**DAYS OF THE YEAR**
$ 46,709.05	**COST PER YEAR FOR NURSING HOME CARE**

$ 46,709.05	**COST PER YEAR FOR NURSING HOME CARE**
26,086.68	**AVERAGE COST PER YEAR FOR HCBS's**
$ 20,622.37	**COST SAVINGS**
x 26	**PEOPLE WITH DISABILITIES**

$ 536,181.62 TOTAL POTENTIAL SAVINGS

Note: Centers for Independent Living reported that Independent Living Services prevented 33 persons from entering nursing homes or other institutions during the last budget period. Using the average nursing home rate as a benchmark these persons may have cost the State of North Dakota an additional $ 680,538.21 for institutional care. These are people that the medical staff or families were actively looking at placement.

E

Testimony on HB 1012, relating to Centers for Independent Living
January 27, 2009

Chairman Pollert and members of the Human Resources Division:

My name is Nate Aalgaard, and I am here today representing the North Dakota Centers for Independent Living (CIL's). We are four private nonprofit organizations that provide an array of independent living services by contract with the State. We are part of the state/federal rehabilitation system. Our goal is a society where every person with a disability has the opportunity to be as independent and productive as possible.

In the few minutes we have here today we want to make the case that this program, Independent Living, is worthy of additional state funding. The $250,000 increase for Center for Independent Living services during the 2007-09 biennium was allocated to balance the disparity of funding realized by each CIL and to increase services for the unserved and underserved. Independence CIL (northwest quadrant) received 73% ($182,692) of the new funding. The remaining 27% ($67,308) was dispersed between Options Resource CIL (northeast quadrant) and Freedom Resource CIL (southeast quadrant) This brought the three lowest funded Centers to a similar level.

Options Resource CIL and Freedom Resource CIL utilized the funding for program enhancements to increase services for rural residents. Independence CIL expanded to the Williston area, opening a branch office. They also added an information and referral position in their Minot office. There is expanded information on our progress in your packets.

We are here again because although progress has been made in bringing our services to people in more areas of the state, there are still many counties and communities where we cannot reach due to insufficient resources.

The other Center Directors and I have determined that in order to have sufficient staff presence, each CIL would need about $600,000 per year, or $1.2 million per biennium. For that to be realized, we would need an additional $1.89 million per biennium. With this amount of funding, staff and offices would be added in various communities, creating a physical presence across the State. Once staff are hired, trained and proficient it would be anticipated that service levels would increase 40%.

We have an expansion plan in place for each quadrant of the state. For our Center, Freedom Resource Center, I would like to first start an office in Wahpeton. This is a community with one of the larger populations in our service area. We have done some limited service there, such as community education on accessibility and job accommodations, individual advocacy in special education, and a youth leadership training. Every time we go there we get a great response. Unfortunately, we cannot sustain services due to lack of resources. We have found in other areas that when you have staff in an area, people come, and requests for individual and community services increase.

We have included some service highlights in your information packets. There, you will see that we are doing a number of different types of things to help people with disabilities be more independent. We have helped people find funding for ramps; assisted people navigate the complexities of Medicare Part D; matched them with volunteer mentors who can teach them things like riding public transit or managing their health condition; and given advice on work incentive programs. Many people who come to our Centers simply don't know where to turn. The onset of their disability and all the changes it brings to their lives is just too much. We can help them figure out where to start, who to call, and how to move forward.

And finally, we are actively working to assist people avoid unnecessary institutional placement. We have been doing this for several years, and now we are also contracting with DHS on the Money Follows the Person project. This systems change opportunity promises to create more community options for long term care, and help the State keep rising costs under control.

Centers also provide many community services, and I'd like to turn that part of our presentation over to John Johnson.

E

January 21, 2009

Mr. Chairman Pollert and Members of the Committee:

My name is Troy Brusven; Dakota Center for Independent Living is my Rep-payee. We meet once a month were they are teaching me how to write out my own checks to pay my bills. There teaching me how to balance my checkbook, so one day I'll be able to be independent and take over my own checking account.

Being with them I've learned many things. To name a few Nutrition Classes explains what types of foods to eat and what to stay away from, share recipes with each other and teach us cooking hands on. Winter and Summer severe weather classes, how to be safe in tornadoes and blizzards. We have picnics where we can socialize with others. It is a good program where people like myself can go for help. I'd like to Thank you for your time and supporting House bill 1012 for increased funding for cil's.

January 22, 2009

Mr. Chairman Pollert and Members of the Committee:

My name is Bonnie Brusven; I've been with Dakota Center for Independent Living almost 4 years. I heard about there Drivers Ed Program through Vocational Rehab. After failing my permit test 4 times I thought I'd try one more time. I went through there 7 week program. I PASSED my test taking it just once. With out the help of DCIL it wouldn't have been possible for me to pass my test.

I continue going to Dakota Center for Independent Living for there Social and Recreational programs. Because of my disability it gets me out of my home and meet with people out in the community.

I would like to Thank you in support of House Bill #1012 for increased funding for centers for independent living.

Bill # 1012

Additional Financing for North Dakota C.I.L.'s

I've used the Bismarck C.I.L. for several years and have found them very effective providing guidance for health, behavior and financial issues, along with a great social outlet.

I've made numerous friends at the local C.I.L. and we all seem to wholeheartedly enjoy the great camaraderie between us. We also were introduced to Legislative Sessions and Lobbying Actions which leads us to live our Mission Statement.

I feel the assistance provided by Dakota C.I.L. is a wise investment to the community and state for people with disabilities.

Please include us in your 2009 budget.

Sincerely,

William R. Carnes

Mr. Chairmen and Members of the Committee:

My name is Martin Cochrane. Dakota Center for Independent Living has helped me out in many ways. They helped in teaching me how to fill out job applications, how to cook and how to do grocery shopping.

Dakota Center for Independent Living has helped me to live out on my own, has helped me in to manage my money and to learn hoe to get out and participate in social and recreation activities.

Dakota Center for Independent Living has let me use them for emergency contact number in case I have an accident. I think you should consider and give more funding to the Center for Independent Living so they can continue to help other like myself.

Thank you for your time;

RE: House Bill 1012

Dear Chairman Pollert and members of the committee,

As a disabled resident of North Dakota, I'm writing to share with you about my feelings about House Bill 1012 and why the Independent Living Centers have continued funding.

For the last twenty years, I have been a consumer of the Dakota Center for Independent Living. I received the following services:

Independent living skills training, Advocacy Services, Information and Referral Services, and Social Activities to developed new friendships. Today, I live in my own apartment and live independently. Currently, I volunteer at the Dakota Center for Independent Living.

I urge you to support House Bill 1012 so the disabled North Dakotan may have the opportunity to live independently.

THANK-YOU, for your support on House Bill 1012.

Sincerely,

CARLOS

Carlos Joseph Garza

Randee Sailer
311 E Thayer Ave
Bismarck, ND 58501

Chairman Pollert and Members of the Committee, My name is Randee Sailer. I've been a consumer of Dakota Center for Independent Living for a year and a half. They have helped me a lot. I have a learning disability and never been on my own. They have and are helping me to live on my own and be independent. I never knew how to cook on a stove. I got sent here from another agency for them to help. I also didn't know nothing about Bismarck and have difficulty learning and the directions. They've helped me learn the bus transport. I'm going to be taking self-defense class. If it wasn't for this, I wouldn't of gotten this far. This helps for people to not be in group homes, and to live on your own. I've also learned how to be social and in recreational activities. I have a job I can enjoy, and also get their by bike. That way I save money on transport. Please support increased funding for C.I.L.'s in HB# 1012.

Sincerely,

Randee Sailer

To Rep. Pollert

Dear Sir, I would like to express my thoughts on additional funding for NDCIL. My daughter made several attempts to pass her Drivers Permit test. She was unable to pass until she received asstance from DCIL. After working with DCIL she was successful. I'm very greatful for all the help she received. I trust that you will support additional funds for this wonderful program.

Thank You,

Susan R. Westberg
St Anthony, ND

Finance and Taxation

January 27, 2009

Good Mr. /Mrs. And Committee Members. My name is Sarah Rush. I am from Bowman and District 39.

I am in favor of increase funding on behalf of Dakota Center for Independent Living. They help people with disabilities to be more independent in their lives. They helped me to get TTY phone. A TTY phone is a special phone I can use because of my disability. They helped me to create support group for people with disabilities and their families' members. They help me to study for my Driver license. If they get more funding, they can do more to help people with disabilities.

Thank you for your attention to me. Do you have any questions?

January 21, 2008

Dear Legislators,

Dakota Center for Independent Living helps me to be able to learn things. I continue to live on my own in my own house and use public transportation to get around town, because I don't drive myself. When I have problems with Dickinson's public transportation, DCIL has helped me to stand up for myself at the Transportation Board meetings. DCIL should continue to get money so that elderly people like me who have difficulty seeing can continue to live on my own. My family lives in other states. DCIL does good things for people.

Thank you,

F

Chairman Pollert, and members of the Appropriations-Human Resources Division Committee:

My name is John Johnson, and I am testifying in support of funding for the Centers for Independent Living, which would allow them to have a 'statewide' presence for the first time.

I would like to stress two points; the uniqueness of services that Center's provide and the Community Education and Outreach impact of the CIL's.

1) Provides 'skills training' to all disability groups-both cognitive and physical disabilities; advocacy, cooking, housekeeping skills, management of their home care workers, budgeting, drivers education, social security, etc.
2) Serves all age groups, birth to end of life
3) Home and business accessibility
4) Consumer driven and controlled
5) Resource center for disability and age related issues

By approving the complete request of $1.89 million there would not be a duplication of services.

The second aspect of service I would like to address is that of our 'outreach' efforts into the communities we serve. We see the impact of that outreach in the cities and counties we presently serve and would like to have that same impact throughout North Dakota.

- Durable Equipment Loan Program: Loan out, free of charge medical equipment while individuals wait on program eligibility or delivery of their own equipment.
- Provide education to transition aged youth and college students about disability issues, advocacy, and awareness of disability. These efforts have empowered students to become active in their school, university or community (self advocacy).
- Worked with city, county and state transportation entities to improve access to and expansion of transportation options.
- Educated and provided technical assistance to business entities, as well as individuals, with regards to accessibility. This would include public and private entities, contractors, architects, housing authorities and recreational areas. This is done to increase the availability of affordable, accessible housing and access.
- Provided recreational outings such as fishing, hunting, dances, bowling and other leisure time activities for youth and adults with disabilities.
- Collaborated with local domestic violence and law enforcement officials on providing the most effective services for persons with disabilities.
- Provided information and assistance to returning veterans with disability issues.
- Educated assisted living and other residential living facilities on the rights those with disability issues to ensure optimum quality of living experience.
- Educated social security staff on the services of Independent Living Centers.
- Collaborated to increase the availability of dental care to those uninsured or on medical assistance.

We, the four Centers for Independent Living are a resource center for information on aging and disability issues, we do

provide skills, training, we provide information and technical assistance on various disability issues, we teach and provide advocacy to the elderly and those with disabilities, we offer peer mentoring to those with disabilities, and our services are free of charge to those we serve.

Thank you for your time, any questions.

Same to Senate

Mr. Chairmen Pollert and Members of the Committee:

My name is Tonia Johnston and I am writing to support HB1012 for funding for Centers for Independent Living.

Dakota Center for Independent Living has helped me in many ways to maintain my independence while dealing with my physical and mental disabilities. I have had problems managing my money which has caused many financial hardships. Dakota Center for Independent Living has helped me to figure out a budget that works for my family and they make sure my bills are paid and on time. They allow me to be as involved in paying the bills as I feel I am able to be.

Dakota Center for Independent Living has helped me learn about the different transportation options that I have so that I am able to get around town by myself. I do not drive anymore and that has made getting around difficult. With their help I have learned how to use the Transit system and I have also learned how to use the city bus system and I am now able to do a lot of things on my own.

Dakota Center for Independent Living has helped me with obtaining special equipment or services that make my life a little easier. They helped me to get a scooter when I was unable to walk that worked with my specific disabilities so that I could be independent. They gave me a

medication machine in order to try to help me manage my medications. They have had the city nursing system talk to me about what they could offer me such as coming into my home to help me set up the medication machine and fill it for me, along with making sure I refilled my medications on time. If they think of any other services or equipment that may be useful to me they make sure I know about it. If I find something that I feel may be beneficial to me they help me to find a way to try it.

Dakota Center for Independent Living has helped me with finding housing that was accessible for me. They took the time to go with me to look at the apartment and make sure that it was accessible whether I needed to be in my wheelchair or I could walk. They helped me make sure it was near a bus route so I had easy access to transportation.

Dakota Center for Independent Living has helped me in dealing with all the different agencies that I have to deal with. When my symptoms are more severe it makes dealing with too many people difficult for me. Having the people at Dakota Center for Independent Living handle that for me makes my life better. They have helped me in dealing with the Veterans Administration and they have helped me to find a Medicare prescription plan that covers most of the medications I need. Trying to deal with some of these agencies can feel very overwhelming to me but with their help it has made it a much better experience.

These are just a few of the things that Dakota Center for Independent Living has helped me with. There are many more that I could list but overall without their help I would still be struggling to live day to day. They keep me independent which is very important to my children and I. I look forward to continuing to work with Dakota Center for Independent Living because I

know they have my best interests in mind and will do all they can to make sure I can stay as independent as possible for as long as possible.

January 27, 2009

Good Morning, Chairman Pollert and Members of the Committee. Thank you for the opportunity to speak with you today.

My name is David Shove, I live in Fargo, ND, and I'm asking you to support the expanded funding for ND Centers for Independent Living in HB 1012.

Centers for Independent Living have played an important role in my life; first, when I was seeking help in planning for college and later when I was looking for accessible housing and employment in my community.

Now, I'm an active volunteer with my local Center for Independent Living as well as in the community at large. I'm a peer mentor, helping others by sharing my life experiences. I participate in community activities, such as the annual ADA Celebration and the recent Martin Luther King (MLK) National Day of Service.

None of this would have been possible if not for the help I've received at my local Center for Independent Living. Therefore, I ask you to support the expanded funding for ND Centers for Independent Living to provide services across the entire state.

Thank you for your time and attention.

I

Hello Chairman Pollert and Members of the Committee:

My name is Charmaine Yvette Boehler; I am a lady with many disabilities. Some of which I will address. I am a partial amputee on Right Foot from smoking cigarettes, known as Burgers disease, Heart disease, Hepatitis C, Osteoporosis, TMJ, Chronic Sinusitis, and Glaucoma. I am happy to be alive and able to do the things I am doing. I could not have accomplished anything without the help of DCIL. The counselors there encouraged me and gave me hope for the future. I did not know how to get around without being depressed and feeling hopeless. These counselors are in wheel chairs and happy and helping people like me and others with mental and physical disabilities. They referred me to Vocational Rehabilitation and taught me how to get back out in the world and be a citizen of the community. Because of their programs to help people, I was able to attend college at BSC and finished my degree for Associate in Applied Science as an Administrative Assistant Medical. Please give DCIL increase in financial support, which is desperately needed to continue the education and hope to put people back in the communities and live happy again.

- They teach many things to all of us:
- How to grocery shop.
- How to balance a check book, and budget.
- How to ride a bus.
- How to get out be social and meet other people.
- How to apply and fill out an application for a job.
- How to protect ourselves in case of an emergency in the town or state we live in.
- How to cook, exercise, learn nutrition and many things that need to be taught and shared by people.
- Because of this we are able to live independently and happy with jobs, volunteer, and social activities. DCIL makes this possible and I ask all of you to support the many laws we need to do this and continue the education needed. Thank you for all your support and listening. It is greatly appreciated.

North Dakota Statewide Independent Living Council

CELEBRATING 20 YEARS

1988 - 2008

North Dakota Statewide Independent Living Council
Representative Chet A. Pollert
Chairman, Human Resources Division
House Appropriations Committee
State Capitol
Bismarck, ND 58505

Reference: Testimony HB 1012-Disability Services-Independent Living/VR

Dear Chairman Pollert,

My name is Michelle Barth; I currently have the privilege of serving as North Dakota's Statewide Independent Living Council President (ND SILC). The mission of the Statewide Independent Living Council (SILC) is: To guide the development of the Independent Living (IL) system in North Dakota through the active involvement of the people with disabilities. It is with this mission in mind that the ND SILC would like to express its' full support of HB 1012.

N.D is known for its' rich history, and the people that live here. North Dakotan's are hard working, generous, and kind of spirit. We are also a state that has approx 1 in 6 people identified as having a disability, and an aging population that will reach close to 2/3 of the state's counties will have folks living in them that are 65 years or older in the year 2020. (ND Data Source)In case anyone is adding, that is only eleven years away! North Dakotans are prideful and want to age with dignity and independence. Someone with a disability is no different, they also want to be independent, and with this in mind we need to look at the needs of the all North Dakotans with disabilities.

Chairman Pollert we are appreciative for the additional appropriation of $250,000, for the 2007-09 biennium for Center for Independent Living services. Some of the funds helped Independence CIL of Minot open a much needed branch in Williston. In 2008, 8,198 people had contact with VR and 2,743 received at least one of the four core services provided by CIL. The SILC supports and encourages an additional increase of $ added to Gov Hoven's budget during this legislative session for independent living centers. Increasing funding to independent living centers would mean services could be provided to the 13 counties in North Dakota that are currently underserved or the 26 counties that are not served at all.

and opportunities available in their county or area of the state. Their outcomes could be very different from my families.
I hope that you too can see how vital the CIL's ***full*** presence in ND is. The services they provide are unique, successful, and cost effective, and empowering to the people that receive their services. Investing in the CIL is a win--win for ND!

If you have any questions please feel free to call me at 701-223-1280.
Thank You,

Michelle Barth,
ND SILC President
Enclosure

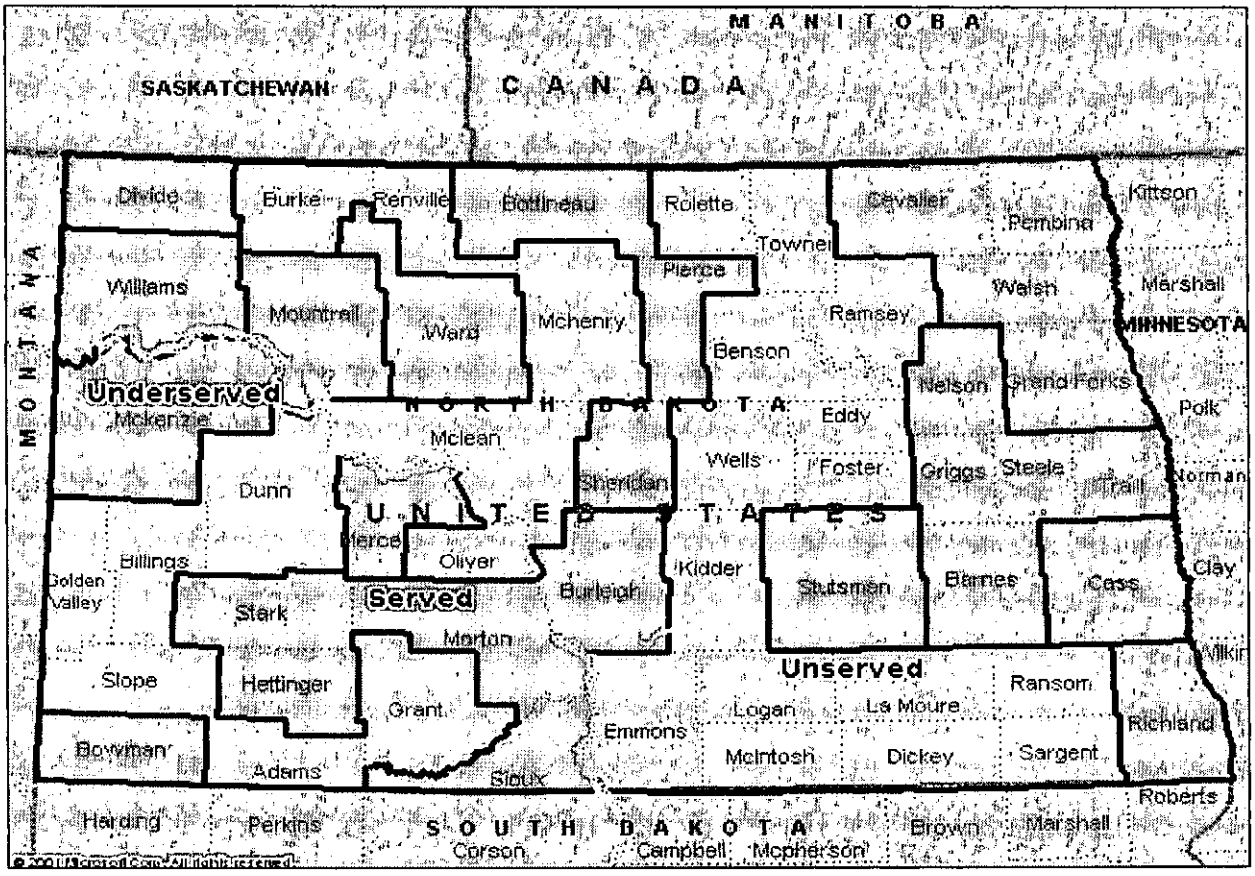
Representative Alon C. Wieland
Representative James A. Kerzman
Representative Ralph E. Metcalf



14 counties served (purple)

13 counties underserved (orange)

26 counties unserved (yellow)

Providing independent living services to North Dakotans is cost effective. Consider the following example: 26 people were moved from institutional care settings (nursing homes or LTC) to independent living community settings with a savings of $536,181.62 The CIL's are unique in that they provide services to anyone with a disability of any type, geographic location, economic status or age.

On a personal note, I feel blessed to live in Bismarck ND, an area that the CIL's have a strong presence in. My husband and I have two children with disabilities. They have grown into wonderful young adults. My daughter will have a college experience just like any other graduated high school senior, thanks in large part to VR's help. My son is getting ready to graduate this Spring and will probably need a little more help getting ready for the "real world" I am not panicked but rather enjoying the process in part because I know what services the CILS have available such as: Independent Living Skills Training, Individual and Systems Advocacy, Peer Counseling, and Information and Referral. should he need help and the help VR offers people with disabilities. What a difference these two organizations can make in someone's life that has a disability, they have touched our families' lives forever. When I think about what our family has been through, I know there are other families that are going through similar situations with their children or teens; the only difference being that if they don't have the same services

MONEY FOLLOWS THE PERSON

Program Information and Transition Services

north dakota department of human services

What is the Money Follows the Person Demonstration Grant?

The Money Follows the Person Demonstration Grant (the MFP Program) is a special program developed by the federal government that provides participating states (like North Dakota) with funding that the State uses to assist people to leave a nursing facility and move to their own home in the community.

Who is Eligible to Participate in the MFP Program in North Dakota?

The MFP Program is limited to persons residing in nursing facilities who are Medicaid eligible, who have resided in an institutional setting for at least six months, are not severely impaired in cognitive skills for decision making, do not have an Alzheimer's diagnosis, and who meet the requirements for at least one of the following State programs:

- Home and Community Based Services waiver, (Determined to be in need of nursing facility level of care, and Age 16 and over and physically disabled or at least 65 years of age);
- Technology Dependent Waiver, (Determined to be in need of nursing facility level of care, Age 18 and over and physically disabled or at least 65 years of age, Medically Stable, Competent, and Vent dependent at least 20 hrs per day);
- Medically Fragile Children waiver (Determined to be in need of nursing facility level of care, 3 to 18 years of age, Greatest need as determined through a Level of Need ranking process, Requires support for Health & Safety, Needs at least one waiver service quarterly to remain in family home setting, Lives with a primary caregiver capable of self directing services).

Persons who are not Medicaid eligible or who have resided in an institutional setting for less than six months may be assisted with transition from a nursing facility by Centers for Independent Living staff through other programs, as appropriate (contact information on back).

How Does MFP Work?

The MFP Program can assist individuals interested in leaving a nursing facility (NF) by providing:

- Information to help them make an informed choice regarding transition and participation in the MFP Program;
- Access to transition services and assistance from a transition coordinator through North Dakota Centers for Independent Living;
- Payment for some one-time moving costs or activities; (rental deposits, furniture, household supplies) and
- Post-discharge follow-up to ensure the move is satisfactory and the individual's needs are being met.

What Housing Choices Will Money Follows the Person Offer?

The MFP grant will operate throughout the state of North Dakota and will transition individuals into a qualified residence, such as:

- The individual's home or a family home;
- A shared home, where no more than three other (four total) unrelated individuals reside;
- An adult foster care home (AFCH) where no more than three other (four total) unrelated individuals reside;
- An apartment, including those in HUD subsidized housing complexes or congregate housing complexes.

When is the Money Follows the Person Program in Effect?

The MFP program will operate in North Dakota beginning June 20, 2008 and will end September 30, 2011.

MFP will fund services provided to individuals participating in the program for 365 days after transition to the community. After that, individuals will continue to receive needed services from the State without interruption.

If you, or someone you care about, lives in a nursing facility and would like to learn about options available to return to the community please contact your local Center for Independent Living (contact information on back) or Jake Reuter, MFP Program Administrator at 701-328-4090.

SUMMARY OF FUNDING REQUEST
NORTH DAKOTA CENTERS FOR INDEPENDENT LIVING

The Center for Independent Living (CIL) directors estimate that in order to have a presence and availability of core services in every county of the state, they would need $1.2 million per biennium each. Each of four Centers for Independent Living is designated to serve a quadrant of the state (see Future expansion areas, page 5).

Current biennial budget, including state and federal funds: $2,905,814
Estimated total amount needed for statewide availability: $4.8 million
Additional funds needed to provide a statewide presence: $1,894,000 per biennium
Governor Hoeven's budget recommendation: $800,000 per biennium
North Dakota House of Representatives recommendation: $400,000 per biennium

3 9 09

Services:
All Centers for Independent Living are required to provide four core services, which are: **Independent Living Skills Training, Individual and Systems Advocacy, Peer Counseling**, and **Information and Referral**. They also provide many others, such as nursing home relocation and prevention, community education, technology assistance, and recreation programming.

How is independent living unique among disability organizations?

- A commitment to systems changes, whereby the long-term goal is a society where everyone with a disability has the opportunity to be a vital and productive member of the community in which they choose to live.
- Availability for any person with any type of disability of any age, geographic location, or economic status to access services.
- North Dakota Centers for Independent living are consumer-driven community based organizations. A majority of our staff, board and management staff are people with disabilities from the areas we serve, who use their personal experience as a basis for the services that are provided based on the needs of the area as reported by the people.
- CIL's make use of volunteers with disabilities to provide peer support to other people with disabilities, but also to use their personal experiences as a base for our organizational and advocacy direction. This personal experience with disability sets CIL's apart from other traditional service providers.
- Centers for independent living promote self-determination and empowerment for people with disabilities through direct one-to-one and group services including skills training, individual advocacy, information and referral, and peer support. Independent Living has the concept of consumer control, whereby people with disabilities coming to them for services have the final say in what it is they want to accomplish. Consumers are responsible for their own actions.

Rationale for funding request

- The Independent Living program is part of the state/federal rehabilitation system. Both state and federal law authorize it. The full array of services is not, however, available to every citizen of the state who would be eligible due to lack of resources. As a service-based industry, more staff is needed in order to reach unserved and least served areas of the state.
- It is cost effective. Independent Living is part of the solution to the ever-increasing costs of long-term care. Centers provide information to people about community resources, and are actively involved in helping people either avoid institutional placement, or

A

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Committee – Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Maggie Anderson, Director of Medical Services, for the Department of Human Services. I am here today to provide you with an overview of the Long-Term Care Continuum budget.

Programs

The long-term care services included in this area of the budget are Nursing Facilities, Basic Care Facilities, Developmentally Disabled Community-Based Care, and the Home and Community-Based Services Programs which have the following funding sources: Service Payments for the Elderly and Disabled (SPED); Expanded SPED; Personal Care; the Program for All-Inclusive Care of the Elderly (PACE); Targeted Case Management; and the Medicaid Home and Community-Based Services Waiver.

The Long-Term Care Continuum encompasses a wide range of medical and support services for individuals who lack some capacity for self-care, and are expected to need care for an extended period of time.

Program Trends

Nursing Facilities

As of September 30, 2008, the percentage of Medicaid-eligible individuals in nursing facilities was 54 percent, which has been fairly consistent for many years. Attachment A shows the Licensed and Occupied Nursing Facility Beds for the current biennium, and Attachment B shows the

Medicaid occupied beds. Based on the September 30, 2008, occupancy reports, 23 facilities were below 90 percent occupancy. The average occupancy for these 23 facilities is 83 percent. The Department continues to believe that a moratorium on the number of nursing facility beds should remain. Throughout the interim, the Department has been in contact with the North Dakota Long Term Care Association for the purpose of tracking the nursing facility beds that are being shifted through the state. The Department's 2009-2011 Budget takes the "bed shifting" into account and is predicated on the moratorium continuing.

During the 2007 Legislative Session, approval was provided for the expansion of Geropsychiatric Services. As of December 2008, the additional 16 Geropsych beds are filled. We expect these beds to be filled throughout the 2009-2011 biennium.

The number of individuals receiving hospice service in Nursing Facilities is reported on Attachment C (Nursing Facility Hospice). As you can see, this number, which includes individuals receiving hospice from all funding sources, has significant fluctuation; however, it has trended higher since July 2005.

Basic Care

Overall, the Basic Care program has seen very little change over the interim. The Department continues to believe that a moratorium on the number of basic care beds should also remain. The process in place for requested exceptions to come before the Department of Health and the Department of Human Services appears to be working well to manage the number of Basic Care beds. Similar to Nursing Facility beds, the Department has been in contact with the North Dakota Long Term Care

Association for the purpose of tracking the basic care beds that are being shifted and added through the state.

Home and Community-Based Services (HCBS)

Home and Community-Based Services continue to provide options for clients who find a need for long-term care services. Staff members work closely with county case managers and providers to ensure clients have the services needed. Often times, it takes a considerable amount of collaboration between formal and informal supports, as well as programs and funding streams, to wrap the necessary services around those who need care. The HCBS staff members are committed to continuous program review to ensure clients and their families have the information needed to make the best choice for their care needs. You will hear throughout this testimony about program changes that have occurred during the interim and those that are funded in the Executive Budget.

Developmental Disabilities

As you will hear from JoAnne Hoesel when she provides the overview testimony for the Developmental Disabilities (DD) programs, there continues to be various areas for program focus. These range from the renewal of the DD waivers, consumer choice, transitions of individuals from the Developmental Center and increased oversight from the Centers for Medicare and Medicaid Services. I will cover the DD Community Grant expenditures later in this testimony.

Major Program Changes

HCBS Waiver

The 2007-2009 Appropriation for the Home and Community-Based Services Waiver included funding to add Family Personal Care, Extended

Personal Care and Home Delivered Meals. **Family Personal Care** assists individuals to remain with their family members and in their own communities, and provides for the provision of extraordinary care payments to the legal spouse of a recipient for the provision of personal care or similar services. **Extended Personal Care** includes hands-on care of a medical nature that is specific to the needs of an eligible individual and will enable an individual to live at home. This service is provided by a Qualified Service Provider (QSP), and to the extent permitted by State law, is care that would otherwise be provided by a nurse. A nurse, licensed to practice in the state, provides training to a QSP approved by the Department to provide the required care and (the nurse) will provide at a minimum, a review of the clients' needs every six months to determine if additional training is required. Activities of daily living and instrumental activities of daily living are not a part of this service. The purpose of **home delivered meals** is to provide a well-balanced meal to an individual who lives alone and is unable to prepare an adequate meal, or who lives with another person who is unable or not available to prepare an adequate meal for the individual. During the 2007-2009 interim, this service was added to the HCBS Waiver, with a limit of three hot or frozen home delivered meals per week. The Executive Budget request for 2009-2011 includes funding to increase the three meals per week to seven meals per week. This increase would require a change to the HCBS Waiver, and it is expected that the implementation date would be January 1, 2010.

Technology Dependant Waiver

Shortly after the beginning of the current biennium (August 1, 2007), the Department received Centers for Medicare and Medicaid Services (CMS)

approval to operate a Medicaid waiver for individuals who are technology dependent. This waiver has three slots available.

Children's Medically Fragile Waiver

2007 Senate Bill 2326 authorized the implementation of Medically Fragile Waiver for Children. This waiver received approval by CMS on April 1, 2008. The waiver currently serves three children and staff members are working with other families to complete the level of care and level of need documents.

Money Follows the Person Demonstration Grant

In 2007, the Department was awarded a Money Follows the Person (MFP) Grant. The grant funding is provided to North Dakota for the purpose of assisting individuals in nursing facilities and institutions that serve individuals with a developmental disability in transitioning to home and community-based settings. The grant is expected to transition 30 individuals with a developmental disability and 80 individuals who reside in a nursing facility to the community. After receiving CMS approval of the operational protocols for the grant, transitions began in the summer of 2008. Through December 2008, five individuals were transitioned to the community. The transition goal for 2009 is 34 individuals. The grant ends September 30, 2011. We have included two MFP brochures (one for each transition population) to provide additional information and detail.

Program for All-Inclusive Care of the Elderly (PACE)

PACE is a program that provides complete health care coverage to persons who have long-term care needs. To be eligible for PACE, an individual must be at least 55 years of age, live within the PACE service area, meet nursing home level of care, and be able to live safely in the

community. Northland Healthcare Alliance and Medical Services staff worked together to implement this "managed care" approach to delivering services to qualifying individuals. Each month, the Medicaid program pays a capitated rate to Northland, and in turn, Northland is responsible to coordinate and pay for all Medicare and Medicaid services needed by the individual. The goal of the PACE program is to provide the necessary services to individuals to allow them to continue living at home. Each individual has a care plan that details the services needed and all services are reviewed and approved by the PACE care team. Northland Healthcare Alliance identified Bismarck and Dickinson as their PACE service areas. Enrollment in the program began in August 2008 and as of December 1, 2008 there are nine individuals enrolled in the program (seven are Medicare and Medicaid and two are Medicare only). For additional information, a PACE brochure is included with my testimony.

Minimum Data Set (MDS) 3.0

Currently, North Dakota, and other states are using Version 2.0 of the Minimum Data Set (MDS).

The following information is adapted from the CMS website:

In response to changes in nursing home care, resident characteristics, advances in resident assessment methods, and provider and consumer concerns about the performance of the Minimum Data Set (MDS) 2.0, the Centers for Medicare and Medicaid Services (CMS) is undertaking an effort to implement Version 3.0. The expected implementation date is October 1, 2009. This implementation will involve system changes and the Department has assembled a multi-Division workgroup to ensure readiness for the October implementation.

According to CMS, the goals of the MDS 3.0 revision are to introduce advances in assessment measures, increase the clinical relevance of items, improve the accuracy and validity of the tool, and increase the resident's voice by introducing more resident interview items. Providers, consumers, and other technical experts in nursing home care requested that MDS 3.0 revisions focus on improving the tool's clinical utility, clarity, and accuracy. CMS also wanted to shorten the tool while maintaining the ability to use MDS data for quality indicators, quality measures, and payment.

MDS is part of the federally mandated process for clinical assessment of all residents in nursing homes. This process provides a comprehensive assessment of each resident's functional capabilities and helps nursing home staff identify health problems. MDS assessments are completed for all residents in certified nursing homes, regardless of individual's source of payment. MDS assessments are required for residents on admission to the nursing facility and then periodically, within specific guidelines and time frames. MDS information is transmitted electronically by nursing homes to the state Medicaid office, and is used as the cornerstone for establishing the resident's per day cost of care.

Non-Medical Transportation

Funding to add Non-Medical Transportation to Service Payments for the Elderly and Disabled (SPED) and ExSPED is included in the Executive Budget. The total funds are $406,444, of which $387,660 are general funds and $18,784 are county funds. Non-Medical Transportation allows individuals to access essential community resources/services in order to maintain themselves in their home and community. Individuals receiving non-medical transportation service: (1) are unable to provide their own transportation, (2) need a means of obtaining basic necessary community

resources and/or services (i.e. grocery, pharmacy, laundromat), and (3) do not have access to transportation through an informal network.

Revising the SPED Fee Schedule

Through input of stakeholders and advocates, the Department has been urged to revise the SPED Fee Schedule. The schedule was last updated August 1, 2003. The Executive Budget includes the funding to update the fee schedule. This update was based on actual cost of living adjustments (COLA) through January 2008 and an estimated COLA for January 2009.

Removal of the Adult Family Foster Care – Point Split

The purpose of Adult Family Foster Care is to offer a choice within a continuum of care to adults, who could benefit from living in a family environment, as well as to promote independent functioning and provide for a safe and secure environment. Currently, when multiple recipients reside in a Family Foster Care setting, the reimbursement points assigned to laundry, shopping, and housekeeping are split by the number of recipients. This results in less reimbursement for the provider and a greater amount of paperwork. The Executive Budget contains funding to remove the point split. Removing the point split will compensate providers more equitably for services provided and help ensure access to Adult Family Foster Care services for clients. The point split change would be effective January 1, 2010.

Implementing Hospice for Children Waiver

Hospice options for families with terminally ill children are very limited. Today hospice is offered to terminally ill individuals who have elected hospice, which generally requires that they are no longer looking at curative measures. A Medicaid Hospice waiver will allow a child to receive

Hospice services and palliative care within the child's home. In addition, the family can continue to receive Medicaid-reimbursed services, such as curative care, as well as counseling, respite, and expressive therapies. The waiver will have 30 available slots, and is expected to be operational by July 1, 2010, contingent upon the implementation of a new Medicaid Management Information System (MMIS) and approval from the Centers for Medicare and Medicaid Services (CMS).

Personal Care – Third Tier

Personal Care Services assist an individual with activities of daily living (ADLs) and instrumental activities of daily living (IADLs) so that the individual is able to live at home. Personal care services are authorized when service activities are essential either on an intermittent or ongoing basis, and the need for personal care services is expected to continue for a period of time in excess of 30 days. Currently there are two levels of Personal Care (Level A and B). The maximum number of hours available is about eight per day. In order to accommodate those unique cases where recipients are determined to require more than eight hours of personal care per day, the Executive Budget contains the funding to add a third tier of Personal Care called Expanded Medicaid State Plan –Personal Care that would allow a maximum of 10 hours of Personal Care per day. Specific criteria would need to be met and prior authorization by a HCBS Administrator would be required for approval of this service. In addition, the Centers for Medicare and Medicaid Services (CMS) will need to approve the addition of the third tier. Based on the time needed for CMS approval and computer system changes, the estimated start date for this service is January 1, 2010.

ISLA Administrative Funding

Currently, administrative reimbursements for the Individualized Supported Living Arrangement and Family Care Option (FCO) III programs are inadequate to support programs for individuals with high levels of need. Providers of service typically lose money providing services to individuals receiving ISLA and FCO III services. These programs are essential to community placement of individuals from institutions and individuals receiving these services have very high need levels. Currently there is a disincentive in the administrative reimbursements to serve clients receiving these services. The Executive Budget contains $2.4 million (of which $.9 million are general funds for ISLA and $96,108 (of which $35,416 are general funds for FCO III) to increase the administrative reimbursement so it is based on the client level of need. This increase is intended to ensure community placements are available and to prevent additional institutional admissions.

Personal Needs Allowance – SSI Only Individuals

Personal Needs Allowance dollars are used by individuals in an institutional setting (Nursing Home, Intermediate Care Facility for the Mentally Retarded (ICF/MR) and Psychiatric Residential Treatment Facility) for items such as clothing, recreational or social activities, a bottle of pop, or a birthday card. Some individuals in an institution are "SSI only" and their Personal Needs Allowance is paid to them by Social Security. This allowance is limited to $30. Funding to increase the Personal Needs Allowance for these individuals to $50 per month is included in the Executive Budget. The $20 increase per person would be funded with 100% general funds. The Executive Budget includes $148,068 to fund this increase. Based on the effort needed to implement

this change, it is expected that this increase would take effect January 1, 2010.

Intense Medical Needs – Family Homes

Currently Intermediate Care Facilities receive enhanced funding to provide services to children with intense medical needs. The Executive Budget includes funding to increase the wages of In-Home Support staff, who assist families in caring for children at home. The level of reimbursement would be at the same level as Intermediate Care Facility providers serving children with similar intense medical needs.

Intense Medical Needs – Residential Facility

As noted above, currently Intermediate Care Facilities receive enhanced funding to provide services to children with intense medical needs. The Executive Budget includes funding to compensate DD providers serving adults with intense medical needs at the same level as Intermediate Care Facilities providers serving children with similar intense medical needs.

Personal Needs Allowance – Decoupling ICF/MR

Personal Needs Allowance dollars are used for items such as clothing, recreational or social activities, a bottle of pop, or a birthday card. Currently, the amount of Personal Needs Allowance individuals in a Nursing Facility and individuals in an Intermediate Care Facility are allowed to keep is currently set at $50 per person per month. During the interim, the Department has worked with the Centers for Medicare and Medicaid Services (CMS) to secure approval to "decouple" the Personal Needs Allowance for individuals in a Nursing Facility from those in an Intermediate Care Facility. The Executive Budget includes funding to increase the Personal Needs Allowance for individuals in an Intermediate

Care Facility to $60 per month. The change would be effective January 1, 2010.

Medicaid Waiver - Autism Spectrum Disorder – Under 5 Years

The Executive Budget contains the funding to implement a Home and Community-Based Services (HCBS) Waiver to provide intensive supports for young children who have a diagnosis of Autism Spectrum Disorder. The waiver needs to be written, and the Department would need to secure CMS approval; therefore, we are expecting an implementation date of July 1, 2010, which would also be contingent upon the implementation of the new Medicaid Management Information System. The waiver will have 30 slots.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Nursing Homes	370,080,827	422,244,637	52,163,810
Basic Care	14,083,121	17,070,865	2,987,744
Personal Care	19,086,421	23,919,788	4,833,367
HCBS Waiver	4,943,345	9,607,825	4,664,480
Tech Dependent Waiver	762,019	540,744	(221,275)
Children's Medically Fragile Waiver	1,343,070	1,165,293	(177,777)
SPED	11,945,116	17,340,292	5,395,176
Ex-SPED	763,149	717,401	(45,748)
PACE	1,452,310	7,393,711	5,941,401
Targeted Case Management	923,325	1,985,916	1,062,591
DD - Community Based Care	274,423,470	323,056,043	48,632,573
Total	699,806,173	825,042,515	125,236,342
General Funds	257,332,905	313,669,588	56,336,683
Federal Funds	435,566,053	505,155,627	69,589,574
Other Funds	6,907,215	6,217,300	(689,915)
Total	699,806,173	825,042,515	125,236,342

FTE	-	-	-

- Nursing Facility services account for about 51.2 percent of the 2009-2011 budget for the long-term care continuum. (Compare to 52.9 percent for 2007-2009 Budget)

- Basic Care accounts for about 2.1 percent of the 2009-2011 budget for the long-term care continuum. (Compare with 2.0 percent for 2007-2009 Budget)

- Home and Community-Based Services account for 7.6 percent of 2009-2011 Budget for the long-term care continuum. (Compare to 5.9 percent for the 2007-2009 Budget)

- DD Grants account for about 39.2 percent of the 2009-2011 Budget for the long-term care continuum. (Compare to 39.2 percent for the 2007-2009 Budget)

- This portion of the 2009-2011 Budget also contains an inflationary increase for providers at seven percent each year of the Biennium.

- The impact on the 2009-2011 Budget of the decline in the Federal Medical Assistance Percentage on general funds for the Long-Term Continuum is $5.8 million.

Nursing Facilities

- The Executive Budget request for nursing facilities totaled $422.2 million, of which $153.2 million are general funds. The current budget for nursing facility services is $370.1 million of which $132.8 million are general funds. This $52.1 million increase is related to: Caseload and Utilization decreases ($9.8 million), the seven/seven percent inflationary increase ($26.9 million), and cost changes of $35 million. The cost changes include the funds necessary for rebasing the limits ($3.5 million), the funds necessary to sustain the increase to the property limits ($7.8 million), and cost changes

reported on the annual cost reports that need to be covered and sustained ($23.7 million). Attachment D shows historical information on expenditures and average daily Nursing Facility Rates. Earlier in my testimony, I reported that Medicaid is paying for approximately 54 percent of individuals in the nursing facilities. The remaining 46 percent are mostly private pay. The increases noted above are built into the average cost per day which affects both Medicaid and private pay residents. Private pay residents will see an increase of approximately $13 per person per day, each rate year of the 2009-2011 Biennium.

- The Executive Budget for nursing facilities was based on Medicaid occupancy of 3,388 beds per month. The occupancy includes:

  3,132 - Nursing Facility
  16 – Dakota Alpha
  30 – Geropsych Unit
  62 - Swing Bed
  86 – Hospice Room and Board
  62 – Out of State

Basic Care

- The Executive Budget for Basic Care is $17.1 million of which $7.9 million are general funds. This is a $3 million increase over the current budget. The average monthly caseload for the 2009-2011 budget request is 455, and the average utilization for the first 12 months of the biennium is 397. The increase consists of cost and utilization changes ($.8 million net increase) and $2.2 million increase for the seven percent inflation each year of the biennium.

Home and Community- Based Services

This area of the budget includes many funding sources such as the various Medicaid waivers, personal care services, SPED, and PACE. Collectively the net change is an increase of $21.5 million in total funds. The contributing factors to the increase are noted below:

- The Executive Budget includes an increase of $4.8 million for Personal Care Services. The average monthly caseload for Personal Care Services is estimated to be 671 and the caseload for the first 12 months of the biennium was 570. The estimated caseload (671) includes the expected average caseload increase of 20 for Tier III Personal Care. The budget increase in this area accounts for the utilization changes noted during the budget preparation process and also includes cost/utilization changes (net increase of $.6 million), the seven percent inflation each year of the biennium ($ 1.4 million increase) and the addition of Tier III Personal Care ($2.8 million increase). Tier III Personal Care is expected to be effective January 1, 2010, after receiving the necessary federal approval, and making the necessary computer system changes.
- The Executive Budget for the Service Payments to the Elderly and Disabled (SPED) is $17.3 million of which $16.5 million are general funds and $.8 million are county funds. This is a $5.4 million increase over the 2007-2009 Budget. The average monthly caseload is estimated to be 1,597, and the average caseload for the first 12 months of the biennium was 1,434. The estimated caseload includes the addition of 22 individuals expected as a result of revising the SPED fee schedule. The cost increase consists of the seven percent inflationary increase ($1.6 million), funding to revise the SPED fee schedule ($.6 million), the portion of the adult family foster care point split that applies to this area ($32,141), and $3.1

million to cover the cost and utilization increases expected, based on the trends used during the budget preparation process.

- The 2009-2011 Executive Budget request for ExSPED is $717,401, as compared to the 2007-2009 Budget of $763,149. The budget request is built on an average monthly caseload of 129, and the average caseload for the first 12 months of the biennium was 109. The seven percent inflationary increase for this area is $70,441, and the portion of the adult family foster care point split that applies to this area is $2,142. In addition there were cost and utilization decreases which totaled $118,331.
- The Executive Budget request for Targeted Case Management is $2 million, of which $.7 million are general funds. This represents a $1.1 million increase over the 2007-2009 appropriation. The average monthly caseload is expected to be 458. For the first 12 months of the current biennium, the caseload was averaging 427. The increase includes $.2 million for the inflationary increase, and $.9 million increases for cost and utilization. The Medicaid Targeted Case Management regulations are on a moratorium through March 2009; therefore, we await the final implementation direction to determine if there are additional impacts in this area.
- The Executive Budget request for the HCBS Waiver is $9.6 million of which $3.6 million are general funds. The HCBS Waiver includes the waivers previously reported as the TBI (Traumatic Brain Injury) Waiver and the Aged and Disabled Waiver. The average monthly caseload included in the budget request is 349 and for the first 12 months of the biennium, the average caseload was 244. The estimated average caseload includes expected increases for the Adult Family Foster Care Point Split (eight) and for the Hospice Waiver (15). The increase in the projected utilization is a result of

the new services added to the waiver over the interim, which were discussed earlier in my testimony. The overall increase, as compared to the 2007-2009 appropriation, is $4.7 million. This increase consists of $.8 million for the seven percent inflationary increase, $81,156 for the portion of the adult family foster care point split change that affects clients within the waiver, $.9 million to fund the new Hospice Waiver for Children, and an increase of $2.9 million for cost and utilization changes accounted for when preparing the budget. The implementation date for the additional home delivered meals is expected to be January 1, 2010 and the implementation date for the Hospice Waiver for Children is expected to be July 1, 2010.

- The Executive Budget request for the Children's Medically Fragile Waiver is $1.2 million of which $.4 million are general funds. The current appropriation for this waiver is $1.4 million. The 2009-2011 budget request estimates an average monthly case load of 11 for this waiver. Currently there are three children receiving waiver services, and the budget is built with estimates of increasing the caseload gradually over 2009-2011. The wavier has a maximum of 15 slots. This area includes a $.1 million for the seven percent inflationary increase, and a net decrease of $.3 million, related to cost and utilization changes.
- The Executive Budget request for the Technology Dependant Waiver is $.5 million of which $.2 million are general funds. The 2007-2009 budget is $.8 million. This waiver is now serving one individual, and the budget request is based on the expectation that we will provide services to two individuals in SFY 2010 and three for SFY 2011. The waiver has a maximum of three slots. The budget request

includes $55,740 for the seven percent inflationary increase and a net decrease of $277,015 for cost and utilization changes.

- The Executive Budget request for the Program for All-Inclusive Care of the Elderly (PACE) is $7.4 million, of which $2.7 million are general funds. While this presents a $5.9 million increase in the budget, it is actually a "shifting" of dollars from other services. The utilization in the other Medicaid services was reduced for the budgeted PACE utilization. As noted earlier in my testimony, PACE is a capitated long-term care program; therefore, PACE is responsible for all Medicaid services needed by enrolled participants. As a result, it is expected that Medicaid would have fewer direct expenditures for services, such as nursing facility care, personal care and hospital services, as these "bills" would be paid directly by the PACE program. The monthly average enrollment for PACE was budgeted at 76, which includes the additional enrollments Northland Healthcare Alliance is expecting in the Bismarck and Dickinson areas. The PACE budget does not contain funding for the inflationary increase, as the rates are established by an actuary and not subject to inflationary increases.

Developmental Disabilities

The increases of approximately $48.6 million in the DD Grants are from following eight areas:

- $190,195 net decrease in caseload. The decrease consists of $151,145 in general funds and $39,050 in federal funds.

- $17.6 million is due to cost changes that occurred during the 2007-2009 Biennium, which must be sustained during the 2009-2011

Biennium. The cost change increase consists of $6.5 million in general funds and $11.1 million in federal funds.

- $28.5 million is due to a seven percent inflationary increase each year of the 2009-2011 Biennium. The increase consists of $10.5 million in general funds and $18 million in federal funds.

- $103,680, of which $38,341 are general funds, to increase the Personal Needs Allowance for individuals residing in an ICF/MR from $50 per month to $60 per month.

- $805,412, of which $297,842 are general funds, to cover the cost of services provided to adults with intense medical needs who live in a residential facility.

- $644,330, of which $238,274 are general funds, to cover the cost of services provided to children with intense medical needs who are cared for in their family homes.

- $57,854 of which $21,394 are general funds, for the portion of the adult family foster care point split change that applies to this area of the budget.

- $1 million, of which $.4 million are general funds, to operate a Medicaid Autism Waiver for one year. The funding is only for one year; it is expected to take one year after legislative approval to write the waiver, secure public input and receive CMS approval.

I would be happy to answer any questions you may have.

Nursing facility rates are established annually from a cost report.

Swing Bed Rates are based on the average Medicaid Nursing Facility Rates from the previous year.

Out of State is the average paid.

Limits were increased effective 1/1/09. ($1.39 per day)

Nursing facility rates were also increased for related property costs. ($3.15 per day)

Increased 125 nursing facility beds to correspond with the known bed movement, 16 geropsych beds added for the 2007-2009 Biennium, which became operational in the fall of 2008, and are occupied as of December 2008; 9 beds for at Dakota Alpha for Long-Term TBI clients; and 19 beds for the utliziation increase in hospice.

Decreased 63 beds to correspond with the expected growth in the PACE program.

7/7 Inflation (10.89 per day)

Removal of HCBS Cap - Point Split	8	-$10.47	**See Note 2**
7/7 Inflation		$79.79	
Total	**322**	**$949.03**	

Note 1 - The appropriation was used because the new services added for the 2007-09 Budget were approved by CMS in the spring of 2008. These services were Home Delivered Meals, Family Personal Care and Extended Personal Care. The additional costs for these services were not reflected in the actual costs of services in the months typically used for budgeting.

Note 2 - Due to the cost of the Point Split being smaller (409.33 per individual per month) than the current average cost of this service, it results in a decrease to the average cost per person.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 3, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Maggie Anderson, Director of Medical Services, for the Department of Human Services. I am here today to provide you with an overview of the Long-Term Care Continuum budget.

Programs

The long-term care services included in this area of the budget are Nursing Facilities, Basic Care Facilities, Developmentally Disabled Community-Based Care, and the Home and Community-Based Services Programs which have the following funding sources: Service Payments for the Elderly and Disabled (SPED); Expanded SPED; Personal Care; the Program for All-Inclusive Care of the Elderly (PACE); Targeted Case Management; and the Medicaid Home and Community-Based Services Waiver.

The Long-Term Care Continuum encompasses a wide range of medical and support services for individuals who lack some capacity for self-care, and are expected to need care for an extended period of time.

Program Trends

Nursing Facilities

As of September 30, 2008, the percentage of Medicaid-eligible individuals in nursing facilities was 54 percent, which has been fairly consistent for many years. Attachment A shows the Licensed and Occupied Nursing Facility Beds for the current biennium, and Attachment B shows the

Medicaid occupied beds. Based on the September 30, 2008, occupancy reports, 23 facilities were below 90 percent occupancy. The average occupancy for these 23 facilities is 83 percent. The Department continues to believe that a moratorium on the number of nursing facility beds should remain. Throughout the interim, the Department has been in contact with the North Dakota Long Term Care Association for the purpose of tracking the nursing facility beds that are being shifted through the state. The Department's 2009-2011 Budget takes the "bed shifting" into account and is predicated on the moratorium continuing.

During the 2007 Legislative Session, approval was provided for the expansion of Geropsychiatric Services. As of December 2008, the additional 16 Geropsych beds are filled. We expect these beds to be filled throughout the 2009-2011 biennium.

The number of individuals receiving hospice service in Nursing Facilities is reported on Attachment C (Nursing Facility Hospice). As you can see, this number, which includes individuals receiving hospice from all funding sources, has significant fluctuation; however, it has trended higher since July 2005.

Basic Care

Overall, the Basic Care program has seen very little change over the interim. The Department continues to believe that a moratorium on the number of basic care beds should also remain. The process in place for requested exceptions to come before the Department of Health and the Department of Human Services appears to be working well to manage the number of Basic Care beds. Similar to Nursing Facility beds, the Department has been in contact with the North Dakota Long Term Care

Association for the purpose of tracking the basic care beds that are being shifted and added through the state.

Home and Community-Based Services (HCBS)

Home and Community-Based Services continue to provide options for clients who find a need for long-term care services. Staff members work closely with county case managers and providers to ensure clients have the services needed. Often times, it takes a considerable amount of collaboration between formal and informal supports, as well as programs and funding streams, to wrap the necessary services around those who need care. The HCBS staff members are committed to continuous program review to ensure clients and their families have the information needed to make the best choice for their care needs. You will hear throughout this testimony about program changes that have occurred during the interim and those that are funded in the Executive Budget.

Developmental Disabilities

As you will hear from JoAnne Hoesel when she provides the overview testimony for the Developmental Disabilities (DD) programs, there continues to be various areas for program focus. These range from the renewal of the DD waivers, consumer choice, transitions of individuals from the Developmental Center and increased oversight from the Centers for Medicare and Medicaid Services. I will cover the DD Community Grant expenditures later in this testimony.

Major Program Changes

HCBS Waiver

The 2007-2009 Appropriation for the Home and Community-Based Services Waiver included funding to add Family Personal Care, Extended

Personal Care and Home Delivered Meals. **Family Personal Care** assists individuals to remain with their family members and in their own communities, and provides for the provision of extraordinary care payments to the legal spouse of a recipient for the provision of personal care or similar services. **Extended Personal Care** includes hands-on care of a medical nature that is specific to the needs of an eligible individual and will enable an individual to live at home. This service is provided by a Qualified Service Provider (QSP), and to the extent permitted by State law, is care that would otherwise be provided by a nurse. A nurse, licensed to practice in the state, provides training to a QSP approved by the Department to provide the required care and (the nurse) will provide at a minimum, a review of the clients' needs every six months to determine if additional training is required. Activities of daily living and instrumental activities of daily living are not a part of this service. The purpose of **home delivered meals** is to provide a well-balanced meal to an individual who lives alone and is unable to prepare an adequate meal, or who lives with another person who is unable or not available to prepare an adequate meal for the individual. During the 2007-2009 interim, this service was added to the HCBS Waiver, with a limit of three hot or frozen home delivered meals per week. The Executive Budget request for 2009-2011 includes funding to increase the three meals per week to seven meals per week. This increase would require a change to the HCBS Waiver, and it is expected that the implementation date would be January 1, 2010.

Technology Dependant Waiver

Shortly after the beginning of the current biennium (August 1, 2007), the Department received Centers for Medicare and Medicaid Services (CMS)

approval to operate a Medicaid waiver for individuals who are technology dependent. This waiver has three slots available.

Children's Medically Fragile Waiver

2007 Senate Bill 2326 authorized the implementation of Medically Fragile Waiver for Children. This waiver received approval by CMS on April 1, 2008. The waiver currently serves four children and staff members are working with other families to complete the level of care and level of need documents.

Money Follows the Person Demonstration Grant

In 2007, the Department was awarded a Money Follows the Person (MFP) Grant. The grant funding is provided to North Dakota for the purpose of assisting individuals in nursing facilities and institutions that serve individuals with a developmental disability in transitioning to home and community-based settings. The grant is expected to transition 30 individuals with a developmental disability and 80 individuals who reside in a nursing facility to the community. After receiving CMS approval of the operational protocols for the grant, transitions began in the summer of 2008. Through December 2008, five individuals were transitioned to the community. The transition goal for 2009 is 34 individuals. The grant ends September 30, 2011. We have included two MFP brochures (one for each transition population) to provide additional information and detail.

Program for All-Inclusive Care of the Elderly (PACE)

PACE is a program that provides complete health care coverage to persons who have long-term care needs. To be eligible for PACE, an individual must be at least 55 years of age, live within the PACE service area, meet nursing home level of care, and be able to live safely in the

community. Northland Healthcare Alliance and Medical Services staff worked together to implement this "managed care" approach to delivering services to qualifying individuals. Each month, the Medicaid program pays a capitated rate to Northland, and in turn, Northland is responsible to coordinate and pay for all Medicare and Medicaid services needed by the individual. The goal of the PACE program is to provide the necessary services to individuals to allow them to continue living at home. Each individual has a care plan that details the services needed and all services are reviewed and approved by the PACE care team. Northland Healthcare Alliance identified Bismarck and Dickinson as their PACE service areas. Enrollment in the program began in August 2008 and as of December 1, 2008 there are nine individuals enrolled in the program (seven are Medicare and Medicaid and two are Medicare only). For additional information, a PACE brochure is included with my testimony.

Minimum Data Set (MDS) 3.0

Currently, North Dakota, and other states are using Version 2.0 of the Minimum Data Set (MDS).

The following information is adapted from the CMS website:

In response to changes in nursing home care, resident characteristics, advances in resident assessment methods, and provider and consumer concerns about the performance of the Minimum Data Set (MDS) 2.0, the Centers for Medicare and Medicaid Services (CMS) is undertaking an effort to implement Version 3.0. The expected implementation date is October 1, 2009. This implementation will involve system changes and the Department has assembled a multi-Division workgroup to ensure readiness for the October implementation.

According to CMS, the goals of the MDS 3.0 revision are to introduce advances in assessment measures, increase the clinical relevance of items, improve the accuracy and validity of the tool, and increase the resident's voice by introducing more resident interview items. Providers, consumers, and other technical experts in nursing home care requested that MDS 3.0 revisions focus on improving the tool's clinical utility, clarity, and accuracy. CMS also wanted to shorten the tool while maintaining the ability to use MDS data for quality indicators, quality measures, and payment.

MDS is part of the federally mandated process for clinical assessment of all residents in nursing homes. This process provides a comprehensive assessment of each resident's functional capabilities and helps nursing home staff identify health problems. MDS assessments are completed for all residents in certified nursing homes, regardless of individual's source of payment. MDS assessments are required for residents on admission to the nursing facility and then periodically, within specific guidelines and time frames. MDS information is transmitted electronically by nursing homes to the state Medicaid office, and is used as the cornerstone for establishing the resident's per day cost of care.

Non-Medical Transportation

Funding to add Non-Medical Transportation to Service Payments for the Elderly and Disabled (SPED) and ExSPED is included in the Executive Budget. The total funds are $406,444, of which $387,660 are general funds and $18,784 are county funds. Non-Medical Transportation allows individuals to access essential community resources/services in order to maintain themselves in their home and community. Individuals receiving non-medical transportation service: (1) are unable to provide their own transportation, (2) need a means of obtaining basic necessary community

resources and/or services (i.e. grocery, pharmacy, laundromat), and (3) do not have access to transportation through an informal network.

Revising the SPED Fee Schedule

Through input of stakeholders and advocates, the Department has been urged to revise the SPED Fee Schedule. The schedule was last updated August 1, 2003. The Executive Budget includes the funding to update the fee schedule. This update was based on actual cost of living adjustments (COLA) through January 2008 and an estimated COLA for January 2009.

Removal of the Adult Family Foster Care – Point Split

The purpose of Adult Family Foster Care is to offer a choice within a continuum of care to adults, who could benefit from living in a family environment, as well as to promote independent functioning and provide for a safe and secure environment. Currently, when multiple recipients reside in a Family Foster Care setting, the reimbursement points assigned to laundry, shopping, and housekeeping are split by the number of recipients. This results in less reimbursement for the provider and a greater amount of paperwork. The Executive Budget contains funding to remove the point split. Removing the point split will compensate providers more equitably for services provided and help ensure access to Adult Family Foster Care services for clients. The point split change would be effective January 1, 2010.

Implementing Hospice for Children Waiver

Hospice options for families with terminally ill children are very limited. Today hospice is offered to terminally ill individuals who have elected hospice, which generally requires that they are no longer looking at curative measures. A Medicaid Hospice waiver will allow a child to receive

Hospice services and palliative care within the child's home. In addition, the family can continue to receive Medicaid-reimbursed services, such as curative care, as well as counseling, respite, and expressive therapies. The waiver will have 30 available slots, and is expected to be operational by July 1, 2010, contingent upon the implementation of a new Medicaid Management Information System (MMIS) and approval from the Centers for Medicare and Medicaid Services (CMS).

Personal Care – Third Tier

Personal Care Services assist an individual with activities of daily living (ADLs) and instrumental activities of daily living (IADLs) so that the individual is able to live at home. Personal care services are authorized when service activities are essential either on an intermittent or ongoing basis, and the need for personal care services is expected to continue for a period of time in excess of 30 days. Currently there are two levels of Personal Care (Level A and B). The maximum number of hours available is about eight per day. In order to accommodate those unique cases where recipients are determined to require more than eight hours of personal care per day, the Executive Budget contains the funding to add a third tier of Personal Care called Expanded Medicaid State Plan –Personal Care that would allow a maximum of 10 hours of Personal Care per day. Specific criteria would need to be met and prior authorization by a HCBS Administrator would be required for approval of this service. In addition, the Centers for Medicare and Medicaid Services (CMS) will need to approve the addition of the third tier. Based on the time needed for CMS approval and computer system changes, the estimated start date for this service is January 1, 2010.

ISLA Administrative Funding

Currently, administrative reimbursements for the Individualized Supported Living Arrangement and Family Care Option (FCO) III programs are inadequate to support programs for individuals with high levels of need. Providers of service typically lose money providing services to individuals receiving ISLA and FCO III services. These programs are essential to community placement of individuals from institutions and individuals receiving these services have very high need levels. Currently there is a disincentive in the administrative reimbursements to serve clients receiving these services. The Executive Budget contains $2.4 million (of which $.9 million are general funds for ISLA and $96,108 (of which $35,416 are general funds for FCO III) to increase the administrative reimbursement so it is based on the client level of need. This increase is intended to ensure community placements are available and to prevent additional institutional admissions.

Personal Needs Allowance – SSI Only Individuals

Personal Needs Allowance dollars are used by individuals in an institutional setting (Nursing Home, Intermediate Care Facility for the Mentally Retarded (ICF/MR) and Psychiatric Residential Treatment Facility) for items such as clothing, recreational or social activities, a bottle of pop, or a birthday card. Some individuals in an institution are "SSI only" and their Personal Needs Allowance is paid to them by Social Security. This allowance is limited to $30. Funding to increase the Personal Needs Allowance for these individuals to $50 per month is included in the Executive Budget. The $20 increase per person would be funded with 100% general funds. The Executive Budget includes $148,068 to fund this increase. Based on the effort needed to implement

this change, it is expected that this increase would take effect January 1, 2010.

Intense Medical Needs – Family Homes

Currently Intermediate Care Facilities receive enhanced funding to provide services to children with intense medical needs. The Executive Budget includes funding to increase the wages of In-Home Support staff, who assist families in caring for children at home. The level of reimbursement would be at the same level as Intermediate Care Facility providers serving children with similar intense medical needs.

Intense Medical Needs – Residential Facility

As noted above, currently Intermediate Care Facilities receive enhanced funding to provide services to children with intense medical needs. The Executive Budget includes funding to compensate DD providers serving adults with intense medical needs at the same level as Intermediate Care Facilities providers serving children with similar intense medical needs.

Personal Needs Allowance – Decoupling ICF/MR

Personal Needs Allowance dollars are used for items such as clothing, recreational or social activities, a bottle of pop, or a birthday card. Currently, the amount of Personal Needs Allowance individuals in a Nursing Facility and individuals in an Intermediate Care Facility are allowed to keep is currently set at $50 per person per month. During the interim, the Department has worked with the Centers for Medicare and Medicaid Services (CMS) to secure approval to "decouple" the Personal Needs Allowance for individuals in a Nursing Facility from those in an Intermediate Care Facility. The Executive Budget includes funding to increase the Personal Needs Allowance for individuals in an Intermediate

Care Facility to $60 per month. The change would be effective January 1, 2010.

Medicaid Waiver - Autism Spectrum Disorder – Under 5 Years

The Executive Budget contains the funding to implement a Home and Community-Based Services (HCBS) Waiver to provide intensive supports for young children who have a diagnosis of Autism Spectrum Disorder. The waiver needs to be written, and the Department would need to secure CMS approval; therefore, we are expecting an implementation date of July 1, 2010, which would also be contingent upon the implementation of the new Medicaid Management Information System. The waiver will have 30 slots.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Nursing Homes	370,080,827	52,163,810	422,244,637	7,573,519	429,818,156

FTE	0	0	0	0	0

Budget Changes from Current Budget to Executive Budget:

- Nursing Facility services account for about 51.2 percent of the 2009-2011 Budget for the long-term care continuum. (Compare to 52.9 percent for 2007-2009 Budget)

- Basic Care accounts for about 2.1 percent of the 2009-2011 Budget for the long-term care continuum. (Compare with 2.0 percent for 2007-2009 Budget)

- Home and Community-Based Services account for 7.6 percent of the 2009-2011 Budget for the long-term care continuum. (Compare to 5.9 percent for the 2007-2009 Budget)

- DD Grants account for about 39.2 percent of the 2009-2011 Budget for the long-term care continuum. (Compare to 39.2 percent for the 2007-2009 Budget)

- This portion of the 2009-2011 Budget also contains an inflationary increase for providers at seven percent each year of the Biennium.

- The impact on the 2009-2011 Budget of the decline in the Federal Medical Assistance Percentage on general funds for the Long-Term Continuum is $5.8 million.

Nursing Facilities

- The Executive Budget request for nursing facilities totaled $422.2 million, of which $153.2 million are general funds. The current budget for nursing facility services is $370.1 million of which $132.8 million are general funds. This $52.1 million increase is related to: Caseload and Utilization decreases ($9.8 million), the seven/seven percent inflationary increase ($26.9 million), and cost changes of $35 million. The cost changes include the funds necessary for rebasing the limits ($3.5 million), the funds necessary to sustain the increase to the property limits ($7.8 million), and cost changes reported on the annual cost reports that need to be covered and sustained ($23.7 million). Attachment D shows historical information on expenditures and average daily Nursing Facility Rates. Earlier in my testimony, I reported that Medicaid is paying

for approximately 54 percent of individuals in the nursing facilities. The remaining 46 percent are mostly private pay. The increases noted above are built into the average cost per day which affects both Medicaid and private pay residents. Private pay residents will see an increase of approximately $13 per person per day, each rate year of the 2009-2011 Biennium.

- The Executive Budget for nursing facilities was based on Medicaid occupancy of 3,388 beds per month. The occupancy includes:

  3,132 – Nursing Facility
  16 – Dakota Alpha
  30 – Geropsych Unit
  62 – Swing Bed
  86 – Hospice Room and Board
  62 – Out of State

Basic Care

- The Executive Budget for Basic Care is $17.1 million of which $7.9 million are general funds. This is a $3 million increase over the current budget. The average monthly caseload for the 2009-2011 budget request is 455, and the average utilization for the first 12 months of the biennium is 397. The increase consists of cost and utilization changes ($.8 million net increase) and $2.2 million increase for the seven percent inflation each year of the biennium.

Home and Community- Based Services

This area of the budget includes many funding sources such as the various Medicaid waivers, personal care services, SPED, and PACE.

Collectively the net change is an increase of $21.5 million in total funds. The contributing factors to the increase are noted below:

- The Executive Budget includes an increase of $4.8 million for Personal Care Services. The average monthly caseload for Personal Care Services is estimated to be 671 and the caseload for the first 12 months of the biennium was 570. The estimated caseload (671) includes the expected average caseload increase of 20 for Tier III Personal Care. The budget increase in this area accounts for the utilization changes noted during the budget preparation process and also includes cost/utilization changes (net increase of $.6 million), the seven percent inflation each year of the biennium ($ 1.4 million increase) and the addition of Tier III Personal Care ($2.8 million increase). Tier III Personal Care is expected to be effective January 1, 2010, after receiving the necessary federal approval, and making the necessary computer system changes.

- The Executive Budget for the Service Payments to the Elderly and Disabled (SPED) is $17.3 million of which $16.5 million are general funds and $.8 million are county funds. This is a $5.4 million increase over the 2007-2009 Budget. The average monthly caseload is estimated to be 1,597, and the average caseload for the first 12 months of the biennium was 1,434. The estimated caseload includes the addition of 22 individuals expected as a result of revising the SPED fee schedule. The cost increase consists of the seven percent inflationary increase ($1.6 million), funding to revise the SPED fee schedule ($.6 million), the portion of the adult family foster care point split that applies to this area ($32,141), and $3.1 million to cover the cost and utilization increases expected, based on the trends used during the budget preparation process.

- The 2009-2011 Executive Budget request for ExSPED is $717,401, as compared to the 2007-2009 Budget of $763,149. The budget request is built on an average monthly caseload of 129, and the average caseload for the first 12 months of the biennium was 109. The seven percent inflationary increase for this area is $70,441, and the portion of the adult family foster care point split that applies to this area is $2,142. In addition there were cost and utilization decreases which totaled $118,331.

- The Executive Budget request for Targeted Case Management is $2 million, of which $.7 million are general funds. This represents a $1.1 million increase over the 2007-2009 appropriation. The average monthly caseload is expected to be 458. For the first 12 months of the current biennium, the caseload was averaging 427. The increase includes $.2 million for the inflationary increase, and $.9 million increases for cost and utilization. With the signing of the Economic Stimulus Package, the Medicaid Targeted Case Management regulations are on a moratorium through June 30, 2009; therefore, we await the final implementation direction to determine if there are additional impacts in this area.

- The Executive Budget request for the HCBS Waiver is $9.6 million of which $3.6 million are general funds. The HCBS Waiver includes the waivers previously reported as the TBI (Traumatic Brain Injury) Waiver and the Aged and Disabled Waiver. The average monthly caseload included in the budget request is 349 and for the first 12 months of the biennium, the average caseload was 244. The estimated average caseload includes expected increases for the Adult Family Foster Care Point Split (eight) and for the Hospice

Waiver (15). The increase in the projected utilization is a result of the new services added to the waiver over the interim, which were discussed earlier in my testimony. The overall increase, as compared to the 2007-2009 appropriation, is $4.7 million. This increase consists of $.8 million for the seven percent inflationary increase, $81,156 for the portion of the adult family foster care point split change that affects clients within the waiver, $.9 million to fund the new Hospice Waiver for Children, and an increase of $2.9 million for cost and utilization changes accounted for when preparing the budget. The implementation date for the additional home delivered meals is expected to be January 1, 2010 and the implementation date for the Hospice Waiver for Children is expected to be July 1, 2010.

- The Executive Budget request for the Children's Medically Fragile Waiver is $1.2 million of which $.4 million are general funds. The current appropriation for this waiver is $1.4 million. The 2009-2011 budget request estimates an average monthly case load of 11 for this waiver. Currently there are four children receiving waiver services, and the budget is built with estimates of increasing the caseload gradually over 2009-2011. The wavier has a maximum of 15 slots. This area includes a $.1 million for the seven percent inflationary increase, and a net decrease of $.3 million, related to cost and utilization changes.

- The Executive Budget request for the Technology Dependant Waiver is $.5 million of which $.2 million are general funds. The 2007-2009 budget is $.8 million. This waiver is now serving one individual, and the budget request is based on the expectation that we will provide

services to two individuals in SFY 2010 and three for SFY 2011. The waiver has a maximum of three slots. The budget request includes $55,740 for the seven percent inflationary increase and a net decrease of $277,015 for cost and utilization changes.

- The Executive Budget request for the Program for All-Inclusive Care of the Elderly (PACE) is $7.4 million, of which $2.7 million are general funds. While this presents a $5.9 million increase in the budget, it is actually a "shifting" of dollars from other services. The utilization in the other Medicaid services was reduced for the budgeted PACE utilization. As noted earlier in my testimony, PACE is a managed care long-term care program; therefore, PACE is responsible for all Medicaid services needed by enrolled participants. As a result, it is expected that Medicaid would have fewer direct expenditures for services, such as nursing facility care, personal care and hospital services, as these "bills" would be paid directly by the PACE program. The monthly average enrollment for PACE was budgeted at 76, which includes the additional enrollments Northland Healthcare Alliance is expecting in the Bismarck and Dickinson areas. The PACE budget does not contain funding for the inflationary increase, as the rates are established by an actuary and not subject to inflationary increases.

Developmental Disabilities

The increases of approximately $48.6 million in the DD Grants are from following eight areas:

- $190,195 net decrease in caseload. The decrease consists of $151,145 in general funds and $39,050 in federal funds.

- $17.6 million is due to cost changes that occurred during the 2007-2009 Biennium, which must be sustained during the 2009-2011 Biennium. The cost change increase consists of $6.5 million in general funds and $11.1 million in federal funds.

- $28.5 million is due to a seven percent inflationary increase each year of the 2009-2011 Biennium. The increase consists of $10.5 million in general funds and $18 million in federal funds.

- $103,680, of which $38,341 are general funds, to increase the Personal Needs Allowance for individuals residing in an ICF/MR from $50 per month to $60 per month.

- $805,412, of which $297,842 are general funds, to cover the cost of services provided to adults with intense medical needs who live in a residential facility.

- $644,330, of which $238,274 are general funds, to cover the cost of services provided to children with intense medical needs who are cared for in their family homes.

- $57,854 of which $21,394 are general funds, for the portion of the adult family foster care point split change that applies to this area of the budget.

- $1 million, of which $.4 million are general funds, to operate a Medicaid Autism Waiver for one year. The funding is only for one year; it is expected to take one year after legislative approval to write the waiver, secure public input and receive CMS approval.

House Changes

- Increased the Personal Needs Allowance for individuals in Basic Care Facilities from $60 per month to $75 per month. The cost of this change is $112,320, all of which are general funds. This change also requires a change in statute. The necessary language is included in the engrossed version of House Bill 1012.

- Increased the Personal Needs Allowance for individuals in an ICF/MR from $60 per month to $75 per month. The increase for this change is $155,520 of which $57,511 are general funds.

- Added $14.7 million in total funds, of which $4.95 million are general funds, $1.0 million is from the health care trust fund, and $8.79 million are federal funds to provide supplemental salary payments to staff working in basic care and skilled nursing facilities. The supplemental payment will be provided to staff earning less than the eightieth percentile of the salary range at each facility.

- Removed funding for Personal Care Tier III. This change reduced the long-term care grants by $2.76 million of which $1 million are general funds.

- The House included language that would amend NDCC Section 50-30-02 relating to the Health Care Trust Fund. The language would prohibit the executive branch from including Health Care Trust Funds in appropriation bills.

- The House also included language that would require Legislative Council to study the long-term care payment system and the long-term care survey and inspection programs and processes.

- Decreased funding for long-term care grants by $5.6 million in general funds for caseload and utilization. This decrease also reduced the federal match by $9.5 million for a total of $15.1 million.

- Added $18.9 million in total funds, of which $7.0 million are general funds and $11.9 million are federal funds to provide supplemental salary payments to staff working for developmental disability (DD) providers. The supplemental payment will be provided to staff earning less than the ninetieth percentile of the salary range for each DD provider.

- Added funding to increase the payment rates for children and adults who are severely medically fragile and behaviorally challenged receiving services through the DD system. This increase is estimated to cost $1.2 million of which $438,900 are general funds.

- Decreased funding for DD grants based on caseload and utilization estimates by $6.7 million, of which $2.5 million are general funds.

- Decreased funding for inflationary increases for all services in the Long-Term Care Continuum from 7% each year to 6% each year. This reduction is estimated to save $11.6 million of which $4.5 million are general funds.

I would be happy to answer any questions you may have.

Explanation of Delayed Provider Billing Adjustments reflected on following pages:

When two billings are processed in the same month for the same person, the system does not count the person twice. Therefore, the persons receiving are understated; actual units of service are accurate.

7%/7% Inflation (09-11)		$ 2.48
Total	497	$ 25.42

* The department recently began using a new computer program to generate spenddown information. At present the department is working the "kinks" out of this new computer program -- some of the DD Grants information generated by the new computer program differs from the mainframe DD Expenditure Reports. Since the mainframe DD Expenditure Reports reflect reimbursements to providers for billed services, the mainframe DD Expenditure Report data is reflected above for August '07 through November '08.

Testimony on HB 1012
House Appropriation - Human Resource Division
January 26, 2009

Good Afternoon Chairman Pollert and members of the House Appropriations – Human Resource Division. My name is Shelly Peterson, President of the North Dakota Long Term Care Association. I am here today to testify on behalf of long term care facilities.

HB 1012 touches the lives of many individuals. I would like to address the funding for individuals in need of basic and skilled nursing care. We have identified five items of priority that we would like you to support. Two of the five items are currently in HB 1012 and we request that you consider three additional items. The two items in the budget that we request you keep intact are:

1. Seven percent inflator for all Medicaid providers.
2. Increases the Personal Needs Allowance for SSI recipients in nursing facilities from $30 to $50.

Three additional items we ask you to consider are:

1. A $2.00 an hour wage/benefit pass-through for all staff, except administrators that work in a licensed basic care and nursing facility.
2. Increase the nursing facility asset limits from $92,604 to $112,732 for a double room and from $138,907 to $169,098 for a single room.
3. Increase the Personal Needs Allowance for basic care residents from $60 to $100.

Please see Attachment A for the cost breakdown on funding these priorities.

First, I'd like to address the annual inflator (7%) and the wage/benefit pass-through. We are in the worst staffing crisis anyone can recall. Consider these facts:

- Certified Nurse Assistant (CNA) turnover is 51%.
- 49% of nursing facilities contracted with agencies in 2008 to deliver daily resident care because they did not have enough staff. Spending over $3.5 million on contract staff in 2008.

- It takes 8 months on average to fill an open nursing position in a rural nursing facility.
- Nursing facilities reported over 1,000 open positions in April 2008, 733 openings were for CNA's
- 17% of nursing facilities stopped admissions in 2008 because of insufficient staffing.
- Our oldest caregiver is a 94-year-old dietary aide and over 14% of long term care staff is at retirement age.
- Long term care wages are at the bottom of the barrel when compared to other entities in North Dakota. (See Attachment B)

Most nursing and basic care facilities do not have the cash reserves to make the salary adjustments they need to make. Consider this, our new 2009 rates were just updated to the 2006 cost report, inflated by 4% and 5% as passed in 2007 session. Still nearly 40% of all facilities are exceeding at least one limit, spending $3.7 million in unreimbursed costs. (See Attachment C)

We estimate basic care and nursing facilities employ around 13,000 full and part time people. What can you do to help?

Provide a salary/benefit enhancement that is effective July 1, 2009. This will go into the pockets and purses of 13,000 staff. This money will be spent in communities throughout North Dakota to buy groceries, shoes, repair homes, and fill the family car with gas. For every dollar you appropriate to this salary/benefit adjustment, the federal government through FMAP matching will provide an additional two dollars.

Think of the economic boost to North Dakota's economy, thirteen thousand North Dakotans spending an additional $45 million and being better able to take care for their families. Of this total amount, almost $28 million would be covered by federal funds. $17.5 million in state general funds would need to be appropriated to access the federal funds. We believe this is the solution to help assure a workforce for the future. Without an infusion of dollars, surely our workforce crisis will grow. We want our sons and daughters to live and work in North Dakota, and to attract others to consider North Dakota. This salary/benefit boost will help secure that future caregiving workforce. (See Attachment D)

The annual inflator is necessary because our costs are going up faster than our revenue. In 2008, our health insurance increased on average 9.71%. Food has gone up tremendously. The seven percent adjustment will help us better met our increasing costs and we urge that you keep it intact on HB 1012.

Next I'd like to address the cost of construction and renovation for nursing facilities. In the last session, you increased this limit and we are grateful; however it is not sufficient to cover today's costs. For life safety concerns, the Centers for Medicare and Medicaid Services is requiring all nursing facilities be equipped with automatic sprinkler systems. Nursing facilities still have 3½ years to achieve compliance, with approximately one-quarter still needing to upgrade. Many physical plants are forty and fifty years old, not efficient and in need of upgrades. Many facilities are trying to go with more private rooms to better meet the needs of their frail resident population. If the limit is not adjusted, the vast majority of all current and future projects will have not sufficient "property funds" to pay their mortgage obligations. Please consider increasing the limit as outline on the first page of my testimony at a cost of $324,506 in state general funds.

Personal needs allowance for SSI and basic care residents. HB 1012 contains the funding for all nursing facility residents to receive $50 per month. A small minority are only receiving $30 and this has not been sufficient for many years. The other population we are requesting you consider an increase is for basic care residents. Since July 1, 2001, they have been receiving $60 per month. In almost eight years, they have not had an increase, not even the CPI. See the five letters I received from residents in the new facility in Fargo that opened in February 2008. I encourage you to take the time to read all letters – note the one from the 92 year-old women "requesting a greater allowance." (See Attachment E)

In summary, we need your help. With Equalization of Rates, you control the rate system in North Dakota. Funding can not increase without your support and approval! As you consider and fund your priorities, please consider the care to the 14,000 people that will receive care in a long term care facility, as a priority as you have in past sessions. They need caregivers and we need your support to get them the care they need.

Thank you very much for your consideration of our request. I would be happy to answer any questions you may have.

Bismarck, ND 58501 www.ndltca.org

Long Term Care Wages in Four Categories

	# of Staff	Percentage	Types of Staff
Less than $10/hour	2,990	23%	Dietary Aides, Housekeepers, Laundry Asst, Universal Workers, CNA's, Cooks, Receptionists, Nurse Assistants
$10.01 to $15.00/hour	6,890	53%	CNA's, Medication Aides, Activity Staff, Cooks, Case Managers
$15.01 to $20.00/hour	1,820	14%	LPN's, Staff RN's
More than $20.01/hour	1,300	10%	RN's, Director of Nursing, Department Heads and Directors, Chaplain, Administrator
Total	13,000	100%	

Assisted living, basic care and nursing facilities employ 14,000 individuals, it is projected basic care and nursing facilities employ 13,000, equating to 9,000 to 9,720 FTE's. Seventy-five percent or 9,880 staff earn between minimum wage and $15.00. Only 10% of those employed in long term care facilities earn over $20.01 per hour.

The salary data and classification of employees was taken from 21 long term care facilities representing 1,305 licensed beds and 2,243 staff persons. The data from these facilities was then estimated to all basic care and nursing facilities using the same percentage splits into the four salary categories.

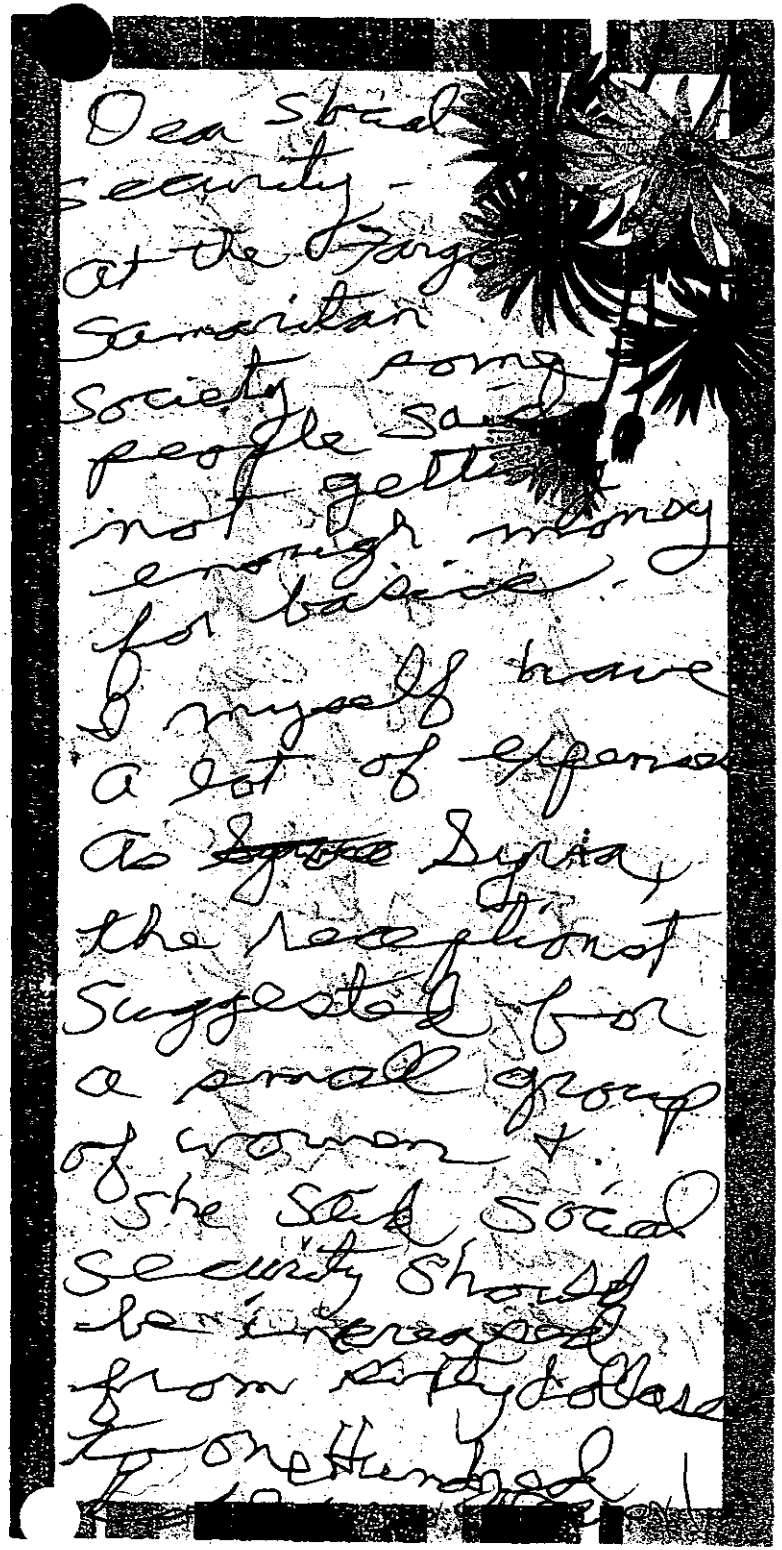
I am writing to request a greater allowance for personal cares for Basic Care residents in the state of North Dakota. I currently reside at Good Samaritan Society- Fargo and this is how my monthly $60 is used:

$60
- 10.62 Insurance Policy
- 3.79 AARP Medicare Rx
- 16.05 Phone
- 20.60 Pharmacy

This leaves me with approximately $4/month and I am unable to make a contribution to the church. Please consider increasing our personal allowance as I feel I have earned the right as I am almost 92 years and have paid for everything with cash my entire life. Thank you for your time and consideration.

Sincerely,
Norma Kortz



Dear Social
Security -
at the Good
Samaritan
Society home
people say
not getting
enough money
for basics.
I myself have
a lot of expenses
as ~~Syria~~ Syria,
the receptionist
suggested for
a small group
of women +.
She said Social
Security should
be increased
from sixty dollars
to one Hundred

we ask for
little. Major
expenses fall
upon me.
I was at Mayo
Clinic & got there
drs. paid I had
to be off aspirin
ten days for kidney
Repair. We are
just asking
for forty more
In closing,
after hearing
about this matter
~~$~~45 dollars perm.

July 29th, 2008

I moved into the Good Samaritan Society Feb. 1st, 2008, and am very thankful for a nice warm, friendly place to live. But with the cost of everything going up, $60.00 a mo is just not enough.

$60.00		$60.00
- 13.76 Phone	to	13.81 a month
46.24		46.19
16.00 - 4 Sunday Rides to Mass	→	20.00 5 Sunday Rides
30.24		26.19
10.00 A Mo. offering		10.00 offering
20.24		16.19
9.82 for visa { RCards, laundry supplies, stamps pop + misc	to	12.00 Visa supplies
10.42		4.19
4.00 coffee after Church	→	4.00 coffee after Church
6.42		.19

Then I need a perm every 3-4 mo; so then can not give at all to church. So that leaves nothing for personal items, such as shoes, undergarments or clothes. (even if I could find clothes at 2nd hand stores)

So I hope you could see to a raise of a $100.00 a month.

Sincerely Violet Wzuck

P.S. Have not ever been able to go for a Hamberg since moved here.

4502-37th ave So.
Fargo, No. Dak 58104

I was able to move into 17 Basic care facility facilaty the 1st of Feb 2008
I enjoy this facility very much but have found out even though it is furnished we feel
The $700.00 we are to keep just not reach out for a person.
I am hoping you can see fit to pass a law that would give us $100. a mo.
Below is my expenses for a Month
Medication.
Med. Pharmaceutical ins.
Church Giving
Clothes
Cleaners
hair care
$3.00 each way to take a bus to the store
some groceries
stamps
This would be a great help to us. We would be able than to go out to eat once a month

Thank You
Pearl Moen

PETITION for
MONTHLY MONEY ALLOTMENT INCREASE
North Dakota Long Term Care Association
Bismarck, North Dakota

October 27, 2008

To the NDLTCA, Bismarck, North Dakota

We, the undersigned residents of the **Good Samaritan Society - Fargo**, do hereby petition the state of North Dakota to increase the monthly money allotment of $60.00 to $100.00 for **basic care residents**. We as seniors would like to maintain our independence for as long as possible and be cared for in an environment that is more homelike. As the cost of living increases, our expenses are increasing as well. On average we spend $15.00 per month on our telephone bills, $20-$25.00 per month on prescription costs. After these expenses, the amount of money for personal expenses, such as clothes, personal items and entertainment would only leave us with $20-$25.00 per month. We greatly appreciate all the help we receive, however, as costs continue to increase we are seeing a need for our personal monthly money allotment also increased.

Testimony on HB 1012
Senate Appropriations
March 9, 2009

Good Afternoon Chairman Holmberg and members of Senate Appropriations. My name is Shelly Peterson, President of the North Dakota Long Term Care Association. I am here to testify on behalf of long term care facilities in North Dakota and the residents and tenants under their care.

HB 1012 touches the lives of many individuals, one being frail elderly North Dakotans in need of significant care and services.

I want to briefly touch upon our funding priorities and hopefully in the end enlist your support of additional funding for long term care.

Annual Inflator

The Governor's budget provided for an annual inflator of 7&7 for all providers. We deeply appreciate the Governors support to assure all providers have sufficient funds to operate. Last year we experienced double digit inflation in our food costs, gas, fuel oil and health insurance. Recognition of these costs is necessary for all providers impacted by HB 1012.

Our greatest challenge today is staffing and the annual inflator you provide is not sufficient to get us out of our staffing crisis we are in today. The House added dollars to help with this crisis and I am asking you today to add additional dollars.

Salary Adjustment for Basic Care and Nursing Facility Staff

We are in the worst staffing crisis anyone can recall. Consider these facts:

- Certified Nurse Assistant (CNA) turnover is 51%.
- 49% of nursing facilities contracted with agencies in 2008 to deliver daily resident care because they did not have enough staff. Spending over $3.5 million on contract staff in 2008.
- It takes 8 months (32 weeks) on average to fill an open nursing position in a rural nursing facility.
- Nursing facilities reported over 1,000 open positions in April 2008, 733 openings were for CNA's
- 17% of nursing facilities stopped admissions in 2008 because of insufficient staffing.

- Our oldest caregiver is a 94-year-old dietary aide.
- Long term care wages are at the bottom of the barrel when compared to other entities in North Dakota. (See Attachment A)

The House provided an additional $4.9 million in state general funds and $1.0 million from the health care trust fund to help improve caregiver salaries. With this $5.9 million and another $9.1 million provided by the Senate, this would give us the $15 million in state general funds necessary to match federal funds. This $15 million will bring in an additional $30 million in federal funds. What an opportunity to secure and grow our workforce.

North Dakota has an opportunity to attract people from other states where unemployment is high and caregivers including nurses are a surplus. Long term care facilities in Michigan have been reporting to us an over abundance of caregivers. Michigan has a similar climate to North Dakota and a surplus of applicants for long term care jobs. Since the start of the recession, Michigan has lost over 600,000 jobs, close to the entire population of North Dakota. Today, we are spending $18,000 to recruit a nurse from the Philippians. Why not spend that money recruiting a family to North Dakota. Attached please see Attachment B which is a handout on Compass Point, a company specifically aliened to help citizens of Michigan re-locate to North Dakota. One barrier to implement this model is competitive wages. We need to offer attractive salaries and benefits. Please see Attachment C which outlines RN average salaries from the United States, unadjusted and adjusted by cost of living. If we want to recruit from Michigan we need to at least come close to their salaries. Currently Michigan is 10th in the nation and North Dakota is 36th. North Dakota has a growing economy, jobs for many and a future for kids

You are probably worried about sustainability. Sustainability is fast becoming a concern to many budgets. We too are worried about sustainability. To us it means sustaining our workforce to care for our aging population. If we don't do something bold this legislative session, we will not have future caregivers. Today, 34% of our workforce is age 50 or older, with 14% already at retirement age. When they retire, we will not have people to replace them.

If we don't sustain and grow our workforce we will see further closing of our rural facilities. We can solve this problem.

Help us address our workforce crisis, grow our population and continue to care for our aging population that needs 24-hour care. A salary/benefit boost will help

secure that future caregiver workforce. (See Attachment D) Why not use some of the stimulus dollars provided through increased FMAP to support our caregiver workforce?

This salary/benefit enhancement would go into the pockets and purses of 13,000 current staff and help us do specific recruitment from Michigan. This money will be spent on our current workforce in communities throughout North Dakota to buy groceries, shoes, repair homes, and fill the family car with gas. By improving our salary range, we hope to be successful in a strong recruitment effort in Michigan. For every dollar you appropriate to this salary/benefit adjustment, the federal government through FMAP matching will provide an additional two dollars.

The House attached a limit on who is eligible to receive the salary/benefit enhancement. The limit will negatively impact our most seasoned caregiving staff, many RNs, LPNs, and CNAs, with the most extensive experience. We need to reward longevity not punish it. We recommend that you remove the 80th percentile limit and allow facilities, as you did in 2001, to administer the wage/benefit to the area's deemed most needy. We commit to assuring all administrators not be eligible for the enhancement.

Asset Limit in Nursing Facilities

The cost of construction and renovation of nursing facilities continues to escalate. In the last session, you increased this limit and we are grateful; however it is not sufficient to cover today's costs. For life safety concerns, the Centers for Medicare and Medicaid Services is requiring all nursing facilities be equipped with automatic sprinkler systems. Nursing facilities still have 3½ years to achieve compliance, with approximately one-quarter still needing to upgrade. Many physical plants are forty and fifty years old, not efficient and in need of upgrades. Many facilities are trying to go with more private rooms to better meet the needs of their frail resident population. If the limit is not adjusted, the vast majority of all current and future projects will have not sufficient "property funds" to pay their mortgage obligations. Please support the House Action of increasing the limit at a cost of $324,506 in state general funds. This limit is still conservative. For the 52 skilled nursing facility beds at the Veteran's Home, they would be limited to $8.8 million (if this limit applied to them). If all the beds were skilled (150) they would be limited to $25.4 million in total funds.

Personal Needs Allowance

HB 1012 contains the funding for all nursing facility residents to receive $50 per month. A small minority are only receiving $30 and this has not been sufficient for many years. The other population we are requesting you consider an increase is for basic care residents. Since July 1, 2001, they have been receiving $60 per month. In almost eight years, they have not had an increase, not even the CPI. See the letters and petition I received from residents in the new facility in Fargo that opened in February 2008. I encourage you to take the time to read all letters. (See Attachment E) The House increased the personal needs allows from $60 to $75 monthly. The residents in the petition are asking you to consider a personal needs allowance of $100.00 monthly.

Assisted Living Funding

Today it is very difficult for low income individuals to access assisted living housing and service options. Although individuals can access services through Medicaid Waiver, personal care options and SPED services, money is not available to help with rent assistance. Just as the state makes available room and board assistance for low income individuals in Basic Care, we request that you consider that same type of assistance for individuals to access the assisted living environment.

In summary, we need your help. We have an opportunity to be bold and grow our workforce and compensate our caregivers. As you consider and fund your priorities, please consider the care to the 14,000 people that will receive care in a long term care facility, as a priority as you have in past sessions. They need caregivers and we need your support to achieve a stable workforce.

Shelly Peterson, President
North Dakota Long Term Care Association

COMPASS POINT

Why Compass Point Labor Management

Reasons for Relocation to North Dakota

Michigan's Economy and Jobs Forecast

- Michigan's economy has been in recession since 2000 and recovery is not projected until at least 2011.
- Since start of the recession, Michigan has lost over 600,000 jobs..... close to the entire population of North Dakota.
- Unemployment rate is expected to go over 11% (January numbers). "Underemployed" brings rate to over 17%. Highest rates in country.
- Michigan's GDP decreased by 3% from 2003-2007. National GDP increased by 12% in same period. Michigan is the only state to show loss.
- Projected state budget deficit this year is $1.5B. Releasing plans this week for cuts in funding for schools, public safety, etc.
- Forbes list of "Ten Most Miserable Cities in US to Live," #6 Flint, #7 Detroit.
- Manufacturing accounts for 30% of Michigan economy. Multiplier effect impacts majority of the economy.
- Only two states had a net loss in population last year: Michigan and Rhode Island (90,000+ moved from Michigan to other states.)
- Health care industry was identified as strong market for state but:
    1. Michigan hospitals on average posted a negative 2.9% margin in 2008
    2. Losses from providing free care, picking up unreimbursed costs for uninsured patients and bad debt reached $2 billion last year
    3. Layoffs began in 2008 with more planned for 2009

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Why Compass Point Labor Management

Reasons for Relocation to North Dakota

1. 11 years of economic contraction. Employees under 40 years old will have spent around 50% of their working lives in restrictive employment environment.
2. Exodus of people under 40 years old has already begun.
3. Recent study indicated over 6,000 Michigan resume postings for positions in Wyoming.
4. North Dakota has a growing economy, providing long-term career opportunities.
5. Michigan employees have many similar skill sets needed by North Dakota employers.
6. North Dakota's environment is similar to Michigan:
   - Climate
   - Work ethic
   - Family values
   - Rural communities
   - Culture
7. North Dakota has cost of living 20% below national average.
8. North Dakota has an excellent schooling system. Michigan must further reduce education funding (very important to relocating families.)
9. North Dakota has a low crime rate..... compared to Detroit, Flint and even Grand Rapids (plus Michigan is further reducing public safety funding.)
10. North Dakota's economy is allowing for community development and good quality of life.
11. Compass Point will assist candidates with relocation options: pre-relocation support groups, housing options, community information, federally funded relocation assistance where qualified, etc.
12. Compass Point provides candidates with in-depth information on North Dakota companies and positions.

Proof of Success

- Overwhelming response to positions already posted by Compass Point.
- Feedback from North Dakota companies that have already hired Michigan candidates (great employees, fit in well, great work ethics, excellent skills, etc.)

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Why Compass Point Labor Management

1. Only agency in Michigan that has earned the authorization to represent the state for On-The-Job-Training contracts written on behalf of client employers.
2. Only agency in Michigan that is supported by Michigan Department of Labor/Federal training assistance programs.
3. Recommended to Job Service North Dakota by Michigan Works.
4. Family held company with offices in Grand Rapids and Detroit.
5. Only agency in Michigan to be offered office space in new State-funded economic development office in Northern Michigan.
6. Extensive support from Michigan Works, Michigan Economic Development Corporation, Veterans Administration, Michigan Technical Education Centers, Grand Rapids Community College and Michigan Human Resources Development Inc.
7. On-going, on-site presence in North Dakota to facilitate employee relocations and service to North Dakota companies
8. Highly experienced staff with background in all areas of business management.
9. Exceptionally loyal client base and highly recommended by employees utilizing our placement services.
10. Approach to daily operations***

****We pride ourselves on conducting our daily operations with "old fashioned" ideals. We do not subject any callers to voicemail • we provide follow-up on a timely basis • we take time to know our clients and our placements in great depth • we value face-to-face meetings at any cost • we are flexible because our clients are the most important element of our business • we do not promise anything that we cannot fulfill.*

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Compass Point Labor Management Market Niche

Out-Of-State Placement Program

- Compass Point serves as a bridge between employers and Michigan/Federal agencies committed to re-employment of the Michigan workforce
- Compass Point has access to a wide range of State funded services including coordination of job fairs, pre-employment training, state-wide offices for recruiting efforts and specialized skills testing
- Compass Point recognizes that recruiting for positions requiring relocation requires specialized support services for the employee and family. Compass Point has developed unique programs that lessen the strain of relocation. These programs are implemented prior to relocation and are the differentiator for increasing the program success.
- Compass Point assigns a specialist to out-of-state employers that meets on-site to gain an in-depth understanding of the employer and the position requirements. On-site follow-up continues and increases success of placements.
- Compass Point will promote employers, local communities and the State of North Dakota, allowing for better understanding and willingness of employees to relocate

Funding and Support Programs Available to Employers

- On-The-Job-Training funding contracts are established and reimbursed 100% to employers
- WOTC tax credit programs are completely administrated on behalf of employers
- Pre-employment training programs may be applicable for employers at no cost for specialized skills training

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Services For Out-Of-State Employers

- Establish and manage job fairs and targeted candidate searches across Michigan for employers
- Promote client companies, State of North Dakota, communities and life-style to candidate pool
- Coordinate and perform recruiting activities in Michigan
  - Preliminary interviews
  - Testing
  - Background checks
  - Drug screens
  - Coordinate web-cam interviews between employer and final candidates
  - Arrange and assist with on-site interviews as appropriate
- Set-up, administrate and follow-up for all On-The-Job-Training programs for employers including timely funding payments
- Administration of all eligibility and documentation requirements for WOTC tax credits available to employers
- Coordinate cost-free pre-employment training programs between employers and Michigan Technical Education Centers when appropriate
- Develop detailed knowledge of employer and position requirements by on-site meetings and position reviews by Compass Point human resources specialist

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Services For Out-Of-State Placements

- Lead employees through relocation support services including funding programs established for returning Michigan workers to employment (programs include cost off-sets for travel expenses, relocation expenses, etc)
- Develop welcome kit that provides relocation assistance including pre-qualified housing alternatives, schooling information, banking contacts, community information, etc.
- Assist with obtaining employment options for spouses if desired
- Arrange pre-employment activities that allow placements and their families to meet and form support groups prior to relocation
- Link single placements with each other if placements are interested in co-housing arrangements, etc.

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Program Cost Details

- Compass Point has been able to structure this program with minimal costs to the out-of-state employer. When factoring in the assumption of internal recruiting costs, the net cost to the employer can be less than internal recruiting.

- The structure of this program has been made possible by utilizing the coordinated services of *Michigan Works, Michigan Economic Development Corporation,* the *Veterans Administration* and *Michigan Technical Education Centers.*

North Dakota Placements Program Administration Fees

Combined Placements	Program Fee Per Placement	Training Funding Reimbursed to Employer	Est. WOTC Tax Credit (Est 20% Eligible)	Net Direct Cost Per Placement
Per placement	$2,060	$600	$480	$980

Net Direct Cost Minus Recruiting Cost Allowance

Combined Placements*	Net Direct Cost Per Placement	Average Recruiting Cost	Fully Allocated Costs (Savings)
Per placement	$980	$600 - $1,500	$380 – ($520)

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Risk Free Structure

Risk Free Structure for Employers

- Employees are retained based entirely upon the discretion of the employer.
- The employer is not responsible for relocation costs.
- Fees are pro-rated based upon the length of time that an employee is actively employed.
- Compass Point does not require any contracts of exclusivity or minimum placement requirements

STAFFING AND LABOR MANAGEMENT
COMPASS POINT

Suggested Next Steps

Suggested Next Steps

- Compass Point provides additional information and follows up by answering any specific questions
- Compass Point representative meets on-site with employers interested in program and answers questions related to specific needs
- Compass Point provides sample of appropriate candidates for review
- Compass Point compiles recruiting plans specific to individual employer needs

Frequently Asked Questions

Compass Point Labor Management Employee Recruitment for North Dakota

Who is Compass Point Labor Management?

Compass Point Labor Management is a placement agency with offices in Michigan that specializes in supporting the hiring functions of employers through State and Federal assistance programs.

Compass Point Labor Management has been approached by Michigan Works for the purpose of assisting with the placement and relocation of Michigan workers into positions based in North Dakota.

What is their experience with placements and government programs?

Compass Point has developed and managed an exclusive arrangement for placing employees and initiating on-the-job training programs supported by State and Federal funds. These arrangements include programs with Michigan Works, the Michigan Technology Education Centers and the Veterans Administration.

What are some of the benefits for North Dakota companies?

Compass Point functions as a bridge for out-of-state employers to access the Michigan labor pool. Various funding programs off-set Compass Point's fees. These fees cover extensive pre-employment screening processes, skills testing, face-to-face final interview opportunities (employer and candidates) and employee relocation assistance.

How do North Dakota companies insure that placements will be good fits?

Compass Point administers an extensive pre-screening process based upon a thorough understanding of the job requirements. Actual skills testing such as weld tests, construction skills testing, programming testing, aptitude testing and instructor references are utilized to the greatest extent possible. Compass Point spends time with the client employers to learn their culture, the work environment and the job requirements. Employers are able to conduct final interviews via web-casts, scheduled interviews in Michigan or on-site interviews in North Dakota.

How much does this program cost?

The majority of Compass Point's fees can be off-set by tax credits to the employer, on-the-job training (wage reimbursements) and coverage of internal recruiting costs. Depending upon the packages that can be compiled for specific placements, the employers may actually realize returns from the funding programs that exceed the placement fees.

How does Compass Point build their labor pool?

Compass Point works directly with Michigan Technology Education Centers, Michigan Works, the Veterans Administration and conducts its own recruiting. Many candidates are referred by employees, clients and business associates.

What is the relationship with the Michigan Technology Education Centers?

The Michigan Technology Education Centers (M-TEC) are skilled trades learning centers located throughout Michigan. Six hundred hour training programs provide specialized skills development in the following fields; welding, electrical, plumbing, construction/carpentry, cnc machining and information systems technology. Compass Point is a prime recruiter of graduates and has an agreement that allows for the training programs to be structured to specific employers' job requirements. Compass Point clients are also allowed to conduct actual skills testing of candidates at the training centers.

What is the relationship with ACT Work Keys?

Work Keys assessment tests have been developed by the ACT organization (known for college entrance exams). These tests measure real world skills that are used in nearly every job. Specific requirements have been compiled for thousands of jobs. Candidates are tested against these requirements for specific jobs, providing the employer with a quantified ranking of each candidate. Compass Point has agreements for administration of these tests at no cost for all of its candidates.

Why do candidates want to relocate?

The Michigan economy has displaced record numbers of employees. The downturn has resulted in permanent changes in the Michigan workforce needs. This realization has increased the pool of candidates that recognize that their long-term employment potential can be improved by considering relocation. Michigan workers have skill sets that are in demand in North Dakota. The environment and culture of North Dakota is also in alignment with backgrounds of many Michigan residents.

Are there any risks or commitments for North Dakota companies?

Employment of these candidates entails the same risks and commitments that a North Dakota employer would assume when hiring a local candidate, based on "at will" employment laws and policies within the State of North Dakota. Compass Point does not require a minimum commitment for placements.

What is the benefit for placements?

Compass Point provides in-depth information about the employer, the job and the long-term opportunities. Compass Point also provides relocation support systems such as assistance with relocation costs, relocation information packages and coordination of family support groups for relocating families. This extensive pre-relocation involvement greatly enhances the success of a long-term relocation.

What types of positions are being sought by the Compass Point labor pool?

Compass Point has the ability to recruit for any type of position. Candidates currently in our pool most willing to relocate, however, are skilled trade candidates. These include welders, pipefitters, electricians, construction trades, engineers and information technology personnel.

How can a company in Michigan represent my company in North Dakota?

Compass Point meets on-site with North Dakota client companies to learn first-hand about the company, its personnel, its culture, the job requirements and the work site. Compass Point promotes the company and North Dakota to the candidates. Compass Point also coordinates various types of interviewing options and meeting opportunities to insure a good pre-employment determination of employer/employee compatibility. Compass Point is also fully ingrained into the Michigan workforce network and can most effectively begin the recruiting process.

What are the next steps?

A Compass Point representative will be establishing meetings with North Dakota employers in Q1/09. Complete information about this program can be provided during such meetings or prior to a meeting. A simple risk-free, commitment-free trial of this program could be established after determining open position requirements.

North Carolina Center for Nursing - Quick Facts

Linda M. Lacey and Jennifer G. Nooney

www.NCcenterfornursing.org/research

2004 RN Average Salaries Across States: Unadjusted and Adjusted by Cost of Living

December, 2005

Studies of nursing salaries rarely consider the impact that the local cost of living makes on the purchasing power of a specific salary. Yet, the table below shows that once adjusted for the cost of living the rank ordering of states on average salary for RNs can change dramatically. California moves from 1st place to 44th, Hawaii from 3rd to 49th. North Carolina moves up in the rankings: from 30th to 20th. Texas moves into 1st place from 19th after adjusting for the cost of living. In fact, many of the states located near the top of the list for unadjusted RN salary levels move to the 3rd or 4th quartile after adjustment. Those states falling at the bottom of the list for unadjusted salary levels move up, although the change in ranking is not as dramatic.

State	Average Annual Salary	State Ranking Before Adjustment	Average Salary Adjusted for COLI	MERIC COLI value	State Ranking After Adjustment
California	$69,140	1	$45,849	150.8	44
Maryland	$65,750	2	$52,266	125.8	23
Hawaii	$64,320	3	$39,802	161.6	49
Massachusetts	$64,120	4	$50,970	125.8	34
New York	$62,140	5	$50,316	123.5	37
New Jersey	$61,790	6	$46,043	134.2	43
Connecticut	$61,450	7	$48,577	126.5	39
Alaska	$60,420	8	$46,946	128.7	41
Washington	$59,650	9	$57,633	103.5	3
Minnesota	$58,980	10	$58,745	100.4	2
Nevada	$58,630	11	$52,442	111.8	21
Oregon	$58,380	12	$54,765	106.6	11
District of Columbia	$58,330	13	$40,367	144.5	48
Delaware	$57,470	14	$55,850	102.9	6
Rhode Island	$56,910	15	$44,531	127.8	46
Michigan	$55,380	16	$54,832	101	10
Colorado	$55,010	17	$54,304	101.3	14
Arizona	$54,940	18	$53,600	102.5	16
Texas	$53,940	19	$60,539	89.1	1

The data used in this analysis comes from the employment and wage surveys conducted by the Occupational Employment Statistics (OES) program in association with the federal Bureau of Labor Statistics (BLS). The OES is a state-federal cooperative effort in which data is collected by the states and then aggregated by the BLS to produce national statistics. The average salary figures in each state in the table are from the November, 2004, tables released by the BLS.

State	Average Annual Salary	State Ranking Before Adjustment	Average Salary Adjusted for COLI	MERIC COLI value	State Ranking After Adjustment
Wisconsin	$53,700	20	$56,646	94.8	4
Pennsylvania	$53,670	21	$53,403	100.5	18
Virginia	$53,330	22	$51,676	103.2	31
New Mexico	$52,620	23	$51,945	101.3	30
Florida	$52,150	24	$51,994	100.3	29
Ohio	$51,840	25	$54,340	95.4	13
Illinois	$51,600	26	$52,069	99.1	26
Utah	$51,590	27	$55,954	92.2	5
South Carolina	$50,950	28	$53,407	95.4	17
Louisiana	$50,560	29	$52,178	96.9	25
North Carolina	$50,450	30	$52,827	95.5	20
Georgia	$50,330	31	$55,126	91.3	9
Tennessee	$49,890	32	$55,619	89.7	7
Missouri	$49,690	33	$54,544	91.1	12
Nebraska	$49,350	34	$52,894	93.3	19
Indiana	$49,100	35	$52,013	94.4	27
Kentucky	$48,980	36	$53,706	91.2	15
Vermont	$48,770	37	$42,706	114.2	47
Idaho	$48,000	38	$51,118	93.9	33
Arkansas	$47,990	39	$55,224	86.9	8
West Virginia	$47,780	40	$52,219	91.5	24
Mississippi	$47,220	41	$52,004	90.8	28
Alabama	$47,170	42	$50,830	92.8	35
Montana	$47,040	43	$47,805	98.4	40
Kansas	$46,910	44	$51,268	91.5	32
South Dakota	$46,830	45	$49,243	95.1	38
Oklahoma	$46,660	46	$52,368	89.1	22
North Dakota	$46,480	47	$50,742	91.6	36
Wyoming	$46,200	48	$45,517	101.5	45
Iowa	$44,000	49	$46,908	93.8	42

The cost of living index used to adjust the state-level average salary figures is a composite index developed by the Missouri Economic Research and Information Center (MERIC). They created a state-level index value by aggregating the city-level cost of living index values published by the American Chamber of Commerce Researchers Association (ACCRA) for the 4th quarter of 2004.

The point of time at which the cost of living was being measured in various cities around the country is consistent with the point of time for the RN salary information.

A more thorough discussion of the data elements used in this analysis and the mechanics of the adjustment procedure can be found in the May/June, 2006, issue of *Nursing Economic$* at www.nursingeconomics.net. See the article by Lacey and Nooney, "Which pasture is really greener? A research note on salary studies" which appears in that issue.

Readers interested in pursuing their own cost of living adjustments should visit the web site of the American Chamber of Commerce Researchers Association or other sites such as http://www.infoplease.com/ which also report cost of living information for selected U.S. cities.

Who will care for me?

North Dakota long term care facilities are in a staffing crisis.

- Long term care facilities spend over **$475 million** each year, with **86%**, or **$409 million**, of those expenditures **remaining in North Dakota.**
- North Dakota **leads the nation** in age **85+** population. North Dakota's **60+** population will reach nearly **200,000** by 2020.
- Over **1,700 additional caregivers** will be **needed** over the next seven years to provide care for North Dakota's aging population.
- The **202 long term care facilities** in North Dakota **employ over 14,000** caregivers at an **annual payroll** of nearly **$341 million.**

You can help.

Who will care for me?

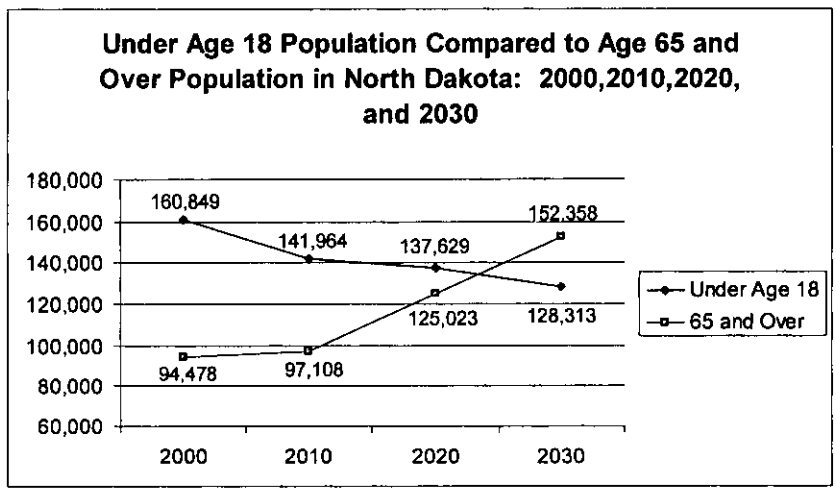
- **Long term care facilities** provide care for over **14,000** North Dakotans **annually.**
- **Lack of caregivers** was the main factor in the **closing** of one basic care facility and the announcement of a nursing **facility closure** in 2008.
- **34%** of caregivers in long term care are age **50 or older.**
- **14%** of the long term care workforce is **at or over retirement age.**
- The **oldest caregiver** in long term care is a **94-year-old** dietary aide.
- **17%** of nursing facilities **stopped admissions** in 2008 because of **insufficient staffing.**
- Nursing facilities reported over **1,000 open positions** in April 2008—**733** openings were for **Certified Nurse Assistants** (CNAs).
- **49%** of nursing facilities **contracted with agencies** in 2008 to deliver daily resident care—at **double or triple the cost.**
- **CNA turnover** is **51%.**
- **32 weeks** is the average time it takes to **fill** an open **nursing position** in a rural nursing facility.
- Entry level **CNA wages** in rural North Dakota are **$9.54** per hour, or **$19,843** annually.
- Following the **2001** long term care **wage/benefit pass-through**, CNA **turnover decreased** over **30%.**

Your support of the equity pool will help build North Dakota's caregiver workforce for the 21st century.

North Dakota Long Term Care ASSOCIATION

Aging in North Dakota

- North Dakota leads the nation with the highest proportion of individuals aged 85 and older comprising 2.3% of the total population.
- North Dakota is ranked fourth in the nation in citizens aged 65 and older
- From 2000 to 2030, North Dakota's age 65 and older population will grow by 61%, and our under age 18 population will decrease by 20%.
- Long term care facilities provide care for over 14,000 North Dakotans annually.



Who will care for North Dakota's Aging Population?

- Over 1,700 additional caregivers will be needed over the next seven years to provide care for North Dakota's aging population.
- Over one-third (34.2%) of nursing facility employees are 50 years or older.
- Over one-half (53.4%) of nursing facility employees are 40 years and older.
- Almost 14% of nursing facility employees are at retirement age.

Testimony on House Bill 1012
House Appropriations Committee – Human Resources Division
January 26, 2009

Presented by Carole Watrel
AARP North Dakota Volunteer

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Carole Watrel, a volunteer with AARP North Dakota. I am a licensed social worker, a volunteer adult legal guardian, and I work with the Alzheimers Support Group at St. Alexius Medical Center. I am here today on behalf of AARP's 88,000 North Dakota members to speak in support of three provisions in HB 1012:

1. Increasing the medically needy income levels; and
2. Revising the Service Payments for the Elderly and Disabled (SPED) fee schedule.
3. A 7% increase in reimbursement for providers for each year of the biennium.

Increased income levels for medically needy

The medically needy income levels allow Medicaid eligible individuals to keep part of the money they earn to meet expenses for basic needs like shelter, food, utilities, and clothing.

An estimated 3,200 North Dakotans would benefit from the executive budget proposal to increase medically needy income levels to 83 percent of poverty. The income levels would increase to $720 for a one-person household and $969 for a two-person household. The current levels have been frozen since 2003 at $500 per month and $516 per month, respectively. Imagine an elderly husband and wife trying to live from month-to-month on just $516. Since 2003, the costs of groceries, rent and utilities have gone up considerably. If we truly want to allow North Dakotans to remain in their homes and communities as they age, we need to allow them the means to do so.

A new survey of AARP members in North Dakota shows 75 percent are concerned about being able to stay in their homes as they get older. 68 percent are concerned about having enough money to meet daily living expenses. The proposed change to medically needy income levels would mean people could keep enough of the money they earn to maintain their own homes.

Revising the SPED Fee Schedule

As presented in the executive budget, revising the Service Payments for the Elderly and Disabled (SPED) fee schedule would reduce the cost sharing payment for the SPED program to allow individuals to keep more of their income before contributing to the cost of their care. According to the Department of Human

Services, the number of people in the SPED program will average almost 1,600 each month in the next biennium.

Social Security is the major source of income for most older North Dakotans. While the allowed income levels for SPED have remained stagnant since 2003, COLA increases in Social Security force a recipient to slide up the fee scale, paying a greater and greater percentage for their care. Medicare premiums and other costs of living go up...also taking away what little increase they received. SPED services sometimes become unaffordable for those who depend solely on Social Security to live. The updated SPED fee schedule was based on Social Security cost of living adjustments between 2003 and 2008 and an estimated cost of living adjustment for 2009.

The SPED sliding fee scales should be revisited every year. AARP would strongly support adding an automatic cost of living increase to the income levels, so that adjustments would be automatic from year-to-year based on inflation.

Provider Reimbursements

I want to also mention that AARP supports the executive budget recommendation for 7 percent increases in reimbursement to providers each year of the biennium. These providers are small businesses and workers in your communities who contribute directly to the community's financial base, and they deserve to be paid fairly for the services they provide. The 2007 Legislature increased the reimbursement levels for QSPs (Qualified Service Providers) to bring them up to a level of income equal to workers in similar jobs. If the current legislature were to address the reimbursement issue, we would suggest it be with particular focus on the direct care workers, those individuals who do the hands on work that help people live with dignity. While QSPs working independently benefited immediately from the equalization of reimbursements in 2007, we are not certain that the direct care workers employed by QSPs registered as agencies were as fortunate.

Members of the committee, thank you for your time and attention.

AARP[SM]

House Bill 1012
Senate Appropriations Committee
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Carole Watrel, an advocacy volunteer for AARP North Dakota. I am a licensed social worker, a volunteer adult legal guardian, and I work with the Alzheimer's Support Group at St. Alexius Medical Center. I am here today on behalf of AARP's 88,000 North Dakota members to speak in support of four specific provisions in HB 1012:

1. Increasing the medically needy income levels.
2. Support for the Service Payments for the Elderly and Disabled (SPED) fee schedule.
3. A 7% increase in reimbursement for providers for each year of the biennium.
4. Establishment of an Aging and Disability Resource pilot.

Increased income levels for medically needy
The medically needy income levels allow Medicaid eligible individuals to keep part of the money they earn to meet expenses for basic needs like shelter, food, utilities, and clothing.

A new survey of AARP members in North Dakota shows 75 percent are concerned about being able to stay in their homes as they get older. 68 percent are concerned about having enough money to meet daily living expenses. House Appropriations has adjusted the increase to 75% of poverty...and we would encourage you to restore that figure to 83%...as it was in the executive budget proposal.

By increasing the Medically Needy income level to 83% of poverty...allowing someone to keep just $200 more a month... we could allow someone the dignity of choosing where they would like to live...and perhaps extending the time before they are in need of the more expensive care of a nursing home.

Revising the SPED Fee Schedule
As presented in the executive budget, revising the Service Payments for the Elderly and Disabled (SPED) fee schedule would reduce the cost sharing payment for the SPED program to allow individuals to keep more of their income before contributing to the cost of their care.

Social Security makes up at least half of the income for over half of North Dakotans 65 and older. A third of older North Dakotans rely on Social Security as their only source of income. While the allowed income levels for SPED have remained stagnant since 2003, COLA increases in Social Security force a recipient to slide up the fee scale, paying a greater and greater percentage for their care. Medicare premiums and other costs of living go up...also taking away

what little increase they received. SPED services sometimes become unaffordable for those who depend solely on Social Security to live.

Provider Reimbursements
I want to also mention that AARP supports the executive budget recommendation for 7 percent increases in reimbursement to providers each year of the biennium. These providers are small businesses and workers in your communities who contribute directly to the community's financial base, and they deserve to be paid fairly for the services they provide.

Aging and Disability Resource LINK
Finally, we are asking this committee to include funding for an Aging and Disabilities Resource pilot project as proposed in the executive budget. Carol Olson made this request of the committee yesterday during her testimony.

This is an important consumer issue, regardless of a person's socioeconomic status.

Establishment of such a service has been discussed and debated for more than 20 years. It's something an overwhelming number of our members tell us they want. I also want to remind you of Senate Concurrent Resolution 4018 passed by the 2007 legislature, supporting individual choice for long-term care. A copy is attached to my testimony.

You've seen the statistics. North Dakota's population is aging rapidly. Per capita, we already have the greatest percentage of people age 85 and older of any state. By 2020, 27% of the state's residents will be 60 and older. You also know that the vast majority of people want to remain in their own homes and in their communities as they age. That's why we can no longer delay.

The goal of an Aging and Disability Resource process is to minimize confusion, enhance individual choice, and support informed decision-making when individuals and families find they need long-term care services. An ADRC would provide a neutral place where people can obtain consistent and comprehensive information, objective advice, and access to a wide range of community supports. Those needing services and their family members could talk to someone face-to-face as well as access information by phone or online 24/7.

AARP has worked closely with the Department of Human Services and other advocacy organizations to build awareness and a foundation of support for this resource. We are committed to the successful implementation of the pilot to help ensure that those needing long-term care services would receive comprehensive, consistent information on all of the choices that are available, including services to allow them to remain in their own homes.

We encourage North Dakota policymakers in the strongest possible terms to embrace a philosophy of delivering services in a way that allows older people the greatest independence and greatest quality of life.

Members of the committee, thank you for your time and attention.

CHAPTER 641

SENATE CONCURRENT RESOLUTION NO. 4018

(Senator J. Lee)
(Representative Boucher)

LONG-TERM CARE CHOICE SUPPORTED

A concurrent resolution expressing support for long-term care choices, including home and community-based services, for North Dakotans with disabilities and older adults.

WHEREAS, the public interest would best be served by a broad array of long-term care services that promote individual autonomy, dignity, and choice for older adults and those with disabilities, including more home and community-based services to give all North Dakotans who are older adults or who have a disability, free choice in planning and managing their lives; and

WHEREAS, the Legislative Assembly recognizes that nursing home care is also a critical part of the state's long-term care continuum and that such services should continue to promote individual dignity, autonomy, and a homelike environment to the greatest extent possible;

NOW, THEREFORE, BE IT RESOLVED BY THE SENATE OF NORTH DAKOTA, THE HOUSE OF REPRESENTATIVES CONCURRING THEREIN:

That the Sixtieth Legislative Assembly supports long-term care choices, including home and community-based services, for North Dakotans with disabilities and older adults to:

1. Plan and manage their own lives to the greatest extent possible;
2. Participate in the planning and operation of community-based services;
3. Receive information that will allow them to make informed care decisions;
4. Choose to remain in their communities and in their homes when appropriate to their needs and when it can be reasonably accommodated taking into account the resources available to the state and the needs of others with disabilities;
5. Meet their needs through a care system in a culturally sensitive way;
6. Support family members and other persons providing voluntary care; and
7. Make care choices from a long-term care continuum that is visible, trusted, and easily accessed.

C

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Linda Wright, Director of the Aging Services Division of the Department of Human Services. I am here today to provide you an overview of the Division's budget for the Department of Human Services.

Programs

The Aging Services Division provides home and community based service options to maintain individuals in their homes and communities and assists in protecting the health, safety, welfare and rights of residents of long-term care settings and vulnerable adults in the community. This includes administration of Older Americans Act federal funds, the Telecommunications Equipment Distribution Program, State Funds to Providers, the Long-Term Care Ombudsman Program, the Guardianship Program for Vulnerable Adults, the Senior Community Service Employment Program, Qualified Service Provider Training, support for the Governor's Committee on Aging, Model Legal Systems Grant, and Aging and Disability Resource Center.

The Aging Services Division is a federally designated single planning and services area, which requires the Division to carryout the responsibilities of the State Unit on Aging and the Area Agency on Aging as set forth in the Older Americans Act (OAA). Among the requirements in the 2006 reauthorization of the OAA is the following:

"require state agencies to promote the development and implementation of a state system of long-term care that enables older individuals to receive long-term care in home and community based settings in accordance with the individual's needs and preferences."

Caseload / Customer Base

- In 2000, 118,985 (18.5 percent) of the population in North Dakota was 60 years of age or older.
- In 2020, it is projected that 170,117 (27 percent) of the population in North Dakota will be 60 years of age or older.
- In 2000, only one county (McIntosh) had more than 40 percent of its population age 60 or older.
- In 2020, 22 counties will have more that 40 percent of their population aged 60 or older.
- In 2020, three counties (Divide, Hettinger and McIntosh) will have more than 50 percent of their population age 60 or older.
- In 2000, 14,726 (2.3 percent) of North Dakota residents were age 85 or older.
- In 2020, it is projected that 20,106 (3.2 percent) of North Dakota residents will be age 85 and older.
- McIntosh County ranks number one in the nation among 3,142 counties for the highest percent of the population age 65 and older.

Please refer to the attached updated Graying of North Dakota brochure for additional information.

- In Federal Fiscal Year (FFY) 2007, 30,557 older persons received Older Americans Act funded services which includes home-delivered meals, congregate meals, outreach, health maintenance services, national family caregiver program services, legal services, in-home safety, senior companion services, vulnerable adult protective services, and long-term care ombudsman services.

Older American Act – Title III Programs	
SERVICE	UNITS OF SERVICE
Congregate Meals	752,072 meals
Home-Delivered Meals	535,646 meals
Health Maintenance	148,238 units
Information & Assistance	1,858 units
Legal Assistance	4,795 units
Outreach	118,025 units
Senior Companion	3,475 units

Vulnerable Adults Program	
New cases	444
Closed cases	404
Information/referral	392
Brief Services	223
Hours	7,008

Family Caregiver Support Program	
Unduplicated Caregivers Served	421
Unduplicated Grandparents Served	13
Respite Care Provided	190,584 hours

Long-Term Care Ombudsman Program	
Number of Complaints	1,142
Number of Cases Opened	824

- The Qualified Service Provider (QSP) training program under contract with Lake Region State College has trained 227 QSPs from July 2006 through June 2008 for provision of in-home care. The training is provided by 64 nurses statewide and is not a mandatory requirement to become a QSP. Due to the fact that a health care professional must sign off on the documentation of competency when a QSP enrolls to provide services, many QSPs chose to participate in the training program. The documentation of competency is then signed by the nurse trainer. As of December 2008, there were 1718 QSPs statewide which includes 139 agencies. Family home care or family personal care is provided by 373 QSPs which basically means that each QSP provides services to only one client (a family member).
- The Senior Community Service Employment Program will provide on the job training to 71 low-income individuals over the age of 55. The Division is contracting with Experience Works (formerly Green Thumb) to provide direct service to the enrollees. Experience Works serves an additional 275 enrollees in North Dakota through a national contract with the Department of Labor.

Program Trends / Major Program Changes

- As the result of a cooperative agreement with the Department of Transportation (DOT), transit services are no longer funded by the

Older Americans Act and are funded by DOT. We continue to have on-going communication with DOT and receive statistical data from them regarding the number of rides provided to older persons.

- The increasing costs of providing services, including raw food costs, and meeting the new federal dietary requirements for congregate and home delivered meals; transportation costs and other inflationary increases, along with fairly flat federal funding, have increased the burden on contract providers to meet expenses in providing services to older persons.
- The information and referral services provided by the Division, formerly known as the Senior Info Line has expanded its database and changed its name to the Aging and Disability Resource-LINK. In addition to phone calls and e-mail inquiries, the Resource-LINK web site receives about 700 hits or "visits" per month. The attached brochure provides additional details about the Aging and Disability Resource-LINK.
- The development of Aging and Disability Resource Centers (ADRCs) continues as a goal for the Department. ADRCs serve as integrated points of entry into the long-term care system, commonly referred to as a "one stop shop," and are designed to address many of the frustrations consumers and their families experience when trying to access needed information, services and supports. The research findings from the Department's Real Choice Change Grant strongly indicated that establishing an ADRC will provide the opportunity to move another step forward in providing ease of access to information and services for consumers.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Salary and Wages	1,171,458	1,335,767	164,309
Operating	11,499,804	12,994,723	1,494,919
Capital Payments	194	-	(194)
Grants	1,598,290	1,592,380	(5,910)
Total	14,269,746	15,922,870	1,653,124
General Funds	1,480,994	3,182,707	1,701,713
Federal Funds	12,378,752	12,429,971	51,219
Other Funds	410,000	310,192	(99,808)
Total	14,269,746	15,922,870	1,653,124

FTE	10.00	10.00	

The salary and wages line item has a net increase of $164,309 due to the following:

- $121,143 of which $91,857 is general funds for the Governor's salary package
- $19,601 in general funds for the cost to continue the second year salary increase
- $23,565 to maintain current FTEs.

The operating line item increased by $1,494,919. The major increases are:

- $35,500 increase, of which $8,875 is from the general fund for office rent at Prairie Hills Plaza. The Division relocated from the Capitol to Prairie Hills Plaza in November 2007.
- $29,971 increase, of which $700 is from the general fund for increased travel costs for staff and Volunteer Community Ombudsmen

- $30,000 increase, of which $9,980 is from the general fund for the training of Qualified Service Providers to meet the actual cost of the training.
- $106,400 in general funds for the inflationary rate increase for direct service providers.
- $600,000 in general funds to establish Aging and Disability Resource Centers. This is offset by an $840,000 decrease, of which $40,000 is from the general fund, to remove appropriation authority from last session for a federal grant (that was not received) to establish Aging and Disability Resource Centers.
- $900,000 from the general fund to increase the reimbursement to Older Americans Act service providers to assist in meeting the actual costs of providing services.
- $627,445, of which $2,021 is from the general fund for increases in operating fees and services related to:
    - Ombudsman Activities - ($23,567)
    - Telecommunications Equipment Distribution – $14,100
    - Preventive Health – ($3,700)
    - Title III B Community Services - $57,458
    - Congregate Nutrition - $88,780
    - Home Delivered Nutrition - $118,340
    - Alzheimer's Demonstration Project – ($226,725)
    - Nutrition Services Incentive Program - $453,654
    - Single Point of Entry – ($30,000)
    - Family Caregiver Support - $172,994

Grants decreased by $5,910 due to the following:

- A decrease of $15,000 in other funds for the Telecommunications Equipments Distribution program

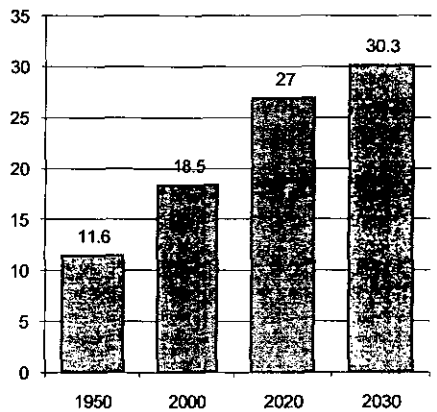
- An increase of $50,000 in federal funds for the Model Legal Systems for Seniors grant
- A decrease of $250,000 of federal and other funds for the closeout of the Alzheimer's Disease Demonstration grant
- An increase of $209,090 of federal funds for the Senior Employment grant

This concludes my testimony. I would be happy to answer any questions.

Percent of the North Dakota Population 60 Years of Age and Older and 85 Years of Age and Older

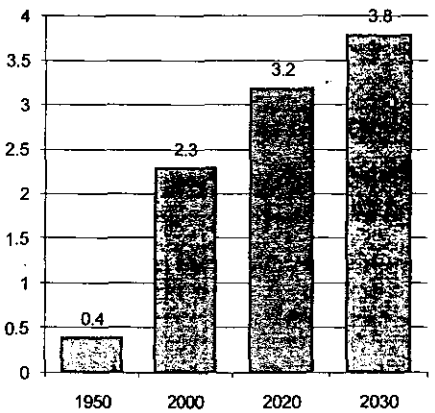
- **In 1950,** 72,050 (11.6%) of North Dakota residents were age 60 and older.
- **In 2000,** 118,985 (18.5%) of North Dakota residents were age 60 and older. The U.S. percent of residents age 60 and older was 16.3.
- **In 2020,** it is projected that 170,117 (27%) of North Dakota residents will be age 60 and older.
- **In 2030,** it is projected that 183,897 (30.3%) of North Dakota residents will be age 60 and older.

Percent ND Population Age 60 and Older



- **In 1950,** 2,262 (0.4%) of North Dakota residents were age 85 and older.
- **In 2000,** 14,726 (2.3%) of North Dakota residents were age 85 and older. The U.S. percent of residents age 85 and older was 1.5.
- **In 2020,** it is projected that 20,106 (3.2%) of North Dakota residents will be age 85 and older. The U.S. percent of residents age 85 and older is projected to be 1.9.
- **In 2030,** it is projected that 23,302 (3.8%) of North Dakota residents will be age 85 and older.

Percent ND Population Age 85 and Older



Challenges for the Future

- Addressing healthy aging through disease prevention and health promotion.
- Continuing to support the needs of family caregivers.
- Providing an array of quality long-term care options, especially home and community-based services which many people report they prefer.
- Addressing the mental health needs of older persons.
- Providing consumers and their families easier access to services through information and development of "one stop shop" programs.
- Addressing the issue of the direct care service workforce and the value of older workers.

north dakota department of human services

Older Americans Act Services

Federal Fiscal Year 2007

Background

The Older Americans Act was signed into law July 14, 1965, for the purpose of improving the lives of older individuals in relation to income, housing, employment, long-term care, retirement, and community services. In addition to creating the Administration on Aging (AoA), the Act authorized grants to states for community planning, programs and services, and research, demonstration, and training projects in the field of aging.

The Department of Human Services' Aging Services Division serves as the single planning and service agency for older persons in North Dakota, as designated by the U.S. Department of Health and Human Services, AoA.

Eligibility

The Older Americans Act (OAA) provides funding for services for individuals age 60 and older. Services are not tied to income. Individuals must have an opportunity to contribute to the cost of the service, but no one can be denied service due to inability or unwillingness to contribute toward the cost.

Prioritizes Serving Older Individuals Who:

- Reside in rural areas
- Have low incomes/greatest economic and social needs
- Are considered to be of a minority
- Have limited English proficiency
- Have severe disabilities
- Are diagnosed with Alzheimer's disease and related disorders (*as well as, the caretakers of such individuals*)
- Are at risk of institutional placement

Individuals Served

- During Federal Fiscal Year 2007, a total of **30,557 older individuals** in North Dakota received services funded under the Older Americans Act.

OAA Requirements

Under this federal law, states are required to develop a comprehensive and coordinated system of home and community-based services that allows older individuals to lead independent, meaningful, and dignified lives in their own homes and communities.

To accomplish this, Older Americans Act funds, state funds, and local funds are coordinated to avoid duplication and maximize service. The Department of Human Services' Aging Services Division contracts with local providers for services.

OAA Services Provided

Assistive Safety Devices – A service that provides needed safety devices for older individuals.

Senior Center/Congregate Meals – A service that provides meals consisting of at least one-third of the daily dietary needs for an older individual eating in a group setting.

Home-Delivered Meals – A service that provides meals consisting of at least one-third of the daily dietary needs for an older individual who is homebound and unable to prepare an adequate meal.

Health Maintenance Services – Services provided to assess and maintain the health and well being of older individuals. Services include blood pressure/pulse/rapid inspection, foot care, home visits, and medication set-up.

Outreach Services – Efforts to seek out older individuals and identify their needs and to then make appropriate referral and linkage to available services.

Senior Companion Services – A service provided by volunteers (who receive a stipend) that offers periodic companionship and non-medical support to older individuals with special needs.

Continued on other side →

OAA Services (*Continued*)

Legal Assistance Services - Legal advice and representation are provided by an attorney to older individuals with economic or social needs and includes (i) to the extent feasible, counseling or other appropriate assistance by a paralegal or law student under the direct supervision of an attorney; and (ii) counseling or representation by a non-lawyer where permitted by law.

Information and Assistance - A service provided by the Department's **Aging and Disability Resource-LINK**, a nationwide toll-free number (**1-800-451-8693**), that provides information on a wide range of home and community-based and long term care and support services, volunteer opportunities, and benefits. Information can also be accessed on-line at http://www.carechoice.nd.gov/.

Senior Community Service Employment Program - Provides part-time employment opportunities in community service activities for unemployed low-income persons who are 55 years or older and who have fewer employment prospects.

Older Americans Act funds are also used to provide services through the:

- North Dakota Family Caregiver Support Program
- Long-Term Care Ombudsman Program
- Vulnerable Adult Protective Services Program

Separate fact sheets are available for each of the programs.

The Division also administers a federally funded demonstration grant: the **Model Legal Systems for Seniors grant**.

Federal Fiscal Year 2007 Older Americans Act Services
Number of Individuals Served/Units of Service Provided

Service	Individuals Served	Units of Service	
Congregate Meals	15,462	752,072 meals	1 unit = 1 meal
Home-Delivered Meals	6,183	535,646 meals	1 unit = 1 meal
Health Maintenance	4,790	148,238 units	Set billing units per procedure
Information & Assistance	1,858	1,858 units	1 unit = 1 contact
Legal Assistance	1,127	4,795 units	1 unit = 15 minutes
Outreach	15,695	118,025 units	1 unit = 15 minutes
Senior Companion	256	3,475 units	1 unit = 1 contact

Funds Expended In Federal Fiscal Year 2007
for Services Listed in the Above Chart

Federal Funds – Older Americans Act	$ 3,974,950.18	37.1%
Federal Funds – NSIP (for Nutrition Programs)	796,730.00	7.4%
State Funds – Match for Older Americans Act Funds	360,000.00	3.4%
Required Match (from Providers)	731,605.68	6.8%
Additional Local Funds	1,746,206.51	16.3%
Program Income from Participants	3,103,605.44	29.0%
TOTAL AMOUNT EXPENDED	$ 10,713,097.81	100%

**Does not include expenditures for the Family Caregiver Support Program, Senior Community Service Employment Program, Long-Term Care Ombudsman Program, or the Vulnerable Adult Protective Services Program.*

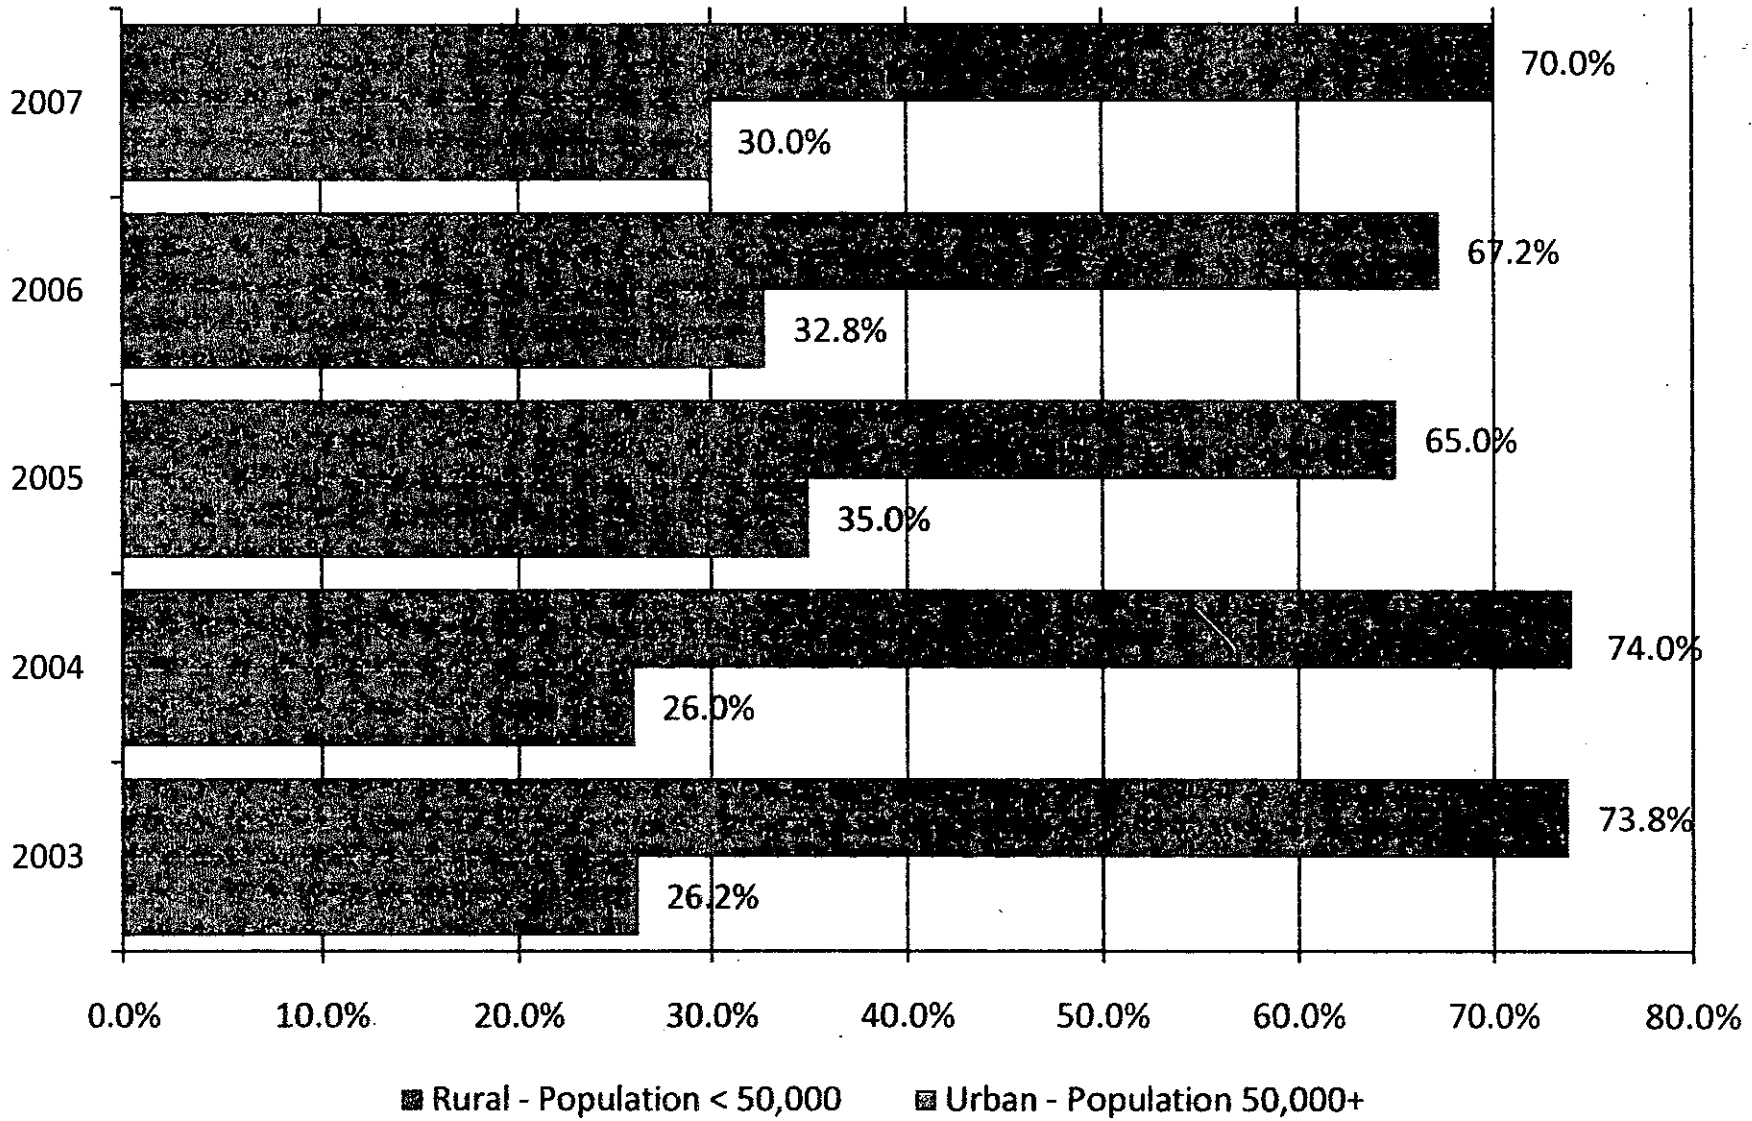
Comparison of Rural /Urban OAA Clients



North Dakota Long Term Care: Issues and Recommendations, 1987
By: Interagency Task Force on Long Term Care
Targeted Population: Elderly and people with disabilities

Summary of Information

The ND Interagency Task Force on Long Term Care, which includes the Governor's Office, Department of Human Services, and Department of Health, conducted a study in Drayton, ND in 1986. This study established the need to look at the structural, functional, financial and social concerns regarding the long term care delivery system in ND and how it affects the needs of the aging population in our state. The report is not directly about the Drayton Study, but about the issues that the nation and ND is facing in regards to long term care.

The following recommendations were given by the ND Interagency Task Force on Long Term Care:

- State policy be implemented to include: a) a balanced continuum of long term care services b) the functional limitations and needs of the elderly will serve as the principal criterion for the use of long term care services or the development of additional long term care services, c) the financial and organizational structure of the long term care delivery system will be designed to assist older adults in obtaining appropriate long term care services, d) access to appropriate long term care services for older adults will be improved through provided a central point of entry. e) institutional services will be considered "alternative" services with in the continuum of long term cares services f) families, as the principle caregivers to older adults, will be supported, g) ND's certificate of need law will continue as a function of the State Health Council and the Council will make necessary changes in it's review process that will further the development of a balanced continuum of long term cares services in ND.
- Single point of entry to the system of long term care be recognized and used, and that a system of case management be established and used.
- Federal and state dollars for long term care services be pooled in state government and dispersed on the basis of the functional needs of clients.
- The Department of Health and DHS continue the ongoing consolidation of the inspection of care function with the certification survey for ICF/MRs.
- Based upon the demonstrated efficiencies expected to be achieved under the ICF/MR consolidation pilot project, the task force recommends that the Department of Health and DHS consolidated the inspection of care, certification and licensure functions for all long term care facilities.
- Consolidation of inspection of care with the certifications survey process should accompany the consolidation of authority for imposing graduated economic sanctions on those facilities that fail to meet the quality compliance standards.
- The State Health Council, with the assistance of the Department of Health and DHS, should recommend to ND's Congressional delegation a series of changes in federal nursing requirements that would permit the state to reduce the burden of regulation for long term care facilities.
- Passage of legislation to improve access to HCBS by a) requiring all HCBS that are financed by the state be available in each county, b) apply economic assistance on a sliding fee scale, c) extend eligibility standards through assessments of functional impairment rather than the likelihood of institutionalization, d) a system of case management within the communities and pre-admission assessment of all applicants for nursing home care.
- Enact a bill that 1) Directs the DHS to develop a case-mix reimbursement system for nursing homes which will a) provide that the rates determined will be adequate to support the basic services, b) assures that payment system will provided incentives for service to "heavy care patients", c) require the payment system incorporate positive economic incentives for the efficient operation of nursing homes. 2) Provides that the rate of payment for the basic services required participation in the Medicaid program will apply to all residents equally.
- The Health Department, the DHS, the Governor's Office and the Office of Management and Budget recommend an appropriated level of state funding of the health planning/certificate of need programs for the 1987-1989 biennium.

Attachment A

Aging and Disability Resource LINK – No Wrong Door

Relevant information and advice when and where people need it

Is a process. Not one place.

Strengthens what we have.

Goal: Minimize confusion, enhance individual choice, and support informed decision-making regarding long-term care services

Pilot in 2 Regions

- **Region IV** (*Grand Forks, Nelson, Pembina, and Walsh counties*)
  Partners/Access Points
  - Northeast Human Service Center
  - County Social Service Offices
  - Options Interstate Resource Center for Independent Living
  - Senior Centers and Other Community Partners
- **Region VII** (*Burleigh, Emmons, Grant, Kidder, McLean, Mercer, Morton, Oliver, Sheridan, and Sioux counties*)
  Partners/Access Points
  - West Central Human Service Center
  - County Social Service Offices
  - Dakota Center for Independent Living
  - Northland PACE program
  - Senior Centers and Other Community Partners

Raise awareness of existing public and private community care and support services for seniors and people with disabilities through education and outreach.

Improve access to needed services.

Improve coordination between providers to better meet the needs of seniors, individuals with disabilities, and their families.

Trained Advisors at access points provide personalized solutions to individual needs.

- *Evaluate needs*
- *Explain options*
- *Explore benefits/programs they may qualify for and help apply*
  - People leave with a plan, not a list of phone numbers
- *Be accountable for outcomes and conduct follow-up*

Available to all.

- Sliding fee scale (cost sharing) for private pay

Addresses Gaps/Issues while avoiding duplication.

- Awareness of available services
- Evening and weekend access to help
- Early coordination with hospital discharge planners
- Meet private pay individuals' needs too (If don't qualify for public services, referrals and help accessing private services is currently inconsistent)
- Stigma of contacting County Office or Human Service Centers

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Linda Wright, Director of the Aging Services Division of the Department of Human Services. I am here today to provide you an overview of the Division's budget for the Department of Human Services.

Programs

The Aging Services Division provides home and community based service options to maintain individuals in their homes and communities and assists in protecting the health, safety, welfare and rights of residents of long-term care settings and vulnerable adults in the community. This includes administration of Older Americans Act federal funds, the Telecommunications Equipment Distribution Program, State Funds to Providers, the Long-Term Care Ombudsman Program, the Guardianship Program for Vulnerable Adults, the Senior Community Service Employment Program, Qualified Service Provider Training, support for the Governor's Committee on Aging, Model Legal Systems Grant, and Aging and Disability Resource-LINK.

The Aging Services Division is a federally designated single planning and services area, which requires the Division to carryout the responsibilities of the State Unit on Aging and the Area Agency on Aging as set forth in the Older Americans Act (OAA). Among the requirements in the 2006 reauthorization of the OAA is the following: "require state agencies to promote the development and

implementation of a state system of long-term care that enables older individuals to receive long-term care in home and community based settings in accordance with the individual's needs and preferences."

Caseload / Customer Base

- In 2000, 118,985 (18.5 percent) of the population in North Dakota was 60 years of age or older.
- In 2020, it is projected that 170,117 (27 percent) of the population in North Dakota will be 60 years of age or older.
- In 2000, only one county (McIntosh) had more than 40 percent of its population age 60 or older.
- In 2020, 22 counties will have more than 40 percent of their population aged 60 or older.
- In 2020, three counties (Divide, Hettinger and McIntosh) will have more than 50 percent of their population age 60 or older.
- In 2000, 14,726 (2.3 percent) of North Dakota residents were age 85 or older.
- In 2020, it is projected that 20,106 (3.2 percent) of North Dakota residents will be age 85 and older.
- McIntosh County ranks number one in the nation among 3,142 counties for the highest percent of the population age 65 and older.

Please refer to the attached updated Graying of North Dakota brochure for additional information.

- In Federal Fiscal Year (FFY) 2008, 31,979 older persons received Older Americans Act funded services, which

include home-delivered meals, congregate meals, outreach, health maintenance services, national family caregiver program services, legal services, in-home safety, senior companion services, vulnerable adult protective services, and long-term care ombudsman services. See Attachment 1 for additional information about Older Americans Act services.

FFY 2008 Program Utilization

Older American Act – Title III Programs	
SERVICE	UNITS OF SERVICE
Assistive Safety Devices	1,731 devices
Congregate Meals	732,015 meals
Home-Delivered Meals	540,319 meals
Health Maintenance	140,258 units
Information & Assistance	1,900 units
Legal Assistance	4,370 units
Outreach	94,339 units
Senior Companion	5,204 units

Vulnerable Adults Program	
New cases	486
Closed cases	468
Information/referral	360
Brief Services	257
Hours	6,839

Family Caregiver Support Program	
Unduplicated Caregivers Served	551
Unduplicated Grandparents Served	14
Respite Care Provided	47,230 hours

Long-Term Care Ombudsman Program	
Number of Complaints	1,091
Number of Cases Opened	732

- The Qualified Service Provider (QSP) training program under contract with Lake Region State College has trained 227 QSPs from July 2006 through June 2008 for provision of in-home care. The training is provided by 69 nurses statewide and is not a mandatory requirement to become a QSP. Due to the fact that a health care professional must sign off on the documentation of competency when a QSP enrolls to provide services, many QSPs choose to participate in the training program. The documentation of competency is then signed by the nurse trainer. As of February 2009, there were 1,713 QSPs statewide which includes 143 agencies. Family home care or family personal care is provided by 362 QSPs, which basically means that those QSPs provide services to only one client (a family member).
- The Senior Community Service Employment Program will provide on-the-job training to 71 low-income individuals over the age of 55. The Division is contracting with Experience Works (formerly Green Thumb) to provide direct service to the enrollees. Experience Works serves an additional 275 enrollees in North Dakota through a national contract with the Department of Labor.

Program Trends / Major Program Changes

- As the result of a cooperative agreement with the Department of Transportation (DOT), transit services are no longer funded by the Older Americans Act and are funded by DOT. We continue to have on-going communication with DOT and receive statistical data from them regarding the number of rides provided to older persons.
- The increasing costs of providing services, including raw food costs, and meeting the new federal dietary requirements for congregate and home delivered meals; transportation costs and other inflationary increases, along with fairly flat federal funding, have increased the burden on contract providers to meet expenses in providing services to older persons.
- The information and referral services provided by the Division, formerly known as the Senior Info Line has expanded its database and changed its name to the Aging and Disability Resource-LINK. In addition to phone calls and e-mail inquiries, the Resource-LINK web site receives about 700 hits or "visits" per month. The attached brochure provides additional details about the Aging and Disability Resource-LINK.
- The development of Aging and Disability Resource LINK "No Wrong Door" model continues as a goal for the Department, as included in the Executive budget. In addition to $600,000 in general funds, House Bill 1012 also contained revisions to N.D.C.C. 50-06-29. The House Appropriations Committee removed this statutory change from HB 1012 and included the establishment of an ADRC in HB 1476. That bill failed to pass the House. HB 1476 included language that would have allowed the Department not only to establish community-based Aging and Disability Resource Center

services, but also would have allowed the Department to secure funding from a variety of sources including federal grants, foundation funds, general funds and other funding sources. The Department has developed draft language that would revise the current state law allowing the Department to pursue other funding sources and implement the Aging and Disability Resource Link model. Without this change in statute, the Department cannot pursue future federal grants or other funding opportunities.

ADRCs have been developed in 45 states, as required by the Older Americans Act, and serve as integrated points of entry into the long-term care system, commonly referred to as "no wrong door" or "one stop shop", and are designed to address many of the frustrations consumers and their families experience when trying to access needed information, services and supports. Many long-term care studies that have been conducted in North Dakota, beginning with the "Drayton study" in 1987, have recommended establishment of a "one stop shop" or "no wrong door."
Please refer to attachments A through H for additional information about ADRCs.

The Aging and Disability Resource Link model is accountable for outcomes and follow-up with each consumer.

The service deliver model is a process. It does not replace the functions of agencies such as County Social Service Offices, Human Service Centers, Independent Living Centers, Older Americans Act Programs, etc., but instead brings the agencies together to build on existing services; to cross-train staff; to educate and inform the

public; to network and enter into collaborative agreements; to more effectively serve older persons, and persons with physical disabilities and their families by providing needed information, assessment, eligibility help, benefits counseling, and options for services.

The Aging and Disability Resource Link model does not create another layer of bureaucracy; but instead addresses gaps while avoiding duplication and improving consumer access to needed services.

The model establishes partners and access points in service areas.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase/ Decrease	2009 - 2011 Budget	House Changes	To Senate
Salary and Wages	1,171,458	164,309	1,335,767	(10,202)	1,325,565

Grants	1,598,290	(5,910)	1,592,380	-	1,592,380
Total	14,269,746	1,653,124	15,922,870	(639,372)	15,283,498
General Funds	1,480,994	1,701,713	3,182,707	(622,056)	2,560,651
Federal Funds	12,378,752	51,219	12,429,971	(15,084)	12,414,887
Other Funds	410,000	(99,808)	310,192	(2,232)	307,960
Total	14,269,746	1,653,124	15,922,870	(639,372)	15,283,498
FTE	10.00	-	10.00	-	10.00

Budget Changes from Current Budget to Executive Budget:

The salary and wages line item has a net increase of $164,309 due to the following:

- $121,143 of which $91,857 is general funds for the Governor's salary package.
- $19,601 in general funds for the cost to continue the second year salary increase.
- $23,565 to maintain current FTEs.

The operating line item increased by $1,494,919. The major increases are:

- $35,500 increase, of which $8,875 is from the general fund for office rent at Prairie Hills Plaza. The Division relocated from the Capitol to Prairie Hills Plaza in November 2007.
- $29,971 increase, of which $700 is from the general fund for increased travel costs for staff and Volunteer Community Ombudsmen.
- $30,000 increase, of which $9,980 is from the general fund for the training of Qualified Service Providers to meet the actual cost of the training.
- $106,400 in general funds for the inflationary rate increase for direct service providers.
- $600,000 in general funds to establish Aging and Disability Resource Center services. This is offset by an $840,000 decrease, of which $40,000 is from the general fund, to remove appropriation authority from last session for a federal grant (that was not received) to establish Aging and Disability Resource Center services.

- $900,000 from the general fund to increase the reimbursement to Older Americans Act service providers to assist in meeting the actual costs of providing services.
- $627,445, of which $2,021 is from the general fund for increases in operating fees and services related to:
    - Ombudsman Activities - ($23,567)
    - Telecommunications Equipment Distribution – $14,100
    - Preventive Health – ($3,700)
    - Title III B Community Services - $57,458
    - Congregate Nutrition - $88,780
    - Home Delivered Nutrition - $118,340
    - Alzheimer's Demonstration Project – ($226,725)
    - Nutrition Services Incentive Program - $453,654
    - Single Point of Entry – ($30,000)
    - Family Caregiver Support - $172,994

Grants decreased by $5,910 due to the following:

- A decrease of $15,000 in other funds for the Telecommunications Equipments Distribution program
- An increase of $50,000 in federal funds for the Model Legal Systems for Seniors grant
- A decrease of $250,000 of federal and other funds for the closeout of the Alzheimer's Disease Demonstration grant
- An increase of $209,090 of federal funds for the Senior Employment grant

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $3,350 – general fund and $6,852 – federal funds for a total of $10,202.

The House reduced 50 percent of the department-wide travel increase. Aging Services share of this decrease is $13,970 total funds; $3,506 – general fund; $8,232 - federal funds; and $2,232 - other funds.

The House reduced the inflationary increase for providers from 7% and 7% to 6% and 6% resulting in a decrease of $15,200 in general funds.

The House removed $600,000 general funds for the establishment of Aging and Disability Resource Center services.

This concludes my testimony. I would be happy to answer any questions.

Attachment A1

Aging and Disability Resource LINK – No Wrong Door

Relevant information and advice when and where people need it

Is a process. Not one place.

Strengthens what we have.

Goal: Minimize confusion, enhance individual choice, and support informed decision-making regarding long-term care services

Pilot in 2 Regions

- **Region IV** (*Grand Forks, Nelson, Pembina, and Walsh counties*)
  Partners/Access Points
  - Northeast Human Service Center
  - County Social Service Offices
  - Options Interstate Resource Center for Independent Living
  - Senior Centers and Other Community Partners
- **Region VII** (*Burleigh, Emmons, Grant, Kidder, McLean, Mercer, Morton, Oliver, Sheridan, and Sioux counties*)
  Partners/Access Points
  - West Central Human Service Center
  - County Social Service Offices
  - Dakota Center for Independent Living
  - Northland PACE program
  - Senior Centers and Other Community Partners

Raise awareness of existing public and private community care and support services for seniors and people with disabilities through education and outreach.

Improve access to needed services.

Improve coordination between providers to better meet the needs of seniors, individuals with disabilities, and their families.

Trained Advisors at access points provide personalized solutions to individual needs.

- *Evaluate needs*
- *Explain options*
- *Explore benefits/programs they may qualify for and help apply*
  - People leave with a plan, not a list of phone numbers
- *Be accountable for outcomes and conduct follow-up*

Available to all.

- Sliding fee scale (cost sharing) for private pay

Addresses Gaps/Issues while avoiding duplication.

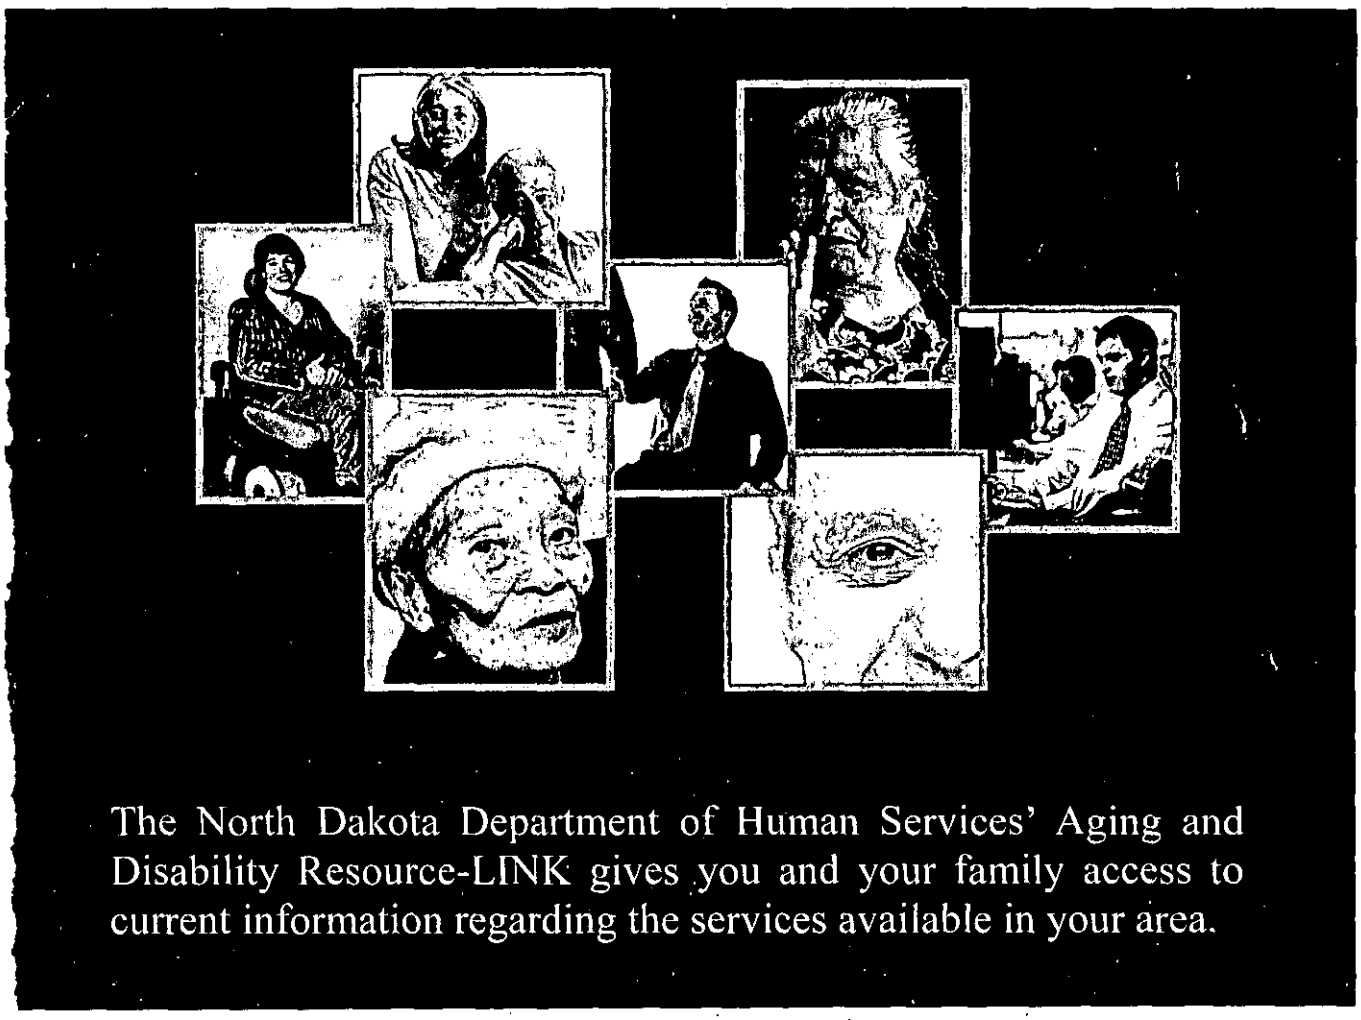
- Awareness of available services
- Evening and weekend access to help
- Early coordination with hospital discharge planners
- Meet private pay individuals' needs too (If don't qualify for public services, referrals and help accessing private services is currently inconsistent)
- Stigma of contacting County Office or Human Service Centers

NORTH DAKOTA AGING and DISABILITY

Resource-LINK

Your Care Choice Connection to Aging and Disability Resources

What Options and Choices are Available for Seniors and Adults with Disabilities?



The North Dakota Department of Human Services' Aging and Disability Resource-LINK gives you and your family access to current information regarding the services available in your area.

Independence. Choice. Self-Direction.

What is the Aging and Disability Resource-LINK?

The Aging and Disability Resource-LINK is a free service to help you make decisions regarding the type of care you or your loved one might need and it links you to available services in your community to help meet those needs.

This service is available by phone (nationwide toll-free) from 8:00 AM until 5:00 PM CST, Monday through Friday. The phone is answered by an individual who has met the requirements of a Certified Information Resource Specialist for Aging (CIRS-A) through the national Alliance for Information and Referral Systems.

The Aging and Disability Resource-LINK also maintains a website which is updated on a regular basis and provides the same information available through our toll-free phone service.

Aging and Disability Resource Centers

A Joint Program of the Administration on Aging & Centers for Medicare & Medicaid Services

Working to Build the Future of Long-Term Care

Empowering adults as they age with reliable information and access to the care they need

Enabling individuals who are at high risk of nursing home placement to remain at home

Building disease prevention into community living through the use of low-cost, evidence-based programs

Administration on Aging

BACKGROUND

The Aging and Disability Resource Center Program (ADRC), a collaborative effort of the Administration on Aging (AoA) and the Centers for Medicare & Medicaid Services (CMS), is designed to streamline access to long-term care.

The ADRC initiative supports state efforts to develop "one-stop shop" programs at the community level that will help people make informed decisions about their service and support options and serve as the entry point to the long-term support system. States are using ADRC funds to better coordinate and/or redesign their existing systems of information, assistance and access and are doing so by forming strong state and local partnerships.

ADRC programs provide information and assistance to individuals needing either public or private resources, professionals seeking assistance on behalf of their clients, and individuals planning for their future long-term care needs. ADRC programs also serve as the entry point to publicly administered long-term supports including those funded under Medicaid, the Older Americans Act and state revenue programs.

In particular, ADRCs streamline access to long-term care services for individuals with disabilities, older adults, and their family caregivers, particularly those at highest risk of nursing home placement and spenddown to Medicaid.

AoA & CMS VISION FOR RESOURCE CENTERS

The goal of the ADRC Program is to empower individuals to make informed choices and to streamline access to long-term support. Long-term support refers to a wide range of in-home, community-based, and institutional services and programs designed to help individuals with disabilities.

The vision is to provide individuals across the United States access to ADRCs, which are highly visible and trusted places where people can turn for information on the full range of long-term support options. To help and support these efforts, in 2006, the Older Americans Act was reauthorized with the inclusion of language supporting the development of ADRC efforts in every state.

In many communities, long-term support services are administered by multiple agencies and have complex, fragmented, and often duplicative intake, assessment, and eligibility functions. Figuring out how to obtain services is difficult. A single, coordinated system of information and access for all persons seeking long-term support minimizes confusion, enhances individual choice and supports informed decision-making. It also improves the ability of state and local governments to manage resources and to monitor program quality through centralized data collection and evaluation.

ADRC GRANTEES

AoA and CMS launched the ADRC initiative in the fall of 2003. From 2003 to 2005 43 states were awarded grants to develop pilot programs. Additional funding was awarded in 2006 and 2007 to expand existing states efforts. In 2008, an additional two new states were funded bringing the total number of funded ADRC states to 45.

While grantees are only required to pilot their ADRC in at least one community, they are all striving to replicate the program

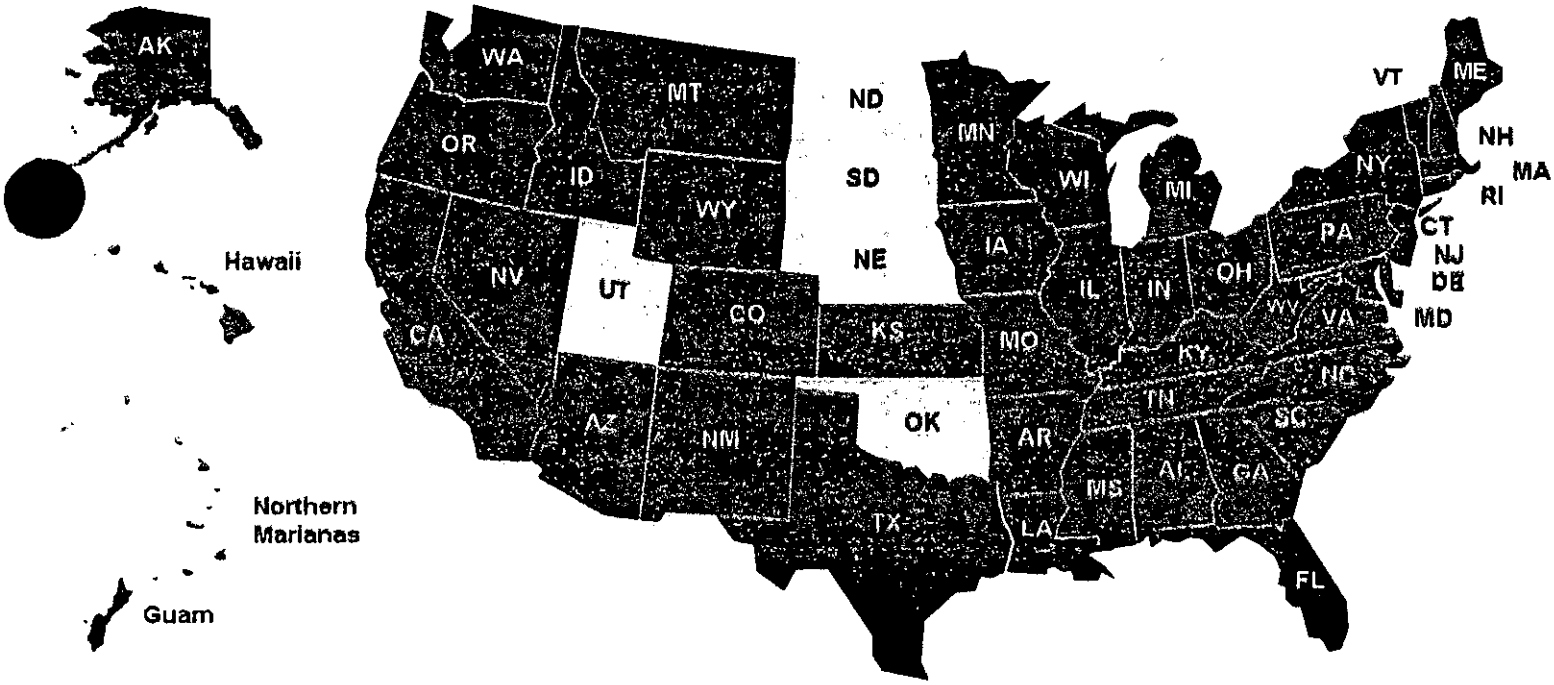
across the entire state. The map below indicates states that have been awarded ADRC grants and the year they received their award. In addition, the map below highlights states which are pursuing ADRC efforts even without receiving specific ADRC grant funds.

ADDITIONAL INFORMATION

For additional information on the ADRC initiative, please visit The ADRC Technical Assistance Exchange website at www.adrc-tae.org. The website includes contact information for AoA and CMS ADRC project officers, summary information on each of the grantees, and a variety of resources related to this initiative.

You can also find additional ADRC information on the AoA website at www.aoa.gov or the CMS web site at www.cms.hhs.gov/newfreedominitiative.

AGING AND DISABILITY RESOURCE CENTER AWARDEES



For More Information

AoA recognizes the importance of making information readily available to consumers, professionals, researchers, and students. Our website provides information for and about older persons, their families, and professionals involved in aging programs and services. For more information about AoA, please contact: US Dept of Health and Human Services, Administration on Aging, Washington, DC 20201; phone (202) 619-0724; fax (202) 357-3523; Email: aoainfo@aoa.gov or contact our website at www.aoa.gov

AGING AND DISABILTY RESOURCE CENTER (ADRC) COMPONENTS

This document was drafted by the North Dakota
Real Choice Rebalancing Grant Steering Committee

An Aging and Disability Resource Center (ADRC), also called a single point of entry, is designed to provide an identifiable place where people can get information, objective advice, and access to a wide range of community supports.

The ADRC must address the following criteria:

1. Ensure "one-stop access" for clients to services; eliminating duplicative assessments and numerous agency contacts.
2. Will serve all adults needing long term care services, targeting older persons and persons with disabilities (non DD). This includes both private pay and public funded individuals.
3. Will serve entire designated service area.
4. Will enter into collaborative agreements with other service providers in the service area.
5. Will coordinate with case management service providers.
6. Will advertise and conduct public education regarding the single point of entry.
7. Will conduct an initial brief assessment (screening) of each individual.
8. As appropriate, will conduct an in-depth assessment utilizing an electronic assessment document compatible within the state system.
9. Will coordinate with the Senior Info-Line, 211, First Link, and any other information and referral services.
10. Will recruit and train volunteers to act as referral sources and sources of basic information in each community.
11. Will provide face to face service to individuals in their own homes in the community, in medical care settings and in long term care facilities.
12. Will utilize a multi-disciplinary approach, to include medical, financial, and social expertise to develop an individual's option/service plan.
13. Will utilize both the formal and informal support networks in meeting the needs of the client.
14. Will determine eligibility for various services (both functional and financial).
15. Will be available 24/7, not to take the place of a crisis management system but to instead ensure timeliness of needed information and services and to streamline the process.
16. Provide follow-up services to include quality assurance.
17. Advocate on behalf of the consumer in securing services.
18. Assure that the service is consumer directed (person-centered approach) and all decisions are made by the consumer or their legal representative.
19. Ensure that consumers and their family members have access to all the information necessary to make decisions regarding continuum of care services.
20. Will provide disclosure of conflict of interest.
21. Create a community advisory committee.

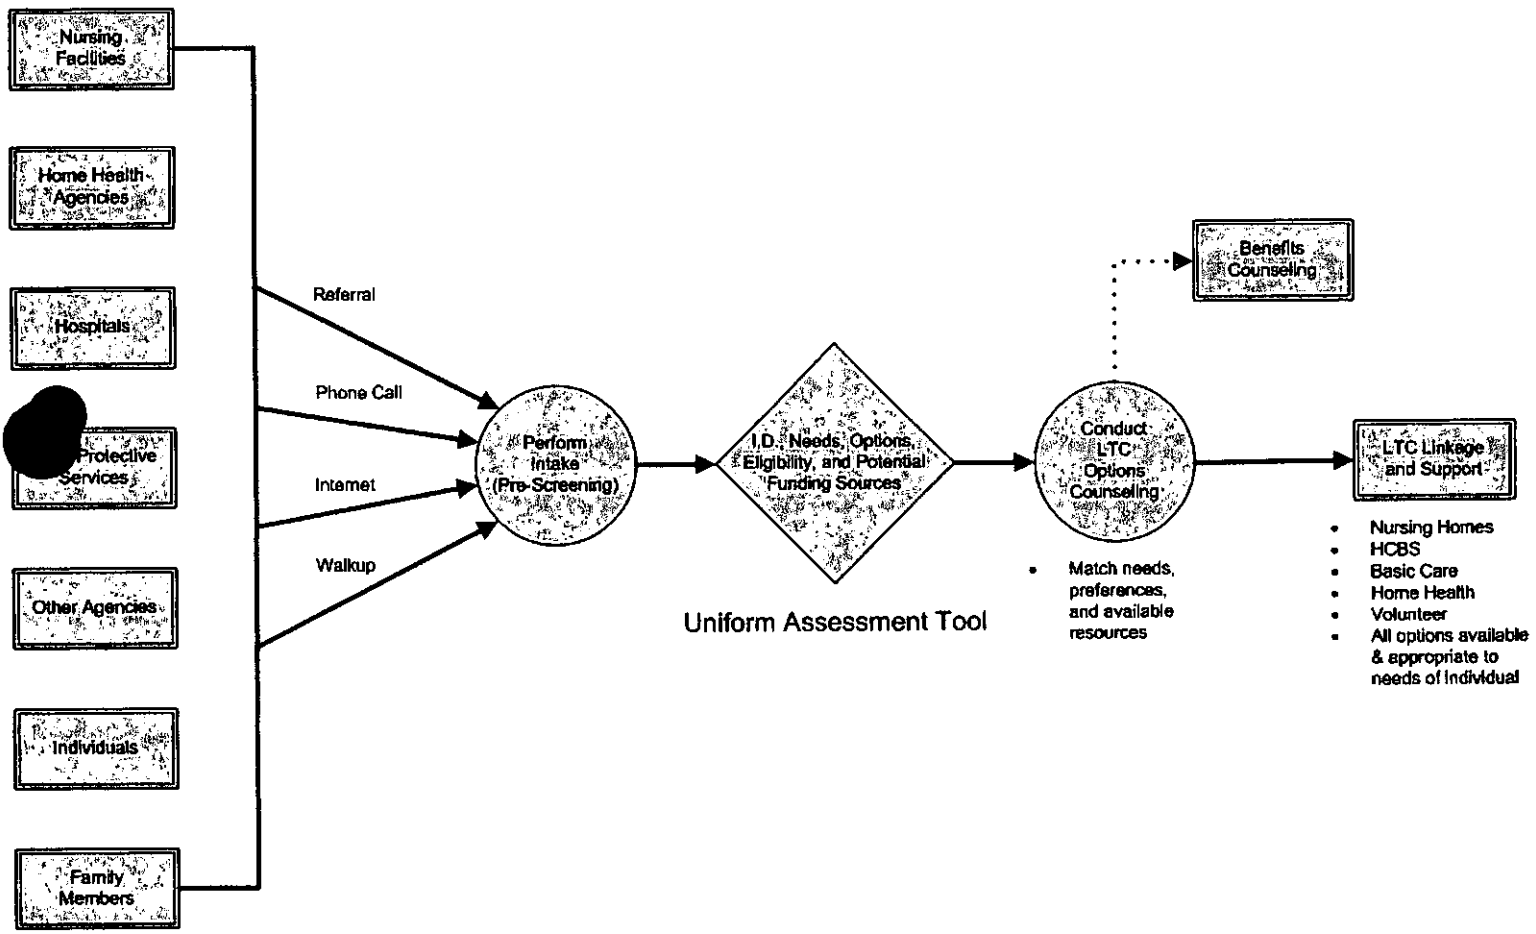
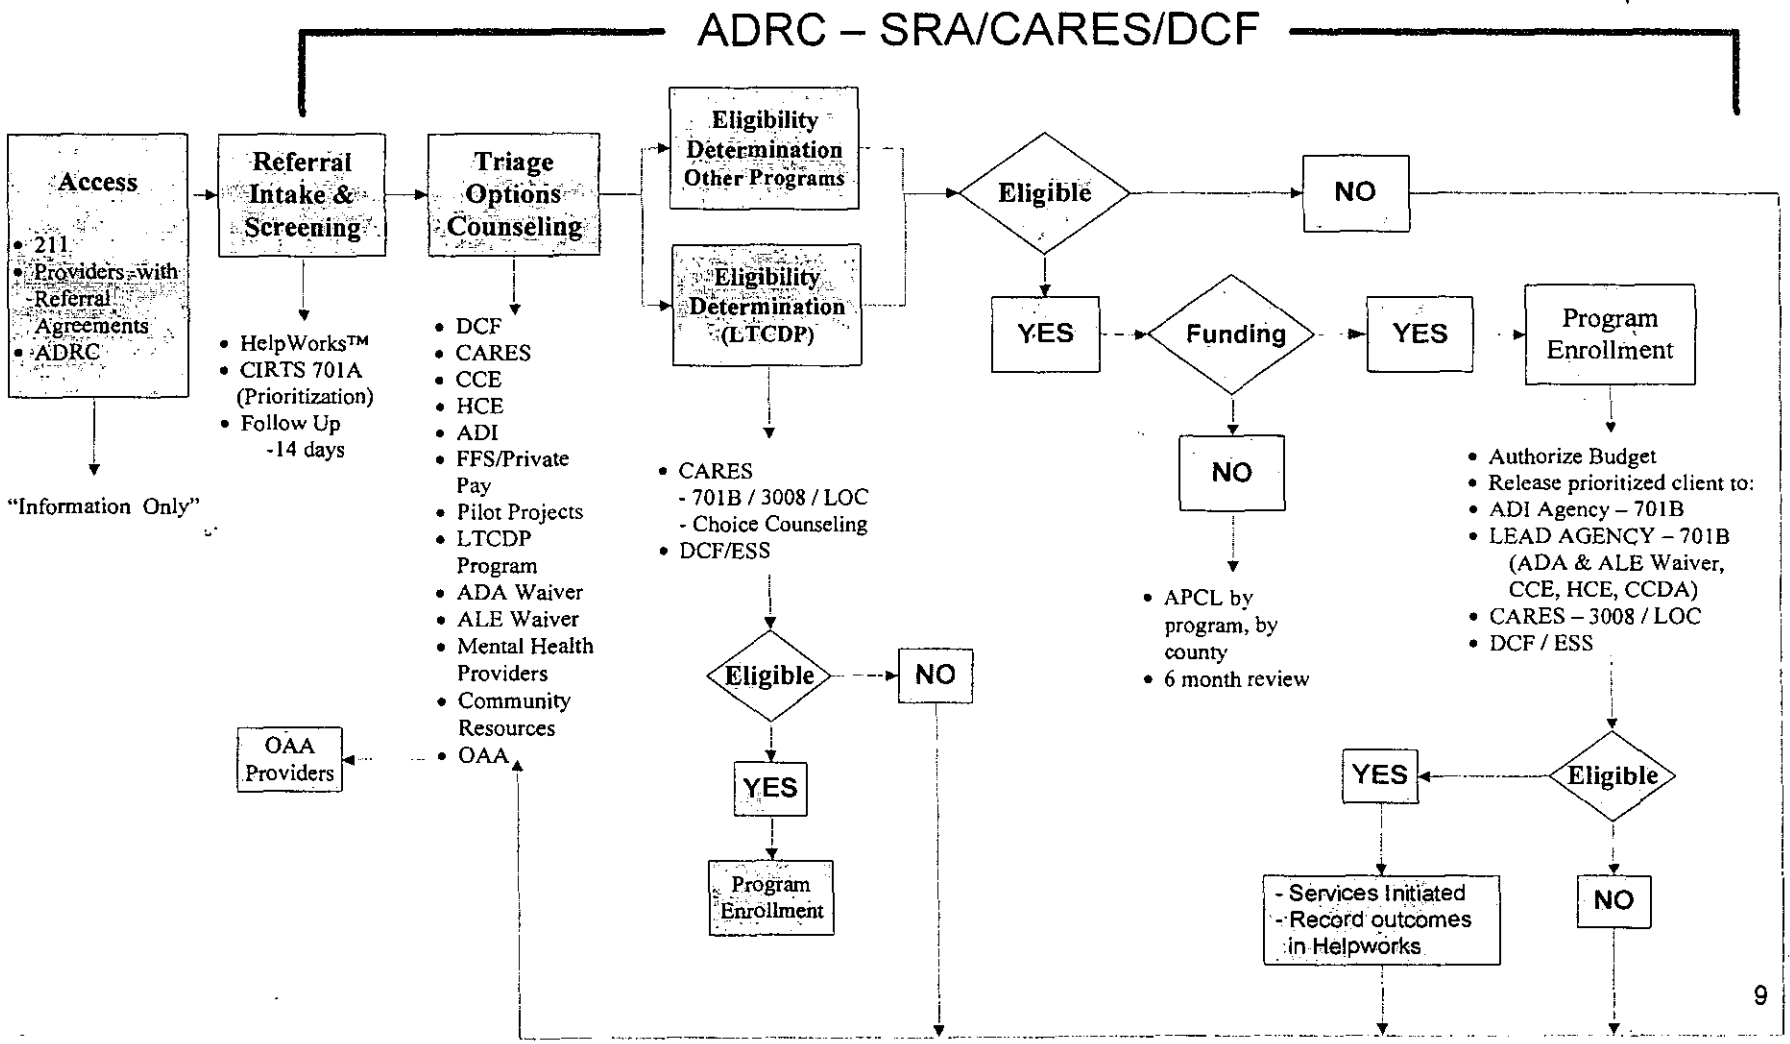
Draft 6.12.06

Example Single Point of Entry (SPE) Operational Flowchart



ADRC Centralized Model



Aging and Disability Resource Center Successes 2008

- ADRCs play an active role in **helping consumers access public benefits** for long term services and supports, making the application process less onerous and more seamless for consumers. **Among the 24 states** awarded grants in 2003 and 2004:
  - **all** assist consumers with **completing financial applications** for Medicaid,
  - **over half** have **functional** eligibility assessors **co-located** with the ADRC,
  - **one-third** have **financial** eligibility assessors **co-located** and
  - **three-quarters** can **track** the **eligibility status** of applicants as they move through the system.

- **Building on the strong existing networks** for Senior Information and Assistance, State Health Insurance Assistance Programs, and Independent Living Centers has resulted in **147 ADRCs serving 28 percent of the U.S. population** with only $39.8 million of federal seed money over a four year period.
  - States used this seed money to continue to **enhance the I&A infrastructure** to support cost-effective and efficient delivery of information.
    - **21 states** have statewide long term supports and services **resource directories** accessible to the public and professionals **via the internet** (twelve of them new since ADRC and another seven significantly enhanced through the ADRC project) and another **16** are **in the process** of developing similar statewide capability.
    - **34** of the 43 ADRC states have **Medicaid applications available on the internet** with **seven** of these (and another four in process) allowing consumers to complete the application online and **submit it electronically.**
    - **Five** ADRCs have **online consumer decision tools** and another **six** are in the process of **developing** such capability
    - ADRC pilot sites developed **information exchange protocols across partners** so consumers only have to tell their story once.
    - Several ADRCs use **portable technology** for data entry and scanning documents; eight states use laptops in the field and three employ portable scanning or photography.
  - ADRCs have furthered states' ongoing efforts to **improve access to long term supports** and services by strengthening **partnerships**, establishing **minimum standards** of service, fostering **consistency**, enhancing **professionalism**, and emphasizing the **consumers' perspective** in all activities.

- By **serving all income groups and across disabilities**, ADRCs **overcome the stigma associated with Medicaid** and can assist a wide range of individuals, including family

caregivers, in obtaining long term supports and services in the most desirable and appropriate setting.

- By intervening in **critical pathways** to long term services and supports, such as hospital discharge planners, physicians or other health professionals, or long term supports providers, through options counseling, ADRCs convey the range of alternative services and settings available, as well as methods to pay so individuals can both plan ahead and make informed decisions about current needs.
    - Nearly **one-half** of the individuals contacting ADRCs to date were **referred by critical pathway entities.**
    - While measuring **diversions from nursing facilities** is difficult, among the 13 states with a 25 percent decline in Medicaid nursing facility users per 1,000 elderly over the 1995-2005 period, **six** of them conducted **pre-admission screening through a single entry point** as of 2002 (Mollica and Gillespie, 2003). The **top three states** (Maine, Washington and Oregon, **all with declines greater than 35 percent** compared to a national average of 15.2 percent) all **have pre-admission screening through a single entry point.** In contrast, only six of the 23 states below the national average of 15.2 percent used pre-admission screening through a single entry point. [A total of 19 states used pre-admission screening through a single entry point for Medicaid entrants into nursing facilities in 2002].
    - ADRCs will play a **critical role in nursing facility transitions** under the Money Follows the Person Demonstration (MFP). Of the 31 **MFP states, 24 have ADRCs** and **18** of these ADRC have indicated that they **will play a role** in the grant implementation.

- States recognize the value ADRCs provide and:
    - **Over half** of the 43 ADRC grantees have passed **legislation,** developed **executive guidance,** and/or contributed **state funds** to enhance and expand ADRCs.
    - **State funding** contributions to date, not including the required match for the grants, **exceed $36 million.**
    - **Eleven ADRC grantees** have achieved **statewide coverage** with their ADRCs and
    - **Kentucky,** similar to **Wisconsin,** plans to use **the ADRC as the entry point to managed long term care** in the state.

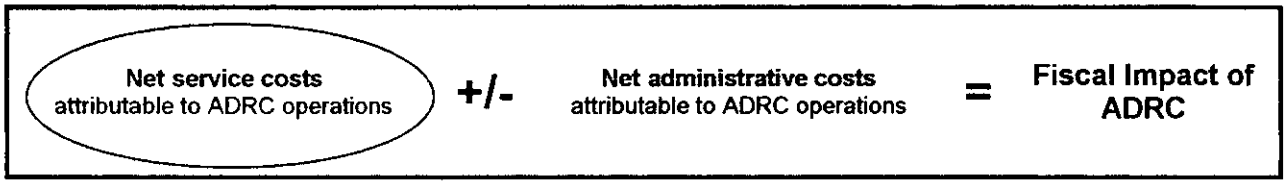
Options for Assessing the Impact of ADRCs on Long Term Care Costs

Measuring the effect of ADRCs and other initiatives that promote home and community-based services (HCBS) presents a major challenge. ADRCs comprise one component of complicated and constantly evolving state long term care (LTC) systems. States often simultaneously pursue multiple initiatives to promote HCBS, and the private market adapts to consumer preferences and financial opportunities, resulting in many intervening variables that make it difficult to determine the direct impact of specific initiatives. Nonetheless, there are multiple strategies for collecting evidence about the way ADRCs impact the broader LTC system.

This paper focuses on assessing the fiscal impact of ADRCs. While ADRCs might result in cost savings for Medicaid programs, many would argue that reducing unnecessary utilization and supporting community integration are important goals regardless of fiscal considerations. Nonetheless, policymakers in state and federal government have a major stake in better understanding the overall fiscal impact of implementing ADRCs.

As depicted in ***Exhibit 1***, the fiscal impact of ADRC operations includes two components: net service costs attributable to ADRC operations (new service costs minus offsets for shifting utilization to more cost-effective services) and net administrative costs attributable to running the ADRC (new administrative costs minus new administrative efficiencies). This paper focuses on the net service cost component of this equation. Whether these costs are positive or negative will determine what effect the ADRC has on overall costs.

Exhibit 1: Fiscal Impact Equation



Methodologically, a randomized control trial that assigns one group of people to receive ADRC assistance and others to a control group that does not would be considered the best and most robust way to study the impact of ADRCs. In practice, however, such a trial is impractical and unethical, and as such, has not been implemented by any ADRC grantees. Other methods for assessing the fiscal effects of an ADRC, such as the pre/post analysis discussed below, have serious limitations. Therefore, we recommend that evaluators approach this issue from multiple perspectives. A body of suggestive evidence, drawn from multiple types of analysis, can be compelling to policymakers even if any single measure has methodological limitations.

In this brief, we discuss three basic strategies for assessing the service costs and cost savings attributable to ADRC operations due to reduced use of institutional LTC services. We focus on institutional service utilization most typical of older adults and people with physical disabilities (i.e., nursing facility services), although the same logic can generally apply for other populations.

The strategies presented here are intended to be broadly applicable, but each can be tailored to the circumstances of a particular state or ADRC site. We have made every effort to simplify the analyses, at the expense of some important methodological considerations. We encourage you to use these strategies as starting points for additional thoughts on methodological refinement.

STRATEGY #1: PRE / POST ANALYSIS

The pre/post analysis strategy focuses on changes in service utilization before and after ADRC implementation. There are several measures against which pre/post analysis can be applied to help assess the fiscal impact of an ADRC.

Overview: Comparing nursing facility and HCBS expenditures before and after ADRC implementation.

Theory: By helping clients connect with resources, assess their options, and plan for future needs, ADRC activities should result in a decrease in the use of nursing facilities and an increase in the use of HCBS services for people enrolled in public programs. Although public spending on LTC may continue to grow (due to demographic trends and rising costs of services), this shift in services may slow the rate of growth.

Limitations: There are many intervening variables that make it difficult to isolate the impact of ADRCs or to attribute any changes over time to the ADRC initiative specifically. The more changes in the LTC system that coincide with ADRC implementation, the more difficult it will be to interpret the results of the analysis and make any conclusions about the impact of the ADRC.

What would I need to make this strategy work?

- Information about Medicaid nursing facility costs before and after ADRC implementation – in the aggregate and per capita
- Information about costs for HCBS, including Medicaid waiver costs, before and after ADRC implementation
- An understanding of other changes in the LTC system and how they may be overlapping with or working against the effect of the ADRC
- Sufficient amount of time in operation as an ADRC

Exhibit 2 provides an example for an ADRC that began operations on the first day of 2003.

Exhibit 2: Total LTC Costs, Before and After ADRC Implementation

	Period before ADRC implementation			Period after ADRC implementation	
ADRC areas	2000	2001	2002	2003	2004
Medicaid nursing facility costs (state share only)	$190,000,000	$199,500,000	$209,475,000	$216,806,625	$221,500,000
Medicaid HCBS costs (state share only)	$25,000,000	$26,275,000	$27,500,000	$28,400,000	$32,000,000
State-funded LTC	$10,000,000	$10,500,000	$11,025,000	$11,410,875	$11,900,000
Total	$225,000,000	$236,275,000	$248,000,000	$256,617,500	$265,400,000
Percent Change in Total LTC Costs		5.0%	5.0%	3.5%	3.4%
Difference in Rate of Change ((average rate 2000-2002) - (average rate 2003-2004))					1.6%

In this example, the rate of change in LTC costs declined from 5.0 percent to 3.4 percent after ADRC implementation. Because the rate of increase declined, this may be seen as a cost-savings. This cost savings can be converted into a dollar value, as shown in ***Exhibit*** 3.

Exhibit 3: Savings from a Decline In the Rate of Cost Increases

Baseline costs before ADRC implementation	Costs if they continued to increase by 5%	Actual costs after ADRC implementation	Difference
$225,000,000	$273,488,906	$265,400,000	$8,088,906

When looking at aggregate numbers, it is important to control for changes in cost, which vary from year to year. Major fluctuations in reimbursement rates, especially for nursing facility services, and other new or changing factors in the reimbursement system (e.g., intergovernmental transfers, provider taxes, and upper payment limits) also warrant careful consideration.

Advantages: This approach is straightforward and intuitive. By focusing on aggregate LTC costs, it gives a high-level overview and factors out any cost-shifting between programs.

Disadvantages: Many variables affect the trajectory of LTC costs that are independent of ADRC implementation, including concurrent changes in the LTC system and changes in Medicaid payment rates and eligibility rules. For example, a large increase in Medicaid payment rates to

Senate Appropriations Committee Testimony on HB 1012 – Medicaid Funding – PACE
Rodger Wetzel, Director, Northland PACE Senior Care Services Program

Mr. Chair and members of the Committee:

My name is Rodger Wetzel. Currently I am the Director for the Northland PACE Senior Care Services Program. We have developed this program first in Bismarck-Mandan and Dickinson, and plan to expand to other communities in the near future, after our first federal review.

PACE stands for "Program of All-inclusive Care for the Elderly." The emphasis is on "All-inclusive." I have attached our PACE brochure and the NDDHS PACE fact sheet. The NDDHS has supported our program since the beginning. All participants must be screened eligible for nursing home level of care, but cared for at home for as long as possible. It is a capitated program, whereby we receive a monthly fee for all usual Medicare, Medicaid, and HCBS services provided.

I have worked in the field of aging in North Dakota since I was 26, and I will turn 65 this year...almost 40 years of "aging" experiences in ND. Previously I served as Director of Eldercare at St. Alexius for 23 years; and prior to that I was the Assistant Administrator of the Aging Services Division of the NDDHS. While there I helped develop the first HCBS services for N.D. And now, PACE is a great example of the coordinated, comprehensive, preventive care for senior adults that many of us have hoped for and envisioned for many years.

We all know the rising cost of LTC services in ND, and our aging population, especially those over age 85. We also know the advantages to seniors and payers of keeping elderly in their own homes as long as possible. My mother is slowly recovering in a nursing home from a hip fracture, but we hope to return her to an apartment in the near future, with in-home services.

The legislature has funded many successful and cost effective home and community based services, such as SPED, expanded SPED, Medicaid Waiver Programs, etc. It is my understanding that the House considers those HCBS programs a priority in the NDDHS budget. PACE is the most comprehensive of these types of programs, combining HCBS services with medical, healthcare, preventive, social, and other services needed by each participant, for as long as they live. PACE program services cost an average of ½ of the average cost of nursing home care to Medicaid, and private payers. So it is financially advantageous to senior adults, their family members, Medicaid, and LTC insurances. Our very first PACE participant in Dickinson was moved out of a nursing home back to her own home.

It is my understanding that the NDDHS budgeted dollars for Medicaid, which would include LTC funding, which includes funding for PACE, has been reduced by the House. We are requesting no reduction in Medicaid funds for PACE, as these funds are necessary for us to expand PACE services to include more low-income participants in North Dakota. (over)

We have seen some of our PACE participants exhibit significant improvements in their health in just a short time after enrolling in PACE.

PACE staff monitor the participant's health status on a regular basis, sometimes daily. If a health problem occurs, staff generally will notice it, or be informed of it as soon as possible. Staff may notice changes while providing in-home services, services at the PACE center, through regularly checking vital signs, or through lab tests, such as blood or urine. They can see a doctor or nurse practitioner most days, if necessary.

We make sure that necessary medications are taken at the proper times. In the past they may have taken the wrong medications, taken too many, or taken too few. We also want to make sure our participants are eating healthy meals every day. This may include their eating meals at the PACE Center, having 1-2 daily meals delivered, microwavable meals, assisting with preparing meals, assistance with shopping for foods, or supplements.

A final reason for their health improvements is that PACE participants are encouraged to come to the PACE center on a regular basis for clinic and health services, therapies, noon meals, and recreation. Just getting out of the house and into a positive health-oriented environment can make a difference in lives of homebound older persons. We pay for all needed transportation to the center and all other needed appointments.

I ask for your support for Medicaid funding for PACE services during the next biennium. We have heard strong support for the PACE alternative model from many public and private agencies serving senior adults, as well as payers.

Thank you. I would be happy to answer any questions.

north dakota department of human services

Fact Sheet

September 2008

Program of All-inclusive Care for the Elderly (PACE)

Background:

- The Balanced Budget Act of 1997 established the PACE model for both Medicaid and Medicare programs.
- PACE providers receive a set amount of money on a monthly basis for each eligible Medicare and Medicaid enrollee to provide patient-centered and coordinated care to frail elderly individuals living in the community.
- PACE has been approved by the U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration (SAMHSA) as an evidenced based model of care.

What is PACE?

PACE programs provide a comprehensive service delivery system which includes all needed preventive, primary, acute and long term care services so that individuals can continue living in the community. The PACE program becomes the sole source of services for Medicare and Medicaid eligible enrollees. For most participants, the comprehensive service package permits them to continue living at home while receiving services. Providers assume full financial risk for participants' care without limits on amount, duration, or scope of services.

Who Can Participate?

Participants must:

- Be a Medicare or Medicaid enrollee who is age 55 or older,
- Be eligible for nursing home level of care, and
- Live in a PACE service area.

PACE Services:

The emphasis of the PACE program is on enabling participants to remain in their community and enhancing their quality of life. A team of health care professionals from different disciplines assesses each participant's needs, develops a care plan, and delivers all services (including acute care and nursing facility services if necessary). Minimum services that must be provided in the PACE center include primary care services, social services, restorative therapies, personal care and supportive services, nutritional counseling, recreational therapy, and meals. The services are provided primarily in an adult health center, supplemented by in-home and referral services in accordance with a participant's needs. PACE is a voluntary program.

Location:

The Northland Healthcare Alliance has developed two PACE organizations in North Dakota. They are located in Bismarck and Dickinson. The Bismarck PACE program is able to serve 150 enrollees and Dickinson is able to serve 25 enrollees.

Contact Information:

For information about PACE and how to enroll into the program, contact Northland PACE:

National PACE Association

Responding to the Unique Needs of Seniors and their Families

Program of All-inclusive Care for the Elderly (PACE)

PACE programs coordinate and provide all needed preventive, primary, acute and long term care services so that older individuals can continue living in the community. PACE is an innovative model that enables individuals who are 55 years old or older and certified by their state to need nursing home care to live as independently as possible. Through PACE, today's fragmented health care financing and delivery system comes together to serve the unique needs of each individual in a way that makes sense to the frail elderly, their informal caregivers, health care providers and policy makers.

PACE Programs Offer High Quality Care and are Proven Cost Effective

- PACE utilizes interdisciplinary teams - including physicians, nurse practitioners, nurses, social workers, therapists, van drivers and aides - to exchange information and solve problems as the conditions and needs of each individual who decides to participate in PACE change - all with the objective of enabling participants to live longer in the community.
- PACE provides participants regular access to doctors and other primary care professions who know them and who specialize in caring for older people.
- PACE participants have improved health status and quality of life, lower mortality rates, increased choice in how time is spent, and greater confidence in dealing with life's problems, according to a recent Abt Associates study.
- The PACE financing model combines payments from Medicare and Medicaid or private pay sources into one flat-rate payment to provide the entire range of health care and services, including paying for hospital care, in response to individual needs.
- PACE utilizes transportation systems to enable participants to live as independently as possible in the community while having access to the supportive services, medical specialists, therapies and other medical care they need.

Characteristics of PACE Participants

- The average age of PACE participants is 80 years old. Seventy-five percent of participants are female.
- The average PACE participant has 7.9 medical conditions, many of which are chronic conditions includ ing diabetes, dementia, coronary artery disease, and cerebrovascular disease.
- While most PACE participants live alone in the community, approximately 7% live in nursing homes for which the PACE program pays.

For more information about the National PACE Association or NPA Membership, call 703-535-1565 or visit www.NPAOnline.org.

*** Allocation is based upon an analysis of claims data used by the actuary in the preparation of the per member, per month payment.

Of the nine (9) current clients, three (3) came from nursing homes, one (1) was receiving SPED services, one (1) was receiving HCBS Waiver services, and one (1) was receiving both SPED and Waiver services. The other three (3) were not previously receiving services.

Northland PACE Description

The Northland PACE Program is designed specifically to maintain independence for seniors by offering comprehensive, coordinated healthcare services through a single organization.

Advantages to participating in Northland PACE include:

- Dedicated, qualified healthcare professionals
- Long-Term care services
- Coordinated care 24 hours a day, 365 days a year
- Support for family care givers
- Personalized individual care

mission

Northland Healthcare Alliance, dedicated to the healing mission of the elderly, is a combined effort of its members to collaborate through our Northland PACE Project to provide healthcare services especially for the frail elderly in our communities by fostering independence, optimizing function, preserving dignity and assisting them to live in their community for as long as they are able.

NORTHLAND PACE

Program of All-Inclusive Care for the Elderly

NORTHLAND PACE

Program of All-Inclusive Care for the Elderly

dedicated to providing the **highest level of care to seniors** in our community

What is Northland PACE?

Northland PACE serves the elderly in our community. PACE is designed to keep seniors who are at risk for nursing home care living independently at home by providing the highest level of healthcare. Northland PACE employs a team of professionals called a care team that coordinates all aspects of healthcare for PACE participants. Our team approach promotes personal attention while adding quality to your or a loved one's life.

What is the Northland PACE care team?

Your care is provided by a team of specialists. This team includes a physician, a nurse practitioner, registered nurse, social worker, rehabilitation and recreation therapists, health aides and several others who will assist in your healthcare.

Our goal is to help you increase your quality of life allowing you to continue living at home.

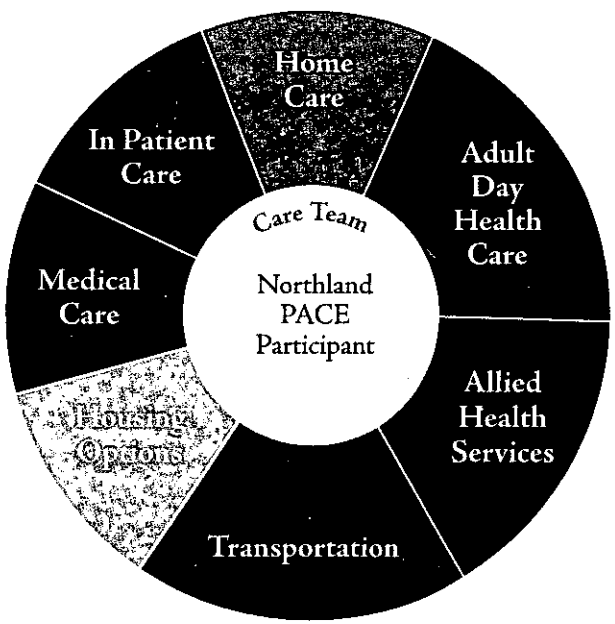
Who is eligible for Northland PACE?

To be eligible to enroll in the Northland PACE Program you must:

- Be at least 55 years old.
- Meet nursing home level of care.
- Be able to live safely in the community.
- Live within an area served by Northland PACE.

How much does PACE cost?

Northland PACE program accepts Medicare and Medicaid. Individuals eligible for Medicaid may have a monthly spend down amount calculated based on financial criteria. The spend down or private amounts are not impacted by a change in the PACE participant's health status. There are no hidden costs or deductibles.



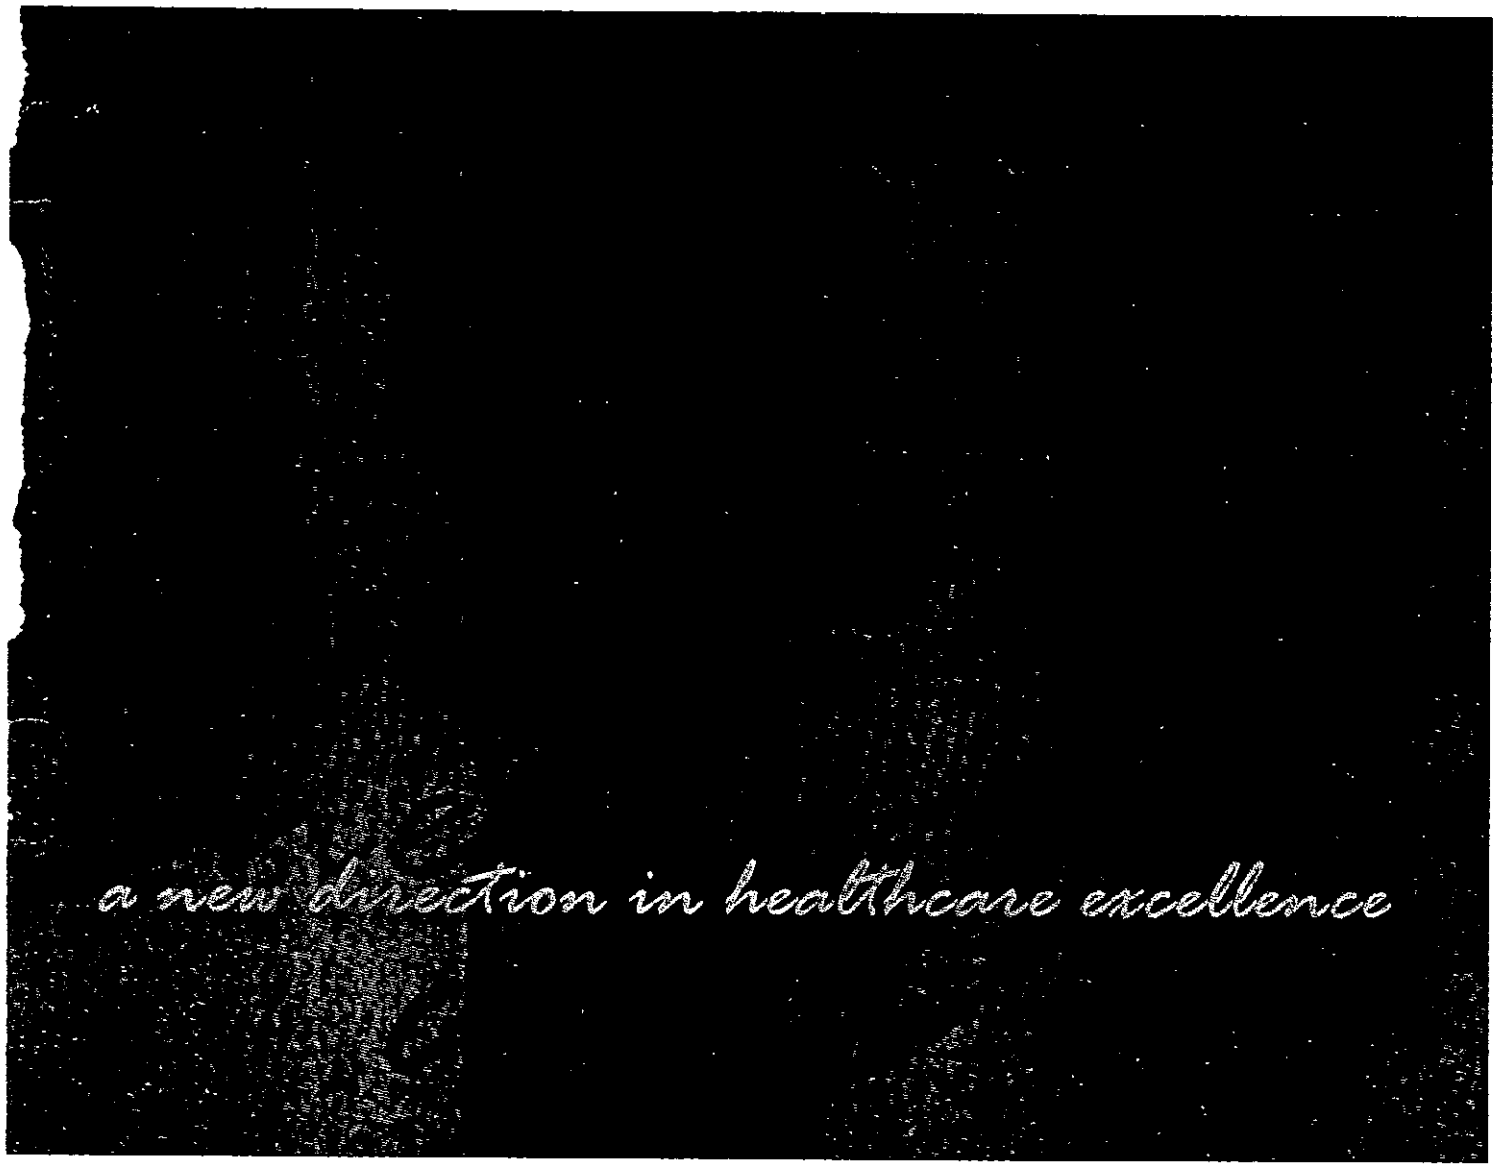
How is Northland PACE different from other healthcare providers?

Northland PACE has several different caregivers available to meet your healthcare needs every day to ensure you have the highest quality of care. With the Northland PACE care team, you won't fall through the cracks.

What services are available with Northland PACE?

- Comprehensive primary medical care provided by a Northland PACE physician
- Meals and nutritional counseling
- Services of medical specialists, including audiology, dentistry, optometry, podiatry, and speech therapy
- Home health care and personal care
- All necessary prescription drugs
- Social services
- Adult day center with therapists (physical, occupational, and recreational) and nursing care
- Hospital, emergency service and nursing-home care when necessary
- Transportation

NORTHLAND
HEALTHCARE ALLIANCE



MEMBER SERVICES

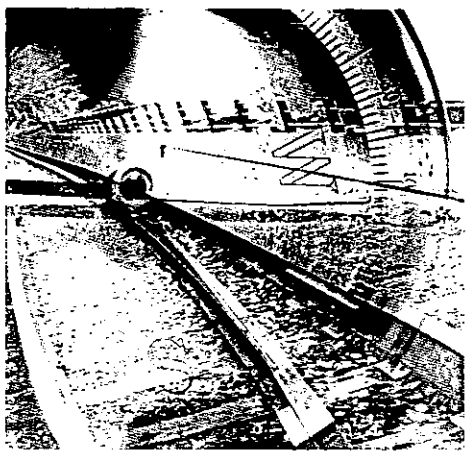
Sponsored by a partnership of Catholic Health Systems

The past 11 years have gone by faster than any in my life. I attribute that to the dynamic aspects of being involved in a network like Northland Healthcare Alliance. We have gone from a fledgling entity with two employees to a multi-faceted organization with more than 20 employees working on a full range of healthcare services. I never imagined that we would be running mobile MRI scanners down the road or that we would be buying huge amounts of natural gas in bulk for our members and other facilities. We have pursued programs that provide benefit to the members that participate and the formula of working together has paid off. Northland Healthcare Alliance is a unique entity in many ways. Many healthcare networks are founded and survive by aligning with a large Group Purchasing Organization (GPO). Northland has not done this and has relied on other programs to benefit its members.

I believe the key to our success has been and always will be the support and participation of our members in the idea-generating and development of the programs that are offered. We are unique because through these idea-generating sessions, we have created a slate of services for our members that are different from any network in the country.

This brochure provides a glimpse of the services and programs we offer. Take a few minutes to peruse this booklet and see if there are offerings that can benefit your organization. Better yet if you think of other ideas that would fit the network model, please feel free to call us. That is part of the power of the network model.

Timothy C. Cox, President



mission

Northland Healthcare Alliance, a Catholic-led integrated health care delivery network whose members include both Catholic and other partners, has as its purpose to enhance the healing mission of the Catholic health care ministry in the Dakotas.

The creation of Northland Healthcare Alliance was based on the desire to provide a working vehicle to insure the continuation of value-based healthcare in the Dakotas, and to have a far-reaching effect on the improvement of the health status of individuals in our communities, particularly in rural areas. Rural healthcare, since the organization of Northland Healthcare Alliance in 1996, has become a focus of law-makers in both state and federal levels to promote and support clinics, hospitals and long-term care facilities in rural communities.

Northland Healthcare Alliance is an integrated health care delivery network whose members include both Catholic and other partners. The creation of Northland Healthcare Alliance was based on the desire to provide a working vehicle to insure the continuation of value-based healthcare in the Dakotas. In addition, the Alliance strives to have a far-reaching effect on the improvement of the health status of individuals in our communities, particularly in rural areas. Since the organization of Northland Healthcare Alliance in 1996, lawmakers at both the state and federal levels have increasingly focused on promoting and supporting clinics, hospitals and long-term care facilities in rural communities.

Northland Healthcare Alliance is able to provide services directly to its members at a greatly reduced fee because of its ability to negotiate group pricing. Some services are provided at no charge as an added benefit to our members.

equipment services

Anesthesia Equipment Services: The Alliance has negotiated several joint services contracts that have reduced costs for anesthesia equipment service. Northland receives best pricing because of the large volume the group brings to the table.

Thermo Asset Management: Northland Healthcare Alliance uses Thermo Asset Management to manage maintenance and repairs of large capital equipment such as CT scanners, magnetic resonance imaging (MRI) equipment, and radiology and catheterization lab equipment. In addition to maintenance, Thermo Asset Management also offers analysis of new purchases to determine if the organization is receiving best pricing compared to similar organizations across the nation. Thermo Asset Management has an extensive database of information addressing repairs, equipment parts and service vendors to assist in maintaining these pieces of equipment. Members can still maintain their relationships and services with the original equipment manufacturers (OEM's) for their service work if they choose.

Sterilizer Maintenance Services: Member facilities rely on Northland for sterilizer maintenance services including inspections, preventive maintenance and repair of steam and gas sterilizers, decontamination washers, surgical tables and surgical lights. In addition, consultation to help determine needs, purchase and install equipment is also available. Our technicians have more than 30 years of experience working with sterilizer equipment in this area.

Biomedical Equipment Services: By taking advantage of biomedical services offered through Northland Healthcare Alliance, organizations can be assured of receiving the expertise necessary to ensure medical equipment meets manufacturers' standards in accordance to both safety and functionality. Our biomedical engineer will come on site to inspect, maintain and repair patient care monitors, defibrillators, fluoroscopes and ultrasound electrostimulization units. This accessibility translates into quick turnaround for repairs as well as eliminating the time and cost involved in sending equipment to the manufacturer for repair. Member facilities also receive site inspection reports necessary for accreditation and JCAHO requirements.

group contracting

Infectious Waste: Northland members benefit from discounted group contract rates for handling infectious waste. Northland also works with facilities to reduce the volume of infectious waste through staff training.

Natural Gas Purchasing: Northland Healthcare Alliance is one of the largest purchasers of natural gas in North Dakota. Northland Healthcare Alliance has created a large purchasing group of 23 entities that purchase natural gas in bulk. Extensive savings have been generated each year through the group purchase.

clinical services

Health Information Management Services: Northland Healthcare Alliance members benefit from expertise available through Northland Health Information Management (HIM) Services.

HIM Services include the following:

- Interim coding assistance for vacation/extended leave situations
- Coding audits (hospital and clinic)
- HIM consulting services (hospital, clinic and nursing home)
- General HIM department and record reviews
- Policy development
- HIPAA compliance reviews

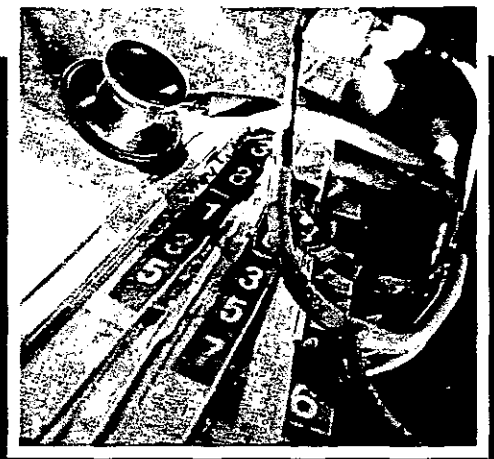
Staff and provider education is provided on a variety of subjects such as coding, documentation, compliance issues and HIPAA.

Mobile Imaging Services: Mondak Imaging Services LLC, a partnership between Northland Healthcare Alliance and Montana Health Network, provides magnetic resonance imaging (MRI) services to members in Montana, North Dakota and South Dakota. These mobile MRI units travel to member facilities to provide convenient, high-quality diagnostic imaging. Because services are provided on-site, patients and physicians receive results more quickly. In addition, facilities benefit by providing another revenue-generating service and offering state-of-the-art technology to patients without having to purchase the equipment. The mobile units are staffed by radiologic technologists who have attained national MRI certification.

Clinic Services: Clinic services focuses on improving health care delivery through the primary care clinics. In addition to disease management and quality improvement, clinic redesign workshops are available to our members. Billing support is also available to members.

Clinics are an integral partner for the future of hospitals and long term care facilities. Northland is developing approaches to help connect clinics and hospitals digitally so patient information can flow between each entity.

Telemedicine Services: Northland provides members the opportunity to participate in teleconference call capabilities for one-on-one clinical consults or group meetings of up to 50 locations. Members can take advantage of these services for educational purposes as well as administrative meetings. Telemedicine is the first step of a multi-step approach of bringing connective information technology to all member sites. Individuals in your community will appreciate being able to stay in their home town to receive many specialty services.



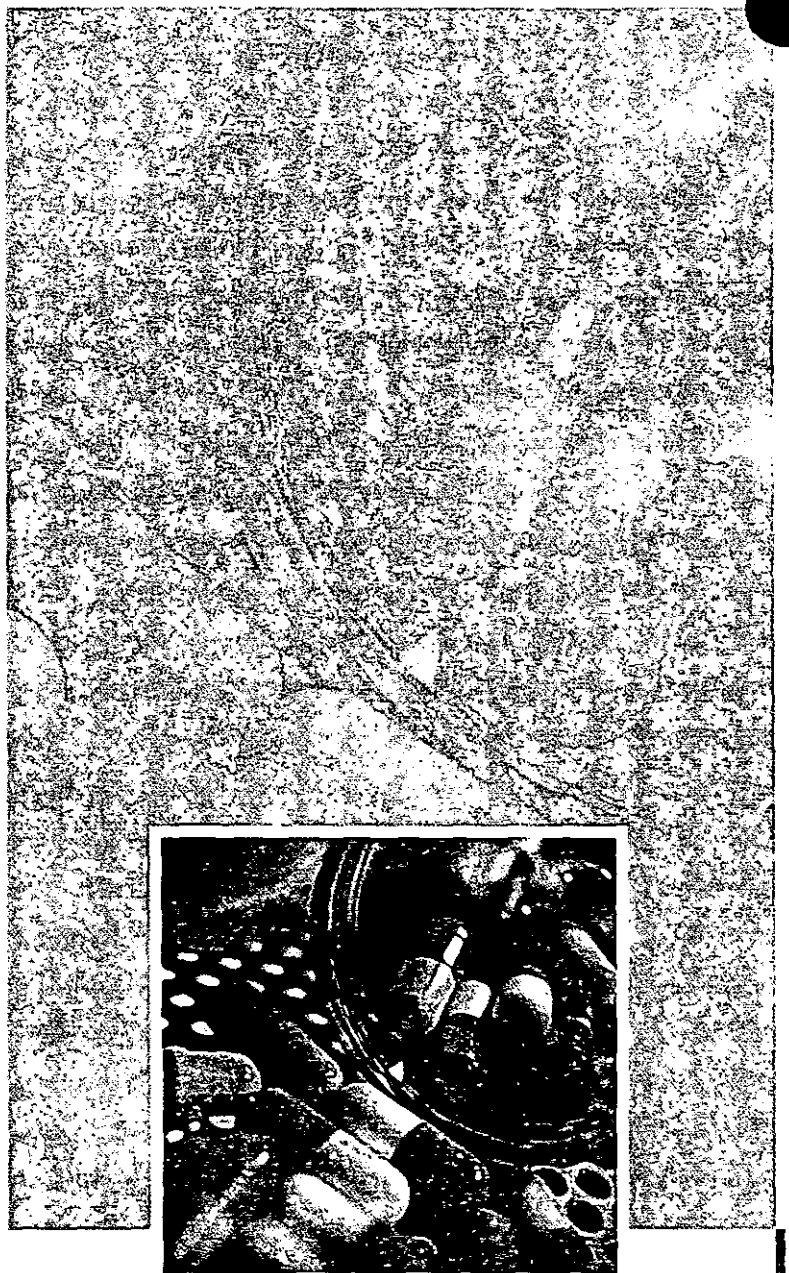
employee benefits

Cafeteria 125 Flexible Benefits: Northland Healthcare Alliance partners with Total Administrative Services Corporation to administer flexible spending accounts.

This service helps employees to pay for certain qualified services on a pre-tax basis. Paying for approved benefits with per-tax dollars reduces the amount employees pay in taxes and increases take-home pay.

Expenses including dental care, prescriptions, eyeglasses and out-of-pocket medical expenses are eligible. The program also includes savings for dependent care services and some transportation expenses.

Life Insurance: Members benefit from Northland's ability to negotiate preferred pricing based on its group size and buying power. This preferred pricing also applies to employee life insurance programs. Northland offers an excellent life insurance product at a reduced cost for its members. Members have saved thousands of dollars on a benefit that is relatively inexpensive and gives employees some peace of mind.



collection services

Recovery Resources, LLC: Recovery Resources, LLC, a full-service collection agency specializing in the healthcare industry, is owned by Northland Healthcare Alliance, Medi-Sota and Montana Health Network. As experts in the medical collection industry, Recovery Resources' staff members offer users exceptional customer service and reasonable commission rates with no up-front costs. Recovery Resources offers collections services on medical accounts. If payment in full is not an option, Recovery Resources' staff will work with the debtor to develop a reasonable payment schedule. If necessary, legal action, including garnishments and/or executions, may be considered if payment is not collected.

Recovery Resources also offers a program called LoanTrak Account Management. LoanTrak is an account management service provided by Alliance Financial Services, a subsidiary of Recovery Resources. This program amortizes loans, prints disclosure statements, generates coupon booklets, collects and tracks interest and principal payments, and identifies slow pay accounts for action or review.

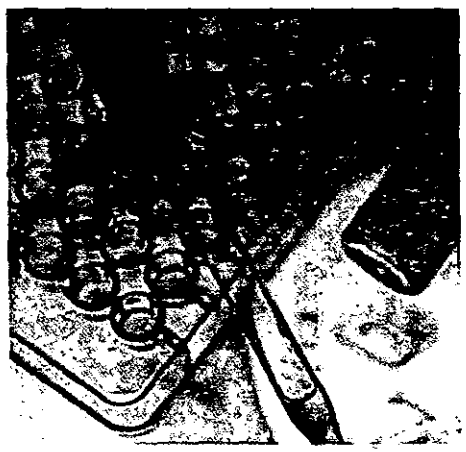
In addition, Recovery Resources offers the following services:

- Up-to-the-minute online account information
- Credit reporting
- Monthly, quarterly and annual reports
- Custom reports upon request
- Skiptracing
- Collection training and education
- Access to Recovery Resources' knowledge and resources
- Site visits

other services

Benchmarking Services: Hospital benchmarking software is available to members from Northland through membership in the National Cooperative of Health Networks Association. This software was developed by the Pioneer Health Network to assist smaller hospitals in collecting data to track and benchmark best practices. For a modest annual fee, the information allows a member to evaluate how its facility compares with like hospitals in North Dakota and throughout the country.

Education and Roundtables: The ability to work with other facilities and individuals to expand available resources for is just one benefit of network membership. Northland capitalizes on this and brings together task forces to share information and, in many cases, to develop programs or products relating to their respective interests. The 15 task forces include the following groups: behavioral health; capital equipment; community health needs assessment; critical access hospital; education; financial services; information technology, HIPAA, human resources, marketing, medical records, membership-new member recruitment, physician services; plant services and quality improvement. Northland sponsors an ongoing leadership development course for middle managers. This course covers a comprehensive set of training modules addressing strategic planning, problem solving, communication, budgeting, conducting meetings and conflict resolution.



Grant Development: Northland Healthcare Alliance has assembled a group of individuals with expertise to assist facilities in grant writing endeavors. In addition, the Alliance has vigorously pursued relevant grant programs to augment the resources of the network and expand programs that will assist each entity in fulfilling its mission. Funding organizations respond more favorably to applications that offer impact in more than 15 communities.

Critical Access Hospital Services: Assistance is also available for critical access hospital issues such as quality/compliance issues, financial aspects and general regulation compliance. Our staff has received extensive training to assist and facilitate issues that affect critical access hospital facilities. This resources is available to members to support them on an on-going basis.

Marketing Services: Northland offers services and support to develop and enhance marketing activities of member organizations. Expertise is provided for assisting with marketing and public relations functions including print material production, event coordination and marketing campaign planning and implementation.

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 27, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, for the record, I am Edie Armey , Director of TrainND Northeast, formerly known as Workforce Training, a division of Lake Region State College. I am writing to provide testimony regarding the budget of the Aging Services Division.

Since 2001, we have worked under contract with the Division of Aging Services to deliver a training program for Qualified Service Providers. TrainND Northeast is honored to continue this valuable service. This program is delivered statewide with the aid of 69 Registered Nurses as trainers (this is 5 more than Linda shared with you due to filling a long-time need in Cass County). To date, the program has provided training to 732 care givers across the state. Based on Linda Wright's information of 1,718 QSPs involving 139 agencies, TrainND Northeast trained over 42% of the QSPs in North Dakota. Enlisting Registered Nurses across the state ensures that interested, caring individuals do not have to leave their area to receive this training. This program is vitally important for people who wish to stay in their homes but need additional care or assistance to do so.

The intent of Qualified Service Provider Program is to:

1. Provide training at the location where training is needed;
2. Ensure that care givers have demonstrated the mastery of the particular skills necessary;
3. Provide a standard of quality of care based on the needs of the client; and
4. Deliver the training on a one-on-one, face-to-face basis to ensure the highest level of learning.

As rural areas struggle with ***declining*** health care services and ***increasing*** health care costs, it is vital that quality in home care be available. Our program, utilizing experienced, skilled, Registered Nurses who have completed the *Train the Trainer* course are considered LRSC faculty in regards to liability. This protects the RN and also enforces our ability to train care providers who have demonstrated the necessary skills before being listed as a Qualified Service Provider with the Division of Aging Services.

Without Qualified Service Providers, many more elderly or disabled North Dakotans would be forced out of independence and into resident care. So often, resident care is not available in their home community, where they have loved ones and civic ties. The Qualified Service Provider training program offers them the chance to receive quality care and remain in their homes and community.

The current budget for the Qualified Service Provider Program of $30,000 coupled with the additional requested $30,000 will allow the training program to continue to provide in-home care services for many of our elderly. I urge you to continue the funding for this program at the level of $60,000 per biennium. Clearly the need and the positive outcomes of this program have been witnessed in its successes since 2001.

I would like to add one fact. Frequently, while at meetings of the Olmstead Commission's Sub-committee on Direct Care Service Workers, I hear representatives from many different factions say there is so much more need. In addition, they are genuinely concerned about the pay QSPs and Nurse Trainers receive. We currently serve 29 out of 53 counties. It is my hope that one day soon; the Department of Human Services and this committee will consider another increase which would allow us to hire one FTE devoted to this program so that we can meet the true needs of our dear, elderly North Dakotans in every county in this state.

Respectfully Submitted,
Edith Armey
Director, TrainND Northeast
Lake Region State College, Devils Lake, ND

trainND

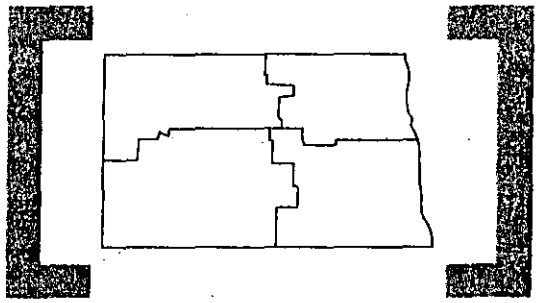
Why is TrainND important to North Dakota?

TrainND is the state's most comprehensive and inclusive training network. Our training services for business and industry help North Dakota businesses compete on a global level, and they are tailored to support their efforts to capitalizeon growth potential.



What business leaders are saying

When asked to describe TrainND in one or two words, business leaders, legislators and North Dakota employees at a Statewide Advisory Board Strategic Planning Retreat used words such as: Positive, Responsive, Effective, Affordable, Vital, Value-added, Customized and Flexible.

"Every service employee we hire receives training from TrainND before beginning duties in the field. This has helped create a safer environment for all of us as we move forward in the energy industry. Whenever we have needed specific training, they have been very helpful and accommodating."
Todd Beard
Nabors Well Service • Williston

"We saw the results of [coaching and communications] training through improved employee relations and greater consistency in the applications of rules and regulations at our Grand Forks plant."
Dan Gordon
LM Glasfiber • Grand Forks

"The southeast TrainND Region understands our need for flexible training in both specialized and general skills — small groups and company-wide. I congratulate any manager with the wisdom to make this connection."
Kim Lunde
Cherrington Enterprises, Inc.
Jamestown

"The southwest TrainND instructor works with our maintenance staff to develop a training outline, detailed test plans and coordinates the training schedule. Very positive feedback has been received with respect to the professional nature of training and the mobile facility."
Mark Thompson
Leland Olds Station • Bismarck

TrainND by the numbers

211,607 total training hours

1,345 businesses served

743 businesses returned for additional training

53% of our business is repeat business

17,380 total registrations

11,990 unduplicated registrations

99% client satisfaction

98% employee satisfaction

Fiscal Year 2008

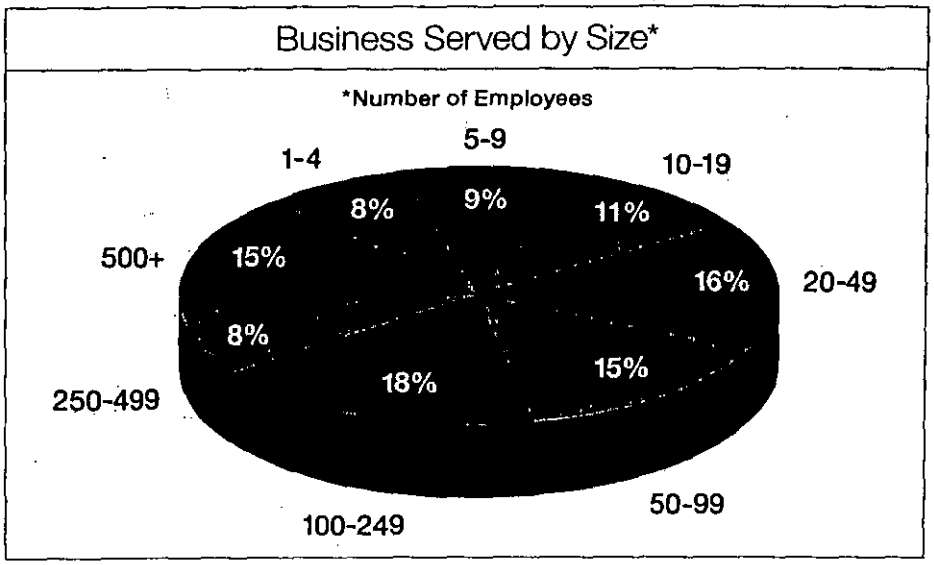
trainND

A good investment

The overall revenue generated from training this year is up 16% from last year. Training increases employee retention, productivity, competitiveness, quality and customer satisfaction.

Current efforts and goals of TrainND:

- Continue to inform policy makers
- Increase the consultative relationship with our clients
- Identify, clarify and communicate what workforce training is — and what it can do for North Dakota business
- Deliver training to clients anytime, anywhere
- Increase participation in events such as the Governor's Workforce Summit and HR Conference
- Collaborate and deliver programs across the state for welding, machining, manufacturing, oil and gas, commercial drivers license training and more



In 1999, after the legislative enactment of the workforce training system, the State Board of Higher Education charged Career and Technical Education plus regional training advisory boards with successful implementation of the new training system. In the 2007 Legislative Session, HB 1019 provided funding for new initiatives, salaries, operations and awareness. To address awareness-building goals, the regions collaborated to develop our brand, our new name (TrainND) and our new look. **www.TrainND.com**

trainND NORTHEAST

Training In-Home Care Providers

TrainND Northeast partners with the North Dakota Department of Human Services Aging Services Division to train in-home care providers. There is a critical need in North Dakota, especially in rural and tribal areas as our population ages. In-home care providers are trained by highly-qualified registered nurses who customize training to suit the provider and the client.

In-Home Care Providers make a difference

The goal of home care is to assist the client to be as independent as possible and remain in his or her home. Compassionate, competent care will help the client achieve this goal. A trained in-home care provider may make the difference between a client continuing to live at home or moving to a long-term care facility.

Who should be an In-Home Care Provider?

Delivering quality in-home care is an important job that requires a number of skills. The most valuable skill is professionalism, which encompasses dependability, empathy, trustworthiness, respectfulness, confidentiality, and communication.

"I'm grateful to TrainND for the training experience. I learned a lot about myself and the elder I help."

Julie Quallick
In-Home Care Provider

"The strongest part of this program was making sure the resident will be comfortable and reassured that you are there to assist them in whatever they need."

Pam Fehr
In-Home Care Provider

"I think you are doing a splendid job in training workers in this program. Keep up the good work!"

Helen Seigard
In-Home Care Provider

In-Home Care Provider Training *by the numbers - FY 08-09*

29	ND Counties Served	55%	ND Counties Served
170	Providers Trained	21	Providers Re-certified
69	Registered Nurse Trainers	98%	Participant Satisfaction

732 Total Providers Trained 2002-2008

About the program

- There is no cost to the In-Home Care Provider
- Instruction manuals for Nurse Trainers and In-Home Care Providers are provided by TrainND Northeast
- The goal of the program is to increase the number of capable In-Home Care Providers across the state

Testimony
House Bill 1012 – Department of Human Services
Aging Services Budget
Human Resources Division
House Appropriations Committee
January 27, 2009

Same testimony given to Senate

Chairman Pollert and members of the committee, my name is Brian Arett. I am the Executive Director of Fargo Senior Services and a representative of the 26 agencies that are members of the North Dakota Senior Service Providers (NDSSP) that provide Older American Act Services to the senior population of this state. I am here to testify in support of the budget for the Aging Services Division of the North Dakota Department of Human Services. In particular I am here to testify in support of the $900,000 increase in reimbursement to Older Americans Act Service Providers.

At the same time I am here to speak in support of this increase I am here to ask your committee to consider a request for an additional increase for Older Americans Act Service Providers. I make this request because of the significant challenges we face in providing for the growing numbers of seniors, particularly those age 85 and older, throughout the state, and because of the large number of services that we provide with no reimbursement.

Older Americans Act services such as Home Delivered and Congregate Meals, Outreach, Health and Senior Companion services are an important part of the continuum of care that helps our seniors to remain in their homes as late in life as possible. In testimony provided by Linda Wright on January 13th she highlighted the projected growth in the numbers of older people in the state over the next 11 years, particularly those people age 85 and older. This increase in the number of seniors in our state will certainly lead to further growth in the demand for the services we provide.

Linda's testimony also touched on some of the challenges Older Americans Act Service Providers are facing. She mentioned new federal dietary requirements for congregate and home delivered meals. These requirements were implemented in 2008 and require an additional half cup serving of fruit or vegetable, increased fiber requirements, an additional slice of bread and the use of 100% whole wheat bread for the meals we serve. These changes resulted in an increase of more than 40 cents per meal for our meals program in 2008. Linda also spoke about the increasing costs for inflation we are experiencing with respect to food, staff, transportation and supplies. Food costs alone are projected to increase 5-6% this year.

When we met with Governor Hoeven's office last fall to talk about our need for additional support for the services we provide for the elderly our request was for the state to fully fund the established reimbursement rate for the meals programs we operate and to increase the reimbursement rate to $3.50/meal. The reimbursement rate in 2008 was $3.00/meal but because of a shortage of federal/state funds the dollars available were only able to fund 944,444 of the 1,287,718 meals served in 2007 (the most recent numbers available) or 77.2%.

In 2009 the reimbursement rate was raised to $3.50/meal but funding was only increased by $64,506 so this year only 67.6% of the meals that will be provided will be funded at the new $3.50/meal rate. In essence, the reimbursement rate was raised but because the amount of dollars did not go up at the same proportion state/federal dollars will run out sooner leaving it to us to have to make up an even bigger share of the costs associated with this program.

The result in 2008 was that eight meal sites out of a total of 198 sites throughout the state were closed. Projections are for an additional four to close in 2009 and possibly as many as 14 more in 2010. Generally the meal sites that close are in the most rural parts of the state and in towns where we contract with restaurants for meal service. Thirty-four percent of our service sites (65 communities) are in towns

with populations of 200 people or less. In 46 of the communities served, the meals are provided through a contract with a local restaurant, nursing home or hospital. Many times these sites close because we are not able to reimburse these small restaurants a more reasonable rate due to the limited reimbursement we receive.

I have talked about services statewide. I would like to talk a little about the services provided by Fargo Senior Services. We serve 6 counties and 33 communities in Region 5. In 8 of these communities we contract with a local restaurant for meal services. Our agency has 24 full time and 60 part time employees with a total annual payroll of more than $1.5 million. We spend just over $1 million annually on food purchased from wholesale vendors and restaurants.

Our request of your committee is to increase funding for Older Americans Act Meal Service Providers by an additional $1.9 million so that we can be reimbursed at the established state rate for every meal we provide. We arrived at this amount by multiplying the number of meals served in 2007 by $3.50/meal and subtracting state/federal dollars already available as well as the increase already included in the department budget request as follows:

1,287,718 meals x $3.50/meal = $4,507,013
$4,507,013 - 3,047,839 (federal/state funds in 2009) = 1,459,174
$1,459,174 x 2 years = $2,918,348 (estimated shortfall for the biennium)
$2,918,348 - 900,000 – 106,400 = $1,911,948 shortfall
$1,911,948 is equal to 546,271 meals for the biennium

The member agencies of the NDSSP are the organizations providing services to older people in the most rural parts of our state. Meal services are provided in 190 communities of all sizes and in all corners of the state. Many of the older residents of small towns throughout the state rely on these meal services as one of the few alternatives to institutional care available in their community.

The increase being requested in the DHS budget will help us to keep up with the inflationary increases we are experiencing. In particular, it will help us to maintain an adequate reimbursement rate for the many rural restaurants we work with. I know I speak on behalf of my colleagues throughout the state in highlighting this area.

If we are going to keep up with the growing costs for providing services and the growing need for services brought on by the ever increasing senior population we need to raise revenues from somewhere. Local resources have been stretched as thin as they can be. In 2007 (the most recent year figures are available) funds spent on Older Americans Act Services came from the following sources; 44.5% Federal, 29% Program Income, 23.1% Local and 3.4% State.

We look to the state as a natural partner in helping us to meet this need. The major benefit for the state comes from assisting seniors to stay at home in a less restrictive and much less expensive setting, saving dollars that would have to be spent on nursing home care if our services are not available. A list of the agencies that are members of the North Dakota Senior Services Providers is attached.

Thank you for your time. I would be happy to answer any questions you might have.

Organizations that are members of North Dakota Senior Service Providers:

1. Williston/Region I Senior Services
2. Minot Commission on Aging
3. Kenmare Wheels and Meals
4. Tri County Meals and Services, Rugby
5. Souris Basin Transportation, Minot
6. Cavalier County Meals and Services, Langdon
7. Nutrition United, Rolla
8. Benson County Transportation, Maddock
9. Senior Meals and Services, Devils Lake
10. Walsh County Nutrition Program, Park River
11. Pembina County Meals and Services, Drayton
12. Greater Grand Forks Senior Citizens Association
13. Fargo Senior Services
14. Dickey County Senior Citizens, Ellendale
15. James River Senior Services, Jamestown
16. South Central Adult Services, Valley City
17. Central Valley Health Unit, Jamestown
18. West River Transportation, Bismarck
19. Mandan Golden Age Services
20. Burleigh County Senior Adults, Bismarck
21. Kidder/Emmons Senior Services, Steele
22. Mercer McLean Counties Commission on Aging, Hazen
23. Elder Care, Dickinson
24. Southwest District Health Unit, Dickinson
25. Southwest Transportation, Bowman
26. Legal Assistance of North Dakota, Bismarck

Testimony
House Bill 1012 – Department of Human Services
Aging Services Budget
Human Resources Division
House Appropriations Committee
January 27, 2009

Same testimony given to Senate

Chairman Pollert and members of the committee, my name is Pat Hansen. I am the Executive Director of South Central Adult Services and I am also a representative of the 26 agencies that are members of the North Dakota Senior Service Providers that provide Older Americans Act Services to the senior population of this state.

Brian Arett's testimony explained the statewide situation regarding meals for seniors. I would like to provide you with information concerning my project. South Central Adult Services provides congregate and home delivered meals, outreach, and transportation to Region VI which includes the counties of Barnes, LaMoure, Foster, Logan, McIntosh, Griggs, Dickey, Stutsman, Wells and Sheridan. South Central provided 116,087 congregate meals, 94,640 home delivered meals, 12,841 billable units of outreach and 53,623 rides in 2008. We provided 64,139 meals with no federal/state reimbursement. At the $3.00 meal reimbursement rate for 2008 this is a shortfall of $192,417. At the 2009 rate of $3.50 this amount increases to $224,486. South Central Adult Services did not receive any increase in federal/state meal dollars for 2009.

I have been employed by South Central Adult Services since 1980 in several positions, including secretary, outreach worker, administrative assistant, fiscal officer, and for the past two years, director. South Central employed a total of 111 people in full and part-time positions last year. We have gone from an administrative staff of 3 ½ people down to 2. We have no retirement benefits, and the agency only pays $100 per month of our health insurance benefits. Several years ago the Board of Directors voted to implement a retirement plan for the employees. I was the fiscal officer at the time, and after compiling the budgets for

each of our counties, I determined that we would have to close seven meals sites to pay for the minimum match required for a retirement plan. I recommended that we forego the retirement plan and maintain the meal sites. We have consistently opted to cut anything EXCEPT services. Sadly enough, this year when I presented budgets to my county councils, I had to ask them to try and maintain their services and sites for one more year, 2009. I informed them of our contact with the Governor's staff and my hope that during this legislative session funding would be appropriated to pay for ALL of the meals we are providing, allowing us to pay for the increasing cost of food and supplies and to keep staff to operate the sites and prepare the meals. All of my counties are spending more local dollars than they will receive this year. This cannot continue.

I have seen many changes in our programs, and in the population we serve over these many years. When I first began with Aging, much of the emphasis was on socialization and outreach. The people who participated in the programs were 60-70 years old, and most were very active and did a lot of volunteer work in the senior centers and their communities. Today, in our region, 24% of all services are provided to people age 85 and older, and 40% of all home delivered meal participants are age 85 and older. The meals are no longer just a social activity. They are a necessity. For those of you who are familiar with nursing home admission criteria, people who have deficits in two or more Activities of Daily Living (ADLs) are eligible for nursing home admission. In my region alone we are serving 222 people who meet or exceed that criteria. If in-home services were not available and these people required nursing home placement it would cost in excess of $13.3 million dollars each year for their care, just for Region VI.

Let me share a story with you about what happens when people do not receive Home Delivered Meals. In McVille (population 470) in Nelson County in 2007 meals were provided 5 days per week by a cafe. In May of that year, the city-owned cafe changed managers and was closed for one month. Prior to the sale of the cafe, 8 people received a home delivered meal every day. When the cafe

re-opened after the one month closure, there were only 4 people left on the home delivered list. What happened to the other 4 people, you might ask? The answer is - all 4 of them went to a Nursing Home during that one-month period when they did not receive Home Delivered Meals. The only thing that changed in these 4 people's lives is that they did not get a meal and for them it was the tipping point that led them to need nursing home care.

Statewide statistics on active participants in 2008 indicate that there are a total of 1,149 people who meet the ADL criteria. If 574 (1/2) were forced to enter facilities it would cost $34.4 million dollars. Of the 1,149 people, 297 are already below poverty level and would likely qualify for Medicaid on admission. The increase in Medicaid funding for those individuals would exceed $17.8 million dollars.

I have a difficult time putting dollar values on the quality of life we provide for our elderly. I love my job, and it is not because of the great salary and benefits. It is because of the benefit I receive from serving some of our most precious assets, our seniors. Most of them worked to provide the quality of life we all have in North Dakota, and I think they deserve the best we can provide for them in their "golden" years. I would ask that you consider what your desire, or the desire of your parents or grandparents, is for the future. Do you want to continue to live in your own home, surrounded by members of your community? Or do you want to live in an institutional setting when a few relatively inexpensive services could keep you at home? We all know that nursing homes and assisted living facilities are necessary when we are unable to care for ourselves, but let's not hurry the process.

Thank you for allowing me to present this information. I have included attachments for your individual review. The first is a listing of the number of clients in each county with 2 or more ADLs. The second is an explanation of what the ADLs consist of. I would be happy to answer any questions you may have.

County	Clients with 2 or more ADLs	Age 60-74	Age 75-84	Age 85+	Living Alone	Below Poverty	Male	Female

6. During the past 7 days, and considering all episodes, how would you rate the client's ability to perform SHOPPING?

- ☐ 1 - Independent
- ☐ 2 - Requires assistance
- ☐ 3 - Totally dependent

7. During the past 7 days, and considering all episodes, how would you rate the client's ability to perform TRANSPORTATION?

- ☐ 1 - Independent
- ☐ 2 - Requires assistance
- ☐ 3 - Totally dependent

8. Rank the client's ability to use the TELEPHONE.

- ☐ 1 - Independent
- ☐ 2 - Requires assitance
- ☐ 3 - Totally dependent

What is the client's IADL count?

K

NDAHC **North Dakota** Association for **Home Care**

Testimony

House Bill 1012-Tammy Theurer, ND Association for Home Care

House Appropriations Committee-Human Resources Division

Representative Pollert, Chairman

January 27, 2009

Chairman Pollert and members of the House Appropriations Human Resources Committee, my name is Tammy Theurer, I am a registered nurse and the Director of Home Care & Hospice at St. Alexius Medical Center. I am here today as the Past President of the ND Association for Home Care (NDAHC) and representing the association.

The NDAHC represents Home Health Care Agencies (Hospital-based, County, nonprofit, and proprietary) and their branches, providing care throughout ND, allowing clients to remain in their homes.

Home Health Care provides: Skilled Nursing, Physical Therapy, Speech Therapy, Occupational Therapy, Certified Nurse Assistants (CNAs), Infusion Therapy, Medical Social Workers, Pediatric and Psychiatry Programs, as well as Home Health Aides and Homemaker services, or Personal Care Services assisting with activities of daily living and in certain circumstances, tele-health services. Today I will address the Skilled Nursing and Personal Care, or QSP (Quality Service Provider) services provided by Home Health agencies.

QSP services are provided by individuals, proprietary agencies, and Home Health Care Agencies. Home Health agency QSP services are provided within a medical model of care. These agencies are certified by Medicare and Licensed by the state of North Dakota. Agency QSP providers are generally CNAs, or minimally Nurse Assistants registered in the state, who are directly supervised by a registered nurse. These CNAs receive ongoing education and evaluation of their skills and abilities.

In 2006, NDAHC surveyed members to determine the number of agencies providing these services, the level at which they were reimbursed, as well as their cost to provide the services. At that time, there were 17 agencies providing this care, with varying levels of reimbursement. The average reimbursement in 2006-07 was $15.14 per hour with an average cost of $22.92 to provide this care. Data from the Department of Human Services for January 1994 through January 2006 showed an average annual increase in reimbursement for these services to be 3.21 %. If Home Health Care agencies

Box 2175 • Bismarck, ND 58502-2175 • Phone: 701-224-1815 • Fax: 224-9824
E-mail: ndahc@aptnd.com • http://www.aptnd.com/ndahc

were to continue to provide personal care services and allow individuals to remain in their homes, agencies needed to keep pace with the increasing cost to provide the services.

The 2007 Legislature addressed the reimbursement for personal care services, standardizing the reimbursement rate among agencies and providing a positive increase. Currently, these services are reimbursed at $19.64 per hour.

A recent survey of our members concluded that the average cost to provide Personal Care Services in the year 2008 was approximately $27.75/hour, compared to an average cost of $22.92/hour in 2006-2007(based on a prior survey of our members). This is an increase of $4.83 during this two year period, which translates to an increase in cost to provide services of approximately 10.5% per year of the biennium. The areas that appear to have the greatest effect on this increase in cost are due primarily to travel costs, wages and benefits, and staff recruitment and retention. Considering the reimbursement is $19.64 per hour and the average cost is $27.75 per hour, Personal Care services are currently reimbursed at 71% of agency costs. Although we are very appreciative of the 7/7% inflationary increase in the Governor's budget, in order to lessen this gap and bring agencies closer to a break even situation, we are requesting a 15% increase in Personal Care payments, in addition to the 7/7% inflationary increase.

Comparing QSP Home Health Care Claims from 2006 to 2008, all agencies providing these services are continuing to do so. The number of clients served for the 11 months of data in 2006 was 516. For the 12 months ended 6/30/08, the number of clients being served by Home Health Agencies only was 523. As you can see, the demand for these services has not decreased. In fact, based on the demographic trends throughout the state, particularly with regards to our aging population, we only expect the number of clients we serve to increase.

Skilled care services provided by Home Health Agencies include Skilled Nursing, Physical Therapy, Speech Therapy, and Occupational Therapy.

According to the Provider Fee Schedule from the Department of Human Services, the current average allowable charge for Home Health Providers is $81.60 per visit. The average cost for these skilled services was $126.28 per visit. Payments from ND Medicaid cover less than 65% of agency costs. We are requesting an increase in the provider fee schedule by 15%, in addition to the annual 7% increase recommended in the Governor's budget. This increase would be an important move toward minimizing the deficit between the amounts paid to agencies and the actual costs to provide services. As with the Personal Care services, the costs are primarily due to wages and benefits, travel time and mileage, and costs to recruit and retain staff.

Telehealth/Telemonitoring Services:

At this time only three agencies in ND are providing telehealth/telemonitoring services. These services are not reimbursed by ND Medicaid. These three agencies have been able to demonstrate significant

benefits with the addition of this technology, which enhances the care provided to patients in their homes. For example, with the use of telemonitoring equipment, agencies are able to identify changes in the patient's medical condition more quickly, resulting in timely interventions that in turn result in the avoidance of a hospital stay or an emergency room visit. NDAHC is requesting that ND Medicaid reimburse Home Health Agencies for telehealth/telemonitoring visits at the same rate as a skilled nursing visit. Minnesota Medicaid's reimbursement structure includes reimbursement of telehealth visits at the same rate as skilled nursing visits. NDAHC would advocate for similar reimbursement by ND Medicaid, but would recommend that the definition of telehealth or telemonitoring visits be broad enough to account for ever changing technology. Options range from very sophisticated, high cost units involving video cameras and complex computers, to monitors utilizing phone lines or web based technology. Industry information indicates that only a small percentage, between 3 and 4 %, of individuals benefiting from telemonitoring services require the more elaborate and expensive real time video equipment.

The reimbursement of telehealth/telemonitoring visits by certified Home Health Agencies would enable more agencies to provide this important technology to more efficiently manage patient conditions. This technology would be of particular importance in the rural areas of our state, resulting in closer patient oversight and management of their disease processes. By increasing the use of this technology, the savings resulting from fewer hospitalizations and emergency room visits would easily surpass the expenditures paid for telehealth/telemonitoring visits.

The increase in reimbursement for QSP services as a result of the 2007 Legislature has allowed our agencies to continue providing these much needed services. Payments to agencies for both Personal Care services and Skilled Services remain significantly below agency costs to provide this important care to the citizens of North Dakota. In order to lessen this gap, we are requesting additional increases beyond the proposed inflationary rates. In order to expand the use of telehealth/telemonitoring, we are asking for reimbursement for those services. However, if we do not receive an increase which would bring us closer to our cost to provide these services, we are afraid we will be forced to limit our service area and possibly even the number of clients we are able to serve. Home Health Agencies in North Dakota are committed to bringing needed care to individuals in their homes. Home Care continues to be a very cost effective option.

Thank you for the opportunity to testify before you today. We appreciate your consideration of our situation. I'd be happy to answer any questions you might have.

NDAHC North Dakota Association for Home Care

Testimony

House Bill 1012 - Jo Burdick, North Dakota Association for Home Care

House Appropriations Committee - Human Resources Division

Representative Pollert. Chairman

January 27, 2009

Same testimony given to Senate 3-4-09

Chairman Pollert and members of the House Appropriations Human Resources Committee, my name is Jo Burdick. I am a registered nurse and the Executive Director of MeritCare Home Care. I am here today as the Vice President of the ND Association for Home Care (NDAHC) and representing the association. I would like to discuss the use of technology in home health care utilizing home tele-monitoring units in patient homes.

Home Tele-monitoring is not a new concept but it isn't widely used in North Dakota. Currently, only three agencies in ND are providing home tele-monitoring services. Many of the counties served by home health agencies in North Dakota are designated as "Frontier Counties", counties with less than 6 persons per square mile. Tele-monitoring brings needed intervention to these sparsely populated areas where winter driving and distance often limit access. Home Tele-monitoring allows a patient to be monitored on a daily basis, and as needed, for signs and symptoms of exacerbations and have more immediate response to impending problems, averting more intensive treatment including use of emergent care and re-hospitalization.

Home tele-monitoring has helped nurses and home health agencies overcome the challenging position of compromising patient care for the sake of cost. It allows nurses to increase operational efficiencies by scheduling visits according to the patient's needs. The ability to visit when clinically appropriate, rather than being constrained by a pre-determined schedule further enhance these efficiencies. Clinicians can react quickly to actual or potential problems. Patient needs are identified more efficiently for improved outcomes.

Testimony

House Bill 1012-JoAnn Ferrie, ND Association for Home Care

Senate Appropriations Committee-Human Resources Division

Senator Holmberg, Chairman

March 4, 2009

Chairman Holmberg and members of the Senate Appropriations Human Resources Committee: My name is JoAnn Ferrie. I am a registered nurse and the Director of Professional Home Care. I am here today as a member of the ND Association for Home Care (NDAHC) representing the association.

The NDAHC represents home health care agencies (hospital-based, county, nonprofit, and proprietary) and their branches, providing care throughout ND, allowing clients to remain in their homes.

Home health care provides: skilled nursing, physical therapy, speech therapy, occupational therapy, certified nurse assistants (CNAs), infusion therapy, medical social workers, pediatric and psychiatric programs, as well as home health aides, homemaker services, and personal care services, assisting with activities of daily living and, in certain circumstances, tele-health services. Today I will address the skilled nursing and personal care, or QSP (Quality Service Provider) services provided by home health agencies.

QSP services are provided by individuals, proprietary agencies, and home health care agencies. Home health agency QSP services are provided within a medical model of care. These agencies are certified by Medicare and licensed by the state of North Dakota. Agency QSP providers are generally CNAs or, minimally, nurse assistants registered in the state, who are directly supervised by a registered nurse. These CNAs receive ongoing education and evaluation of their skills and abilities.

In 2006, NDAHC surveyed its membership to determine the number of agencies providing these services, the level at which they were reimbursed, as well as their cost to provide the services. At that time, there were 17 agencies providing this care, with varying levels of reimbursement. The average reimbursement in 2006-2007 was $15.14 per hour with an average cost of $22.92 to provide this care.

The 2007 Legislature addressed the reimbursement for personal care services, standardizing the reimbursement rate among agencies and providing a positive increase. Currently, these services are reimbursed at a maximum of $19.64 per hour.

A recent survey of our members concluded that the average cost to provide personal care services in the year 2008 was approximately $27.75 per hour. Although we are very appreciative of the 7/7% inflationary increase in the Governor's budget, we are requesting a 15% increase in personal care payments, in addition to the 7/7% inflationary increase.

Comparing QSP home health care claims from 2006 to 2008, all agencies providing these services are continuing to do so. The number of clients served for the 11 months of data in 2006 was 516. For the 12 months ending 06/30/08, the number of clients being served only by home health agencies was 523. As you can see, the demand for these services has not decreased. In fact, based on the demographic trends throughout the state, particularly with regard to our aging population, we only expect the number of clients we serve to increase.

Skilled care services provided by home health agencies include skilled nursing, physical therapy, speech therapy, and occupational therapy.

According to the Provider Fee Schedule from the Department of Human Services, the current allowable charge for home health providers is $81.60 per visit. The average cost for these skilled services was $126.28 per visit. We are requesting an increase in the Provider Fee Schedule by 15%, in addition to the annual 7% increase recommended in the governor's budget. When home health and QSP services are provided, our citizens can remain at home. They buy groceries and pay taxes and utilities. Some may volunteer and may have jobs while utilizing these QSP or skilled services.

The caregivers providing these services are qualified and could work in any facility—hospital, SNF, or DDMR facility—and should be paid like wages, regardless of where they work. This increase would be an important move toward minimizing the deficit between the amounts paid to agencies and the actual costs to provide such services, and keep more North Dakotans at home.

Thank you for the opportunity to testify before you today. We appreciate your consideration of our situation. I would be happy to answer any questions you might have.

C

Testimony for HB 1012
House Appropriations
January 26, 2009

Good afternoon Chairman Pollert and members of the House Appropriations - Human Resource Division. My name is Cathy Schmidt, I am the Director of Valley View Heights Assisted Living here in Bismarck. I am here to testify on behalf of assisted living facilities throughout North Dakota and I am here to ask for your support of an OAR within the Department of Human Services budget. The OAR was not in HB 1012 and it would have provided $2.1 million to support low and moderate income individuals so they could access assisted living.

These are people who couldn't have planned for assisted living when they were in their 40's and 50's because assisted living didn't exist. They are finding now that they either can't afford to enter an assisted living community or once they're in one they may not be able to stay in their home because their funds have run out. Just last month one of my own tenant's daughters informed us that her mother only had a month left of resources to live at Valley View Heights. This is a lady who worked as a secretary most of her adult life and moved in because of dementia. Since last month, this lady was discharged to a nursing home that takes Medicaid and the move has made such a negative impact on her dementia that she was admitted within days to a secured memory care unit.

As a member of Money Follows the Person Housing subcommittee, and the Department of Human Services Assisted Living Workgroup, I hear of the need for a rent subsidy from other committee members such as the Housing Authority, Protection and Advocacy, the Option Resource Center for Independent Living, as well as AARP. These groups are finding that the "nearly poor" are falling through the cracks in North Dakota.

Why are they choosing assisted living? Assisted living usually offers an apartment setting as opposed to a single room. Because most tenants are leaving their own home to move to these communities it is important to know that these apartments do not have the feel of an institution but rather a social setting. Tenants are as independent as they can tolerate much like you and I. They are able to continue to live independently - with some help.

These tenants are an average age of 85 years old. They are leaving their homes primarily because of physical decline, cognitive decline or both. They can no longer do the things necessary to maintain their homes or health but they're not ready for a skilled nursing facility. Some simply need assistance with housekeeping, laundry, meals, transportation and other incidental activities of daily living. While others need those services as well as medication oversight, assistance with bathing, dressing and supervision.

Well over 90% of tenants who live in assisted living are self pay. They saved for a rainy day and are now spending down their savings as life starts to "sprinkle" on them a little. Unfortunately, some were not able to save enough to stay in assisted living while others were not able to get into assisted living at all because they just couldn't get the help.

It's heartbreaking to see the people who call or come into our facilities looking for a place to live that do not quite qualify for Medicaid but don't have enough resources to come into these apartments on their own. SPED programs are available to help these individuals with the service component but it does not help with the housing component keeping assisted living out of reach for many.

In conclusion, I ask that you support the $2.1 million OAR within the Department of Human Services budget. By doing so you will be giving a hand up to those elderly North Dakotans who fall through the cracks of available housing. Thank you for your time.

Testimony for HB 1012
O.A.R. 5
Senate Appropriations
March 9, 2009

Good afternoon Chairman Holmberg and members of the Senate Appropriations committee. My name is Cathy Schmidt, I am the Director of Valley View Heights Assisted Living here in Bismarck. I am here to testify on behalf of assisted living facilities throughout North Dakota and the North Dakota Long Term Care Association but most importantly, I am here on behalf of the elderly and disabled who need a little help to obtain housing options. I am here to ask for your support of OAR #5 within the Department of Human Services budget. The OAR was not in HB 1012 and it would have provided $2.1 million to support low and moderate income individuals so they could access assisted living.

These are people who couldn't have planned for assisted living when they were in their 40's and 50's because assisted living didn't exist. They are finding now that they either can't afford to enter an assisted living community or once they're in one they may not be able to stay in their home because their funds have run out. Just a couple months ago one of my own tenant's daughters informed us that her mother only had a month of resources left to live at Valley View Heights. This is a lady who worked as a secretary most of her adult life and moved in because of dementia. This lady was discharged to a nursing home that takes Medicaid and the move made such a negative impact on her dementia that she was admitted within days to a secured memory care unit.

As a member of Money Follows the Person Housing subcommittee, and the Department of Human Services Assisted Living Workgroup, I hear of the need for a rent subsidy from other committee members representing; the Housing Authority, Protection and Advocacy, the Option Resource Center for Independent Living, as well as AARP. These groups are finding that the "nearly poor" are falling through the cracks in North Dakota. As you heard in testimony last Wednesday, the Minot State University study on affordable housing for the elderly reinforces this.

Why are they choosing assisted living? Assisted living usually offers an apartment setting as opposed to a single room. Because most tenants are leaving their own home to move to these communities it is important to know that these apartments do not have the feel of an institution but rather a social setting. Tenants are as independent as they can tolerate much like you and I. They are able to continue to live independently - with some help.

These tenants are an average age of 85 years old. They are leaving their homes primarily because of physical decline, cognitive decline or both. They can no longer do the things necessary to maintain their homes or health but they're not ready for a skilled nursing facility. Some simply need assistance with housekeeping, laundry, meals, transportation and other incidental activities of daily living. While others need those services in addition to medication oversight, assistance with bathing, dressing and supervision.

Well over 90% of tenants who live in assisted living are self pay. They saved for a rainy day and are now spending down their savings as life starts to "sprinkle" on them a little. Unfortunately, some were not able to save enough to stay in assisted

living while others don't even make it in the door at all because they just couldn't get the help.

It's heartbreaking to see the people who call or come into our facilities looking for a place to live that do not quite qualify for housing assistance but don't have enough resources to come into these apartments on their own. SPED programs are available to help these individuals with the service component but it does not help with the housing component keeping assisted living out of reach for many.

In conclusion, I ask that you support the $2.1 million OAR within the Department of Human Services budget. By doing so you will be giving a hand up to those elderly North Dakotans who fall through the cracks of available housing. Thank you for your time.

1/26/09

Representative Chet Pollert, Chairman Human Resources

Chairman Representative Pollert and committee members. My name is Allan Metzger, past administrator of Golden Acres Manor, a 60 bed skilled nursing facility in Carrington.

I am here to ask for your support on funding legislation for what is termed, "wage pass through" for long term care employees. I thank you in advance for allowing me the time to address this committee.

In my opening statement I used the term past administrator. I retired this past December 2008. I had been the administrator of Golden Acres for 32 years. My reference to longevity will hopefully become clearer by the end of my testimonial.

As you debate a wage pass through for long term care employees, I want to step back in time. The year was 2001. The funding mechanism was Intergovernmental Transfer Funds. The legislature at that time created the funding for a wage pass through to long term care employees. The benefits of that legislative sessions' actions were profound and long lasting to Golden Acres Manor.

Prior to 2001, Golden Acres like other nursing homes were struggling to maintain staffing at most levels. Our jobs were viewed by many as secondary market income jobs. People would come and go at levels that would not ensure quality of care. The wage pass through could not have been timelier for the following reasons:

- July 2001 every employee received $1.65 per hour wage increase by-passing any corporate intent.
- After July 2001 the jobs went from secondary market jobs to jobs of choice.
- A wave of commitment and professionalism was brought to a higher level as the staff's attitudes went from knowing they were good, but why where they here, to knowing they were good and pleased that they were recognized for their efforts.
- Unfilled positions were filled.
- Quality individuals showed up asking for applications.
- Employees that gave of their time and talent decided to stay and are with us today.
- Our corporation was then able to take the biennial operating increases in funding and strengthen our health insurance program and create a 401-K retirement plan.

Golden Acres went from having okay jobs to "Career Jobs" because of the actions of some of you and former colleagues in 2001.

Today Golden Acres has a wage and benefit expenditure of $3.2 million while employing 90 plus individuals. Entry level support staff starts around $11.00 per hour, mid level around $16.00, and licensed and or degreed around $23.00, all receiving paid health insurance and 401-K benefits.

What you created in 2001, to your credit, was a stimulus package for the individual worker and it worked. It will work again in 2009. A 'wage pass through" will enhance the present staff and bring new staff into the health care industry by enhancing wages.

My passion is for my former staff that say, "I have a career in health care, not a job in health care". Because of a stimulus package on behalf of North Dakota Long Term Care Employees through past actions added many great years to my career in health care.

I ask for your support on House Bill 1012.

Thank You!

Allan Metzger
Past Administrator
Golden Acres Manor
Carrington, ND
701-652-3117

My name is Kurt Stoner and I am the administrator of Bethel Lutheran Home in Williston, ND. Bethel Lutheran Home is a 168 bed skilled nursing home and a 19 bed basic care facility. Through our Foundation we also offer senior living through 47 senior independent living apartments. I also currently serve as chairman of our North Dakota Long Term Care Association Board of Directors. I am here today on behalf of the 13,000 North Dakota residents who are provided care in basic care and nursing facilities throughout our state. This past year at Bethel we have experienced a staffing crisis that has not been equaled in my 17 years of service to that organization. We have stopped or slowed admissions numerous times throughout 2008 in an effort to maintain quality care for those we serve. In May of 2008 we increased salaries by 50¢ per hour for all of our staff in an effort to become more competitive with the local labor market. This adjustment was above and beyond the annual performance adjustment our employees are eligible on their anniversary date of employment. Although the salary adjustment did make a difference in our ability to attract staff we found we are still unable to compete in our local economy due to the heightened oil activity. In October of 2008, our Board of Directors approved an additional 50¢ per hour increase to all staff. Today our CNA's starting salary at 10.85 an hour. I am pleased to report following the second salary adjustment that our staffing improved significantly. However, the combination of slowing admissions (up to 16 open beds) while at the same time increasing our salaries is probably not an option for most nursing homes. Because of our reimbursement system in North Dakota the vast majority of these costs will not be recognized until 2010, with 8 months of the second 50¢ raise not

recognized until 2011 rate year. Bethel at this time is experiencing significant losses from operation. After our second salary adjustment our losses total over $~~160~~ 130,000 in November and December alone. Because of funded depreciation monies that have been previously set aside we are able to pay for these salary increases until our costs are recognized in future rate years. This however is not the case for many nursing homes. Since October our staffing has improved and we currently have only 6 open beds with prospect for several more admission. My story may be unique only because my set of circumstances involves an oil boom economy. However, in Fargo or Bismarck it may not be oil, but a diverse economy with more options available for prospective employees. In smaller communities you are competing for a limited number of workers in your geographic region. The end result however is the same. If we cannot offer competitive wages we cannot attract quality, compassionate caregivers. A salary/benefit pass through, however, will provide the upfront monies to allow facilities who do not have the cash reserves to pay a living wage to their employees and get those costs recognized immediately. North Dakotans are blessed to have 83 Nursing Homes and 58 Basic Care Facilities throughout our State. The majority of these facilities are non-profit facilities whose original mission statement resonates through the quality care they provide. I want to thank you for your time and ask for your support for the Governor's proposed inflator and salary/benefit pass through that that will allow all of us the ability to maintain our history of providing quality, compassionate care. Thank you.

1/26/2009

Amanda Chase
Sheyenne Care Center
Valley City, ND

Good Afternoon Chairman Pollert and Committee Members.

My name is Amanda Chase; I'm a Certified Resident Assistant at the Sheyenne Care Center in Valley City. I have worked as a Certified Resident Assistant for the last 13 years and LOVE what I do. The Resident's mean everything to me and I enjoy the relationship that I have developed with them over the years. I'm here in support HB1012 which contains the 7% inflator and consider an amendment to increase all long term care salaries and benefits by $2.00.

I'm married and have 5 children whose ages are Lane 11, MaKell 8, John 4, Parker 3, and Kathryn 4 months. My husband and I live 10 miles from town and both work in Valley City. This last year we experienced financial stress with the cost of everything going up. Which meant we had to seriously evaluate everything we do from gasoline we use to drive to work, to food cost and daycare.

Over the last 13 years I have worked full-time at 32 hours per week and my salary currently is $13.70 per hour. I work a total of 64 hours in a period of 2 weeks. I do not work more than this, as the cost of daycare would take my entire paycheck.

My gross income in 2 weeks is $920.20. After deductions of $173.25 medical insurance, $2.50 vision insurance, and $25.00 dental insurance, $36.81 in a 401K retirement plan, $7.46 for life insurance and the state and federal taxes totaling $144.90, my net pay, in what I bring home to my family, is $530.28 every 2 weeks. This gives my husband and I $265.14 per week to pay bills and buy the necessities for our family of 7 such as food, gasoline, clothing, a home mortgage, and heating oil.

Our income disappears very quickly. Our medical bills, even with insurance exceed $2000 per year. Our daycare expense for our children is $288 per month. We get by with a lesser expense of day care because I work the 3:00-11: 30 pm shift and they are not in daycare that long. Imagine our expense if I were to work a normal 8-5 shift.

As you know, these are only a few of our expenses we have in raising a family of 7. I truly don't know how basic care and nursing facility employees who make less money than I do survive.

Even though I love what I do, it has lead me to evaluate my career and financial situation for future income growth. I decided due to "higher costs" of living in ND, gas and food prices, to go back to college in 2007. I figured with a college degree, I would be able to bring home a better income for my family. I am now faced with $20,000 in student loans when I graduate in May. It is very depressing. Like I said earlier, I love what I do and I

would look at making my position as a Certified Resident Assistant a career if the financial income is such that helps my family.

As a Certified Resident Assistant at Sheyenne Care Center, I have helped residents through some of there most difficult times. I have helped residents who look at me as their family member and I have also sat with residents and cried during their final hours of life. There is no monetary reward large enough for helping people in times like this. But as a mother, I will always try to do what is best for my family.

The $2.00 salary enhancement would not only help our family and our financial situation but would help every basic care and nursing facility employees doing the same work everyday. Helping people!

I ask you to support HB1012, which contains the 7% inflator and consider an amendment to increase all long-term care salaries and benefits by $2.00. This will help me continue to care for our residents, which I love to do.

Thank you Chairman Pollert and committee members for giving me the opportunity to visit with you today. If you have any questions I would be happy to address them at this time.

Mr. Chairman and members of the committee, my name is Leontine Gabel. I have utilized services of Quality Service Provider's (QSP's) for the last 5 plus years. I never intended on ever using this service but because of a series of unfortunate events, I was forced to turn to QSP services. My late husband had Parkinsons Disease so he required much care. Since all our children were grown I had to do it alone, so I thought. Even though, our daughter offered to assist, I was "too proud" to say yes. I felt I made vows for "in sickness and in health" so I must take care of my husband.

In May 2003 while attending a social event at our church I had a stroke. I resided in a long term facility for 5 months before returning home. We were fortunate that our daughter acquired the information from Social Services to become a Qualified Service Provider. If it had not been for QSP Services we would have been forced out of our home long before we left. Not only was this helpful to us, it also saved the government a lot of money.

QSP's are extremely in demand and deserve a decent wage. Not everyone can do this type of work and as in all professions, there are some that are dishonest etc.. Overall there are many great QSP's that go above and beyond their call of duty. Sometimes even on their own time to help someone out, for instance, taking someone to the doctor because this individual has no family here; or taking a client to lunch and paying for both just so this client can get out. Remember this; someday you like me may need this service. We never know what our future will be. Consider this in your vote on House Bill 1012.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 9, 2009

Chairman Holmberg and members of the Senate Appropriations Committee, I am Jane Strommen, Director of Community of Care. I am here to testify and ask for your support of our program by including it in the Department of Human Services' budget. Community of Care is currently not part of House Bill 1012 or an OAR.

My purpose here today is to briefly summarize the work of Community of Care and explain its significant value to rural communities, their older residents, their families, and taxpayers.

Community of Care is a new membership-based non-profit organization. It began as a pilot project of the Good Samaritan Society's nursing home in Arthur. Its mission is to assure older adults and others in need in rural Cass have access to essential health, human, and spiritual services essential to their well being and offered within a community of faith. It was created to address the significant changes rural communities have experienced over the past decades and the resulting impact on older adults. The loss of farming as a main way of life, out migration of young people, and loss of local businesses have changed neighborhoods and communities in both subtle and overt ways. These changes have altered the sense of community, personal experiences and social relationships among the persons remaining in these communities. To mitigate some of the challenges of growing old in a rural environment, Community of Care has developed a number of social and

community supports identified as needed from a community planning process. Some of the services include information/referral and assistance, caregiver support, State Health Insurance Counseling, a volunteer program, health promotion, and education on relevant aging issues. Last year, over 600 unduplicated persons were served by staff, who partnered with 40+ community volunteers, with parish nurses, with civic and service clubs, with area youth, and with formal service providers. Collaboration and coordination with both formal and informal organizations helps to maximize current resources and minimize duplication. Last year, a formal interagency agreement was established between Community of Care and Cass County Social Services, Fargo-Cass Public Health, Fargo Senior Services, and the Family Caregiver Program (SEHSC). The purpose of the collaborative agreement is to assist the client in accessing eligible services so they can remain in their home or the least restrictive setting. The collaborative is a "no wrong door" approach, meaning regardless of which agency receives the initial client contact, the client is going to receive access to available services in the most simplified process possible.

Community of Care is working to improve the long-term care system in incremental, practical, commonsense ways and, at the same time, develop a model for other rural communities to create the capacity (not institution) to support its older residents. Community of Care currently has a contract with the Department through its Money Follows the Person Grant to provide planning of home and community-based service use in 10 counties.

Researchers have hypothesized that communities are perceived as 'good places to grow old' when relevant services are delivered, social ties exist,

and commitment to the needs of older residents is evident. Community of Care is striving to help rural Cass County be a good place to grow old. North Dakota faces significant challenges in being a good place to grow old because of rural depopulation, out migration of young adults, and an increasing proportion of elderly. In 2000, almost 60% of towns had a population of fewer than 250 people and, at the same time, 40 counties have been experiencing a loss in population. These trends pose serious concerns for the state in meeting the needs of its older citizens.

Community of Care is currently funded by grants, a United Way allocation, and local membership contributions from its 200+ individual and organizational members. We are requesting $120,000 during the next biennium so Community of Care can use its experience and knowledge learned to date to fully develop an efficient, flexible, local model and to conduct an evaluation to measure outcome objectives. The outcome objectives include: (1) Improve the availability and awareness of supports necessary to help older adults maintain their independence and remain in their homes and communities as long as possible; (2) Assist in re-vitalizing rural communities by providing access to healthcare and other essential services and by building community and faith-based partnerships, and (3) Realize cost savings to taxpayers by delaying utilization of institutional care and promoting more cost-effective services.

I would ask for your partnership in funding a program that could have a significant impact on the quality of life and financial well-being of many North Dakotans. I would be happy to answer any questions you may have.

Community of Care

Following are two examples of Community of Care providing care and support to individuals who otherwise would be at risk of pre-mature institutionalization or unnecessary hospitalizations:

The Need

Mr. E is a 47 year old who lives with his elderly father. He is disabled due to severe diabetes and other complicating health conditions. Last year, Mr. E developed a life-threatening infection which resulted in a lengthy hospital stay of over two months. The following months brought several re-hospitalizations and emergency room visits. Unless Mr. E's health status could be stabilized, he had few options other than being admitted to a nursing home. Community of Care was able to provide the assistance Mr. E desperately needed.

The Outcome

Mr E now has volunteers 4 days a week to get him to and from dialysis treatment, not including volunteers who provide rides for additional medical appointments. Community of Care assists Mr E with billing paying, paperwork and prescription and financial assistance. Because of his serious health condition, Community of Care provides close health monitoring directly and in collaboration with other health professionals to reduce the likelihood of unnecessary institutionalization or hospitalization. Since Community of Care started helping Mr E, he has been able to avoid a health crisis, has not had a hospital stay and has maintained a reasonable quality of life. Mr. E is a Medicaid client.

The Need

Mr. D is an 88 year old who lives alone. He lives a quiet life, keeping to himself, picking up aluminum cans in the community, and caring for his birds and cats. When he developed some health problems, his life changed. Having the flu and not being able to put weight on his legs left him bedridden and unable to summon help. It was several days before help arrived. Our Volunteer Coordinator, while stopping by for a visit, found Mr. D and was able to provide the help he critically needed.

The Outcome

Our Volunteer Coordinator was able to arrange for Mr. D to be hospitalized to get his health condition treated and stabilized. During a short-term nursing home stay for physical therapy, Mr. D was able to stay current with his bills, get his mail regularly, have someone check on his apartment, have his pets cared for, and have other errands done, as needed. Mr. D was able to leave the nursing home and return home to his apartment, pets, and friends because of Community of Care arranging and coordinating the efforts of both volunteers and health care professionals. Today, Community of Care helps manage his medical and service needs, arranges transportation, and assures his social and emotional needs are met. It is highly unlikely Mr D would be able to continue living in his own home and community without the assistance of Community of Care. Mr. D is also a Medicaid client.

Our funding request will allow us to develop an evaluation plan and gather the data to determine if the program is achieving a lower than expected incidence of institutional care or emergency room services in comparison to similar populations not served by this type of program.

A

Testimony
House Bill 1012 – Department of Human Services
Conference Committee
Representative Pollert, Chairman
April 23, 2009

Chairman Pollert and members of the Conference Committee, I am Jane Strommen, Director of Community of Care. Thank you for the opportunity to be here today to briefly summarize the work of Community of Care and explain its significant value to rural communities, their older residents, their families, and taxpayers.

Community of Care is a new membership-based non-profit organization. It began as a pilot project of the Good Samaritan Society's nursing home in Arthur. Its mission is to assure older adults and others in need in rural Cass have access to essential health, human, and spiritual services essential to their well being and offered within a community of faith. It was created to address the significant changes rural communities have experienced over the past decades and the resulting impact on older adults. To mitigate some of the challenges of growing old in a rural environment, Community of Care has developed a number of social and community supports identified as needed from a community planning process. Some of the services include information/referral and assistance, caregiver support, State Health Insurance Counseling, a volunteer program, health promotion, and education on relevant aging issues. Last year, over 600 unduplicated persons were served by staff, who partnered with 40+ trained volunteers, parish nurses, civic and service clubs, area youth, and formal service providers. Collaboration and coordination with both formal and informal organizations helps to maximize current resources and minimize duplication. Last year, a

formal interagency agreement was established between Community of Care and Cass County Social Services, Fargo-Cass Public Health, Fargo Senior Services, and the Family Caregiver Program (SEHSC). The purpose of the collaborative agreement is to assist the client in accessing eligible services so they can remain in their home or the least restrictive setting. The collaborative is a "no wrong door" approach, meaning regardless of which agency receives the initial client contact, the client is going to receive access to available services in the most simplified process possible. Here is one example of how Community of Care is working to keep people in their homes: Volunteer medical transportation is being provided to a 47 year old male who requires dialysis four times per week. He is a Medicaid client. Each day of dialysis, a volunteer drives 50 miles and gives six hours of his or her time. In addition, Community of Care staff provides assistance with bill paying and paperwork completion. Care coordination with family members, public health and county social services is provided so this gentleman's health care needs are met, preventing costly hospital stays, ER visits, and nursing home admission.

Community of Care is a unique model and different from the Aging and Disability Resource Center (ADRC) concept in the following ways:

- It is a flexible, non-bureaucratic organization that can respond effectively to local needs.
- It is a community-based program with a sense of ownership demonstrated through volunteerism, governance, and financial support.
- It is specifically a "rural" program that utilizes culturally sensitive approaches to reach and serve people.

- Community of Care has collaborated with community leaders and key service providers to develop needed services in the area.
- It does not have the stigma associated with county social service agencies.
- There is a demonstrated willingness of people to support and pay for this type of program, through membership and charitable gifts.

Community of Care has an annual budget of $175,000, with current revenue coming from foundation grants, charitable contributions, government contracts/grants, and a United Way allocation. We are requesting $120,000 during the next biennium so Community of Care can use its experience and knowledge learned to date to fully develop an efficient, flexible, local model and to conduct an evaluation to measure outcome objectives. Following are just a few of the benefits of this program:

- Addresses services found to be lacking or insufficient.
- Possesses a strong volunteer component as part of the program.
- Increases knowledge and awareness to help people access the current system of services.
- Promotes individual and community responsibility and support.
- Delays institutional care and promotes more cost effective services.

Community of Care is working to improve the current long-term care system in incremental, practical, commonsense ways, and at the same time, develop a model for other rural communities. I would ask for your approval of this funding request. Thank you.

North Dakota Department of Human Services

2007 - 2009 Budget
24 FTEs

Revised 1/7/09

Testimony
House Bill 1012 – Department of Human Services
House Appropriations Human Resources Division
Representative Pollert, Chairman
January 13, 2009

Chairman Pollert, members of the House Appropriations Human Resources Division, I am Nancy McKenzie, Director of the Vocational Rehabilitation Division (VR) which includes the Disabilities Determination Services (DDS) unit of the Department of Human Services (DHS). I am here today to provide you with an overview of the program trends and budget requests in these two programs. Staff are responsible for administrative and policy direction in regard to a range of services for individuals with disabilities.

Programs

Vocational Rehabilitation is made up of 10 FTEs who are responsible for the administration of Titles I, VI, and VII of the Rehabilitation Act, as amended. As such, they are responsible for needs assessment, staff training, site plan development and outcome monitoring, development of policy, quality assurance, client advocacy through the Client Assistance Program, oversight of expenditure of federal VR funds, and compliance with federal rules.

To carry out these responsibilities, VR unit staff work with regional VR staff at the human services centers, with community business partners, schools and universities, Job Service, the State Rehabilitation Council, the State Independent Living Council, Centers for Independent Living, federal oversight agencies, and other private and public entities involved in rehabilitation services.

Statewide Trends

- Veterans' Needs: Projections indicate that there is a growing population of returning veterans with traumatic brain injury problems. We anticipate increased need in this area, and VR is working with the Veterans Administration to prepare for this.
- Workforce Development: VR works closely with the Governor's Workforce Development initiative, to assist in preparing individuals for employment in those sectors of highest need in the state. Individuals with disabilities are an important part of the total job pool for North Dakota.
    - Job Market Impact: North Dakota's low rate of unemployment and number of available open positions has resulted in fewer individuals seeking VR assistance. We are focusing on assisting employers to not only continue recruiting, but to retain employees with disabilities who may need workplace evaluations or modifications.
- Transition-age Youth: This population sector presents special needs in the areas of employment and independent living.
- Increased Federal Accountability Requirements:
    - Both the RSA and the Social Security Administration are placing great emphasis on achievement of state plan outcomes and adherence to federal outcome guidelines. Failure to meet these expectations can result in sanctions including plans of correction and possible loss of funds.
    - RSA review of VR programs in November 2008 showed North Dakota to be achieving its goals and standards; we are awaiting the written report with recommendations for

changes, particularly in the areas of quality improvement and long-range fiscal planning.

- SSA determines annual workload goals, goals for quality and goals for claims completion time in the DDS unit.

Accomplishments

- 903 individuals were assisted into employment following VR services during FFY 2008.
  - Of these, 88% were individuals with a significant disability.
  - Over 98% receive pay at or above minimum wage.
  - Average hours worked per week changed from 10 to 33; average earnings increased from $92.92/week to $377.46/week at closure.
  - Client Payback: for every $1.00 spent by VR for FFY 2008, clients pay back $2.01 in taxes.
- The Social Security Administration reimbursed the VR program $315,735 in FFY 2008. This represents reimbursement for 33 successful closures of individuals previously receiving disability payments.
- VR co-chairs the state Transition Steering Committee, which brings together multiple service providers for youth, to improve services and reduce duplication. The Community of Practice model includes working groups in all regions of the state.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase/ Decrease
Salary and Wages	3,322,451	4,155,296	832,845
Operating	1,522,560	2,102,575	580,015
Grants	18,817,218	19,750,721	933,503
Total	23,662,229	26,008,592	2,346,363
General Funds	4,259,542	5,200,705	941,163
Federal Funds	19,295,687	20,717,664	1,421,977
Other Funds	107,000	90,223	(16,777)
Total	23,662,229	26,008,592	2,346,363
FTE	34.00	34.00	0.00

- The salary and wages line item increased by $832,845, and can be attributed to the following:
  - $377,913 in total funds of which $92,506 is general fund to fund the Governor's salary package for state employees.
  - $21,770, of which $17,019 is general fund, to continue the second year of the 4% salary increase.
  - The remaining $433,162, which includes a decrease of $46,883 in general fund, is a combination of increases and decreases needed to sustain the salary of the 34 FTE in this area of the budget.

- The operating line item increased by $580,015 (6%). This includes $92,620 in general funds and is a combination of the increases expected next biennium which are offset by decrease as follows:
  - Increase of $48,584 in rentals/leases for building space;
  - Increase of $157,935 in travel to required federal meetings;
  - Increase in operating fees and services: in VR, this includes $343,180 for the public awareness media campaign. Public

input meetings have regularly indicated that this is a critical part of reaching out to our target population.
    - Increase of $57,520 in printing costs;
    - Increase of $43,319 in professional development and professional fees;
    - Decreases of $70,523 in office furniture, supplies, and postage offset these increases.

- The grants line item increases by $933,503. $800,000 of this increase is general funds, related to the Governor's budget increase for independent living services. This increase will continue the effort to expand that program statewide, reaching more individuals who can be assisted to remain living in their homes in the community.
    - The remaining $133,503 includes increases in federal funds of $154,602 and is offset by decreases in general fund of $14,099 and other funds of $7,000.

- FTE: There are no FTE changes in this budget.

This concludes my testimony; I would be happy to answer any questions you may have. Thank you.

	07-09		09-11		Breakdown of Rate Increases			Rate	Utilization	Total
	Trips	Budget	Trips	Budget	Lodging	Mileage	Airfare	Increase	Increase*	
Total Non-Employee Trips	132	$ 26,210	179	$ 45,427	$ 600	$ 573	$ 2,000	$ 3,173	$ 16,044	$ 19,217
Total In-State Trips	370	$ 48,065	426	$ 96,798	$ 3,012			$ 3,012	$ 45,721	$ 48,733
Total Out-of-State Trips	60	$ 90,363	96	$ 180,348			$ 12,000	$ 12,000	$ 77,985	$ 89,985
Total		$ 164,638		$ 322,573	$ 3,012	$ 573	$ 12,000	$ 18,185	$ 139,750	$ 157,935

*Explanation of usage increases:

Non-Employee Trips increased due to increased participation by members of State Rehab Council and the need to have a DDS medical consultant provide outreach services. Out-of-state trips are for State Independent Living Council (SILC) members to attend the National SILC Congress and the National CIL conference. One trip has been included for one of the DDS medical consultants.

In-State Trips increased due to needs for additional monitoring required by federal regulations.

Out-of-State Trips increased due to meetings required by federal governing agencies for VR and DDS. Also, the Social Security Administration (SSA) is beginning the work to replace their current computer system and is requiring multiple meetings on the development of the new system.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Nancy McKenzie from the Department of Human Services (DHS). I am here today to provide you with an overview of the program trends and budget requests for the Vocational Rehabilitation Division, which includes the Disability Determination Unit. Staff in these areas are responsible for administrative and policy direction in regard to a range of services for individuals with disabilities.

Programs

Vocational Rehabilitation is made up of 10 FTEs who are responsible for the administration of Titles I, VI, and VII of the Rehabilitation Act, as amended. As such, they are responsible for needs assessment, staff training, site plan development and outcome monitoring, development of policy, quality assurance, client advocacy through the Client Assistance Program, oversight of expenditure of federal VR funds, and compliance with federal rules.

To carry out these responsibilities, division staff work with regional VR staff at the human services centers, as well as community business partners, schools and universities, Job Service, the State Rehabilitation Council, the State Independent Living Council, Centers for Independent Living, federal oversight agencies, and other private and public entities involved in rehabilitation services.

The services are funded through federal funds received through the Department of Education, Rehabilitation Services Administration (RSA), along with the required general fund match. The federal participation level is 78.7%.

Disabilities Determination Services includes 24 FTEs who are responsible for individual eligibility determination for Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) statewide. The staff receive claims from the local Social Security offices, gather supporting data, and determine whether or not an individual meets the federal criteria for enrollment in SSDI or SSI.

DDS services are funded 100% through federal funds received from the Social Security Administration.

Clients Served

Vocational Rehabilitation – FFY 2008

- 6,472 individuals received employment services through VR. This is a decrease from the previous year, impacted by North Dakota's strong job market and availability of employment.
- 8,198 individuals received independent living services; this is an increase from the previous year, with additional funding for the Independent Living Centers supported by the 2007 Legislature.
- 319 employers hired or retained VR clients as the result of a VR contact. 3,260 total employer contacts took place.
- 1,109 individuals were served through the Older Blind Program.

Disability Determination Services – FFY 2008

- 5,563 eligibility applications were cleared for SSI/SSDI.

Statewide Trends

- Veterans' Needs: Projections indicate that there is a growing population of returning veterans with traumatic brain injury problems. We anticipate increased need in this area, and VR is working with the Veterans Administration to prepare for this.
- Workforce Development: VR works closely with the Governor's Workforce Development initiative, to assist in preparing individuals for employment in those sectors of highest need in the state. Individuals with disabilities are an important part of the total job pool for North Dakota.
    - Job Market Impact: North Dakota's low rate of unemployment and number of available open positions has resulted in fewer individuals seeking VR assistance. We are focusing on assisting employers to not only continue recruiting, but to retain employees with disabilities who may need workplace evaluations or modifications.
- Transition-age Youth: This population sector presents special needs in the areas of employment and independent living.
- Increased Federal Accountability Requirements:
    - Both the RSA and the Social Security Administration are placing great emphasis on achievement of state plan outcomes and adherence to federal outcome guidelines. Failure to meet these expectations can result in sanctions including plans of correction and possible loss of funds.
    - RSA review of VR programs in November 2008 showed North Dakota to be achieving its goals and standards; we are awaiting the written report with recommendations for changes, particularly in the areas of quality improvement and long-range fiscal planning.

- SSA determines annual workload goals, goals for quality and goals for claims completion time in the DDS unit.

Accomplishments

- 903 individuals were assisted into employment following VR services during FFY 2008.
  - Of these, 88% were individuals with a significant disability.
  - Over 98% receive pay at or above minimum wage.
  - Average hours worked per week changed from 10 to 33; average earnings increased from $92.92/week to $377.46/week at closure.
  - Client Payback: for every $1.00 spent by VR for FFY 2008, clients pay back $2.01 in taxes.
- The Social Security Administration reimbursed the VR program $315,735 in FFY 2008. This represents reimbursement for 33 successful closures of individuals previously receiving disability payments.
- VR co-chairs the state Transition Steering Committee, which brings together multiple service providers for youth, to improve services and reduce duplication. The Community of Practice model includes working groups in all regions of the state.

Overview of Budget Changes

Description	2007-2009 Budget	Increase/ Decrease	2009-2011 Budget	House Changes	To Senate
Salary and Wages	3,322,451	832,845	4,155,296	(8,119)	4,147,177
Operating	1,522,560	580,015	2,102,575	(73,338)	2,029,237
Grants	18,817,218	933,503	19,750,721	(400,000)	19,350,721
Total	23,662,229	2,346,363	26,008,592	(481,457)	25,527,135
General Funds	4,259,542	941,163	5,200,705	(419,762)	4,780,943
Federal Funds	19,295,687	1,421,977	20,717,664	(50,706)	20,666,958
Other Funds	107,000	(16,777)	90,223	(10,989)	79,234
Total	23,662,229	2,346,363	26,008,592	(481,457)	25,527,135
FTE	34.00	0.00	34.00	0.00	34.00

Budget Changes From Current Budget to Executive Budget:

- The salary and wages line item increased by $832,845, and can be attributed to the following:
  - $377,913 in total funds of which $92,506 is general fund to fund the Governor's salary package for state employees.
  - $21,770, of which $17,019 is general fund, to continue the second year of the 4% salary increase.
  - The remaining $433,162, which includes a decrease of $46,883 in general fund, is a combination of increases and decreases needed to sustain the salary of the 34 FTE in this area of the budget.

- The operating line item increased by $580,015 (6%). This includes $92,620 in general funds and is a combination of the increases expected next biennium which are offset by decrease as follows:
  - Increase of $48,584 in rentals/leases for building space;
  - Increase of $157,935 in travel to required federal meetings;

- Increase in operating fees and services: in VR, this includes $343,180 for the public awareness media campaign. Public input meetings have regularly indicated that this is a critical part of reaching out to our target population.
- Increase of $57,520 in printing costs;
- Increase of $43,319 in professional development and professional fees;
- Decreases of $70,523 in office furniture, supplies, and postage offset these increases.

- The grants line item increases by $933,503. $800,000 of this increase is general funds, related to the Governor's budget increase for independent living services. This increase will continue the effort to expand that program statewide, reaching more individuals who can be assisted to remain living in their homes in the community.
  - The remaining $133,503 includes increases in federal funds of $154,602 and is offset by decreases in general fund of $14,099 and other funds of $7,000.

- FTE: There are no FTE changes in this budget.

House Changes

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $2,666 general fund and $5,453 federal funds for a total of $8,119.

- The House reduced 50% of the department-wide travel increase. The VR/DDS share of this decrease is $73,338 total funds; $17,096 general fund.
- The House reduced 50% of the increase in the grants line item for Independent Living Centers, from $800,000 to $400,000, all of which is general fund.

This concludes my testimony; I would be happy to answer any questions you may have. Thank you.

A

Global Behavioral Health Initiative

Description:

Our aim in developing the Global Behavioral Health Initiative was to address as one issue those needs that have impact across the system of care for mental health and substance abuse services. Thus, this was developed to address the following specific goals:

- To more fully develop the continuum of care available to serve clients in least restrictive, community-based settings. This was determined based on input from stakeholder meetings, contracted providers, and DHS regional program staff.
- To impact the North Dakota State Hospital census, which has frequently exceeded 100% during the current biennium; and,
- To provide a consistent rate for all Human Service Center contracts with local hospitals that better meets their actual costs of providing the service. As noted in my overview testimony for the Human Service Center, the current payment structure puts us at risk of losing these local services.

Testimony
House Bill 1012 – Department of Human Services
House Appropriations - Human Resources Division
Representative Pollert, Chairman
January 14, 2009

Chairman Pollert, members of the House Appropriations Human Resources Division, I am Nancy McKenzie, Statewide Director of the Regional Human Service Centers (HSCs) for the Department of Human Services (DHS). I am here today to provide you with an overview of the budget, program trends and direction in the regional centers. Your committee will later receive specific testimony from each of the center directors.

Human Service Centers

- The 8 Regional Human Service Centers are a network of outpatient behavioral health clinics that serve individuals whose illness, addiction, disability or conditions place them at risk of harm or institutional placement. They provide an important community safety net for our most vulnerable citizens, to ensure that services are available and accessible at the most appropriate and cost-effective level of care.
- Each of the centers provides the "Core Services" as outlined in the attached document. We continue to place a high value on alignment across the regions, operating as one public system that shares resources as needs and demands shift.
- Services are provided within the clinic setting, various rural outreach centers, in client homes, or other community settings, and include 24-hour emergency services as well as follow-up services.

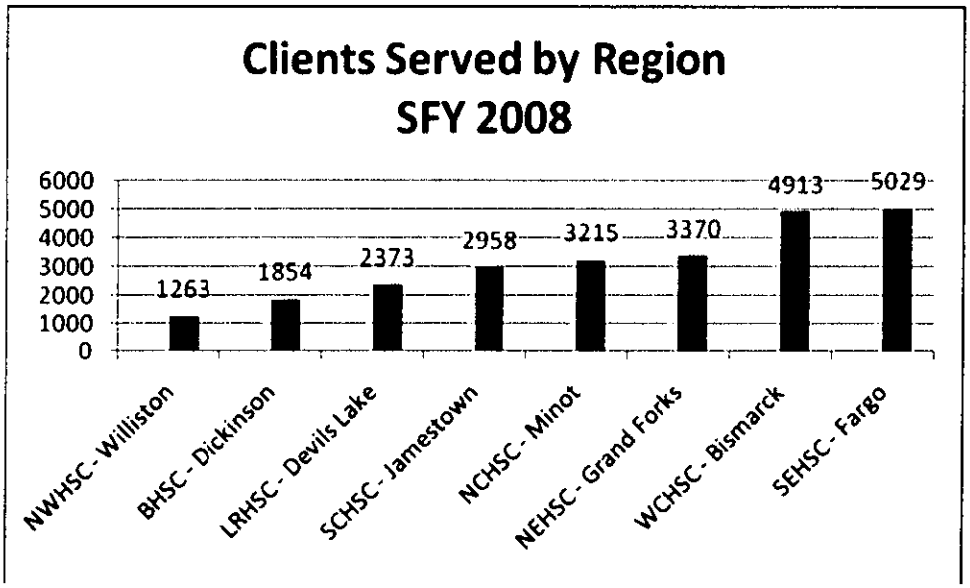
- In addition to direct evaluation and treatment services, the HSCs are responsible for program supervision and regulatory oversight of the Child Welfare services provided by county social services as well as oversight of the Aging Services programs in their regions.

Clients Served

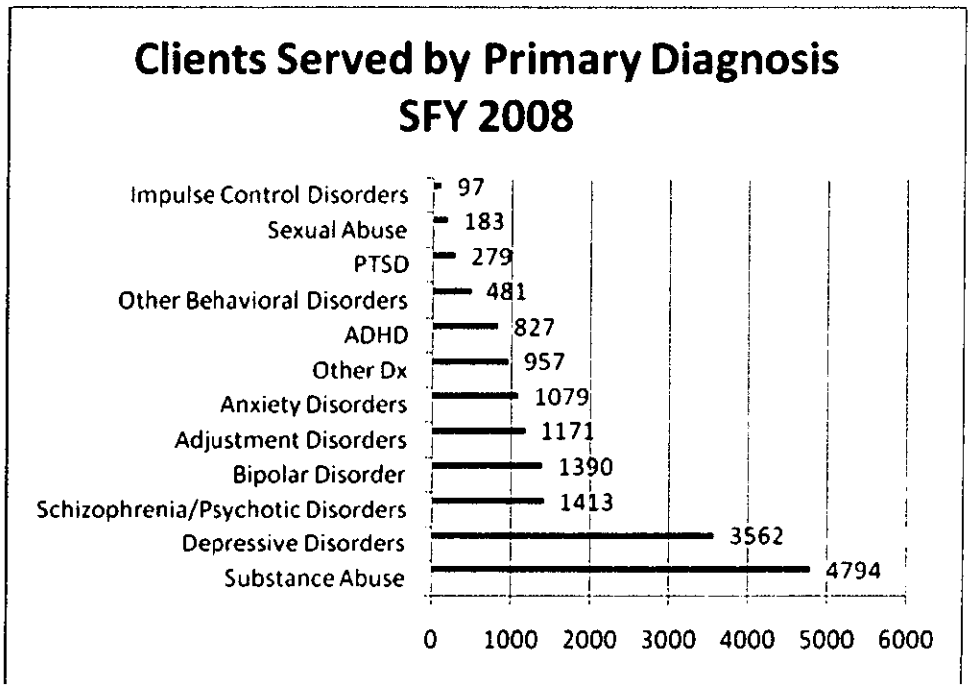
Demographics of those served in State Fiscal Year 2008 include:

- Over 24,975 individuals were served excluding Vocational Rehabilitation (VR); this is an approximately 3.5% increase over the prior year, and represents 4% of North Dakota's residents. Individual regions served from 3-6% of their population base.
- 25% of clients served were children; 75% were adults.
- Only 10% of clients are served just once (evaluation, etc.), while 90% receive services over a period of time.
- During the same period, VR served 6,472 individuals, many of whom received other HSC services as well. Older Blind programs served 1,105 individuals.
- 43% of HSC clients qualify for no fee on the sliding fee scale; of those, 21% have no third party payment source.

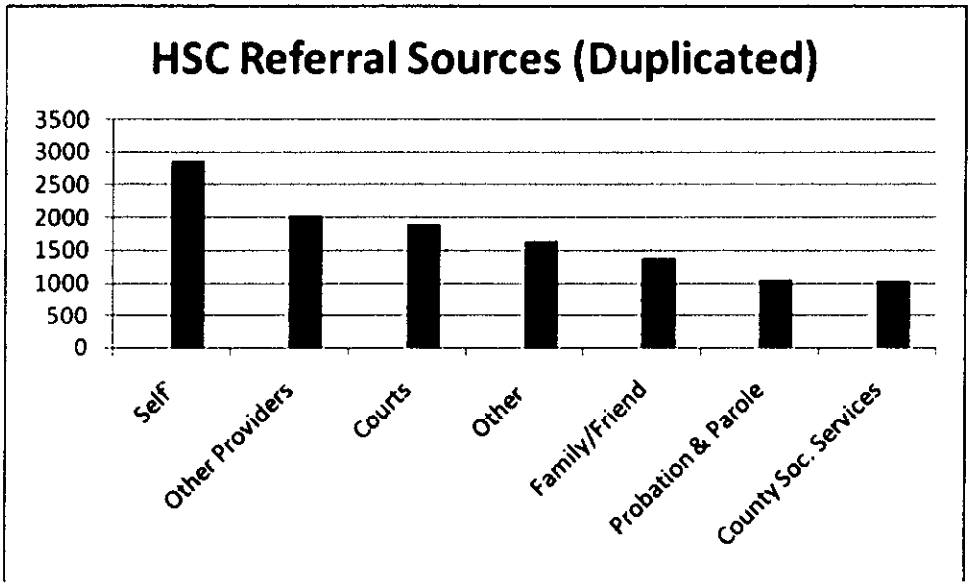
The following graphics further show the demographics of statewide HSC clients:



(Note: Despite unique regional differences/needs, clients served range in order of regional population sizes.)



(Note: 67% of clients receive a primary diagnosis; others are emergency services or DD clients.)



Statewide Trends

- Demand for services continues to stress current capacity, particularly in the more populated areas of the state. In the current biennium, the State Hospital census has exceeded 100%. There has been increasing concern from our local hospital partners due to longer lengths of stay in those facilities, often beyond available contract dollars. One of those providers, the Dickinson St. Joseph's Hospital, closed its inpatient psychiatric unit during the current biennium.
- Many of the clients served by the HSCs receive multiple services; this is not surprising when one considers that many have multiple diagnoses, a tendency to homelessness, and need for maintenance services. We work to wrap critical services around these individuals in the community, to support their stability and recovery, minimize

symptoms, and decrease the potential for more costly hospitalization.

- Primary services provided to HSC clients, in descending order of clients served, include:
    - Case Management
    - Evaluation/Intake
    - Medication Review/Therapy with Medication Review
    - Nursing Services
    - Individual Therapy
    - Information and Referral
    - Group Therapy
    - Family Therapy
    - Emergency Services
    - Other Services
- The HSCs have fallen behind in their ability to compete for and hire professional staff in the marketplace. We have worked hard on internal staff development to assist in filling addiction counselor positions, and continue to have ongoing psychology and psychiatry vacancies.
    - Staff vacancies in hard-to-fill positions result in longer client wait times. We monitor our wait times, with a goal of seeing non-emergent clients within two weeks of referral. Wait times that exceed that goal are consistently due to staff vacancies.
    - Future planning to meet recruitment and succession needs of retiring staff has been undertaken with DHS Human Resource staff, and has included additional supervisory and leadership development training.

Accomplishments

I am pleased to report progress in several initiatives undertaken by the Human Service Centers:

- Further implementation of evidence-based practices in all of the regions continues. This results in more consistent implementation of services, and better outcome tracking for specific interventions. As further testimony will describe, evidence-based practices are now implemented in all regions and for several client populations (children with emotional disturbances, adults with serious mental illness, adults with dual diagnoses, etc.). A strong focus on recovery principles results in clients working closely with staff to determine appropriate goals and needed supports.
- Community residential capacity for clients needing additional living supports increased in the current biennium, the result of funding supported by the 2007 Legislature. This enables us to provide appropriate alternatives to hospitalization and to have available a more complete continuum of community services.
- We continue to collaborate with the Department of Correction and Rehabilitation (DOCR) to provide timely and appropriate follow-up treatment services for individuals following release from prison. Advance release planning has resulted in more prompt psychiatric follow-up upon release from prison.
- Flexible models of service delivery such as telemedicine are being successfully utilized and will continue to be expanded. This has had a positive impact in our rural state for individuals who have difficulty accessing needed treatment. I anticipate continued growth in the use of telemedicine by our own psychiatrists, which will help us meet needs in difficult-to-fill rural positions.

Overview of Budget Changes – Human Service Centers Combined

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / (Decrease)
HSCs / Institutions	128,741,073	152,511,350	23,770,277
General Funds	62,736,289	79,878,717	17,142,428
Federal Funds	59,773,910	65,670,482	5,896,572
Other Funds	6,230,874	6,962,151	731,277
FTE	836.48	847.48	11.00

The major changes can be explained as follows:

- The Governor's salary package recommendation requires $9.6 million total funds (40% the overall increase) with $7.2 million being from the general fund.
- The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $1.5 million total funds with $1.1 million being from the general fund.
- In order to address resource needs at the Regional level for individuals who need more structured, supervised care, while simultaneously addressing capacity issues at the State Hospital, the budget includes funding across the Human Service Center system of $4.4 million total funds with $3.9 being from the general fund. This funding is to accomplish the following:
    - Provides consumers with more appropriate levels of care and to reduce our dependence on the ND State Hospital, and includes funding for crisis beds in the Minot region, supported residential and detox services in the Grand Forks region, staffing needs as it relates to the Cooper House residential project in the Fargo region (4 FTEs), an addition of a case manager in the Jamestown region to assist with addiction

caseloads, and long term residential services in the Dickinson region.

  - Provides for a consistent rate of payment for local inpatient hospitalization of our clients who are indigent, which will be on par with the newly proposed Medicaid rebased reimbursement rate.

- An increase of 6 FTEs, mainly for capacity issues, requires $600,000 total funds with $300,000 being from the general fund.
- Other salary changes have been required to meet critical market shortages or to provide temporary staff to meet increased consumer demand requires $1.6 million total funds, with approximately $710,000 being from the general fund.
- Provides for young adult transitional residential services in the Bismarck and Fargo regions. Total increase is $1.2 million with $835,000 being from the general fund.
- Provides for a 7% inflationary increase for each year of the biennium for contracted services - $2.7 million total increase with $2.5 million being from the general fund.
- Provides $1.9 million in total with approximately $867,000 from the general fund for the continuation of contracted services in the regions and the unforeseen funding issues for the providers we currently contract with predominately in the Minot, Grand Forks and Bismarck Regions.

In summary, while client needs/complexity present challenges, the HSCs have taken a number of positive steps to meet needs in a cost-effective manner. The proposed 2009-20011 budget will allow us to continue and improve those efforts. This concludes my overview testimony for the Human Service Centers; I would be happy to answer any questions.

SUMMARY OF CORE SERVICES
DEPARTMENT OF HUMAN SERVICES
REGIONAL HUMAN SERVICE CENTERS

Aging Services:

- Aging Services Administration
- Vulnerable Adult Protective Services
- Long-Term Care Ombudsman Program
- Adult Family Foster Care Licensure

Developmental Disabilities

- Case Management
- Day Supports (Southeast)
- Extended Services (Northwest and Badlands)

Vocational Rehabilitation

- Assessment for eligibility and rehabilitation needs
- Counseling and Guidance
- Information and Referral
- Job related services
- Vision Services
- Supported Employment Services
- Rehabilitation Technology Services
- Business Services including ADA Consultation and Assessment

Child Welfare Services

- Program Supervision – Regional Reps and Child Care Licensing Specialists
- Parental Capacity Evaluation
- Foster Parent Support Services
- Acute/Clinical Services as deemed clinically appropriate

Children's Mental Health

- Level I Criteria
  - Care Coordination
  - Acute/Clinical Services as deemed appropriate
- Level II Criteria
  - Care Coordination
  - Case Aide Services
  - Crisis Residential/Safe beds
  - Flexible funding
  - Acute Clinical Services as deemed appropriate

Serious Mental Illness (Extended Care Coordination)

- Care Coordination
- Case Aide Services
- Needs-based array of residential services
- Community Support Services
- Medical Management
- Acute/Clinical Services as deemed clinically appropriate

Acute Clinical Services

- Core Populations:
  - Self Harm/Suicide
  - Child Abuse and Neglect
  - Foster Care/ Subsidized Adoption
  - Acute Psychiatric
- Services
  - Psychological evaluation and testing
  - Psychiatric evaluation
  - Clinical evaluation
  - Individual Therapy
  - Group Therapy
  - Family Therapy
  - Clinical Case Management
  - Medication Management
  - Crisis Residential
  - Short Term Hospital
  - Lab and Clinical Screening

Substance Abuse Services

- Care Coordination/Case Aide
- Evaluation
- Social and Medical Detoxification Services
- Needs based array of primary treatment services
  - Low intensity outpatient
  - Intensive outpatient
  - Day treatment
- Needs validated residential services
- Medication/Medical monitoring/Management

Crisis/Emergency Response Services

- 24-hour a day/7-days a week crisis call response from a designated, trained Center employee
- Regional Intervention Services
  - Screening
  - Gatekeeping/referral

Note: Funding varies depending upon the service and the financial status of the client for a combination of federal funding sources, general funds, and third party collections including private pay and insurance.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg and members of the Senate Appropriations Committee, I am Nancy McKenzie, Statewide Director of the Regional Human Service Centers (HSCs) for the Department of Human Services (DHS). I am here today to provide you with an overview of the budget, program trends and direction in the regional centers. Your committee will also receive specific written testimony from each of the center directors.

Human Service Centers

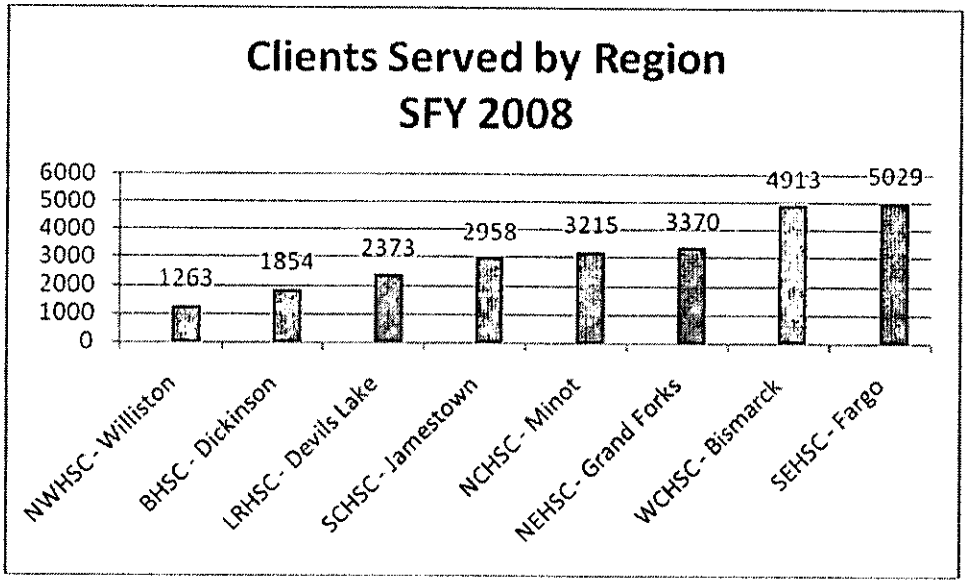
- The 8 Regional Human Service Centers are a network of outpatient clinics that serve individuals whose illness, addiction, disability or conditions place them at risk of harm or institutional placement. They provide the community safety net for our most vulnerable citizens, to ensure that services are available and accessible at the most appropriate and cost-effective level of care.
- Each of the centers provides the "Core Services" as outlined in the attached document. We continue to place a high value on alignment across the regions, operating as one public system that shares resources as needs and demands shift.
- Services are provided within the clinic setting, various rural outreach centers, in client homes, or other community settings, and include 24-hour emergency services as well as follow-up services.
- In addition to direct evaluation and treatment services, the HSCs are responsible for program supervision and regulatory oversight of the Child Welfare services provided by county social services as well as oversight of the Aging Services programs in their regions.

Clients Served

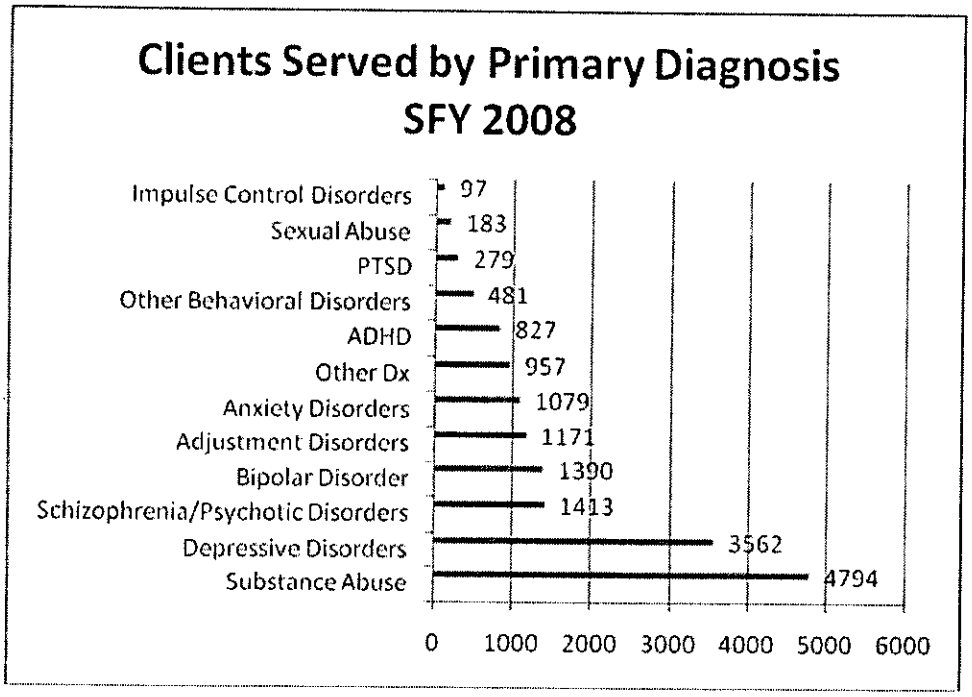
Demographics of those served in State Fiscal Year 2008 include:

- Over 24,975 individuals were served excluding Vocational Rehabilitation (VR); this is an approximately 3.5% increase over the prior year, and represents 4% of North Dakota's residents. Individual regions served from 3-6% of their population base.
- 25% of clients served were children; 75% were adults.
- Only 10% of clients are served just once (evaluation, etc.), while 90% required services over a period of time.
- During the same period, VR served 6,472 individuals, many of whom received other HSC services as well. Older Blind programs served 1,105 individuals.
- 43% of HSC clients qualify for no fee on the sliding fee scale; of those, 21% have no third party payment source.

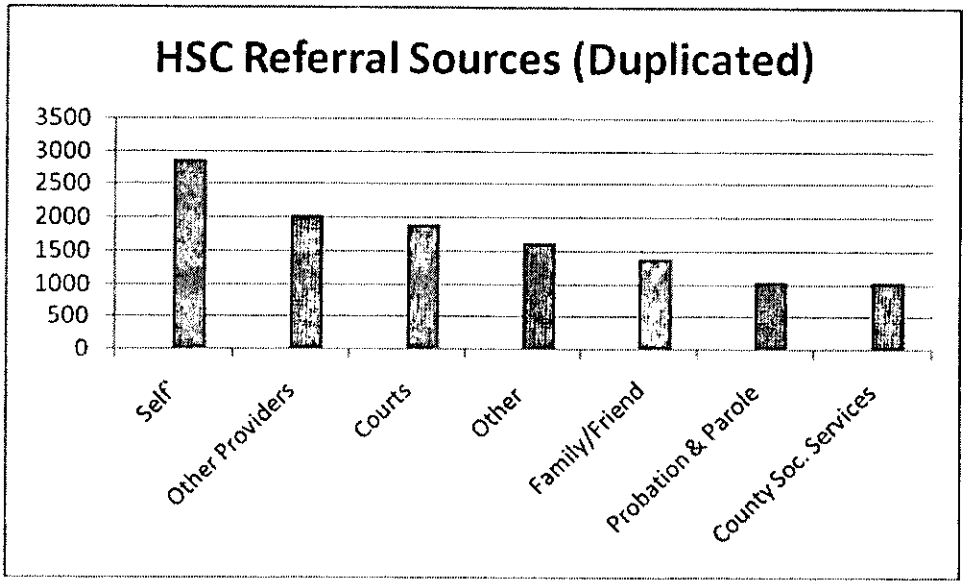
The following charts further show the demographics of those we serve.



(Note: Despite unique regional differences/needs, clients served range in order of regional population sizes.)



(Note: 67% of clients receive a primary diagnosis; others are emergency services or DD clients.)



Statewide Trends

- Demand for services continues to stress current capacity, particularly in the more populated areas of the state. In the current biennium, the State Hospital census has frequently exceeded 100%. There has been increasing concern expressed by our local hospital partners due to longer lengths of stay in those facilities, often beyond available contract dollars. One of those providers, the Dickinson St. Joseph's Hospital, closed its inpatient psychiatric unit during the current biennium, which creates new challenges for clients needing access to inpatient care.
- Many of the clients served by the HSCs receive multiple services; this is not surprising when one considers that many have multiple diagnoses, a tendency to homelessness, and need for maintenance services. We work to wrap critical services around these individuals in the community, to support their stability and recovery, minimize symptoms, and decrease the potential for more costly services.
- Primary services provided to HSC clients, in descending order of clients served, include:
    - Case Management
    - Evaluation/Intake
    - Medication Review/Therapy with Medication Review
    - Nursing Services
    - Individual Therapy
    - Information and Referral
    - Group Therapy
    - Family Therapy
    - Emergency Services
    - Other Services

- The HSCs have fallen behind in their ability to compete for and hire professional staff in the marketplace. We have worked on internal staff development to assist in filling addiction counselor positions, and continue to have ongoing psychology and psychiatry vacancies.
    - Staff vacancies in hard-to-fill positions result in longer client wait times. We monitor our wait times, with a goal of seeing non-emergent clients within two weeks of referral. Wait times that exceed that goal are consistently due to staff vacancies.
    - Future planning to meet recruitment and succession needs of retiring staff has been undertaken with DHS Human Resource staff, and has included additional supervisory and leadership development training.

Accomplishments

I am pleased to report progress in several initiatives undertaken by the Human Service Centers:

- Further implementation of evidence-based practices in all of the regions continues. This results in more consistent implementation of services, and better outcome tracking for specific interventions. As further testimony will describe, evidence-based practices are now implemented in all regions and for several client populations (children with emotional disturbances, adults with serious mental illness, adults with dual diagnoses, etc.). A strong focus on recovery principles results in clients working closely with staff to determine appropriate goals and needed supports.
- Community residential capacity for clients needing additional living supports increased in some areas of the state in the current biennium, the result of funding supported by the 2007 Legislature.

This enables us to provide more alternatives to hospitalization and to have available a more complete continuum of community services.

- We continue to collaborate with the Department of Correction and Rehabilitation (DOCR) to provide timely and appropriate follow-up treatment services for individuals following release from prison. Advance release planning has resulted in more prompt psychiatric treatment upon release from prison.
- Flexible models of service delivery such as telemedicine are being successfully utilized and will continue to be expanded. This has a positive impact for individuals who have difficulty accessing needed treatment in our rural state. We are planning for more use of telemedicine by our own psychiatrists, which will help us meet needs in difficult-to-fill rural positions.

Overview of Budget Changes – Human Service Centers Combined

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
HSCs / Institutions	128,741,073	23,770,277	152,511,350	(8,982,834)	143,528,516
General Funds	62,736,289	17,142,428	79,878,717	(6,117,746)	73,760,971
Federal Funds	59,773,910	5,896,572	65,670,482	(2,557,626)	63,112,856
Other Funds	6,230,874	731,277	6,962,151	(307,462)	6,654,689
FTE	836.48	11.00	847.48	(11.00)	836.48

Budget Changes From Current Budget to Executive Budget:

- The Governor's salary package recommendation requires $9.6 million total funds (40% the overall increase) with $7.2 million being from the general fund.
- The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $1.5 million total funds with $1.1 million being from the general fund.
- In order to address resource needs at the Regional level for individuals who need more structured, supervised care, while simultaneously addressing capacity issues at the State Hospital, the Department submitted an OAR we termed Global Behavioral Health, which was funded in the Executive Budget. This portion of the budget included funding across the Human Service Center system of $4.4 million total funds with $3.9 being from the general fund. This funding is to accomplish the following:
    - Provides consumers with more appropriate levels of care and to reduce our dependence on the ND State Hospital, and includes funding for crisis beds in the Minot region, supported residential and detox services in the Grand Forks region, staffing needs as it relates to the Cooper House residential project in the Fargo region (4 FTEs), an addition of a case manager in the Jamestown region to assist with addiction caseloads, and long term residential services in the Dickinson region. These funds will directly contribute to our managing clients in the community and keeping the State Hospital census from exceeding capacity.
    - Provides for a consistent rate of payment for local inpatient hospitalization of our clients who are indigent, which will be on par with the newly proposed Medicaid rebased

reimbursement rate. Without continuing partnerships with these providers, clients will not be able to be served closer to home and the State Hospital capacity will be greatly exceeded.

- An increase of 6 FTEs, to meet local capacity needs requires $600,000 total funds with $300,000 being from the general fund.
- Other salary changes have been required to meet critical market shortages or to provide temporary staff to meet increased consumer demand. This requires $1.6 million total funds, with approximately $710,000 being from the general fund.
- Provides for young adult transitional residential services in the Bismarck and Fargo regions. Total increase is $1.2 million with $835,000 being from the general fund. This is a portion of our population whose needs have been noted by interim committees as well as families and advocates.
- Provides for a 7% inflationary increase for each year of the biennium for contracted services - $2.7 million total increase with $2.5 million being from the general fund. Our contract providers are facing increased cost and challenges with staff turnover rates.
- Provides $1.9 million in total with approximately $867,000 from the general fund for the continuation of contracted services in the regions and the unforeseen funding issues for the providers we currently contract with predominately in the Minot, Grand Forks and Bismarck Regions.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $856,667 - general fund and $1,752,266 – federal and other funds for a total of $2,608,933.

The House reduced 50% of the department-wide travel increase. The overall human service center share of this decrease is $103,641 - total funds; $62,870 – general fund.

The House removed all funding for the Global Behavioral Health OAR which was funded in the Executive Budget, except for the contracted 24/7 staffing for Cooper House in the Fargo region. This amendment removed funding for crisis beds in the Minot region, supported residential and detox services in the Grand Forks region, staffing needs as it relates to the capacity issues at the Southeast Human Service Center (4 FTEs), an addition of a case manager in the Jamestown region to assist with addiction caseloads, and long term residential services in the Dickinson region. Also removed was the provision for a consistent rate of methodology for local inpatient hospitalization of our clients who are indigent, which would have been on par with the newly proposed Medicaid rebased reimbursement rate. The total decrease is $4,090,895; $3,664,789 - general fund.

The young adult transitional residential services in the Bismarck and Fargo regions included in the Executive Budget were removed. The total decrease to the Executive Budget is $1,176,844; $834,622 – general fund.

6 newly proposed FTE added in the Executive Budget to address capacity issues were removed. The total decrease is $619,646; $369,810 – general fund.

The House amended the provider inflation amounts from 7% per year to 6% per year. This resulted in a total decrease of $382,875; $329,790 - general fund.

In summary, while client needs/complexity present challenges, the HSCs have taken a number of positive steps to meet needs in a cost-effective manner. The proposed 2009-20011 Executive budget will allow us to continue and improve those efforts. This concludes my overview testimony for the Human Service Centers; I would be happy to answer any questions.

B

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 22, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Marilyn Rudolph, Director of Northwest Human Service Center(NWHSC) in Williston and North Central Human Service Center (NCHSC) in Minot for the Department of Human Services (DHS). I am submitting this testimony to provide an overview of the budget for both centers.

Northwest Human Service Center

Northwest Human Service Center serves Divide, McKenzie and Williams counties. Outreach offices are located in Crosby, Tioga and Watford City.

Caseload / Customer Base

- Northwest Human Service Center provided services to 1,263 consumers in SFY 2008; 883 adults and 379 children were served. This is an increase since last biennium. We are serving more individuals covered by insurance. This may be a result of high employment in the oil industries.
- Northwest Human Service Center provided Vocational Rehabilitation services to an additional 332 consumers in 2008.

Program Trends

- The challenge facing Northwest Human Service Center is recruitment of professional and paraprofessional staff. We now

have two vacant PhD level psychologist positions. One position has been vacant since February 2008. The second was vacated November 1, 2008. We have worked with DHS Human Resources to advertise to no avail. Currently, we are utilizing nine hours a week of psychological services from a recently retired psychologist. Licensure requires a psychologist participate on our multidisciplinary diagnostic team. We have partnered with West Central Human Service Center to provide tele-staffing with one of their psychologists for multidisciplinary staffing, which worked well; however, we cannot offer the full psychological evaluation service with this limited arrangement. We have also had a Mental Health Technician position vacancy since May of 2008. This is a job coach position. The work is demanding and is often shift work. Often eligible applicants can work for more money per hour in less demanding positions. We have found that applicants who have ties to western North Dakota are more likely to accept positions here. As I stated in 2007, recruiting and retaining skilled staff in a very competitive market will be a major challenge.

Accomplishments

- A successful venture has been the Peer Support model administered by Western Sunrise, the consumer run, non-profit corporation. This model has provided the basis for peer training and support for 12 matches in Region I and two support groups weekly. This model has been extended to Region II and VI to date. Region II, Minot, has 24 matches and four support groups. Region VI, Jamestown, is serving 64 people in recovery groups. The Recovery model promotes peer support, self help and employment as pillars of

support to prevent exacerbation of serious mental illness and hospitalization. This model is cost effective and sustainable.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Northwest HSC	7,476,823	8,562,127	1,085,304
General Funds	4,279,976	4,881,955	601,979
Federal Funds	2,851,727	3,328,518	476,791
Other Funds	345,120	351,654	6,534
Total	7,476,823	8,562,127	1,085,304
FTE	44.75	44.75	0

- Salary changes include:
  - The Governor's salary package recommendation requires $512,678 total funds with $392,469 being from the general fund.
  - The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $84,216 total funds with $68,998 being from the general fund.

- Changes in operating include:
  - Travel increased $54,549. Prior to North Central's move to its new location the director slept in space at the center that was not being used. Now she is using a motel when traveling. Administrative travel has been increased $12,276. Usage and Department of Transportation rate increases account for the additional $42,273.

- Building rent increased $34,069. The yearly maximum lease adjustment for the center's Williston office has been increased from $10,000 to $20,000 per year to allow for increases in utilities, taxes, insurance and building maintenance and upkeep. The rent for the center's outreach office in Watford City has increased by $50 per month. Until earlier in this biennium the center had been receiving space in Crosby rent free from the county. Due to the county's need for additional space the center is now renting space elsewhere in town for $250 per month.

- Grants increased $424,279. The demand for services for Seriously Mentally Ill clients account for $209,306. Inflationary increases are $194,526 of which $140,512 is general fund.
- Federal funds from Medical Assistance and other federal sources have increased $476,791. Other funds increased $6,534.

North Central Human Service Center

North Central Human Service Center serves seven counties: Bottineau, Burke, McHenry, Mountrail, Pierce, Renville and Ward. Outreach is provided in New Town, Rugby, Bottineau and Stanley.

Caseload / Customer Base

- North Central Human Service Center provided services to 3,215 individuals in SFY 2008. (2,464 adults and 75 children were served.)
- North Central Human Service Center Vocational Rehabilitation served 802 individuals in 2008.

Program Trends

- North Central Human Service Center has requested $1,458,307 as part of the Global Behavioral Health Initiative to procure a crisis residential unit to serve individuals identified as seriously mentally ill. We have had a contractual agreement with Trinity Hospital to provide hospitalization and stabilization to individuals with serious mental illness. Many of these individuals were then sent to the North Dakota State Hospital. In 2007, Trinity admitted 291 individuals with a total of 1,164 days hospitalized. The cost of hospitalization far exceeds our ability to pay. Sending these individuals to the North Dakota State Hospital exceeds the capacity of the State Hospital. Our intention is to contract for an eight bed facility with skilled staff to stabilize and transition individuals in the community. This will alleviate the burden on the private community hospital and reduce the stressed capacity at North Dakota State Hospital.

Accomplishments

North Central Human Service Center Addiction Services has achieved a high level of diversification in their offering of treatment options.

The Matrix model is an evidence-based intensive evening outpatient program. This program requires specific training and competency. North Central Human Service Center's Matrix program has been certified by the Matrix Institute on Addictions.

An innovative approach to rural services is the Outreach Program for Aging Services. Outreach is the establishment of eligibility for Aging Services programs such as Meals on Wheels and health and wellness programs. We provide information and referral services to seniors (individuals 60 or over) in their homes. The goal is to provide connection for seniors to available services. The coordinator manages referrals and assigns QSP's (qualified service providers) to go into homes in the seven county region.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
North Central HSC	16,894,368	20,923,799	4,029,431
General Funds	8,755,623	12,098,437	3,342,814
Federal Funds	7,285,751	7,976,026	690,275
Other Funds	852,994	849,336	(3,658)
Total	16,894,368	20,923,799	4,209,431
FTE	116.78	117.68	1.00

- Salary changes to the budget include:
  - The Governor's salary package recommendation requires $1.3 million total funds with $1.0 million being from the general fund.
  - The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $197,825 total funds with $180,101 being from the general fund.
  - Additional changes in the salary area are a result of the addition of one FTE for a DD Case Manager. The budget for this position is $100,626 of which $50,313 is from the general

fund. The realignment of staff to meet client needs total $234,044 of which $163,830 is general funds. North Central employs a temporary part-time psychiatrist with a budget of $56,016, as well as one counselor position from Bottineau to provide services in that area with a budget of $38,760, and staff to provide necessary coverage at the center's transitional living facility with salaries of $26,448. General funds for these temporary positions are $84,857.

- The budget for operating expenses has increased $39,932 or 2.3%.

- Grants increased $2,211,526.
  - The cost to continue the current services for Seriously Mentally Ill clients is $305,893.
  - Inflationary increases are $408,959 of which $387,170 is general fund.
  - Additional community based services for the Seriously Mentally Ill, designed to fill gaps in the continuum of care, increase payment to the local hospital, and assist the state hospital to manage its patient census is budgeted for $1,458,307 of which $1,358,307 is general fund.

- General funds increased by $3,342,814, with $1,055,295 related to salaries, benefits and the one FTE in Developmental Disabilities. Inflationary increases for service providers and the development of community based services for the Seriously Mentally Ill have $1,745,478 in general fund budgeted. The remaining $542,041 is related to ongoing costs to continue operations.

- Federal Funds from Medical Assistance and other federal sources have increased $690,275. Other Funds decreased $3,658.

This concludes my testimony on the 2009 – 2011 budget request for Northwest Human Service Center and North Central Human Service Center. I would be happy to answer any questions.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 04, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, this is written testimony prepared by Marilyn Rudolph, Director of Northwest Human Service Center (NWHSC) in Williston and North Central Human Service Center (NCHSC) in Minot for the Department of Human Services (DHS). It is being submitted to provide an overview of the budget for both centers.

Northwest Human Service Center

Northwest Human Service Center serves Divide, McKenzie and Williams counties. Outreach offices are located in Crosby, Tioga and Watford City.

Caseload / Customer Base

- Northwest Human Service Center provided services to 1,263 consumers in SFY 2008; 883 adults and 379 children were served. This is an increase since last biennium. We are serving more individuals covered by insurance. This may be a result of high employment in the oil industries.
- Northwest Human Service Center provided Vocational Rehabilitation services to an additional 332 consumers in 2008.

Program Trends

- The challenge facing Northwest Human Service Center is recruitment of professional and paraprofessional staff. We now

have two vacant PhD level psychologist positions. One position has been vacant since February 2008. The second was vacated November 1, 2008. We have worked with DHS Human Resources to advertise to no avail. Currently, we are utilizing nine hours a week of psychological services from a recently retired psychologist. FTE	44.75	0.00	44.75	0.00	44.75

Budget Changes from Current Budget to Executive Budget:

- Salary changes include:
  - The Governor's salary package recommendation requires $512,678 total funds with $392,469 being from the general fund.
  - The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $84,216 total funds with $68,998 being from the general fund.

- Changes in operating include:
  - Travel increased $54,549. Prior to North Central's move to its new location the director slept in space at the center that was not being used. Now she is using a motel when traveling. Administrative travel has been increased $12,276. Usage and

Department of Transportation rate increases account for the additional $42,273.

- Building rent increased $34,069. The yearly maximum lease adjustment for the center's Williston office has been increased from $10,000 to $20,000 per year to allow for increases in utilities, taxes, insurance and building maintenance and upkeep. The rent for the center's outreach office in Watford City has increased by $50 per month. Until earlier in this biennium the center had been receiving space in Crosby rent free from the county. Due to the county's need for additional space, the center is now renting space elsewhere in town for $250 per month.

- Grants increased $424,279. The demand for services for Seriously Mentally Ill clients account for $209,306. Inflationary increases are $194,526 of which $140,512 is general fund.
- Federal funds from Medical Assistance and other federal sources have increased $476,791. Other funds increased $6,534.

House Changes:

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $97,561 – general fund; $181,792 – federal funds; and $17,764 – other funds for a total of $297,117.
- The House reduced 50% of the department-wide travel increase. Northwest Human Service Center's share of this decrease is $28,089 total funds; $19,621 general fund.
- The House reduced the budgeted inflationary increase for contracted providers from 7/7 to 6/6. Northwest Human Service

Center's share of this decrease is $27,789 total funds; $27,637 general fund.

North Central Human Service Center

North Central Human Service Center serves seven counties: Bottineau, Burke, McHenry, Mountrail, Pierce, Renville and Ward. Outreach is provided in New Town, Rugby, Bottineau and Stanley.

Caseload / Customer Base

- North Central Human Service Center provided services to 3,215 individuals in SFY 2008. (2,464 adults and 75 children were served.)
- North Central Human Service Center Vocational Rehabilitation served 802 individuals in 2008.

Program Trends

- North Central Human Service Center has requested $1,458,307 as part of the Global Behavioral Health OAR to procure a crisis residential unit to serve individuals identified as seriously mentally ill. We have had a contractual agreement with Trinity Hospital to provide hospitalization and stabilization to individuals with serious mental illness. Many of these individuals were then sent to the North Dakota State Hospital. In 2007, Trinity admitted 291 individuals with a total of 1,164 days hospitalized. The cost of hospitalization far exceeds our ability to pay. Sending these

individuals to the North Dakota State Hospital exceeds the capacity of the State Hospital. Our intention is to contract for an eight bed facility with skilled staff to stabilize and transition individuals in the community. This will alleviate the burden on the private community hospital and reduce the stressed capacity at North Dakota State Hospital.

Accomplishments

FTE	116.78	1.00	117.78	(1.00)	116.78

Budget Changes from Current Budget to Executive Budget:

- Salary changes to the budget include:
  - The Governor's salary package recommendation requires $1.3 million total funds with $1.0 million being from the general fund.
  - The cost to continue the July 2008 4% salary increase for 24 months versus the current 12 months of funding requires $197,825 total funds with $180,101 being from the general fund.
  - Additional changes in the salary area are a result of the addition of one FTE for a DD Case Manager. The budget for this position is $100,626 of which $50,313 is from the general fund. The realignment of staff to meet client needs total $234,044 of which $163,830 is general funds. North Central employs a temporary part-time psychiatrist with a budget of

$56,016, as well as one counselor position from Bottineau to provide services in that area with a budget of $38,760, and staff to provide necessary coverage at the center's transitional living facility with salaries of $26,448. General funds for these temporary positions are $84,857.

- The budget for operating expenses has increased $39,932 or 2.3%.

- Grants increased $2,211,526.
  - The cost to continue the current services for Seriously Mentally Ill clients is $305,893.
  - Inflationary increases are $408,959 of which $387,170 is general fund.
  - Additional community based services for the Seriously Mentally Ill, designed to fill gaps in the continuum of care, increase payment to the local hospital, and assist the state hospital to manage its patient census is budgeted for $1,458,307 of which $1,358,307 is general fund.

- General funds increased by $3,342,814, with $1,055,295 related to salaries, benefits and the one FTE in Developmental Disabilities. Inflationary increases for service providers and the development of community based services for the Seriously Mentally Ill have $1,745,478 in general fund budgeted. The remaining $542,041 is related to ongoing costs to continue operations.

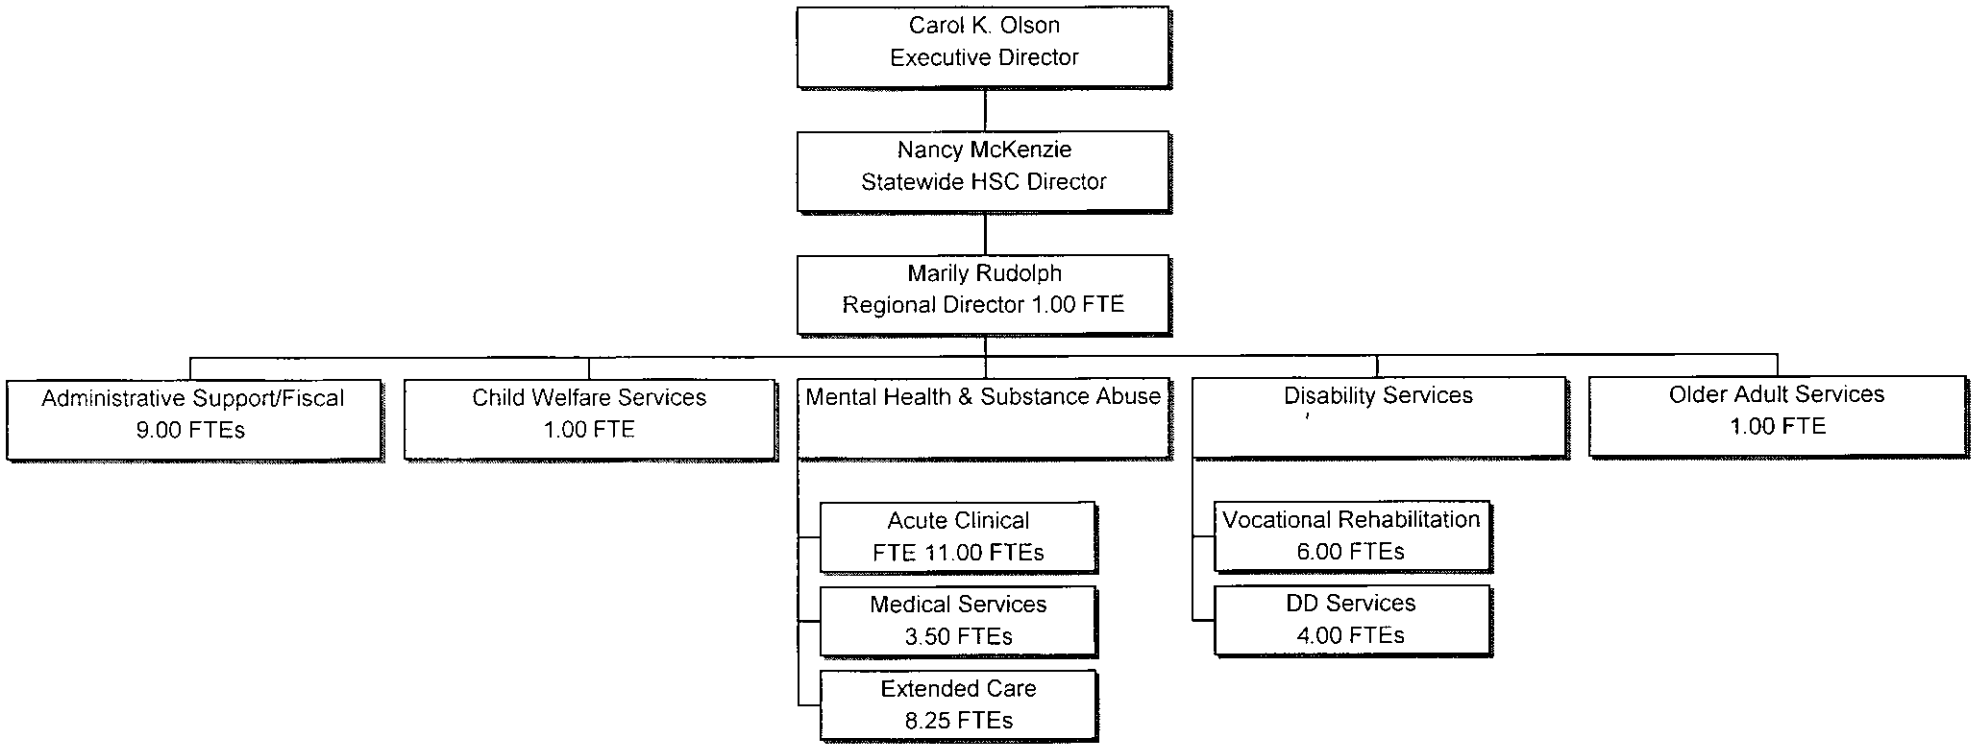
- Federal Funds from Medical Assistance and other federal sources have increased $690,275. Other Funds decreased $3,658.

House Changes:

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $122,969 – general fund; $214,395 – federal funds; and $37,132 – other funds for a total of $374,496.
- The House reduced 50% of the department-wide travel increase. North Central Human Service Center's share of this decrease is $3,653 total funds; $2,132 general fund.
- The House reduced the budgeted inflationary increase for contracted providers from 7/7 to 6/6. North Central Human Service Center's share of this decrease is $58,423 total funds; $55,310 general fund.
- The House removed the Global Behavioral Health OAR from the Department's budget. North Central Human Service Center's share of this OAR is $1,458,307 total funds; $1,358,307 general fund.
- The House removed one FTE for an additional DD Case Manager. Funding for this position was $58,793 in general funds and $52,354 in federal funds for a total of $111,147.

This concludes the testimony on the 2009 – 2011 budget requests for Northwest Human Service Center and North Central Human Service Center.

NORTH DAKOTA DEPARTMENT OF HUMAN SERVICES
NORTHWEST HUMAN SERVICE CENTER



2009-2011
Authorized 44.75 FTEs

Northwest Human Service Center
Detail of Budget Account Code 582000
For the 2009 - 2011 Biennium Budget

1/21/2009

Rentals & Leases	Rate per Sq.Ft.	Amount	General	Fed/Other
Human Service Center Building Rent	$8.50	418,902	250,261	168,641
Outreach Office - Watford City		8,400	5,093	3,307
Outreach Office - Crosby		6,000	3,638	2,362
Total Rentals & Leases Budget Account Code		**433,302**	**258,992**	**174,310**

Northwest Human Service Center
Detail of Budget Account Code 621000 - Operating Fees & Services
For the 2009 - 2011 Biennium

Operating Fees & Services	Amount	General	Fed/Other
Advertising Services	658	438	220
DD Infant and Toddlers Part C (spending authorized by central office)	35,000	0	35,000
Freight & Express	2,663	1,849	814
Licenses & Taxes	3,150	1,933	1,217
Other Operating Fees	2,758	1,672	1,086
Purchase of Services & Coop Agreement	17,576	7,275	10,301
Research Fees	356	258	98
Years of Service Awards	1,223	892	331
Total Operating Fees & Services Budget Account Code	**63,384**	**14,317**	**49,067**

The majority of the Purchase of Services & Coop Agreement ($9,100) is used by the center's MH Partnership program and SMI Services for the Homeless. These funds assist families to reduce the risk of having to place a child outside of their home or to help seriously mentally ill individuals stay in their own home or assist them in obtaining housing. The remaining funds are used in multiple center programs for expenditures that do not fit into another accounting code.

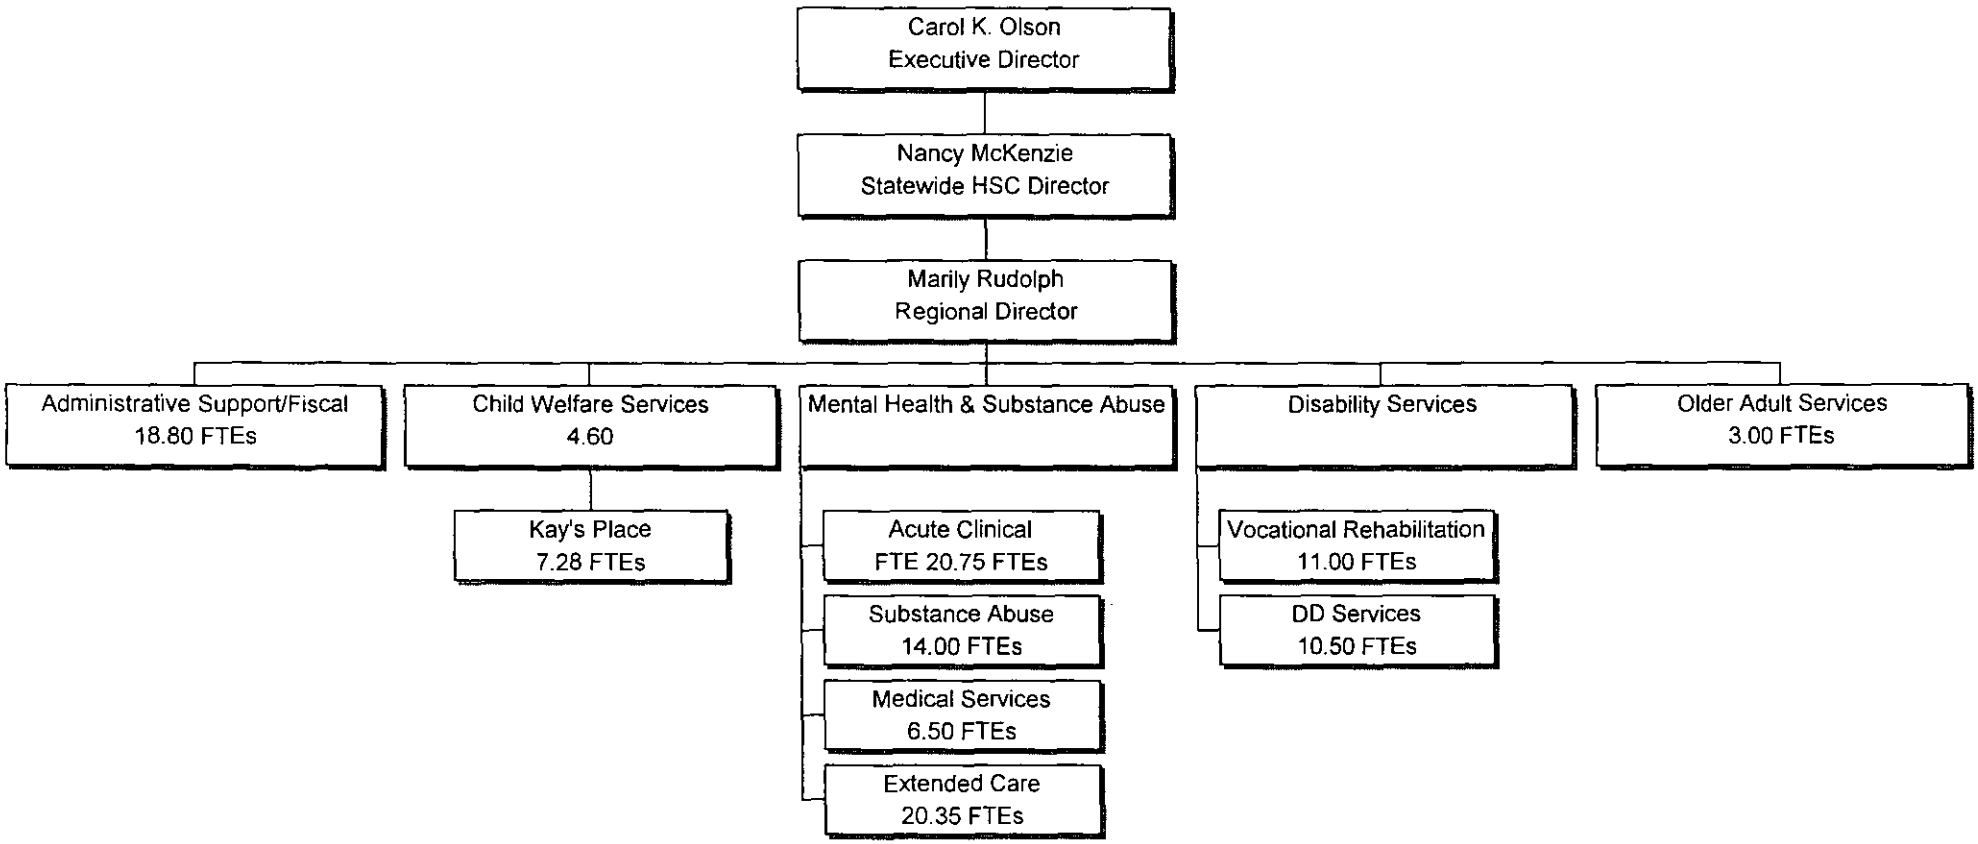
NORTH DAKOTA DEPARTMENT OF HUMAN SERVICES
NORTH CENTRAL HUMAN SERVICE CENTER



2009-2011
116.78 Budgeted FTEs

North Central Human Service Center
Detail of Budget Account Code 621000 - Operating Fees & Services
For the 2009 - 2011 Biennium

Operating Fees & Services	Amount	General	Fed/Other
Advertising Services	250	213	37
DD Infant and Toddlers Part C (spending authorized by central office)	7,500	0	7,500
Extermination Services	1,500	1,117	383
Freight & Express	689	449	240
Licenses & Taxes	10,770	5,809	4,961
Other Operating Fees	41,915	23,802	18,113
Purchase of Services & Coop Agreement	33,000	1,044	31,956
Research Fees	310	239	71
Years of Service Awards	4,111	3,505	606
Total Operating Fees & Services Budget Account Code	**100,045**	**36,178**	**63,867**

North Central's Purchase of Services & Coop Agreements is divided between the center's Respite Care ($25,000) program and SMI Services for the Homeless ($8,000). Respite care provides parents or guardians of a serious emotionally disturb or developmentally disabled child the ability to take a short break from the care required by these children. SMI Services for the Homeless help seriously mentally ill individuals stay in their own home or assist them to obtain housing.

Other Operating Funds are used in multiple center programs for expenditures that do not fit into another accounting code. The largest single expenditure is the $15,000 budgeted for the MH Partnership program. These funds assist families to reduce the risk of having to place a child outside of their home. Other services include cable television at the center's residential facilities, shredding services, floor mats for center entries, fees for security checks, line charges for security systems and fees for security monitoring at the center and the center's residential facilities, and after hours answering services.

B

Testimony
HB 1012 – Department of Human Services
House Appropriations – Human Resource Division
Representative Pollert, Chairman
January 22, 2009

Chairman Pollert and members of the House Appropriations Human Resource Division, I am Tim Sauter, Director of West Central Human Service Center(WCHSC) and Badlands Human Service Center (BHSC) for the Department of Human Services (DHS). I am submitting this testimony to provide you an overview of the budget for both of these centers.

West Central Human Service Center

West Central Human Service Center serves the residents of Burleigh, Emmons, Grant, Kidder, McLean, Mercer, Morton, Oliver, Sheridan, and Sioux counties.

Caseload/Customer Base

- 4,913 individuals received service in Fiscal Year 2008 (3,681 adults and 1,232 children).
- 1,566 individuals received vocational rehabilitation services.
- A high percentage of adults who receive services (95 percent) and parents whose children receive services (83 percent) report satisfaction.
- 91% of Vocational Rehabilitation Service clients report satisfaction.

Program Trends

- The number of individuals with developmental disabilities receiving services has increased from 1,021 in State Fiscal Year (SFY) 2006 to 1,133 in SFY 2008.

- There is an increasing need for residential services for children, particularly transition age with severe emotional disorders, and children with dual disorders.
- Alcohol remains the biggest drug problem, there is a slight decrease in methamphetamine numbers, but increasing numbers of clients who have polysubstance abuse problems.
- Increasing numbers of referrals come from the Department of Corrections and Rehabilitation; this comprises 72 percent of WCHSC adult addiction clients.
- Staff recruitment and retention continue to be a challenge, due to market salary equity problems.

Accomplishments

- WCHSC has implemented several evidenced-based models of treatment.
- Adult and adolescent drug courts continue to produce positive results.
- The WCHSC Vocational Rehabilitation Unit has assisted the start-up of two new businesses and assisted six farm ranch operations to address disability issues and remain in business.
- We have successfully implemented residential services for adolescents receiving substance abuse treatment and safe beds for children.
- The WCHSC Aging Services Unit received a $10,000 grant to establish an Elder Justice Coalition.
- WCHSC nursing staff have successfully assisted 350 consumers to obtain medication from pharmaceutical companies through their Indigent Medication Programs.

- We continue to have a minimal number of residents from Region VII enter the North Dakota State Hospital or the Developmental Center.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase/ Decrease
West Central HSC	$21,028,858	$26,008,933	$4,980,075
General Funds	$10,172,407	$13,315,641	$3,143,234
Federal Funds	$9,940,424	$11,482,159	$ 1,541,735
Other Funds	$ 916,027	$ 1,211,133	$ 295,106
Total	$21,028,858	$26,008,933	$4,980,075

FTE	135.30	136.30	1.00

- The Governor's salary and benefit package adds $1,552,214 in total funds of which $1,163,095 is general fund.
- The cost to continue the July 2008 4% salary increases, for 24 months, totaled $232,921 of which $175,569 is general funds.
- Additional changes in the salary area are a result of one additional FTE for DD Case Management, totaling $100,626 of which $50,313 is general funds, and realignment of staff to meet client needs totaled $723,488 of which $95,095 is general funds.
- Changes to the Operating budget include:
    - Travel increased $46,142 based on Department of Transportation 2009-2011 rates.

- Information Technology Equipment under $5,000 increased by $15,000 based on the need to update equipment in the Rehabilitation Services technical equipment lab.
- Building Rent increased $203,074 based on a $0.54 per square foot increase on 35,521 square feet and an additional 5,210 square feet at a cost of $16.00. The additional space is being occupied by our Rehabilitation Services unit and was needed to alleviate the problem of multiple clinical staff sharing offices, as well as the need for group room space.
- Operating Fees and Services increased by $15,390. The increased funding is for wraparound services and flexible funding for services with the Homeless Program.
- Equipment over $5,000 increased by $16,500 and will be used to replace our primary network copier.

- Grants increased by $2,059,222. Major increases include $304,546 to address local capacity levels and rates for inpatient hospitalization, $496,900 for provider inflationary increases, $750,000 for residential services for young adults transitioning from the Partnership program to the adult system of care, $383,328 for contracted CD adolescent residential and safe bed services, $60,500 to cover a rate increase for contracted Title XIX Evaluation services and $40,124 for increased costs tied to contracted CD Residential services for adults.
- General funds increased by $3,143,234 with $1,484,072 related to salaries and benefits, $1,540,893 related primarily to contracted services for inpatient hospitalization, provider inflation and the proposed residential program for young adults. The remaining $118,269 is related to ongoing costs to continue operations.

- Federal Funds increased by $1,541,735, based on additional Medical Assistance and Foster Care IV-E Case Management, generated through client services and open-ended federal funding sources such as Basic Support for Rehabilitation Services.
- Other Funds increased by $295,106, based on additional collections for services generated through direct client and third party payments.

Badlands Human Service Center

Badlands Human Service Center (BHSC) serves the people of Adams, Billings, Bowman, Dunn, Golden Valley, Hettinger, Slope, and Stark counties.

Caseload/Customer Base

- Badlands served 1,854 individuals (1,308 adults and 546 children) in SFY 2008.
- 311 individuals received vocational rehabilitation services.
- 89% of adults receiving services, and 98% of the parents whose children receive services, report satisfaction with those services.
- 91% of clients receiving vocational rehabilitation services report satisfaction.

Service Trends

- The number of individuals receiving developmental disabilities services has stabilized since SFY 2006.
- Clients continue to present with complex problems including dual diagnosis and polysubstance abuse.

- The number of referrals from the Department of Corrections and Rehabilitation has increased; this now comprises 55% of individuals in adult addiction programs in this region.
- There is a need for long term residential services for persons with chronic addictions and for persons with severe and persistent mental illness.
- Staff recruitment and retention issues continue to be difficult, due to market equity problems.
- There has been an increase in referrals to North Dakota State Hospital due to the closing of the local hospital's inpatient psychiatric unit.

Accomplishments

- BHSC, along with the other Regional Human Service Centers, has implemented evidence-based practice models.
- We increased the number of residential beds available to adults with mental illness and for those who have substance abuse problems from 9 to 16.
- We successfully contracted with an independent psychiatrist and a telemedicine provider.
- We initiated contracts with the medical centers in Bismarck to provide psychiatric stabilization of indigent clients from Region VIII.
- BHSC in partnership with other providers implemented an addiction counselor training consortium.
- To meet the need of rural areas, we have enhanced our outreach services in Adams, Bowman, Hettinger and Golden Valley counties.

Overview of Budget Changes

Description	2007 – 2009 Budget	2009 – 2011 Budget	Increase/ Decrease
Badlands HSC	$9,905,399	$11,694,235	$1,788,836
General Funds	$4,911,935	$6,264,582	$1,352,647
Federal Funds	$4,096,595	$4,614,839	$ 518,244
Other Funds	$ 896,869	$ 814,814	$ (82,055)
Total	$9,905,399	$11,694,235	$1,788,836

FTE	72.7	72.7	0

- The Governor's salary and fringe benefit package for state employees increased total funds by $776,794 of which $592,676 is general fund.
- The cost to continue the July 2008 4% salary increase, for 24 months, requires $123,157 total funds of which $95,188 are general funds.
- Due to staffing realignment during the 07-09 biennium, we have a decrease in salary of ($29,085) of which ($24,932) are general funds.
- Operating expenses increased by $88,276. The primary contributors to this increase are:
    - Rentals for Office space increased by $91,461. Due to increase in utility and labor costs, the rental rate at Pulver Hall, our main office, will increase from $9.50 to $12.50 per square foot. There are other minor rental increases, but this increase accounts for the majority of the change.

- Other changes in our operating expenses result in a net decrease of ($3,185).

- Grants increase by $829,694. Major contributors to this increase are the proposed new 16 bed residential facility and the 7% / 7% inflationary increase for our providers.
- The general fund request increased by $1,352,647, with $770,000 attributed to the proposed residential facility; $592,676 of this increase is related to the Governor's salary package for state employees; offset by a decrease of ($10,029) attributed to the ongoing costs to continue operations.
- Federal funds increased by $518,244, based on additional Medical Assistance and Foster Care IV-E Case Management generated through client services and open-ended federal funding sources such as Basic Support for Rehabilitation Services.
- Other funds have decreased by ($82,055) based on our current trend in patient fee collections.

This concludes my testimony for West Central Human Service Center and Badlands Human Service Center. I would be happy to answer any questions you may have.

Testimony
HB 1012 – Department of Human Services
Senate Appropriations Committee
March 4, 2009

Chairman Holmberg and members of the Senate Appropriations Committee, this is written testimony prepared by Tim Sauter, Director of West Central Human Service Center (WCHSC) and Badlands Human Service Center (BHSC) for the Department of Human Services (DHS). This is being submitted to provide you an overview of the budget for both of these centers.

West Central Human Service Center

West Central Human Service Center serves the residents of Burleigh, Emmons, Grant, Kidder, McLean, Mercer, Morton, Oliver, Sheridan, and Sioux counties.

Caseload/Customer Base

- 4,913 individuals received service in Fiscal Year 2008 (3,681 adults and 1,232 children).
- 1,566 individuals received vocational rehabilitation services.
- A high percentage of adults who receive services (95 percent) and parents whose children receive services (83 percent) report satisfaction.
- 91% of Vocational Rehabilitation Service clients report satisfaction.

Program Trends

- The number of individuals with developmental disabilities receiving services has increased from 1,021 in State Fiscal Year (SFY) 2006 to 1,133 in SFY 2008.

- There is an increasing need for residential services for children, particularly transition age with severe emotional disorders, and children with dual disorders.
- Alcohol remains the biggest drug problem, there is a slight decrease in methamphetamine numbers, but increasing numbers of clients who have polysubstance abuse problems.
- Increasing numbers of referrals come from the Department of Corrections and Rehabilitation; this comprises 72 percent of WCHSC adult addiction clients.
- Staff recruitment and retention continue to be a challenge, due to market salary equity problems.

Accomplishments

- WCHSC has implemented several evidenced-based models of treatment.
- Adult and adolescent drug courts continue to produce positive results.
- The WCHSC Vocational Rehabilitation Unit has assisted the start-up of two new businesses and assisted six farm ranch operations to address disability issues and remain in business.
- We have successfully implemented residential services for adolescents receiving substance abuse treatment and safe beds for children.
- The WCHSC Aging Services Unit received a $10,000 grant to establish an Elder Justice Coalition.
- WCHSC nursing staff have successfully assisted 350 consumers to obtain medication from pharmaceutical companies through their Indigent Medication Programs.

- We continue to have a minimal number of residents from Region VII enter the North Dakota State Hospital or the Developmental Center.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
West Central HSC	21,028,858	4,980,075	26,008,933	(1,646,465)	24,362,468
General Funds	10,172,407	3,143,234	13,315,641	(1,207,194)	12,108,447
Federal Funds	9,940,424	1,541,735	11,482,159	(384,635)	11,097,524
Other Funds	916,027	295,106	1,211,133	(54,636)	1,156,497
Total	21,028,858	4,980,075	26,008,933	(1,646,465)	24,362,468
FTE	135.30	1.00	136.30	(1.00)	135.30

Budget Changes from Current Budget to Executive Budget:

- The Governor's salary and benefit package adds $1,552,214 in total funds of which $1,163,095 is general fund.
- The cost to continue the July 2008 4% salary increases, for 24 months, totaled $232,921 of which $175,569 is general funds.
- Additional changes in the salary area are a result of one additional FTE for DD Case Management, totaling $100,626 of which $50,313 is general funds, and realignment of staff to meet client needs totaled $723,488 of which $95,095 is general funds.
- Changes to the Operating budget include:
    - Travel increased $46,142 based on Department of Transportation 2009-2011 rates.
    - Information Technology Equipment under $5,000 increased by $15,000 based on the need to update equipment in the Rehabilitation Services technical equipment lab.

- Building Rent increased $203,074 based on a $0.54 per square foot increase on 35,521 square feet and an additional 5,210 square feet at a cost of $16.00. The additional space is being occupied by our Rehabilitation Services unit and was needed to alleviate the problem of multiple clinical staff sharing offices, as well as the need for group room space.
- Operating Fees and Services increased by $15,390. The increased funding is for wraparound services and flexible funding for services with the Homeless Program.
- Equipment over $5,000 increased by $16,500 and will be used to replace our primary network copier.

- Grants increased by $2,059,222. Major increases include $304,546 to address local capacity levels and rates for inpatient hospitalization, $496,900 for provider inflationary increases, $750,000 for residential services for young adults transitioning from the Partnership program to the adult system of care, $383,328 for contracted CD adolescent residential and safe bed services, $60,500 to cover a rate increase for contracted Title XIX Evaluation services and $40,124 for increased costs tied to contracted CD Residential services for adults.
- General funds increased by $3,143,234 with $1,484,072 related to salaries and benefits, $1,540,893 related primarily to contracted services for inpatient hospitalization, provider inflation and the proposed residential program for young adults. The remaining $118,269 is related to ongoing costs to continue operations.
- Federal Funds increased by $1,541,735, based on additional Medical Assistance and Foster Care IV-E Case Management, generated through client services and open-ended federal funding sources such as Basic Support for Rehabilitation Services.

- Other Funds increased by $295,106, based on additional collections for services generated through direct client and third party payments.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $135,157 - general fund, $227,169 – federal funds and $49,287 – other funds for a total of $411,613.

The House reduced 50% of the department-wide travel increase. West Central HSC's share of this decrease is $23,173 total funds; $13,677 – general fund, $4,147 federal funds and $5,349 other funds.

The House reduced department-wide provider inflation from 7 percent per year to 6 percent per year. West Central HSC's share of this decrease is $70,986 total funds; $70,021 – general fund, $965 - federal funds.

The House reduced 100% of the department-wide Global Behavioral Health OAR. West Central HSC's share of this decrease is $279,546 total funds; $279,546 – general funds.

The House removed funding for a Young Adult Transitional Services OAR totaling $750,000; $650,000 – general fund and $100,000 federal funds.

The House removed funding for one additional DD Case Manager FTE totaling $111,147; $58,793 – general fund and $52,354 federal funds.

Badlands Human Service Center

Badlands Human Service Center (BHSC) serves the people of Adams, Billings, Bowman, Dunn, Golden Valley, Hettinger, Slope, and Stark counties.

Caseload/Customer Base

- Badlands served 1,854 individuals (1,308 adults and 546 children) in SFY 2008.
- 311 individuals received vocational rehabilitation services.
- 89% of adults receiving services, and 98% of the parents whose children receive services, report satisfaction with those services.
- 91% of clients receiving vocational rehabilitation services report satisfaction.

Service Trends

- The number of individuals receiving developmental disabilities services has stabilized since SFY 2006.
- Clients continue to present with complex problems including dual diagnosis and polysubstance abuse.
- The number of referrals from the Department of Corrections and Rehabilitation has increased; this now comprises 55% of individuals in adult addiction programs in this region.
- There is a need for long term residential services for persons with chronic addictions and for persons with severe and persistent mental illness.
- Staff recruitment and retention issues continue to be difficult, due to market equity problems.

- There has been an increase in referrals to North Dakota State Hospital due to the closing of the local hospital's inpatient psychiatric unit.

Accomplishments

- BHSC, along with the other Regional Human Service Centers, has implemented evidence-based practice models.
- We increased the number of residential beds available to adults with mental illness and for those who have substance abuse problems from 9 to 16.
- We successfully contracted with an independent psychiatrist and a telemedicine provider.
- We initiated contracts with the medical centers in Bismarck to provide psychiatric stabilization of indigent clients from Region VIII.
- BHSC in partnership with other providers implemented an addiction counselor training consortium.
- To meet the need of rural areas, we have enhanced our outreach services in Adams, Bowman, Hettinger and Golden Valley counties.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
Badlands HSC	9,905,399	1,788,836	11,694,235	(931,239)	10,762,996
General Funds	4,911,935	1,352,647	6,264,582	(683,757)	5,580,825
Federal Funds	4,096,595	518,244	4,614,839	(239,557)	4,375,282
Other Funds	896,869	(82,055)	814,814	(7,925)	806,889
Total	9,905,399	1,788,836	11,694,235	(931,239)	10,762,996
FTE	72.70	0.00	72.70	0.00	72.70

- The Governor's salary and fringe benefit package for state employees increased total funds by $776,794 of which $592,676 is general fund.
- The cost to continue the July 2008 4% salary increase, for 24 months, requires $123,157 total funds of which $95,188 are general funds.
- Due to staffing realignment during the 07-09 biennium, we have a decrease in salary of ($29,085) of which ($24,932) are general funds.
- Operating expenses increased by $88,276. The primary contributors to this increase are:
  - Rentals for Office space increased by $91,461. Due to increase in utility and labor costs, the rental rate at Pulver Hall, our main office, will increase from $9.50 to $12.50 per square foot. There are other minor rental increases, but this increase accounts for the majority of the change.
  - Other changes in our operating expenses result in a net decrease of ($3,185).
- Grants increase by $829,694. Major contributors to this increase are the proposed new 16 bed residential facility and the 7% / 7% inflationary increase for our providers.
- The general fund request increased by $1,352,647, with $770,000 attributed to the proposed residential facility; $592,676 of this increase is related to the Governor's salary package for state employees; offset by a decrease of ($10,029) attributed to the ongoing costs to continue operations.
- Federal funds increased by $518,244, based on additional Medical Assistance and Foster Care IV-E Case Management generated

through client services and open-ended federal funding sources such as Basic Support for Rehabilitation Services.

- Other funds have decreased by ($82,055) based on our current trend in patient fee collections.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $40,139 - general fund, $74,273 – federal funds and $7,829 – other funds for a total decrease of $122,241.

The House reduced 50% of the department-wide travel increase. Badlands HSC's share of this decrease is $395 total funds; $232 – general funds, $67 federal funds and $96 other funds.

The House reduced department-wide provider inflation from 7 percent per year to 6 percent per year. Badlands HSC's share of this decrease is $3,603 total funds; an increase of $21,614 – general fund, and a decrease of $25,217 - federal funds. OMB had originally funded the full 7 percent inflationary increase with federal funds, this has now been corrected.

The House reduced 100% of the department-wide Global Behavioral Health OAR. Badlands HSC's share of this decrease is $805,000 total funds; $665,000 – general funds, and $140,000 – federal funds.

This concludes the testimony on the 2009–2011 budget request for the WCHSC and BHSC portions of the DHS budget.

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 22, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Candace Fuglesten, Director of Southeast Human Service Center (SEHSC) and South Central Human Service Center (SCHSC) for the Department of Human Services (DHS). I am here today to provide you an overview of the budget for both centers.

Southeast Human Service Center

SEHSC provides community behavioral health and safety net services to individuals who live primarily in Steele, Traill, Cass, Ransom, Sargent and Richland counties, in Region V of our State. The region is comprised of 173,781 residents (27.2 percent of the state's population) as estimated by the 2007 US Census estimates.

Caseload / Customer Base

- SEHSC provided behavioral health services to 5,029 individuals in SFY 2008 (3,931 adults - 1,098 seventeen years of age or younger). This number increased 1.5 percent since last biennium, but this represents a slowing in the growth of clients from previous years. Fifty-five percent of these individuals qualified to receive services at 100 percent discount due to having incomes that fell 100 percent or more below the poverty index. Forty-one percent of the individuals had no third party payment or insurance coverage of any kind.

- SEHSC provided Vocational Rehabilitation (VR) services to 1,539 individuals. Within the Developmental Disability (DD) service area we served 1,185 individuals in FY 2008.
- SFY 2008 data shows that 13 percent of the behavioral health clients carry dual diagnoses of serious mental illness and chronic addiction. Due to demand issues and capacity limitations, SEHSC provides all of the established human service center core services, but prioritizes serving the most vulnerable individuals who cannot access services elsewhere in the community/region. Our Admission staff assist individuals requesting non-urgent services, who have the potential to access other community providers, by discussing alternative resources with the caller. Many of these individuals then seek those services from other local providers.
- Due to the high demand for case management services for individuals with serious mental illness and/or chronic addiction, we have identified criteria/levels of care to determine those most in need of these services; i.e. individuals at highest risk of rehospitalization or harm to self or others. Individuals who receive case management services require multiple services, and these capacity demands are reflected in our budget.
- Nineteen percent of all admissions to the North Dakota State Hospital (NDSH) in FY 2008 came from this region. This is actually a decrease of four percent from the previous biennium. Short-term inpatient hospitalization for indigent clients is provided at MeritCare Hospital through a contract with SEHSC.
- We also contract for crisis beds for children with severe emotional disorders and crisis/social detox beds for adolescents with substance abuse issues. The addiction crisis beds provide

an intensive level of substance abuse residential care in a family setting. Outcomes in this area have been very positive with increased school attendance, reduction in substance use, and successful reintegration into the parental home.

- Many of our clients are involved in the correctional system either at the local jail and court system or after release from prison and under the supervision of Probation and Parole. We receive a daily census report from the jail, so that we can monitor clients who may be incarcerated and continue to provide psychiatric and medication follow-up. Our regional intervention staff work with the jail to triage and identify new individuals that need immediate psychiatric evaluations that are completed at the jail. Cass County was awarded a Department of Justice grant to work with community partners in a pilot project of a post-booking diversion program for eligible offenders with mental health diagnoses. With this grant the jail has hired a mental health professional and SEHSC receives funds for a 0.75 percent case management FTE who will work with offenders that the court sentences to this program. Both the jail and the prison work with us to plan for aftercare as much as possible with appointments made as often as possible for the day of release.
- The demand for outreach addiction treatment services for both adults and adolescents in our region continues to grow. We have expanded hours in both Lisbon and Wahpeton to meet this demand.

Program Trends

- The impact from New American settlement continues in the Region with West Fargo Schools reporting they have gone from five English Language Learners (ELL) in 1996 to over 500 in the current school year. They represent 21 countries and about 7 percent of the total school population. Fargo school district's ELL speak 113 languages and represent 10 percent of the school's enrollment. SEHSC serves 10 percent minority consumers (not all are ELL) and provides, through contract, translation services in twelve languages.
- The Fargo area has a strong job market with a low unemployment rate. This creates challenges in terms of placing us in a very competitive market for healthcare professionals. Our staff turnover rate for CY 2007 was 14.61 percent, which is an improvement from the last biennium, but still significant. We have had licensed psychologist positions open for over a year and continue to recruit in that area. Turnover of case management staff is also very high, which impacts service delivery in one of the highest need areas.
- The estimated poverty rate in the metropolitan statistical area, which consists of Cass and Clay counties, jumped from 10.1 percent in 2006 to 13.4 percent last year, according to the U.S. Census Bureau's annual American Community Survey.
- Region V has 51 percent (91 individuals) of the long term homeless population in North Dakota according to the latest point in time study conducted in January 2008. "That definition is used to describe individuals or families with disabling conditions who have been homeless continuously for at least

one year, or more than four times in the last three years (ND Interagency Council on Homelessness)."

- As of December 1, 2008, there were 80 children from Region V in the custody of the Department of Human Services, which is an increase from last biennium. Sixty-four of the 80 children entered into custody within the last two years with 54 adoptions occurring during that same timeframe. More than 60 percent of the children are 10 years or under, which indicated a trend that children coming into custody of the State from our region are getting younger.

Accomplishments

I am pleased to report a number of significant accomplishments for SEHSC:

- We have just finished our second full year of implementing the evidence -based practice of Integrated Dual Disorder Treatment (IDDT) which has been proven to improve the quality of life for individuals with co-occurring mental and chronic substance use disorders. In February 2007, we started our second IDDT program for individuals who have a primary chronic substance use disorder. In seeking an improved way to work with our growing population of individuals with both serious mental illness and substance abuse, we noted that IDDT research indicated outcomes which include **reduced** rates of relapse, hospitalization, arrest, incarceration, and utilization of high cost services while **increasing** continuity of care, quality of life outcomes, stable housing, employment, and independent living. This model provides staff with very specific strategies for delivering service. The DHS-Mental Health and Substance Abuse Division is working

with us on the implementation of this practice and has implemented a number of research and data gathering efforts to measure outcomes. Preliminary results are positive, and there are plans to implement the program in other areas of the State.

- SEHSC has continued to increase the number of other evidence-based practices, and to date, in addition to the IDDT program, offers Dialectal Behavioral Treatment, Structured Psychotherapy for Adolescents Responding to Chronic Stress (SPARCS), Trauma Based Focused Cognitive Behavioral Therapy, Matrix, Motivational Interviewing, and Person Centered Treatment Planning.
- In conjunction with the University of North Dakota Medical School, SEHSC provides a psychiatric residency training site for a number of doctors each year. This has assisted with recruitment of psychiatrists both at our Center and within the State.
- SEHSC continues to be approved as a training site for the Association of Psychology Postdoctoral and Internship Centers (APPIC), and each year selects two students from across the country to participate in a nine-month internship program. A number of these trainees have gone on to employment with DHS or within the State. We also are currently in the process of completing an application to be an approved American Psychological Association intern site, so that we can better attract North Dakota graduates to our intern program, which we believe will assist us with recruitment of licensed psychologists.
- In July 2008 we expanded our crisis bed availability to 14 beds (15 when new licensure standards were approved in January 2009). There continues to be high utilization of these beds and a wait list and triage process is used for admission access.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
SEHSC	26,590,526	32,020,964	5,430,438
General	11,548,288	16,054,906	4,506,618
Federal	13,823,577	14,576,889	753,312
Other	1,218,661	1,389,169	170,508
FTEs	182.35	188.35	6.00

- The Governor's salary package of 5/5 and the health insurance increase which adds $2,151,073 in total funds of which $1,632,355 is general fund.
- Additional increases in the salary area of $557,870 are a result of the addition of six FTE's to address capacity concerns for global behavioral health, DD case management and Partnership care coordination which have increased the general fund by $436,961.
- This budget also includes $338,039, of which $239,501 is general funds, to continue the July 2008 salary increases for the entire biennium.
- Operating increases of $65,436 are the result of increased rent of $9,010 for the MI/CD facility; $9,800 increase for computers, travel and supplies for the six additional staff; and an $18,862 inflationary increase for janitorial and drug testing services. Other increases are $9,312 for the increased cost of the accreditation survey for our sheltered workshop; $6,276 in motor pool costs due to the increase in gasoline prices and increased outreach to vulnerable clients in rural areas of the region; $3,058 for staff training; and $8,989 increase in building

repair costs for needed upkeep: e.g. carpeting, painting, repairs to parking lot and building. The increases have $59,813 of general fund.

- Capital assets decreased by $55,897, due the bonds for the Southeast facility being fully paid off in December of 2007. This decreased the general fund by $41,069.
- Grants increased by $2,028,067, primarily based on the following: inflationary increases for providers of $387,427; an increase of $426,844 for an eight bed youth transitional housing facility; $315,360 for a twenty-four hour program coordinator contract for the Cooper House; $192,000 for an adult drug court budget that was moved from Corrections to DHS-SEHSC; $50,000 for respite care expansion; $100,000 for a supported employment project for individuals with mental illness; and $644,135 for the increased need of hospital services for HSC clients who are indigent, along with an increased rate for those services, which is now consistent among all HSCs. These increases account for $1,643,635 of general funds.
- Other changes in the general fund include an increase of $91,734 due to a decrease in the FMAP percentage for Medicaid reimbursement. General fund was also increased by $443,688 due to federal fund limitations required to maintain services in the hold-even budget.

South Central Human Service Center

SCHSC provides community services to individuals who live primarily in Foster, Wells, Griggs, Barnes, Stutsman, LaMoure, Dickey, McIntosh and Logan Counties. This region is comprised of 55,593 residents (8.7 percent of the State's population) as estimated by the 2007 US Census estimates and covers 10,441 square miles.

Caseload / Customer Base

- SCHSC continues to provide clinical services in Valley City, Oakes, Carrington, Cooperstown, LaMoure, Wishek and Fessenden. In addition, clinicians who work with individuals with serious mental illness, vocational rehabilitation needs and developmental disabilities travel to each of the nine counties in Region VI providing services.
- SCHSC provided behavioral health services to 2,958 individuals in SFY 2008 (2,220 adults and 738 children received services). This represents a three percent overall increase in numbers served from last biennium. In addition, 605 individuals received Vocational Rehabilitation Services and 166 individuals received Older Blind Services.
- SCHSC has the only full-time community psychiatrist in Region VI.
- Admissions to the North Dakota State Hospital (NDSH) remain in the 25-30 per month range. As Region VI has no private inpatient mental health treatment facility, the NDSH is utilized for acute inpatient needs as well as for longer term hospitalization needs. Individuals from Region VI also access out-of-region private psychiatric hospitals.
- Referrals for services for individuals from the Court and Correction sectors continue to be high.

- Admissions to the Crisis Residential Unit dipped slightly in CY 2007, but increased in CY 2008 and are currently projected to be approximately 224 admissions for the year.
- Requests for emergency service interventions continued to increase over the course of the last SFY. SCHSC provided 584 emergent interventions in SFY 2008, which was the highest number in the State. In corresponding efforts to reduce potential NDSH admissions, SCHSC developed a formal Regional Intervention Unit (RIS) in an effort to have more highly skilled screeners with increased knowledge of treatment alternatives to assist in consumer treatment and reduction of admissions to the NDSH.
- 27.4 percent (122 of 444) of North Dakota's reported adult abuse and neglect incidents during FFY 2007 occurred within Region VI.
- SCHSC Family Caregiver Support Program has consistently served the largest number of caregivers in the state, with a caseload range of 65-70 at any one time. SCHSC utilizes both in-home and inpatient respite for our caregivers. As of today, 40 percent of our families are in-home care providers for someone with Alzheimer's or related dementia. The Family Caregiver Support Program allows families to delay transitioning of a loved one to a care facility. We can anticipate with a growing population of adults age 60 and over within Region VI that program needs will continue to grow and be impacted by the availability of staffing resources and programmatic funds in the future.

Program Trends

- Citizens (age 60+) comprised 27.2 percent of the total population in Region VI. The South Central region has the oldest average age in the state.
- The baby boomers, the large cohort of individuals born between 1946 and 1964, will continue to create a sizable bulge in the region's future age distribution. Projections indicate that between 2010 and 2015, 34 percent of the region's residents will be age 60 and over.
- The changing age profile of Region VI will have important implications for both the Caregiver Program and Adult Abuse and Neglect reporting and interventions. Requests for interventions can be anticipated to remain strong due to several factors. Declining health status of older adults; poverty which hits certain old age subgroups the hardest; and advanced age adds to this group's vulnerability. These factors, in conjunction with our strong desire to assist this population to remain independent as long as possible, will impact referrals and workloads of SCHSC staff.

Accomplishments

- In conjunction with the NDSH and Progress Enterprises, Inc., the 15 bed Bridgepointe transitional living facility was established. The residential program is providing community-based living and treatment for 15 long-term hospital patients with serious mental illness. This program development has resulted in more availability of bed space at the NDSH for treatment of individuals with acute and long-term mental health treatment needs.

- "Grow our own" efforts associated with training and filling addiction counselor positions have resulted in South Central's Addiction Unit being fully staffed, thus reducing consumer wait times for evaluation and treatment services. The demand for addiction services is high in this region, and there are a large number of consumers with chronic treatment issues.
- An essential new element in the South Central region's recovery oriented mental health system has been the introduction and development of the Peer Support Program. As a means to model recovery and resiliency in overcoming everyday obstacles common to those who live with serious mental illness (SMI), three trained peer support volunteers (individuals who have experienced SMI) coordinate a weekly peer support group for 15-20 consumers and between 70-80 consumers actively participate in recovery-based activities. The Peer Support Program is an integral and growing part of the South Central mental health system as the provision of support by persons who have experienced mental illness is the essence of empowerment and ultimately recovery.
- South Central has continued to increase the number of evidence-based practices, and to date, offers Dialectal Behavioral Treatment, Structured Psychotherapy for Adolescents Responding to Chronic Stress (SPARCS), Trauma Based Focused Cognitive Behavioral Therapy, Matrix, and Person Centered Treatment.
- In ongoing efforts to maximize staffing resources, South Central has successfully reduced consumer "no shows" for psychiatric evaluations and medication reviews through utilization of a Retired Senior Volunteer Program (RSVP) volunteer to complete follow up or "reminder calls" to consumers with scheduled medical appointments. Due to these cue reminder calls, the no show rates

have trended downward by 7.9 percent over the latter months of CY 2008 thus improving program efficiency.

- A workforce analysis of staff at SCHSC was completed which indicated a labor force of skilled experienced individuals with a great number of years of service in their current positions. A high percentage of individuals will reach the rule of 85 within next few years and will be eligible for State retirement. For succession planning purposes, we have made administrative and supervisory training available to interested staff to minimize impact of retirements and to prepare individuals to compete and perform in the near future in leadership roles.
- South Central continued to strengthen consumer care through multiple collaborative efforts with local inpatient and outpatient facilities on such issues as social detoxification, transportation, consumer medication distribution efforts, homelessness, licensed addiction counselor development and recruitment, outpatient sex offender evaluations, expansion of the Sheyenne Care geropsychiatric unit, and substance abuse prevention efforts.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / (Decrease)
SCHSC	14,635,176	15,913,332	1,278,156
General	8,005,783	8,943,330	937,547
Federal	5,860,748	6,216,353	355,605
Other	768,645	753,649	(14,996)
FTEs	85.50	87.50	2.00

The major changes can be explained as follows:

- The Governor's salary package recommendation requires a total increase of $1,013,085 with $788,746 being from the general fund.
- Other increases in the salary and fringe benefits portion of the budget include the addition of two FTE's, one for Vulnerable Adult Services and one for Addiction Services (all $152,182 from the general fund).
- The cost to continue the July 2008 salary increase for the entire biennium is $153,858 total funds ($117,147 general funds).
- The Operating portion of the budget increased by $5,733, mainly due to the addition of the two new FTE's. All of the increase was from the general fund.
- The Grants portion of the budget decreased by $160,363. This is due to a decrease in the amount needed for the operation of our contracted Transitional Living facility, which was a new facility that became operational just before the start of the current biennium. This decrease was offset by the 7 percent inflationary increases for contracted providers, which totaled $325,991 for the biennium. All of the decrease is from the general fund.

This concludes my testimony on the 2009–2011 budget request for the SEHSC and SCHSC portions of the DHS budgets. I would be happy to answer any questions.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, this is written testimony provided by Candace Fuglesten, Director of Southeast Human Service Center (SEHSC) and South Central Human Service Center (SCHSC) for the Department of Human Services (DHS). This gives you an overview of the budget for both centers.

Southeast Human Service Center

SEHSC provides community behavioral health and safety net services to individuals who live primarily in Steele, Traill, Cass, Ransom, Sargent and Richland counties, in Region V of our State. The region is comprised of 173,781 residents (27.2 percent of the state's population) as estimated by the 2007 US Census estimates.

Caseload / Customer Base

- SEHSC provided behavioral health services to 5,029 individuals in SFY 2008 (3,931 adults - 1,098 seventeen years of age or younger). This number increased 1.5 percent since last biennium, but this represents a slowing in the growth of clients from previous years. Fifty-five percent of these individuals qualified to receive services at 100 percent discount due to having incomes that fell 100 percent or more below the poverty index. Forty-one percent of the individuals had no third party payment or insurance coverage of any kind.

- SEHSC provided Vocational Rehabilitation (VR) services to 1,539 individuals. Within the Developmental Disability (DD) service area we served 1,185 individuals in FY 2008.
- SFY 2008 data shows that 13 percent of the behavioral health clients carry dual diagnoses of serious mental illness and chronic addiction. Due to demand issues and capacity limitations, SEHSC provides all of the established human service center core services, but prioritizes serving the most vulnerable individuals who cannot access services elsewhere in the community/region. Our Admission staff assists individuals requesting non-urgent services, who have the potential to access other community providers, by discussing alternative resources with the caller. Many of these individuals then seek those services from other local providers.
- Due to the high demand for case management services for individuals with serious mental illness and/or chronic addiction, we have identified criteria/levels of care to determine those most in need of these services; i.e. individuals at highest risk of re-hospitalization or harm to self or others. Individuals who receive case management services require multiple services, and these capacity demands are reflected in our budget.
- Nineteen percent of all admissions to the North Dakota State Hospital (NDSH) in FY 2008 came from this region. This is actually a decrease of four percent from the previous biennium. Short-term inpatient hospitalization for indigent clients is provided at MeritCare Hospital through a contract with SEHSC.
- We also contract for crisis beds for children with severe emotional disorders and crisis/social detox beds for adolescents with substance abuse issues. The addiction crisis beds provide

an intensive level of substance abuse residential care in a family setting. Outcomes in this area have been very positive with increased school attendance, reduction in substance use, and successful reintegration into the parental home.

- Many of our clients are involved in the correctional system either at the local jail and court system or after release from prison and under the supervision of Probation and Parole. We receive a daily census report from the jail, so that we can monitor clients who may be incarcerated and continue to provide psychiatric and medication follow-up. Our regional intervention staff works with the jail to triage and identify new individuals that need immediate psychiatric evaluations that are completed at the jail. Cass County was awarded a Department of Justice grant to work with community partners in a pilot project of a post-booking diversion program for eligible offenders with mental health diagnoses. With this grant the jail has hired a mental health professional and SEHSC receives funds for a 0.75 percent case management FTE who will work with offenders that the court sentences to this program. Both the jail and the prison work with us to plan for aftercare as much as possible with appointments made as often as possible for the day of release.
- The demand for outreach addiction treatment services for both adults and adolescents in our region continues to grow. We have expanded hours in both Lisbon and Wahpeton to meet this demand.

Program Trends

- The impact from New American settlement continues in the Region with West Fargo Schools reporting they have gone from five English Language Learners (ELL) in 1996 to over 500

in the current school year. They represent 21 countries and about 7 percent of the total school population. Fargo school district's ELL speak 113 languages and represent 10 percent of the school's enrollment. SEHSC serves 10 percent minority consumers (not all are ELL) and provides, through contract, translation services in twelve languages.

- The Fargo area has a strong job market with a low unemployment rate. This creates challenges in terms of placing us in a very competitive market for healthcare professionals. Our staff turnover rate for CY 2007 was 14.61 percent, which is an improvement from the last biennium, but still significant. We have had licensed psychologist positions open for over a year and continue to recruit in that area. Turnover of case management staff is also very high, which impacts service delivery in one of the highest need areas.
- The estimated poverty rate in the metropolitan statistical area, which consists of Cass and Clay counties, jumped from 10.1 percent in 2006 to 13.4 percent last year, according to the U.S. Census Bureau's annual American Community Survey.
- Region V has 51 percent (91 individuals) of the long term homeless population in North Dakota according to the latest point in time study conducted in January 2008. "That definition is used to describe individuals or families with disabling conditions who have been homeless continuously for at least one year, or more than four times in the last three years (ND Interagency Council on Homelessness)."
- As of December 1, 2008, there were 80 children from Region V in the custody of the Department of Human Services, which is an increase from last biennium. Sixty-four of the 80 children

entered into custody within the last two years with 54 adoptions occurring during that same timeframe. More than 60 percent of the children are 10 years or under, which indicated a trend that children coming into custody of the State from our region are getting younger.

Accomplishments

I am pleased to report a number of significant accomplishments for SEHSC:

- We have just finished our second full year of implementing the evidence-based practice of Integrated Dual Disorder Treatment (IDDT) which has been proven to improve the quality of life for individuals with co-occurring mental and chronic substance use disorders. In February 2007, we started our second IDDT program for individuals who have a primary chronic substance use disorder. In seeking an improved way to work with our growing population of individuals with both serious mental illness and substance abuse, we noted that IDDT research indicated outcomes which include **reduced** rates of relapse, hospitalization, arrest, incarceration, and utilization of high cost services while **increasing** continuity of care, quality of life outcomes, stable housing, employment, and independent living. This model provides staff with very specific strategies for delivering service. The DHS-Mental Health and Substance Abuse Division is working with us on the implementation of this practice and has implemented a number of research and data gathering efforts to measure outcomes. Preliminary results are positive, and there are plans to implement the program in other areas of the State.

- SEHSC has continued to increase the number of other evidence-based practices, and to date, in addition to the IDDT program, offers Dialectal Behavioral Treatment, Structured Psychotherapy for Adolescents Responding to Chronic Stress (SPARCS), Trauma Based Focused Cognitive Behavioral Therapy, Matrix, Motivational Interviewing, and Person Centered Treatment Planning.
- In conjunction with the University of North Dakota Medical School, SEHSC provides a psychiatric residency training site for a number of doctors each year. This has assisted with recruitment of psychiatrists both at our Center and within the State.
- SEHSC continues to be approved as a training site for the Association of Psychology Postdoctoral and Internship Centers (APPIC), and each year selects two students from across the country to participate in a nine-month internship program. A number of these trainees have gone on to employment with DHS or within the State. We also are currently in the process of completing an application to be an approved American Psychological Association intern site, so that we can better attract North Dakota graduates to our intern program, which we believe will assist us with recruitment of licensed psychologists.
- In July 2008 we expanded our crisis bed availability to 14 beds (15 when new licensure standards were approved in January 2009). There continues to be high utilization of these beds and a wait list and triage process is used for admission access.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
SEHSC	26,590,526	5,430,438	32,020,964	(2,260,109)	29,760,855
General Funds	11,548,288	4,506,618	16,054,906	(1,482,439)	14,572,467
Federal Funds	13,823,577	753,312	14,576,889	(715,347)	13,861,542
Other Funds	1,218,661	170,508	1,389,169	(62,323)	1,326,846
FTEs	182.35	6.00	188.35	(6.00)	182.35

Budget Changes from Current Budget to Executive Budget

- The increase in salary and fringe benefits is a result of the salary and health insurance package, which adds $2,151,073 in total funds of which $1,632,355 is General Fund.
- Additional increases in the salary area of $557,870 are a result of the addition of six FTE to address capacity concerns for global behavioral health, DD case management and Partnership care coordination which have increased the general fund by $436,961. This budget also includes $338,039, of which $239,501 is general funds, which is the cost to continue the July 2008 salary increases for the entire biennium.
- Operating increases of $65,436 are the result of increased rent of $9,010 for the MI/CD facility; $9,800 increase for computers, travel and supplies for the six additional staff; and an $18,862 inflation increase for janitorial and drug testing services. Other increases are $9,312 increased cost of the accreditation survey for our sheltered workshop; $6,276 in motor pool costs due to the increase in gasoline prices and increased outreach to vulnerable clients in rural areas of the region; $3,058 for staff training; and $8,989 increase in building repair costs for needed

upkeep: e.g. carpeting, painting, repairs to parking lot and building. The increases have $59,813 of general fund.

- Capital assets decreased by $55,897 due the bonds for the Southeast facility being fully paid off in December of 2007. This decreased the general fund by $41,069.
- Grants increased by $2,028,067 primarily based on the following: inflationary increases for providers of $387,427; an increase of $426,844 for an eight bed youth transitional housing facility; $315,360 for a 24-hour program coordinator contract for the Cooper House; $192,000 for an adult drug court budget that was moved from The Department of Corrections and Rehabilitation to DHS-SEHSC; $50,000 for respite care expansion; $100,000 for a supported employment project for individuals with mental illness; and $644,135 for the increased need of hospital services for HSC clients who are indigent, along with an increased rate for those services, which is now consistent among all HSCs. These increases account for $1,643,635 of general funds.
- Other changes in the general fund include an increase of $91,734 due to a decrease in the FMAP percentage for Medicaid reimbursement. General fund was also increased by $443,688 due to federal fund limitations required to maintain services in the hold-even budget.

House Changes:

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $164,349 - general fund, $307,531 - federal funds and $28,636 other funds for at total of $500,516.

- The House reduced 50% of the department-wide travel increase. The Southeast share of this decrease is $3,121 total funds; $1,707 – general fund.
- Additional decreases in the salary area of $617,652 are a result of the reduction of six FTEs to address capacity concerns for global behavioral health, DD case management and Partnership care coordination which decreased the general fund by $427,634. Also included with these 6 positions is a reduction of $9,800 in office supplies. General fund decrease is $6,036.
- Provider inflation was reduced from 7% to 6% which resulted in a decrease of $58,041 in total funds; $57,874 – general fund.
- There was a decrease of $426,844 for an eight bed youth transitional housing facility; and $644,135 for the increased need and the increased rebasing rate of hospital services for HSC clients who are indigent. These decreased the general fund by $828,757, federal funds by $213,422 and other funds by $28,800

South Central Human Service Center

SCHSC provides community services to individuals who live primarily in Foster, Wells, Griggs, Barnes, Stutsman, LaMoure, Dickey, McIntosh and Logan Counties. This region is comprised of 55,593 residents (8.7 percent of the State's population) as estimated by the 2007 US Census estimates and covers 10,441 square miles.

Caseload / Customer Base

- SCHSC continues to provide clinical services in Valley City, Oakes, Carrington, Cooperstown, LaMoure, Wishek and Fessenden. In addition, clinicians who work with individuals with serious mental

illness, vocational rehabilitation needs and developmental disabilities travel to each of the nine counties in Region VI providing services.

- SCHSC provided behavioral health services to 2,958 individuals in SFY 2008 (2,220 adults and 738 children received services). This represents a three percent overall increase in numbers served from last biennium. In addition, 605 individuals received Vocational Rehabilitation Services and 166 individuals received Older Blind Services.
- SCHSC has the only full-time community psychiatrist in Region VI.
- Admissions to the North Dakota State Hospital (NDSH) remain in the 25-30 per month range. As Region VI has no private inpatient mental health treatment facility, the NDSH is utilized for acute inpatient needs as well as for longer term hospitalization needs. Individuals from Region VI also access out-of-region private psychiatric hospitals.
- Referrals for services for individuals from the Court and Correction sectors continue to be high.
- Admissions to the Crisis Residential Unit dipped slightly in CY 2007, but increased in CY 2008 and are currently projected to be approximately 224 admissions for the year.
- Requests for emergency service interventions continued to increase over the course of the last SFY. SCHSC provided 584 emergent interventions in SFY 2008, which was the highest number in the State. In corresponding efforts to reduce potential NDSH admissions, SCHSC developed a formal Regional Intervention Unit (RIS) in an effort to have more highly skilled screeners with increased knowledge of treatment

alternatives to assist in consumer treatment and reduction of admissions to the NDSH.

- 27.4 percent (122 of 444) of North Dakota's reported adult abuse and neglect incidents during FFY 2007 occurred within Region VI.
- SCHSC Family Caregiver Support Program has consistently served the largest number of caregivers in the state, with a caseload range of 65-70 at any one time. SCHSC utilizes both in-home and inpatient respite for our caregivers. As of today, 40 percent of our families are in-home care providers for someone with Alzheimer's or related dementia. The Family Caregiver Support Program allows families to delay transitioning of a loved one to a care facility. We can anticipate with a growing population of adults age 60 and over within Region VI that program needs will continue to grow and be impacted by the availability of staffing resources and programmatic funds in the future.

Program Trends

- Citizens (age 60+) comprised 27.2 percent of the total population in Region VI. The South Central region has the oldest average age in the state.
- The baby boomers, the large cohort of individuals born between 1946 and 1964, will continue to create a sizable bulge in the region's future age distribution. Projections indicate that between 2010 and 2015, 34 percent of the region's residents will be age 60 and over.
- The changing age profile of Region VI will have important implications for both the Caregiver Program and Adult Abuse and Neglect reporting and interventions. Requests for interventions

can be anticipated to remain strong due to several factors. Declining health status of older adults; poverty which hits certain old age subgroups the hardest; and advanced age adds to this group's vulnerability. These factors, in conjunction with our strong desire to assist this population to remain independent as long as possible, will impact referrals and workloads of SCHSC staff.

Accomplishments

- In conjunction with the NDSH and Progress Enterprises, Inc., the 15 bed Bridgepointe transitional living facility was established. The residential program is providing community-based living and treatment for 15 long-term hospital patients with serious mental illness. This program development has resulted in more availability of bed space at the NDSH for treatment of individuals with acute and long-term mental health treatment needs.
- "Grow our own" efforts associated with training and filling addiction counselor positions have resulted in South Central's Addiction Unit being fully staffed, thus reducing consumer wait times for evaluation and treatment services. The demand for addiction services is high in this region, and there are a large number of consumers with chronic treatment issues.
- An essential new element in the South Central region's recovery oriented mental health system has been the introduction and development of the Peer Support Program. As a means to model recovery and resiliency in overcoming everyday obstacles common to those who live with serious mental illness (SMI), three trained peer support volunteers (individuals who have experienced SMI) coordinate a weekly peer support group for 15-20 consumers and

between 70-80 consumers actively participate in recovery-based activities. The Peer Support Program is an integral and growing part of the South Central mental health system as the provision of support by persons who have experienced mental illness is the essence of empowerment and ultimately recovery.

- South Central has continued to increase the number of evidence-based practices, and to date, offers Dialectal Behavioral Treatment, Structured Psychotherapy for Adolescents Responding to Chronic Stress (SPARCS), Trauma Based Focused Cognitive Behavioral Therapy, Matrix, and Person Centered Treatment.
- In ongoing efforts to maximize staffing resources, South Central has successfully reduced consumer "no shows" for psychiatric evaluations and medication reviews through utilization of a Retired Senior Volunteer Program (RSVP) volunteer to complete follow up or "reminder calls" to consumers with scheduled medical appointments. Due to these cue reminder calls, the no show rates have trended downward by 7.9 percent over the latter months of CY 2008 thus improving program efficiency.
- A workforce analysis of staff at SCHSC was completed which indicated a labor force of skilled experienced individuals with a great number of years of service in their current positions. For succession planning purposes, we have made administrative and supervisory training available to interested staff to minimize impact of retirements and to prepare individuals to compete and perform in the near future in leadership roles.
- South Central continued to strengthen consumer care through multiple collaborative efforts with local inpatient and outpatient

facilities on such issues as social detoxification, transportation, consumer medication distribution efforts, homelessness, licensed addiction counselor development and recruitment, outpatient sex offender evaluations, expansion of the Sheyenne Care geropsychiatric unit, and substance abuse prevention efforts.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
SCHSC	14,635,176	1,278,156	15,913,332	(656,012)	15,257,320
General Funds	8,005,783	937,547	8,943,330	(386,259)	8,557,071
Federal Funds	5,860,748	355,605	6,216,353	(202,814)	6,013,539
Other Funds	768,645	(14,996)	753,649	(66,939)	686,710
FTE	85.50	2.00	87.50	(2.00)	85.50

Budget Changes from Current Budget to Executive Budget:

The major changes can be explained as follows:

- The Governor's salary package recommendation requires a total increase of $1,013,085 with $788,746 being from the general fund.
- Other increases in the salary and fringe benefits portion of the budget include the addition of two FTEs, one for Vulnerable Adult Services and one for Addiction Services (all $152,182 from the general fund).
- The cost to continue the July 2008 salary increase for the entire biennium is $153,858 total funds ($117,147 general funds).

- The Operating portion of the budget increased by $5,733, mainly due to the addition of the two new FTEs. All of the increase was from the general fund.
- The Grants portion of the budget decreased by $160,363. This is due to a decrease in the amount needed for the operation of our contracted Transitional Living facility, which was a new facility that became operational just before the start of the current biennium. This decrease was offset by the 7 percent inflationary increases for contracted providers, which totaled $325,991 for the biennium. All of the decrease is from the general fund.

House Changes:

- The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $128,661 - general fund and $263,169 – federal and other funds for a total of $391,830.
- The House reduced 50% of the department-wide travel increase. South Central's share of this decrease is $16,815 total funds; $10,231 – general fund.
- Additionally, the House removed the 2 new requested FTEs, along with the operating associated with these FTEs. The total decrease is $200,797, all general fund.
- Finally, the House reduced the provider inflation amounts from 7% per year to 6% per year. This resulted in a total decrease of $46,570, all general fund.

This concludes the testimony on the 2009–2011 budget request for the SEHSC and SCHSC portions of the DHS budget.

Testimony
House Bill 1012 – Department of Human Services
House Appropriations – Human Resources Division
Representative Pollert, Chairman
January 22, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Kate Kenna, Director of Lake Region Human Service Center (LRHSC) and Northeast Human Service Center (NEHSC) for the Department of Human Services (DHS). I am here today to provide you an overview of both centers' budget requests.

Lake Region Human Service Center

Lake Region Human Service Center provides services to Ramsey, Cavalier, Rolette, Towner, Benson, and Eddy counties. In 2007 the population estimate in the region was 40,458, or 6.3 percent of the total state population. Services are provided throughout the region with one office in Devils Lake and an outreach office in Rolla.

Caseload / Customer Base

The Lake Region HSC provided services to 2,373 individuals (excluding Vocational Rehabilitation) in Fiscal Year 2008; 1,776 adults and 572 children received services. In addition, 368 individuals received Vocational Rehabilitation services, and 136 received Older Blind services.

The poverty rate in Region III is 19.3 percent, nearly two times the state average of 10 percent. Temporary Aid to Needy Families (TANF) recipients continues to grow; currently Lake Region Human

Service Center has 852 TANF recipients – 41 percent of all TANF families in North Dakota.

Program Trends

- Difficulty recruiting qualified staff, especially in the areas of psychology, addiction, and fully qualified mental health clinicians continues. Region III remains a designated Mental Health Professional Shortage area by the National Health Service Corp, with a score of "18". This is the highest designation in North Dakota.
- Developmental Disability case management for children ages 0-3 has increased from 54 in 2007 to 65 in 2008.
- Enrollment in day supports for individuals with developmental disabilities has increased from five individuals in 2001 to 20 in 2008.
- The Lake Region HSC has experienced an increase in dually diagnosed consumers (Serious Mental Illness and Addiction). The complexity of these cases require more intensive case management and case aide services.
- Emergency/crisis calls have increased from 550 in FY 2007 to 631 in FY 2008.
- The Lake Region HSC, with 6 percent of the state's population, has nearly 17 percent of the children in foster care. This number does not include the 62 children in Native American care, which increases the percentage rate to 23 percent.
- Admissions to the State Hospital are down from 69 in FY 2007 to 58 in FY 2008. There have been substantial declines in the past few years. Lake Region Human Service Center is assisting our more challenging consumers to stay in the community by wrapping supportive services around them.

Accomplishments

- Increased efforts to screen potential North Dakota State Hospital admissions continue to be successful. Region III has no inpatient psychiatric or inpatient substance abuse alternative within the region, but state hospital diversions to community-based alternatives have increased. In the mid-1980s our regional referrals to the state hospital averaged 322 consumers per year; in the mid-1990s, the average was 207. These admissions were further reduced to just over 100 per year by the middle of the current decade. Total state hospital admissions for SFY 2007 were 69 consumers and for SFY 2008 were 58.
- The Lake Region HSC continues to work toward strengthening the quality of the community-based services we provide. We are growing our abilities to provide evidenced based services, including the UCLA Matrix Program for treating substance abuse; Trauma Focused Cognitive Behavioral Therapy, as well as Structured Psychotherapy for Adolescents under Chronic Stress for treating trauma; and other consumer friendly models including the Recovery Model and Person Centered Services. We will soon be training staff in Motivational Interviewing, as well as starting an adolescent matrix program in conjunction with a multi-agency collaboration to start an adolescent drug court.
- In another effort to strengthen community-based services Lake Region HSC expanded our full-time satellite office in Rolette County. The Rolla Outreach Office offers Developmental Disabilities case management, PATH homeless case management, Serious Mental Illness case management, Vulnerable Adult Protective Services,

mental health counseling, emergency services, and substance abuse evaluation and treatment, including the option for residential stay at our ten bed crisis residential unit.

- In an effort at quality improvement, Lake Region is one of the three pilot human service centers working with Network for the Improvement of Addiction Treatment (NIATx). This organization helps behavioral health agencies improve services by bringing to the table researched and innovative solutions to reduce no show rates, improve access, improve completion rates of consumers, reduce costs, improve staff morale, and achieve good outcomes from services provided.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
Lake Region HSC	9,884,876	11,011,109	1,126,233
General Funds	5,304,226	6,263,550	959,324
Federal Funds	4,129,219	4,306,213	176,994
Other Funds	451,431	441,346	(10,085)
Total	9,884,876	11,011,109	1,126,233
FTE	62	62	-

- Salary and Wages related expenses increased by $795,934 and can be attributed to the following:
  - $704,783 in total funds of which $545,128 is general funds to fund the Governor's salary package for state employees.
  - $(19,212) in temporary salaries which represents a half-time temporary position.

- The remaining $110,363 is largely the result of funding legislatively approved salary increases in the current biennium into the 09-11 biennium.

- The Operating cost increased by $35,908 and is a combination of the following items:
  - An increase of $42,100 in travel related expenses. This increase is largely based on State Fleet's expected per mileage increase to $.40. This biennium that cost has been approximately $.28/mile.
  - An increase of $2,840 for data processing supplies.
  - A decrease of $9,597 in Operating Fees and Services. Of this amount, $4,250 of the decrease is in the area of Vocational Rehabilitation for the purchase of services, and $7,500 of the decrease is in the Alcohol and Drug services for purchase of services. These amounts are offset by an increase of $3,050 for the Developmental Disabilities Experienced Parent Program.

- Lake Region HSC's operating budget includes $425,580 in building rent for its two office locations. The main Devils Lake office has a projected budget of $379,980 which equates to approximately $10.42/square foot per year. The Center's Rolla Outreach office has a budget of $45,600 and is approximately $9.71/square foot per year.

- The Grants costs include an increase of $294,391. Of this amount, $85,721 is to fund the current biennium's increases into the 09-11 biennium with the remaining $208,670 representing the Governor's recommended increase for contracted providers.

The general fund request increased by $959,324 with 79% of that increase ($753,798) related to the Governor's salary package for state employees and recommended contracted provider increases. The remaining increase of $205,526 is associated largely with the current biennium salary, provider inflationary increases being carried into the new biennium, and the operating changes described above.

Northeast Human Service Center

This area of the budget includes the programs of the Northeast Human Service Center (NEHSC). The NEHSC serves the citizens of Grand Forks, Nelson, Walsh, and Pembina counties. The center is located in Grand Forks with a satellite office in Grafton and an outreach site in Cavalier.

Caseload / Customer Base

- The population in Region IV is approximately 91,000; this represents 14 percent of the state's population. Fifteen percent of the state's children, nearly 23,500, reside in our region.
- The Northeast HSC provided clinical services to 3,371 individuals in SFY 2008; 2,407 adults and 964 children received services. This represented a 10 percent increase in clients over SFY 2006. During the same two year period our addiction evaluations increased by 30 percent, and clinical intakes by 19 percent.
- Vocational Rehabilitation (VR) served 1,144 clients; 140 clients were served through the Older Blind program.

- Other residents of our counties received indirect services provided through Aging Services, Foster Grandparent Program, Child Welfare, and community education.
- Priority is placed on serving the Region's most vulnerable individuals, including those who cannot otherwise access services.

Program Trends

- The Northeast HSC has had difficulty recruiting/retaining a psychologist, community home counselors, and fully qualified mental health clinicians. We have just confirmed hiring for a vacant psychiatry opening; however, this is from within the DHS system.
- In addiction services, Northeast HSC has noted an increase in the use of prescription medication, a decrease in methamphetamine as a primary substance of use, a need for longer residential stays (which has at times created a bottleneck for new clients), and an increase in clients from County Social Services and the Department of Corrections and Rehabilitation who require additional case management and more frequent involuntary commitments.
- In Developmental Disabilities (DD), more families are struggling economically and are requesting assistance in helping meet the excess costs of having a child with a disability. Developmental Disability Case Managers (DDCM) are spending more time helping families meet basic needs such as housing, heat, diapers, food, etc. Our numbers in DD case management continue to grow each biennium.
- The Ruth Meiers Adolescent Residential Facility has experienced an increase in referrals and admissions of younger adolescents (11-12 year olds), an increase in females referred, and an increase in

youth with sexually related behavior problems. We also note there is a disproportionate number of referrals of Native American children (40 percent).

- Children and Family Services notes that there were 39 adoptions of foster care children in 2008, compared to 11 in 2007. In 2007 there were 62 family foster homes and in 2008 there are 82. The number of therapeutic foster homes also increased from 21 to 32.
- The Northeast HSC has been working with Network for the Improvement of Addiction Treatment (NIATx) to improve services to clients. We have focused on reducing wait time, increased customer satisfaction, and efficiency. This process looks at evaluating services and using a rapid change cycle in the delivery of services. We have noticed success in access for clients and a reduction of paperwork in the first two cycles.

Accomplishments

- Evidenced Based Practices have been implemented at NEHSC which include: Contingency Management in Addiction, Matrix Program, and Person Centered Treatment Planning.
- We have implemented an Adult Drug Court with funding provided during the last legislative session. In cooperation with our Court, and Department of Corrections we began seeing clients in October of 2008 and to date have 12 consumers in the program. Our Adolescent Drug Court continues and currently is serving 19 clients.
- The Northeast HSC successfully implemented a telemedicine program for psychiatric services and addiction evaluations. Region IV has telemedicine sites in Northwood, Grafton, and the Grand Forks

Correctional Center. This allows us to provide services in an efficient and timely manner.

- Admissions to the State Hospital from Region IV continue to be extremely low with 46 admissions for the period of January 1, 2008 through November 30, 2008. Region IV had 56 admissions for the same period in 2007. This is due to our diligent intake screening, coordination, and utilization of community services.
- Northeast HSC has broadened the continuum of housing available for individuals with serious mental illness in partnership with Prairie Harvest and funding received during the last legislative session. We have new community support and housing for an additional eight consumers which has resulted in preventing hospitalization and maintaining consumers in the community.
- Through the Network for Improvement of Addiction Treatment (NIATx), Northeast HSC has decreased the wait time from admission intake to time seen by a clinician by 15-20 minutes per client. We have reduced client generated paperwork eliminating two forms. We continue to identify process issues and teams to work towards continuous improvement of our service delivery.

Overview of Budget Changes

Description	2007 - 2009 Budget	2009 - 2011 Budget	Increase / Decrease
NEHSC	22,325,047	26,376,851	4,051,804
General	9,758,051	12,056,316	2,298,265
Federal	11,785,869	13,169,485	1,383,616
Other	781,127	1,151,050	369,923
FTEs	137.10	138.10	1.00

- Salaries and benefits increased by $2,166,161 and can be attributed to the following:
  - The increase in salary and fringe benefits is a result of the salary and health insurance package which adds $1,540,334 in total funds of which $1,114,357 is general fund.
  - $100,626 to fund the addition of 1.0 FTE to address requirements of the Centers for Medicare and Medicaid Services on our Developmental Disabilities programs, of which approximately half is from the general fund.
  - The cost to sustain the second year of the 2007-09 salary increases for the full 2009-11 biennium is $231,501 of which $164,132 is general fund.
  - Northeast HSC converted a contracted psychiatrist to a full time employee at the start of the 2007-09 biennium. $323,064 was added to salaries and benefits to cover the cost of the FTE; $62,544 of this was general fund.
  - The remaining $29,364 budget decrease is a combination of increases and decreases needed to sustain the pay plan of the 137.10 FTE in this area of the budget.

- Operating budget decreased by $57,786 (2%) and is a combination of the following increases and decreases expected next biennium:
  - A $62,321 increase in our rental budget is primarily for a $.70 increase in per square foot cost for Northeast HSC's main office building. The square foot cost for the Center's main office building is currently at $12.45. For the 09-11 biennium, the landlord has requested the $.70 increase to cover current and projected increases in utility and maintenance costs. The new per square foot

cost will be $13.15. The Northeast HSC also rents 658 square foot of unfinished storage space which will increase from $4.40 per square foot to $5.10 for the same reasons. In addition we pay $380/month ($9,120 a biennium) for the Outreach Office located in Cavalier.

- An $85,074 decrease in the Fees–Professional Services budget as a result of a decrease in the number of Foster Grandparents Northeast is allowed to have and compensate due to a federal reallocation.
- A $50,000 decrease in the Medical, Dental, and Optical budget based on actual expenditures. Concerns regarding increase in medication costs for clients and limited access to samples have not transpired.
- State Fleet Service's increase in the motor pool rate contributed to an increase of $15,120 in our travel budget.

- The grants budget increased by $ 1,943,434 of which $ 1,618,977 is general fund. This increase is a result of the following:
  - $967,998 is budgeted for contracted providers to reflect significant cost increases to maintain existing level of services for our residential services for adult and adolescent clients with chemical dependency and for adult clients with serious mental illness; for the operation of our psych social club for individuals with serious mental illness. $894,515 of this is general fund.
  - $613,573 is needed to fund 7% increases for providers for each year of the biennium of which $443,799 is general fund.
  - $361,863 is budgeted to meet capacity issues and meet unmet need for development of a social detox program, increasing our supported residential service by 20 client hours per week and

funding our existing utilization of psychiatric hospitalization beds at Altru Hospital. $280,663 of this budget is general fund.

The general fund request increased by $2,298,265 with 49% of that increase, $1,114,353, related to the Governor's salary package for state employees and increased health insurance costs. The remaining increase of $1,183,912 is associated with the increase in the operating changes described above.

The net change of the federal and other funds is a result of the increases above.

This concludes my testimony on the 2009 - 2011 budget requests for the Lake Region Human Service Center and Northeast Human Service Center. I would be happy to answer any questions.

Testimony
House Bill 1012 – Department of Human Services
Senate Appropriations
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, this is written testimony prepared by Kate Kenna, Director of Lake Region Human Service Center (LRHSC) and Northeast Human Service Center (NEHSC) for the Department of Human Services (DHS). It is provided to give you an overview of both centers' budget requests.

Lake Region Human Service Center

Lake Region Human Service Center provides services to Ramsey, Cavalier, Rolette, Towner, Benson, and Eddy counties. In 2007 the population estimate in the region was 40,458, or 6.3 percent of the total state population. Services are provided throughout the region with one office in Devils Lake and an outreach office in Rolla.

Caseload / Customer Base

The Lake Region HSC provided services to 2,373 individuals (excluding Vocational Rehabilitation) in Fiscal Year 2008; 1,776 adults and 572 children received services. In addition, 368 individuals received Vocational Rehabilitation services, and 136 received Older Blind services.

The poverty rate in Region III is 19.3 percent, nearly two times the state average of 10 percent. Temporary Aid to Needy Families (TANF) recipients continues to grow; currently Lake Region Human Service Center has 852 TANF recipients – 41 percent of all TANF families in North Dakota.

Program Trends

- Difficulty recruiting qualified staff, especially in the areas of psychology, addiction, and fully qualified mental health clinicians continues. Region III remains a designated Mental Health Professional Shortage area by the National Health Service Corp, with a score of "18". This is the highest designation in North Dakota.
- Developmental Disability case management for children ages 0-3 has increased from 54 in 2007 to 65 in 2008.
- Enrollment in day supports for individuals with developmental disabilities has increased from five individuals in 2001 to 20 in 2008.
- The Lake Region HSC has experienced an increase in dually diagnosed consumers (Serious Mental Illness and Addiction). The complexity of these cases require more intensive case management and case aide services.
- Emergency/crisis calls have increased from 550 in FY 2007 to 631 in FY 2008.
- The Lake Region HSC, with 6 percent of the state's population, has nearly 17 percent of the children in foster care. This number does not include the 62 children in Native American care, which increases the percentage rate to 23 percent.
- Admissions to the State Hospital are down from 69 in FY 2007 to 58 in FY 2008. There have been substantial declines in the past few years. Lake Region Human Service Center is assisting our more challenging consumers to stay in the community by wrapping supportive services around them.

Accomplishments

- Increased efforts to screen potential North Dakota State Hospital admissions continue to be successful. Region III has no inpatient psychiatric or inpatient substance abuse alternative within the region, but state hospital diversions to community-based alternatives have increased. In the mid-1980s our regional referrals to the state hospital averaged 322 consumers per year; in the mid-1990s, the average was 207. These admissions were further reduced to just over 100 per year by the middle of the current decade. Total state hospital admissions for SFY 2007 were 69 consumers and for SFY 2008 were 58.
- The Lake Region HSC continues to work toward strengthening the quality of the community-based services we provide. We are growing our abilities to provide evidenced based services, including the UCLA Matrix Program for treating substance abuse; Trauma Focused Cognitive Behavioral Therapy, as well as Structured Psychotherapy for Adolescents under Chronic Stress for treating trauma; and other consumer friendly models including the Recovery Model and Person Centered Services. We will soon be training staff in Motivational Interviewing, as well as starting an adolescent matrix program in conjunction with a multi-agency collaboration to start an adolescent drug court.
- In another effort to strengthen community-based services Lake Region HSC expanded our full-time satellite office in Rolette County. The Rolla Outreach Office offers Developmental Disabilities case management, PATH homeless case management, Serious Mental Illness case management, Vulnerable Adult Protective Services, mental health counseling, emergency services, and substance abuse

evaluation and treatment, including the option for residential stay at our ten bed crisis residential unit.

- In an effort at quality improvement, Lake Region is one of the three pilot human service centers working with Network for the Improvement of Addiction Treatment (NIATx). This organization helps behavioral health agencies improve services by bringing to the table researched and innovative solutions to reduce no show rates, improve access, improve completion rates of consumers, reduce costs, improve staff morale, and achieve good outcomes from services provided.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
LRHSC	9,884,876	1,126,233	11,011,109	(370,042)	10,641,067
General	5,304,226	959,324	6,263,550	(147,193)	6,116,357
Federal	4,129,219	176,994	4,306,213	(182,180)	4,124,033
Other	451,431	(10,085)	441,346	(40,669)	400,677
FTE	62	0	62	0	62

Budget Changed from Current Budget to Executive Budget:

- Salary and Wages related expenses increased by $795,934 and can be attributed to the following:
  - $704,783 in total funds of which $545,128 is general funds to fund the Governor's salary package for state employees.
  - $(19,212) in temporary salaries which represents a half-time temporary position.

- The remaining $110,363 is largely the result of funding legislatively approved salary increases in the current biennium into the 09-11 biennium.

- The Operating cost increased by $35,908 and is a combination of the following items:
  - An increase of $42,100 in travel related expenses. This increase is largely based on State Fleet's expected per mileage increase to $.40. This biennium that cost has been approximately $.28/mile.
  - An increase of $2,840 for data processing supplies.
  - A decrease of $9,597 in Operating Fees and Services. Of this amount, $4,250 of the decrease is in the area of Vocational Rehabilitation for the purchase of services, and $7,500 of the decrease is in the Alcohol and Drug services for purchase of services. These amounts are offset by an increase of $3,050 for the Developmental Disabilities Experienced Parent Program.

- Lake Region HSC's operating budget includes $425,580 in building rent for its two office locations. The main Devils Lake office has a projected budget of $379,980 which equates to approximately $10.42/square foot per year. The Center's Rolla Outreach office has a budget of $45,600 and is approximately $9.71/square foot per year.

- The Grants costs include an increase of $294,391. Of this amount, $85,721 is to fund the current biennium's increases into the 09-11 biennium with the remaining $208,670 representing the Governor's recommended increase for contracted providers.

The general fund request increased by $959,324 with 79% of that increase ($753,798) related to the Governor's salary package for state employees and recommended contracted provider increases. The remaining increase of $205,526 is associated largely with the current biennium salary, provider inflationary increases being carried into the new biennium, and the operating changes described above.

House Changes

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for Lake Region Human Service Center is $104,767 – general funds; and $214,295 – federal and other funds for a total of $319,062.

The House reduced 50% of the department-wide travel increase. Lake Region HSC's share of this decrease is $21,170 total funds; $12,616 general fund.

The House removed $29,810 in funding to change our contracted provider's inflationary increases from the Governor's planned 7% in each year of the biennium to 6% each year, the entire $29,810 is general funds.

Northeast Human Service Center

This area of the budget includes the programs of the Northeast Human Service Center (NEHSC). The NEHSC serves the citizens of Grand Forks, Nelson, Walsh, and Pembina counties. The center is located in Grand Forks with a satellite office in Grafton and an outreach site in Cavalier.

Caseload / Customer Base

- The population in Region IV is approximately 91,000; this represents 14 percent of the state's population. Fifteen percent of the state's children, nearly 23,500, reside in our region.
- The Northeast HSC provided clinical services to 3,371 individuals in SFY 2008; 2,407 adults and 964 children received services. This represented a 10 percent increase in clients over SFY 2006. During the same two year period our addiction evaluations increased by 30 percent, and clinical intakes by 19 percent.
- Vocational Rehabilitation (VR) served 1,144 clients; 140 clients were served through the Older Blind program.
- Other residents of our counties received indirect services provided through Aging Services, Foster Grandparent Program, Child Welfare, and community education.
- Priority is placed on serving the Region's most vulnerable individuals, including those who cannot otherwise access services.

Program Trends

- The Northeast HSC has had difficulty recruiting/retaining a psychologist, community home counselors, and fully qualified mental health clinicians. We have just confirmed hiring for a vacant psychiatry opening; however, this is from within the DHS system.

- In addiction services, Northeast HSC has noted an increase in the use of prescription medication, a decrease in methamphetamine as a primary substance of use, a need for longer residential stays (which has at times created a bottleneck for new clients), and an increase in clients from County Social Services and the Department of Corrections and Rehabilitation who require additional case management and more frequent involuntary commitments.
- In Developmental Disabilities (DD), more families are struggling economically and are requesting assistance in helping meet the excess costs of having a child with a disability. Developmental Disability Case Managers (DDCM) are spending more time helping families meet basic needs such as housing, heat, diapers, food, etc. Our numbers in DD case management continue to grow each biennium.
- The Ruth Meiers Adolescent Residential Facility has experienced an increase in referrals and admissions of younger adolescents (11-12 year olds), an increase in females referred, and an increase in youth with sexually related behavior problems. We also note there is a disproportionate number of referrals of Native American children (40 percent).
- Children and Family Services notes that there were 39 adoptions of foster care children in 2008, compared to 11 in 2007. In 2007 there were 62 family foster homes and in 2008 there are 82. The number of therapeutic foster homes also increased from 21 to 32.
- The Northeast HSC has been working with Network for the Improvement of Addiction Treatment (NIATx) to improve services to clients. We have focused on reducing wait time, increased customer satisfaction, and efficiency. This process looks at evaluating services and using a rapid change cycle in the delivery of

services. We have noticed success in access for clients and a reduction of paperwork in the first two cycles.

Accomplishments

- Evidenced Based Practices have been implemented at NEHSC which include: Contingency Management in Addiction, Matrix Program, and Person Centered Treatment Planning.
- We have implemented an Adult Drug Court with funding provided during the last legislative session. In cooperation with our Court, and Department of Corrections we began seeing clients in October of 2008 and to date have 12 consumers in the program. Our Adolescent Drug Court continues and currently is serving 19 clients.
- The Northeast HSC successfully implemented a telemedicine program for psychiatric services and addiction evaluations. Region IV has telemedicine sites in Northwood, Grafton, and the Grand Forks Correctional Center. This allows us to provide services in an efficient and timely manner.
- Admissions to the State Hospital from Region IV continue to be extremely low with 46 admissions for the period of January 1, 2008 through November 30, 2008. Region IV had 56 admissions for the same period in 2007. This is due to our diligent intake screening, coordination, and utilization of community services.
- Northeast HSC has broadened the continuum of housing available for individuals with serious mental illness in partnership with Prairie Harvest and funding received during the last legislative session. We have new community support and housing for an additional eight consumers which has resulted in preventing hospitalization and maintaining consumers in the community.

- Through the Network for Improvement of Addiction Treatment (NIATx), Northeast HSC has decreased the wait time from admission intake to time seen by a clinician by 15-20 minutes per client. We have reduced client generated paperwork eliminating two forms. We continue to identify process issues and teams to work towards continuous improvement of our service delivery.

Overview of Budget Changes

Description	2007 - 2009 Budget	Increase / Decrease	2009 - 2011 Budget	House Changes	To Senate
NEHSC	22,325,047	4,051,804	26,376,851	(759,946)	25,616,905
General	9,758,051	2,298,265	12,056,316	(468,574)	11,587,742
Federal	11,785,869	1,383,616	13,169,485	(277,713)	12,891,772
Other	781,127	369,923	1,151,050	(13,659)	1,137,391
FTEs	137.10	1.00	138.10	(1.00)	137.10

Budget Changes from Current Budget to Executive Budget

- Salaries and benefits increased by $2,166,161 and can be attributed to the following:
  - The increase in salary and fringe benefits is a result of the salary and health insurance package which adds $1,540,334 in total funds of which $1,114,357 is general fund.
  - $100,626 to fund the addition of 1.0 FTE to address requirements of the Centers for Medicare and Medicaid Services on our Developmental Disabilities programs, of which approximately half is from the general fund.

- The cost to sustain the second year of the 2007-09 salary increases for the full 2009-11 biennium is $231,501 of which $164,132 is general fund.
- Northeast HSC converted a contracted psychiatrist to a full time employee at the start of the 2007-09 biennium. $323,064 was added to salaries and benefits to cover the cost of the FTE; $62,544 of this was general fund.
- The remaining $29,364 budget decrease is a combination of increases and decreases needed to sustain the pay plan of the 137.10 FTE in this area of the budget.

- Operating budget decreased by $57,786 (2%) and is a combination of the following increases and decreases expected next biennium:
  - A $62,321 increase in our rental budget is primarily for a $.70 increase in per square foot cost for Northeast HSC's main office building. The square foot cost for the Center's main office building is currently at $12.45. For the 09-11 biennium, the landlord has requested the $.70 increase to cover current and projected increases in utility and maintenance costs. The new per square foot cost will be $13.15. The Northeast HSC also rents 658 square foot of unfinished storage space which will increase from $4.40 per square foot to $5.10 for the same reasons. In addition we pay $380/month ($9,120 a biennium) for the Outreach Office located in Cavalier.
  - An $85,074 decrease in the Fees–Professional Services budget as a result of a decrease in the number of Foster Grandparents Northeast is allowed to have and compensate due to a federal reallocation.

- A $50,000 decrease in the Medical, Dental, and Optical budget based on actual expenditures. Concerns regarding increase in medication costs for clients and limited access to samples have not transpired.
- State Fleet Service's increase in the motor pool rate contributed to an increase of $15,120 in our travel budget.

- The grants budget increased by $ 1,943,434 of which $ 1,618,977 is general fund. This increase is a result of the following:
  - $967,998 is budgeted for contracted providers to reflect significant cost increases to maintain existing level of services for our residential services for adult and adolescent clients with chemical dependency and for adult clients with serious mental illness; for the operation of our psych social club for individuals with serious mental illness. $894,515 of this is general fund.
  - $613,573 is needed to fund 7% increases for providers for each year of the biennium of which $443,799 is general fund.
  - $361,863 is budgeted to meet capacity issues and meet unmet need for development of a social detox program, increasing our supported residential service by 20 client hours per week and funding our existing utilization of psychiatric hospitalization beds at Altru Hospital. $280,663 of this budget is general fund.

The general fund request increased by $2,298,265 with 49% of that increase, $1,114,353, related to the Governor's salary package for state employees and increased health insurance costs. The remaining increase of $1,183,912 is associated with the increase in the operating changes described above.

The net change of the federal and other funds is a result of the increases above.

House Changes

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for the Northeast Human Service Center is $63,064 - general fund; and $128,994 - federal and other funds for a total of $192,058.

The House reduced 50% of the department-wide travel increase. Northeast HSC's share of this decrease is $7,225 total funds; $2,654 general fund.

The House removed $111,147 in funding and 1.0 FTE for a Developmental Disabilities case manager position to meet requirements of the Centers for Medicare and Medicaid Services on our Developmental Disabilities programs. $58,793 general fund.

The House removed $149,000 in funding for an increase of 20 hours of client service per week in our supported residential program for individuals with mental illness to meet increased demands for the service; $67,800 of general fund.

The House removed $ 140,000 in general fund for the startup and operation of a social detox service in Grand Forks.

The House removed $72,863 in general fund that was intended to increase funding for our psychiatric hospitalization at Altru Hospital so

that the rate paid by the Human Service Center was consistent with the rate paid by Medical Assistance for the same service (rebasing).

The House removed $87,653 in funding to change our contracted provider's inflationary increases from the Governor's planned 7% in each year of the biennium to 6% each year; $63,400 in general fund.

This concludes testimony on the 2009 - 2011 budget requests for the Lake Region Human Service Center and Northeast Human Service Center.

A

Testimony
HB 1012 - Department of Human Services
House Appropriations Committee
January 22, 2009

Chairman Pollert and members of the Human Resources Division, my name is Larry Bernhardt. I am the Director of Stark County Social Services in Dickinson and I am here today representing the ND County Social Service Director's Association and we are in support of House Bill 1012.

Counties have been a pillar in the overall public human service system since North Dakota became a state. All aspects of the human service budget, impact the citizens of our counties, therefore, we attempt to look at the needs of the whole system. We have several items we want to bring to your attention relative to HB 1012.

First of all, we are delighted that the Department of Human Services has included in their budget, dollars to raise the Medically Needy Income Level to 83% of the poverty level. This is truly a major impact on the low-income elderly and disabled of our state. Today, we have people trying to live on $500.00/month to meet their basic needs of shelter, food, utilities, clothing, transportation, etc., because any income over $500.00 must go towards their medical costs before Medicaid can pay anything. This change will allow the single individual to keep $720.00/month for their living needs and a couple will be allowed to keep $969/month for their needs. I speak for the elderly and disabled in ND when I say thank you to the Department, the Governor, and the Legislature for making an adjustment to these Medically Needy Income Levels. It is long overdue and will change the lives of many North Dakotans.

Second, a major concern for the County Social Service Agencies is the need for a comprehensive Eligibility Computer System to determine eligibility for the Medicaid Program, Supplemental Nutritional Assistance Program (Food Stamps), Temporary Assistance to Needy Families Program (TANF), Low Income Home Energy Assistance Program (LIHEAP), Foster Care Payments Program and Child Care Assistance Program.

Today, Eligibility Workers must enter data in four different computer systems – NATL, TECS, VISION, and CCWIPS – in order to determine eligibility and authorize benefits for these Programs. There is a definite need to develop one computer system that works across Program lines. The Department of Human Services had developed an OAR for an Eligibility System Replacement with a total cost of $ 18,632,280 ($9,316,140 would be General Funds) to develop that system. However, this OAR has not been included in the Department's budget by OMB or the Governor's Office. Recognizing that the MMIS Replacement Project completion has now been delayed to May, 2010, we believe that it would be next to impossible to start the process for the Eligibility Computer Systems prior to May, 2010 – however it is crucial that we start that process. We are hoping that you will take a look at the OAR, get a revision in costs to allow for a beginning of that process in the upcoming biennium, and include that in the Department's budget so that work can begin. It should be noted that once the new MMIS System is up and running, Eligibility Workers will have to enter data into that system as well, so they will then have 5 systems to work in. The 200+ Eligibility Workers in this state are counting on you to help them continue to do the good job they do, by providing a computer system that will make the work possible as we move forward with continuous program changes, more complex policies, and an expectation to meet quality performance standards. We need to start that process in June, 2010.

Third, we ask the Committee to take note of the loss of funding for Counties in the area of Targeted Case Management. Maggie Anderson, Medicaid Director, mentioned in her testimony that CMS (Centers for Medicaid and Medicare Services) has issued a policy to terminate the payment of Targeted Case Management for Child Welfare Services that would have gone into effect in April, 2008 – however a moratorium was put in place so that billings could continue until April, 2009. When hat moratorium ends in April, 2009, counties will no longer be able to bill for the costs for child welfare case management and we will lose about $1,588,731 in reimbursement as a result. We obviously are very concerned about that loss and the impact it may have on the delivery of Child Welfare Services in North Dakota.

Fourth, we need to invest more in prevention and intervention services in the Child Welfare System and the following OAR's, which did not get into the Department's Budget are excellent ways to do that. Those OAR's are:

$ 102,400 (all General Funds)	**Increase Safety Permanency Funds**
$ 934,742 (all General Funds)	**Increase Parent Aid Services**

Both of these OAR's are very important and we would ask the Committee to include them in the Department's Budget. The increase for Safety Permanency Funds would allow Counties some flexibility to meet the immediate needs of families so that children would no longer be at risk of child abuse/neglect or have to be placed in out of home care. The increase in Parent Aid Services would allow for all counties to have access to funds to offer Parent Aid Services and would allow for the expansion of the service in some counties. This service works directly with families to provide parenting education, household management, strategies to deal with difficult child behaviors, and support to families so that children can stay in their family home or be reunited with their family after having been placed in out of home care. We need to invest more in prevention and intervention services in the Child Welfare System and these are both excellent ways to do that.

Finally, we as County Social Service Agencies have several other concerns. Those being 1.) the reimbursement to Indian Counties for the costs of providing Economic Assistance on reservation and trust lands, 2.) a better reimbursement to counties for the provision of child welfare services, and 3.) increases in provision of prevention and intervention services for child welfare in North Dakota. However, all three of these issues will be coming forward in individual bills in the Legislative process and we would hope that you will support those efforts when they reach your Committee.

Chairman Pollert and members of the Committee, thank you for the opportunity to provide testimony on HB 1012 and I would be happy to attempt to address any questions you may have.

Department of Human Services
Breakdown of "County" Funds
House Appropriations Human Resources Division
2009 - 2011

Description	Amount
Information Technology - "capped"	1,584,396
Economic Assistance Policy	315,354
Long Term Care - SPED	836,938
Children and Family Services	
Foster Care and Adoption	13,178,991
Countywide Cost Allocation	263,033
North Central Human Service Center	
Shelter Care	100,000
Total County Funds	16,278,712

Compensation for MI Case Management Positions ND and Clay County, MN

North Dakota HRMS Classification and Pay Scale:

CLASS	CLASS TITLE	GRADE	MIN	MAX
4080	MI Case Manager I	9	$2384	$3974
4081	MI Case Manager II	10	$2588	$4314

Lakeland Mental Health Information-Chris Kotschevar, Lakeland HR Source
218-736-6987

MI Case Manager 1 Equivalent: Monthly Salary Range for BA with no experience
$2448 – $3617

MI Case Manager II Equivalent: Monthly Salary Range for BA & 2 Years of Experience
$2586 - $3617

Distinction in the two systems is that in MN an employee receives each January a cost of living adjustment and then on their employment anniversary date they move one step with steps varying between 4-6%. They also have health insurance and other benefits.

Testimony
HB 1012 - Department of Human Services
Senate Appropriations Committee
March 4, 2009

Chairman Holmberg and members of the Senate Appropriations Committee, my name is Larry Bernhardt. I am the Director of Stark County Social Services in Dickinson and I am here today representing the ND County Social Service Director's Association and we are in support of House Bill 1012.

Counties have been a pillar in the overall public human service system since North Dakota became a state. All aspects of the human service budget, impact the citizens of our counties, therefore, we attempt to look at the needs of the whole system. We have several items we want to bring to your attention relative to HB 1012.

First of all, we are delighted that the Department of Human Services had included in their budget, dollars to raise the Medically Needy Income Level to 83% of the poverty level. This is truly a major impact on the low-income elderly and disabled of our state. Today, we have people trying to live on $500.00/month to meet their basic needs of shelter, food, utilities, clothing, transportation, etc., because any income over $500.00 must go towards their medical costs before Medicaid can pay anything. This change will allow the single individual to keep $720.00/month for their living needs and a couple will be allowed to keep $969/month for their needs. I speak for the elderly and disabled in ND when I say thank you to the Department, the Governor, and the Legislature for making an adjustment to these Medically Needy Income Levels. It is long overdue and will change the lives of many North Dakotans. However, the House has decreased the funding for this change to reflect income levels of only 75% of the federal poverty level. We are asking the Senate to replace those funds and return the level to the 83% of the poverty level.

Second, a major concern for the County Social Service Agencies is the need for a comprehensive Eligibility Computer System to determine eligibility for the Medicaid Program, Supplemental Nutritional Assistance Program (Food Stamps), Temporary

Assistance to Needy Families Program (TANF), Low Income Home Energy Assistance Program (LIHEAP), Foster Care Payments Program and Child Care Assistance Program. Today, Eligibility Workers must enter data in four different computer systems – NATL, TECS, VISION, and CCWIPS – in order to determine eligibility and authorize benefits for these Programs. It should be noted that once the new MMIS System is up and running, Eligibility Workers will have to enter data into that system as well, so they will then have 5 systems to work in. There is a definite need to develop one computer system that works across Program lines. The Department of Human Services had developed an OAR for an Eligibility System Replacement with a total cost of $ 18,632,280 ($9,316,140 would be General Funds) to develop that system. However, this OAR was not included in the Department's budget by OMB or the Governor's Office. Recognizing that the MMIS Replacement Project completion has now been delayed to May, 2010, we believe that it would be next to impossible to start the process for the Eligibility Computer Systems prior to May, 2010 – however it is crucial that we start that process. The House did ask DHS to develop an amendment to consider starting the process in the next biennium and determined that only $685,000 would be needed to start the process in the next biennium. (Half of those funds would be general funds and the other half would be federal funds) The 200+ Eligibility Workers in this state are counting on you to help them continue to do the good job they do, by providing a computer system that will make the work possible as we move forward with continuous program changes, more complex policies, and an expectation to meet quality performance standards. We need to start that process in June, 2010.

Third, we need to invest more in prevention and intervention services in the Child Welfare System and the following OAR, which did not get into the Department's Budget, is an excellent way to do that. That OAR is:

$ 934,742 (all General Funds) Increase Parent Aid Services

This OAR is very important and we would ask the Committee to include it in the Department's Budget. The increase in Parent Aid Services would allow for all counties to

have access to funds to offer Parent Aid Services and would allow for the expansion of the service in some counties. This service works directly with families to provide parenting education, household management, strategies to deal with difficult child behaviors, and support to families so that children can stay in their family home or be reunited with their family after having been placed in out of home care. We need to invest more in prevention and intervention services in the Child Welfare System and this is an excellent way to do that.

Finally, we as County Social Service Agencies have several other concerns. Those being 1.) the reimbursement to Indian Counties for the costs of providing Economic Assistance on reservation and trust lands, 2.) assistance in the costs of Foster Care and Subsidized Adoption, and 3.) increases in provision of prevention and intervention services for child welfare in North Dakota. However, all three of these issues will be coming forward in individual bills in the Legislative process and we would hope that you will support those efforts when they reach your Committee.

Chairman Holmberg, the following gives you some sense of the numbers of clients being served by County Social Service Agencies across the state:

County Social Service Agency Activities

(State Wide Numbers)

Supplemental Nutrition Assistance Program	**22,800**	**households**
Temporary Assistance to Needy Families (TANF)	**2,388**	**households**
Child Care Assistance Payments	**2,448**	**households**
Heating Assistance (LIHEAP)	**12,037**	**households**
Medicaid	**56,686**	**recipients**
Adoption Subsidy Payments	**912**	**children**
Foster Care Payments (2007 CY)	**2,152**	**children**
Child Abuse/Neglect	**4,011**	**assessments**
Home and Community Based Services (HCBS)	**3,388**	**clients**
Child Care Licensing	**3,461**	**licensing studies**

Chairman Holmberg, we would hope that your Committee would look favorably upon making the following changes to HB 1012:

** **Medically Needy: Replace the funding for the medically needy to reflect income levels of 83% of the Federal Poverty Level**

General	Other	Total
$ 376, 947	$642, 379	$1,019,326

** **Economic Assistance Computer System: Provide funding to begin the planning process, including $100,000 for temporary salaries, $85,000 for assistance from county staff, and $500,000 for contract services**

General	Other	Total
$342,500	$342,500	$685,000

** **Increase Parent Aid Services: Provide funding in order to expand Parent Aid Services to all counties in ND and expand the program in some counties.**

General	Other	Total
$934,742	-0-	$934,742

Chairman Holmberg and members of the Committee, thank you for the opportunity to provide testimony on HB 1012 and I would be happy to attempt to address any questions you may have.

House Bill 1012 – Department of Human Services
House Appropriations - Human Resources Division
Representative Pollert, Chairman
January 14, 2009

Chairman Pollert, members of the House Appropriations Human Resources Committee, I am Alex C. Schweitzer, Superintendent of the North Dakota State Hospital and North Dakota Developmental Center of the Department of Human Services (One Center). I am here today to provide you with an overview of the North Dakota State Hospital and North Dakota Developmental Center for the Department of Human Services.

North Dakota State Hospital Programs:

The North Dakota State Hospital provides short-term inpatient and long-term residential psychiatric, forensic and chemical addiction services for adults. Within this group of adult patients are inmates referred to the Tompkins Rehabilitation and Corrections Center by the Department of Corrections and Rehabilitation for residential addiction services.

The State Hospital provides inpatient services for children and adolescents with serious emotional disorders and substance abuse problems. The Jamestown School system provides educational services to the child and adolescent population on the grounds of the State Hospital.

The above-mentioned patients are considered to be the traditional patient population of the Hospital.

The Hospital also provides inpatient evaluation and treatment services for sexually dangerous individuals. This group of patients are housed and treated in the secure services unit of the Hospital.

The Hospital provides psychiatric, medical and x-ray services under a contract with the James River Correctional Center.

North Dakota State Hospital Census:

The State Hospital operates 307 beds.

The Hospital utilizes ninety (90) of these beds to provide addiction services to offenders in the Tompkins Rehabilitation and Correction Center, comprised of the 60 male and 30 female offenders.

The Hospital utilizes one hundred thirty-two (132) beds for inpatient and residential psychiatric services where the Hospital treats adults, children and adolescents with serious and persistent mental illness, serious emotional disorders and chemical addiction. Inpatient and residential services have been highly occupied for the past three years, with occupancy often running between 95-100%. The Hospital increased the capacity of inpatient and residential services by eight (8) beds in the 05 - 07 biennium to deal with the increased occupancy. In addition, the Hospital increased capacity by four (4) beds in the current biennium to meet the demand for patients. The Hospital during the past biennium was staffed for 85% occupancy in the nursing department.

The primary reasons for the high occupancy are the admission of first time patients, increased acuity from community admissions, a number of chronic patients needing residential settings and the increased need for treatment of patients with complex medical and psychiatric issues.

The Tompkins Rehabilitation and Corrections Center and the Inpatient and Residential Psychiatric Service admissions and average daily census data is outlined in Attachments A (1) & A (2).

The Hospital operates 85 beds in the sex offender unit, and we have current occupancy of 59 patients. The Hospital also operates a Transitional Living Home on the campus for sex offenders in the late stages of their commitment to the program. We can house two offenders at a time in this unit.

The current number of sex offenders in the program is outlined in Attachment B.

In summary, the Executive Budget recommendation for the State Hospital is for a total capacity of 307 patients. The breakdown by program includes; 90 beds in the Tompkins Rehabilitation and Corrections Center with 60 men and 30 women, 85 beds in the Secure Services Unit (sex offender program) and 132 beds in inpatient and residential psychiatric services.

Major Program Changes/Trends:

- The Hospital is experiencing high occupancy and higher acuity in the traditional services program for adults for the past three years.

- The Hospital transitioned 16 serious mentally ill patients to a residential long-term care program at the Sheyenne Care Center in Valley City to best meet their needs and increase capacity at the State Hospital.

- During the current biennium the Hospital opened a fourth sex offender unit with an additional 20 beds and 17 FTEs. The Sex Offender Program should be able to meet capacity needs for the foreseeable future with the current 85 beds and the Transitional Living Program.

- The Hospital did not follow through with the construction of a building addition (the fifth unit) to the GM Building for the sex offender program as authorized during the 2007 legislative session. The additional space was not needed because of the slowing of referrals, the emergence of the outpatient sex offender treatment program and discharges from the inpatient program.

Overview of Budget Changes:

Traditional Services:

Description	2007-2009 Budget	2009-2011 Budget	Increase/ Decrease
Institutions	52,235,044	59,596,627	7,361,583
General Funds	36,423,429	40,066,332	3,642,903
Federal Funds	4,467,669	4,394,303	(73,366)
Other Funds	11,343,946	15,135,992	3,792,046
Total	52,235,044	59,596,627	7,361,583
FTE	381.06	387.06	6.00

Budget Changes from Current Budget to Executive Budget:

- The increase in General Funds is the result of the Executive Budget recommendation for the state employee's salaries and benefit package.

- Federal Funds decrease by $73,366 because of the reduction in Federal Participation.

- Other Funds increase by $3,792,046 because of increased Medicare payments in Pharmacy Part D and Inpatient Part A.

- Salary and benefit increase of $4,306,134 total funds, with general funds increase of $3,333,913, federal funds increase of $419,419

and other funds increase of $552,802 to cover the Executive Budget recommendation for employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increases into the 2009-2011 biennium is $657,917 with General Funds of $599,752.

- The Executive Budget recommendation contains an under funding of salaries of $988,683 and a decrease of $82,141 in other salaries because of decreased utilization of shift differential.

- Operating costs increase of $1,995,383 is due to high patient occupancy and acuity and increased utilization of medications and medical services/supplies. In addition the Hospital is experiencing cost increases in medications, medical services/supplies and utilities.

- The extraordinary repairs increase includes; major extraordinary repairs of $320,000 for resurfacing campus streets and parking lots, $75,000 for campus flooring replacement, $75,000 for asbestos abatement, $106,000 to replace siding and windows in the Transitional Living Houses, $1,146,500 for plumbing work, $360,000 for electrical service work, $95,000 for roofing repair, $25,000 for ADA improvements, and $1,028,517 for heating and cooling upgrades for a total of $3,231,017.

- The net increase in the Executive Budget recommendation for extraordinary repairs is $1,897,517.

- Equipment over $5,000 in the Executive Budget recommendation is $246,220. The net increase for equipment over $5,000 in the Executive Budget recommendation is $123,720.

- Bond payment of $437,729 and this is the final bond payment for the North Dakota State Hospital. The net decrease for bond payments in the Executive Budget recommendation is $28,662.

- The 2009 - 2011 Executive Budget recommendation contains a request for 6 FTEs. These FTEs are for the Inpatient Psychiatric Unit where we are experiencing higher occupancy and higher acuity.

Secure Services:

Description	2007-2009 Budget	2009-2011 Budget	Increase/ Decrease
Institutions	14,491,287	10,404,900	(4,086,387)
General Funds	14,331,656	10,371,601	(3,960,055)
Federal Funds	-	-	-
Other Funds	159,631	33,299	(126,332)
Total	14,491,287	10,404,900	(4,086,387)
FTE	85.45	85.45	-

Budget Changes from Current Budget to Executive Budget:

- The decrease in general funds in the Executive Budget recommendation for secure services is primarily the result of not building the fifth unit and the completion of the safety and security upgrades.

- Other funds decrease of $126,332 is the result of a smaller number of patients having third party payers or private funds for payment.

- Salary and benefit increase of $838,694 total funds, with general funds increase of $837,522 and other funds of $1,172 to cover the Executive Budget recommendation for the employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increase into the 2009-2011 biennium is $123,486 with General Funds of $122,726.

- The Executive Budget recommendation contains a salary under funding of $368,091.

- Operating costs increase in the Executive Budget recommendation by $258,493 because of medication, medical services and utilities increases.

- The Executive Budget recommendation contains a decrease in capital improvements of $3,100,000 as the fifth unit was not built.

- The Executive Budget recommendation contains a decrease of $1,820,303 in extraordinary repairs for the completion of safety and security upgrades in the sex offender unit during the current biennium.

- Total FTEs remain the same in the Executive Budget recommendation as the Current Budget.

North Dakota Developmental Center Programs:

The Developmental Center provides services for individuals with developmental disabilities. The program includes residential services, work and day activity services, clinical and medical services and evaluation and consultation services.

Residential Services at the Developmental Center includes:

- Secure Services Program – this unit is for individuals with developmentally disabilities who have sex offending behaviors and for other individuals from the campus that require a more secure living environment. These individuals require long-term care.

- Medical Program – for individuals with developmental disabilities who are totally dependent on staff to complete daily cares and have medical concerns that require nursing staff accessibility 24 hours

per day. Also, in this area are a small number of individuals diagnosed with profound mental retardation and dual sensory disabilities (vision and hearing). These individuals require long-term care.

- Behavioral Care Program – these individuals with developmental disabilities present with psychiatric diagnoses and significant challenging behaviors. Some of these individuals may also have less severe medical needs.

- Youth Services Program - these young people between the ages of 16 - 25 have difficulty finding programming and housing in the community. The Center will provide short-term services to these individuals until a community placement can be found. This service will be added in early 2009.

- Independent Supported Living Arrangement Program - the Developmental Center is placing and supporting with staff three individuals with sexual health issues in a transitional living facility on the campus to prepare them for community living. They will be discharged from the Developmental Center when they make the transition. This service will be added in early 2009.

- The Developmental Center continues its efforts on an outreach program to assist the community with Consultation, Assistance, Resources, Evaluations and Services (CARES Team) in order to

prevent admissions, readmissions and also assist in transitioning people from the Developmental Center. In 2008 the CARES Team went statewide.

North Dakota Developmental Center (NDDC) Census:

See Attachment C, for the census data at the Center for the period of 1997 through 2008. The Executive Budget recommendation is built for a census of 115 individuals at the Center.

Major Program Changes/Trends:

- The One Center (NDSH/NDDC) shares ten (10) senior and middle management positions.

- The Community Transition task force is working on reducing the population of the Developmental Center with appropriate placements into community settings.

- The Center has added two transitional programs (one for youth and one for individuals with sexual health issues) and enhanced the CARES function to support people in community settings, prevent admissions, to reduce readmissions, and support transition to the community. In respect to the CARES function, the Center is adding (4) four behavioral analysts to carry out the statewide duties. The addition of the two transitional programs, the enhancement of the

CARES function and adding of the behavioral analysts is being absorbed in the current budget and no request for additional dollars is in the Executive Budget recommendation.

Developmental Center:

Description	2007-2009 Budget	2009-2011 Budget	Increase/ Decrease
Institutions	48,221,619	54,015,265	5,793,646
General Funds	14,840,379	16,854,593	2,014,214
Federal Funds	29,378,634	33,003,559	3,624,925
Other Funds	4,002,606	4,157,113	154,507
Total	48,221,619	54,015,265	5,793,646
FTE	445.54	445.54	-

Budget Changes from Current Budget to Executive Budget:

- The increase in General Funds is for the Executive Budget recommendation for the state employee's salary and benefit package.

- The Federal Funds increase is for the state employee's salary and benefit package and a Medicaid settlement.

- The Other Funds increase is for the state employee's salary and benefit package.

- Salary and benefit increase of $4,450,939 total funds, with general funds increase of $1,544,418, federal funds increase of $2,752,054, and other funds increase of $154,467 to cover the Executive Budget recommendation for the employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increase into the 2009-2011 biennium is $606,365 with General Funds of $228,054.

- The Executive Budget recommendation contains a decrease of $46,040 in temporary salaries because of the reduction of one FTE in the dietary department.

- Operating costs increase of $16,127 is due to increases in medications and utilities, but mitigated by decreases in other areas of the operating budget.

- The Executive Budget recommendation for extraordinary repairs at the Center is for $712,675, which is a decrease of $185,525 from the current budget. Extraordinary repairs include; roofing repairs of $215,000, Powerhouse repairs and upgrades of $364,100, flooring and counter top replacement of $65,575, sidewalks and parking lots repairs of $20,000, campus door replacement of $36,000 and painting projects of $12,000.

- Equipment over $5,000 in the Executive Budget recommendation is $75,000. This is a net decrease of $17,640 from the current budget.

- Bond payment of $501,657 and this is the final bond payment for the North Dakota Developmental Center. The net decrease for bond payments in the Executive Budget recommendation is $32,848.

- The total Executive Budget recommendation for extraordinary repairs, bond payments and equipment at the Center is $1,289,332.

- No increase in FTEs at the Developmental Center for this biennial period.

Thank you. I would be happy to answer any questions about the budget request for the North Dakota State Hospital and North Dakota Developmental Center.

Community Capacity Issues with Two Components – Inpatient and Outpatient

The Inpatient component addresses the capacity issues faced by the State Hospital and local hospitals:

- The State Hospital is staffed for 85% occupancy, while the actual occupancy has averaged between 90% - 100% during the same time frame. This is being primarily managed by staff caring for more patients than is considered acceptable staff-to-patient ratios. This, coupled with increased occupancy and increased acuity, creates issues with adequately meeting the needs of patients. The Hospital is also using double shifts, on-call staff and limited overtime when occupancy is running near 100% for a significant period of time. The additional 5 FTE will address this issue - $424,084.

- Also included in the inpatient component is funding to provide a higher rate of payment to the regional hospitals (Trinity, Altru, Meritcare, MedCenter One, and St. Alexius) when Human Service Center clients require short term stabilization. This rate change would be consistent with the rate paid by Medicaid at the newly rebased amount - $1,349,464.

The Outpatient component provides funding to enhance community supports in order to serve clients in the community rather than admitting to inpatient care at the State Hospital or local hospitals.

- To reach this goal, a crisis bed residential program is being proposed in Minot, along with a 16 bed residential facility in Dickinson - $1,910,387. Funding is also proposed to enhance existing community supports in Grand Forks - $289,000 and adds 5 FTE to deal with the growing capacity issues - $542,044.

The inpatient and outpatient components are linked, with the goal being to keep NDSH capacity under 100% while providing adequate staff coverage, and to maintain more clients in their home communities.

House Bill 1012 – Department of Human Services
Senate Appropriations Committee
Senator Holmberg, Chairman
March 4, 2009

Chairman Holmberg, members of the Senate Appropriations Committee, I am Alex C. Schweitzer, Superintendent of the North Dakota State Hospital and North Dakota Developmental Center of the Department of Human Services (One Center). I am here today to provide you with an overview of the North Dakota State Hospital and North Dakota Developmental Center of the Department of Human Services.

North Dakota State Hospital Programs:

The North Dakota State Hospital provides short-term inpatient and long-term residential psychiatric, forensic and chemical addiction services for adults. Within this group of adults are patients referred to the Tompkins Rehabilitation and Corrections Center by the Department of Corrections and Rehabilitation for residential addiction services.

The State Hospital provides inpatient services for children and adolescents with serious emotional disorders and substance abuse problems. The Jamestown Public School System provides educational services to the child and adolescent population on the grounds of the State Hospital.

The above-mentioned patients are considered to be the traditional patient population of the Hospital.

The Hospital also provides inpatient evaluation and treatment services for sexually dangerous individuals. This group of patients are housed and treated in the secure services unit of the Hospital.

The Hospital provides psychiatric, medical and x-ray services under an agreement with the James River Correctional Center.

North Dakota State Hospital Census:

The State Hospital operates 307 beds.

The Hospital utilizes ninety (90) of these beds to provide addiction services to patients in the Tompkins Rehabilitation and Corrections Center, comprised of 60 male and 30 female patients.

The Hospital utilizes one hundred thirty-two (132) beds for inpatient and residential psychiatric services where the Hospital treats adults, children and adolescents with serious and persistent mental illness, serious emotional disorders and chemical addiction. Inpatient and residential services have been highly occupied for the past three years, with occupancy often running between 95% - 100% and occasionally exceeding 100%. The Hospital increased the capacity of inpatient and residential services by eight (8) beds in the 05 – 07 biennium to deal with the increased occupancy. In addition, the Hospital increased capacity by four (4) beds in the current biennium to meet the increased demand. The Hospital during the past biennium was staffed for 85% occupancy in the nursing department.

The major reasons for the high occupancy are the admission of first time patients, increased acuity from community admissions, chronic patients awaiting referral to residential settings and the increased need for treatment of patients with complex medical and psychiatric issues.

The Tompkins Rehabilitation and Corrections Center and the Inpatient Psychiatric Service admissions and average daily census data is outlined in Attachments A (1) & (2) based on a census year of July 1st to June 30th.

The Hospital operates 85 beds for sexually dangerous individuals, and at the end of 2008 we had an occupancy of 59 patients. The Hospital also operates a Transitional Living Home on the campus for two sexually dangerous individuals in the late stages of their commitment to the program.

The census data for the sexually dangerous individuals population is outlined in Attachment B.

In summary, the Executive Budget recommendation for the North Dakota State Hospital is for a total capacity of 307 patients. The breakdown by program includes; 90 beds in the Tompkins Rehabilitation and Corrections Center with 60 men and 30 women, 85 beds in the Secure Services Unit and 132 beds for inpatient psychiatric services.

Major Program Changes/Trends:

- The Hospital is experiencing high occupancy and higher acuity in the traditional services program for adults for the past three years.

- The Hospital transitioned 16 serious and persistent mentally ill patients to a residential long-term care program at the Sheyenne Care Center in Valley City to best meet their needs and increase capacity at the State Hospital.

- During the current biennium the Hospital opened a fourth sex offender unit with an additional 20 beds and 17 FTEs. The Sex Offender Program should be able to meet capacity needs for the foreseeable future with the current 85 beds and the Transitional Living Program.

- The Hospital did not follow through with the construction of a building addition (the fifth unit) to the GM Building for the sex offender program as authorized during the 2007 legislative session. The additional space was not needed because of the slowing of referrals, the emergence of the outpatient sex offender treatment program and discharges from the inpatient program.

Overview of Budget Changes in Traditional Services:

Description	2007 - 2009 Budget	Increase/ Decrease	2009 - 2011 Budget	House Changes	To Senate
Institutions	52,235,044	7,361,583	59,596,627	(3,089,601)	56,507,026
General Funds	36,423,429	3,642,903	40,066,332	(2,037,161)	38,029,171
Federal Funds	4,467,669	(73,366)	4,394,303	(231,311)	4,162,992
Other Funds	11,343,946	3,792,046	15,135,992	(821,129)	14,314,863
Total	52,235,044	7,361,583	59,596,627	(3,089,601)	56,507,026
FTE	381.06	6.00	387.06	(6.00)	381.06

Budget Changes from Current Budget to Executive Budget:

- The increase in General Funds is the result of the Executive Budget recommendation for the state employee's salaries and benefit package.

- Federal Funds decrease by $73,366 because of the reduction in Federal Participation.

- Other Funds increase by $3,792,046 because of increased Medicare payments in Pharmacy Part D and Inpatient Part A.

- Salary and benefit increase of $4,306,134 total funds, with general funds increase of $3,333,913, federal funds increase of $419,419 and other funds increase of $552,802 to cover the Executive Budget recommendation for employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increases into the 2009-2011 biennium is $657,917 with General Funds of $599,752.

- The Executive Budget recommendation contains an under funding of salaries of $988,683 and a decrease of $82,141 in other salaries because of decreased utilization of shift differential.

- Operating costs increase of $1,995,383 is due to high patient occupancy and acuity and increased utilization of medications and medical services/supplies. In addition the Hospital is experiencing cost increases in medications, medical services/supplies and utilities.

- The extraordinary repairs increase includes; major extraordinary repairs of $320,000 for resurfacing campus streets and parking lots, $75,000 for campus flooring replacement, $75,000 for asbestos abatement, $106,000 to replace siding and windows in the Transitional Living Houses, $1,146,500 for plumbing work, $360,000 for electrical service work, $95,000 for roofing repair, $25,000 for ADA improvements, and $1,028,517 for heating and cooling upgrades for a total of $3,231,017. The net increase in the Executive Budget recommendation for extraordinary repairs is $1,897,517.

- Equipment over $5,000 in the Executive Budget recommendation is $246,220. The net increase for equipment over $5,000 in the Executive Budget recommendation is $123,720.

- Bond payment of $437,729 and this is the final bond payment for the North Dakota State Hospital. The net decrease for bond payments in the Executive Budget recommendation is $28,662.

- The 2009 - 2011 Executive Budget recommendation contains a request for 6 FTEs. These FTEs are for the Inpatient Psychiatric Unit where we are experiencing higher occupancy and higher acuity.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $1,556,650, with $511,140 in general funds, $231,282 in federal funds and $814,228 in other funds. This is in addition to the underfund contained in the Executive Budget of $988,683.

The House reduced 50% of the department-wide travel increase. The North Dakota State Hospital's Traditional Services share of this decrease is $16,136, with $9,206 in general funds, $29 in federal funds and $6,901 in other funds.

The House reduced the State Hospital's extraordinary repairs by $1,000,000 – all general funds.

The House removed 6 FTEs from the executive budget that were added because of capacity issues at the State Hospital. The Hospital made a request during House testimony to remove one of these six FTEs. Reduction of $516,815 – all general funds.

Overview of Budget Changes in Secure Services:

Description	2007 - 2009 Budget	Increase/ Decrease	2009 – 2011 Budget	House Changes	To Senate
Institutions	14,491,287	(4,086,387)	10,404,900	-	10,404,900
General Funds	14,331,656	(3,960,055)	10,371,601	-	10,371,601
Federal Funds	-	-	-	-	-
Other Funds	159,631	(126,332)	33,299		33,299
Total	14,491,287	(4,086,387)	10,404,900	-	10,404,900
FTE	85.45	-	85.45	-	85.45

Budget Changes from Current Budget to Executive Budget:

- The decrease in general funds in the Executive Budget recommendation for secure services is primarily the result of not building the fifth unit and the completion of the safety and security upgrades.

- Other funds decrease of $126,332 is the result of a smaller number of patients having third party payers or private funds for payment.

- Salary and benefit increase of $838,694 total funds, with general funds increase of $837,522 and other funds of $1,172 to cover the Executive Budget recommendation for the employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increase into the 2009-2011 biennium is $123,486, with General Funds of $122,726.

- The Executive Budget recommendation contains a salary underfunding of $368,091.

- Operating costs increase in the Executive Budget recommendation by $258,493 because of medication, medical services and utilities increases.

- The Executive Budget recommendation contains a decrease in capital improvements of $3,100,000 as the fifth unit was not built.

- The Executive Budget recommendation contains a decrease of $1,820,303 in extraordinary repairs for the completion of safety and security upgrades in the sex offender unit during the current biennium.

- Total FTEs remain the same in the Executive Budget recommendation as the Current Budget.

North Dakota Developmental Center Programs:

The Developmental Center provides services for individuals with developmental disabilities. The program includes residential services, work and day activity services, clinical and medical services and evaluation and consultation services.

Residential Services at the Developmental Center includes:

- Secure Services Program – this unit is for individuals with developmentally disabilities who have sex offending behaviors and for other individuals from the campus that require a more secure living environment. These individuals require long-term care.

- Medical Program – for individuals with developmental disabilities who are totally dependent on staff to complete daily cares and have medical concerns that require nursing staff accessibility 24 hours per day. Also, in this area are a small number of individuals diagnosed with profound mental retardation and dual sensory disabilities (vision and hearing). These individuals require long-term care.

- Behavioral Care Program – these individuals with developmental disabilities present with psychiatric diagnoses and significant challenging behaviors. Some of these individuals may also have less severe medical needs.

- Youth Services Program - these young people between the ages of 16 - 25 have difficulty finding housing and services in the community. The Center provides short-term services to these individuals until a community placement can be found.

- Independent Supported Living Arrangement Program - the Developmental Center is placing and supporting with staff three individuals with sexual health issues in a transitional living facility on the campus to prepare them for community living. They will be discharged from the Developmental Center when they make the transition.

- The Developmental Center continues its efforts on an outreach program to assist the community with Consultation, Assistance, Resources, Evaluations and Services (CARES Team) in order to prevent admissions, readmissions and also assist in transitioning people from the Developmental Center. In 2008 the CARES Team went statewide.

North Dakota Developmental Center (NDDC) Census:

See Attachment C, for the census data at the Center for the period of 1997 through 2008. The Executive Budget recommendation is built for a census of 115 individuals at the Center.

Major Program Changes/Trends:

- The One Center (NDSH/NDDC) shares ten (10) senior and middle management positions.

- The Community Transition task force is working on reducing the population of the Developmental Center with appropriate placements into community settings.

- The Center has added two transitional programs (one for youth and one for adults) to assist in the transition of individuals to community settings.

- In addition, the CARES function has been enhanced to support people in community settings and to prevent admissions and readmissions to the Center. The Center is adding (4) four behavioral analysts to carry out the statewide duties. The addition of the two transitional programs, the enhancement of the CARES function and adding of the behavioral analysts is being absorbed in the current budget and no request for additional dollars is in the Executive Budget recommendation.

Overview of Budget Changes – North Developmental Center:

Description	2007 – 2009 Budget	Increase/ Decrease	2009 – 2011 Budget	House Changes	To Senate
Institutions	48,221,619	5,793,646	54,015,265	(1,025,546)	52,989,719
General Funds	14,840,379	2,014,214	16,854,593	(437,518)	16,417,075
Federal Funds	29,378,634	3,624,925	33,003,559	(531,518)	32,472,041
Other Funds	4,002,606	154,507	4,157,113	(56,510)	4,100,603
Total	48,221,619	5,793,646	54,015,265	(1,025,546)	52,989,719
FTE	445.54	-	445.54	-	445.54

Budget Changes from Current Budget to Executive Budget:

- The increase in General Funds is for the Executive Budget recommendation for the state employee's salary and benefit package.

- The Federal Funds increase is for the state employee's salary and benefit package and a Medicaid settlement.

- The Other Funds increase is for the state employee's salary and benefit package.

- Salary and benefit increase of $4,450,939 total funds, with general funds increase of $1,544,418, federal funds increase of $2,752,054, and other funds increase of $154,467 to cover the Executive Budget recommendation for the employee salary increase of 5% and 5% and benefit increases (increase in health insurance).

- The cost to continue year two of the 2007-2009 biennium salary increase into the 2009-2011 biennium is $606,365 with General Funds of $228,054.

- The Executive Budget recommendation contains a decrease of $46,040 in temporary salaries because of the reduction of one FTE in the dietary department.

- Operating costs increase of $16,127 is due to increases in medications and utilities, but mitigated by decreases in other areas of the operating budget.

- The Executive Budget recommendation for extraordinary repairs at the Center is for $712,675, which is a decrease of $185,525 from the current budget. Extraordinary repairs include; roofing repairs of $215,000, Powerhouse repairs and upgrades of $364,100, flooring and counter top replacement of $65,575, sidewalks and parking lots repairs of $20,000, campus door replacement of $36,000 and painting projects of $12,000.

- Equipment over $5,000 in the Executive Budget recommendation is $75,000. This is a net decrease of $17,640 from the current budget.

- Bond payment of $501,657 and this is the final bond payment for the North Dakota Developmental Center. The net decrease for bond payments in the Executive Budget recommendation is $32,848.

- The total Executive Budget recommendation for extraordinary repairs, bond payments and equipment at the Center is $1,289,332.

- No increase in FTEs at the Developmental Center for this biennial period.

House Changes:

The House underfunding of salaries for anticipated savings from vacant positions and employee turnover for this area of the budget is $875,170, with $287,370 in general funds, $531,385 in federal funds and $56,415 in other funds.

The House reduced 50% of the department-wide travel increase. The North Dakota Developmental Center's share of this decrease is $376, with $148 in general funds, $133 in federal funds and $95 in other funds.

The House in addition reduced the executive budget request for extraordinary repairs at the North Developmental Center by $150,000.

The House added an amendment requiring a screening prior to admission or readmission to the North Dakota Developmental Center.

Thank you. I would be happy to answer any questions about the budget request for the North Dakota State Hospital and North Dakota Developmental Center.

Memorandum

To: Senator Holmberg, Chairman – Senate Appropriations Committee

From: Alex C. Schweitzer, Superintendent – DHS Institutions

Date: March 11, 2009

The attached reports are presented to the Senate Appropriations Committee at the request of Senator Mathern.

Attached reports include;

(1. Average Length of Stay at the North Dakota State Hospital (Fiscal 2008).

(2. Occupancy levels compared to Baseline nursing staffing levels at the North Dakota State Hospital for calendar years 2006, 2007 and 2008.

If you have any questions or need any more information, please feel free to contact me.

North Dakota State Hospital 09 - 11 Extraordinary Repairs
March 25, 2009

Summary:

Governor's Budget Request:	$3,231,017
House Reductions:	$1,000,000
To the Senate:	$2,231,017

Detail:

Funds for Projects after House Reductions:

Priority:	Project:	Cost:
1	Resurface streets and parking lot	$300,000
2	Replace 1981 coal feeders for coal boiler	$270,000
3	Replace worn rotating grate system on coal boiler	$200,000
4	Handicap Accessible entry/bathroom – P&A office	$ 25,000
5	Replace grate hydraulic system on coal boiler	$ 95,517
6	Replace most of LaHaug sanitary sewer system	$250,000
7	Replace aging water line to JRCC facilities	$175,000
8	Siding and windows for TL Homes	$106,000
9	Replace flooring throughout campus	$ 75,000
10	Rewiring electrical equipment in NH Building	$150,000
11	Replace sub-panel in NH Building	$150,000
12	Replace obsolete ash tower unloading system for Coal boiler	$198,000
13	Repair the remainder of heating plant roof	$ 45,000
14	Overhaul chillers (must be done every 5 years)	$ 15,000
15	Repipe roof drains in several buildings	$150,000
16	Rewiring TL Homes	$ 25,000

Projects not able to complete in 09 – 11 because of House Reductions:

17	Camera all sewer lines	$ 50,000
18	Topographical survey of water mains and sewer	$ 50,000
19	Replace coal boiler steam stop and header valves	$ 21,000
20	Coal boiler safety valve overhaul/replacement	$ 10,000
21	Replace coal boiler ash handling system tube	$ 4,000
22	Replacement and/or repair parts – ash handling System	$ 35,000
23	Valve replacement of pressure steam lines	$ 35,000

D

NORTH DAKOTA DEVELOPMENTAL CENTER
CAPITAL IMPROVEMENTS AND EXTRAORDINARY REPAIRS
FINAL

Priority	PROJECT	2009-11	2011-13	2013-2015
1	Maple Wood – this roof is the same age as Cedar Grove and has some of the same problems.	135,000		
2	Replace or repair doors --- campus-wide	36,000	10,000	10,000
3	Power House - Repairs & maintenance to motors and absorbers; In 2009 run Edy tests on tubes for absorbers #1 & #2, replace softeners, combustion air heater replacement, seal hose and tune up cooling towers, replace motor for #3 boiler fans;	58,400		
4	Powerhouse-In 2010 retube & overhaul #2 absorber	38,000		
5	There are a few areas of the chill water piping system that are direct buried. There have been a few leaks in this system in the past 10 years. This project should coincide with the steam line replacement, as the two systems are located in the same term	50,000	50,000	50,000
6	Grate Replacement Coal Boiler	55,000		
7	Repairs on air handlers, ductwork, univent heaters, coils, air handler motors and dampers on campus. We have done some repairs with the energy upgrade project but there is still a lot of equipment on campus that could need repairs in the upcoming years.	25,000	25,000	25,000
8	There are a few areas of the steam distribution system that are direct buried. There have been leaks in this system in the past and the section of the piping needs to be replaced.	70,000	50,000	50,000
9	Prairie View – this roof is over 20 years old and has passed its life expectancy. There are a few leaks in the tunnel area of the building.	80,000		
10	Concrete Repairs: This is an area that needs ongoing attention. With frost heaves and general wear there should be a rotation of sidewalk replacement to keep them in good condition.	10,000	5,000	5,000
11	Preventive maintenance and repairs on parking lots.	10,000	10,000	10,000
12	There are many areas of campus that need flooring replacement. Carpeting and linoleum.	55,575	40,000	40,000
13	The kitchen and laundry rooms of New Horizons, Maplewood and Cedar Grove are in bad shape. The counter tops are chipped, cracked and many of the cabinets have swelled do to water damage.	10,000	5,000	5,000
14	Repair cracks and eliminate water leaks in tunnels	25,000	25,000	25,000

For 1012 from ARC of ND, Tim Mathern 3.19.09

25-04-05. Qualifications for admission to state facility. ~~Temporary~~ Screening required prior to admissions or readmission – Educational or related services without charge for persons twenty-one years of age and under.

2. ~~The superintendent~~ No person may ~~admit~~ be admitted or readmitted to the developmental center at westwood park, Grafton, unless it is first established that the person cannot be appropriately served through community-based programs and services in the person's home community, or as close thereto as possible. If admission is sought because programs or services are not then available in the person's home community, the programs and services necessary to allow for education or related services to be provided in the student's home community must be identified, and a plan to develop those programs and services shall be created and fully implemented by the appropriate agency no later than the next school year. ~~temporarily for the purposes of observation, without commitment,~~ Any person recommended for admission may not be admitted unless that person has undergone a screening process at the developmental center, with the involvement of local and regional staff, to determine whether the admission or readmission is appropriate. Length of stay criteria may be established under rules as the department of human services may adopt, but no person may remain ~~, any~~. Any person who is suspected of being able to benefit from the services offered at the center, may be screened to ascertain whether or not that person is actually a proper case for care, treatment, and training ~~in~~ at the ~~state facility~~ developmental center. If in the opinion of the interdisciplinary team the person temporarily ~~admitted to the developmental center at westwood part, Grafton~~ screened under this subsection is a proper subject for institutional care, treatment, and training at the developmental center, that person may remain as a voluntary resident at ~~such~~ the center at the discretion of the superintendent on a temporary basis only until the community based services required by this section are in place, if all other conditions for admission required by this section are met.

North Dakota Developmental Center 09 -11 Extraordinary Repairs
March 25, 2009

Summary:

Governor's Budget Request:	$712,675
House Reductions:	$150,000
To the Senate:	$562,675

Detail:

Funds for projects after House Reductions:

Priority:	Project:	Cost:
1	Maplewood Roof Repair	$135,000
2	Campus wide repair of doors	$ 36,000
3	Repairs in the powerhouse	$ 58,400
4	Powerhouse – retube and overhaul absorber	$ 38,000
5	Repair of Chill water piping system	$ 50,000
6	Grate replacement on coal boiler	$ 55,000
7	Repair on air handlers, ductwork and heater coils	$ 25,000
8	Repair of steam distribution system	$ 70,000
9	Replace Praireview roof	$ 80,000
10	Concrete Repairs	$ 10,000

Projects not able to complete in 09 – 11 because of House Reductions:

11	Preventive maintenance and repairs on parking lots	$ 10,000
12	Flooring replacement	$ 55,575
13	Repair of individual suite kitchen areas	$ 10,000
14	Repair cracks and eliminate water leaks in tunnels	$ 25,000
15	Work on heating system	$ 15,000
16	Paint requests across campus	$ 12,000
17	Airheater #3 boiler	$ 10,000
18	Water softener and motor-boiler	$ 17,700

Page Two: Extraordinary Repairs at State Hospital

Priority:	Project:	Cost:
24	Replace coal boiler feed water inlet regulating valve	$ 10,000
25	Install water cooling system on coal boiler	$ 35,000
26	Install back-up heat exchanger in LaHaug Bldg.	$ 20,000
27	Replace obsolete sprinkler heads	$ 20,000
28	Pump House Valves	$ 15,000
29	Backup water supply system with City	$250,000
30	Ventilation for Heating Plant	$ 35,000
31	Install chilled water cools for air conditioning	$ 50,000
32	Campus asbestos abatement	$ 75,000
33	Replace water line/add second line to JRRC Administration Building	$ 75,000
34	Repaint two chiller sump tanks	$ 23,500
35	Roof Repairs – Maintenance schedule	$ 50,000
36	Repair sidewalks throughout campus	$ 20,000
37	Replace two main water shut off valves	$ 18,000
38	Replace two fire hydrants	$ 20,000
39	Repairing two manholes per biennium	$ 5,000
40	Repair leaking basement windows in LaHaug	$ 75,000

CLOSING THE NORTH DAKOTA DEVELOPMENTAL CENTER: ISSUES, IMPLICATIONS, GUIDELINES

David Braddock, Ph.D.
Professor in Psychiatry, University of Colorado

March 7, 2006

TABLE OF CONTENTS

PURPOSE AND FOCUS OF THE PAPER 1

Question 1: How did state-operated institutions for persons with mental retardation and developmental disabilities (MR/DD) evolve nationally? 2

Question 2: What are residential and community services trends in North Dakota today and in two groups of "comparison states"? 4

Question 3: How many states have closed state MR/DD institutions and how many are planning to do so in the near future? 5

Question 4: What are today's institutional costs per resident in North Dakota and, based on previous trends, what can these costs be estimated to be in future years? 7

Question 5: How well do persons with MR/DD typically adjust to relocation from institutions to community living environments? 8

Question 6: How do parents of individuals relocated from state institutions to community settings respond to this process of change? 10

Question 7: How might cost savings be achieved in North Dakota if Grafton were to be closed in the near future? 12

Question 8: Should the State of North Dakota anticipate a short-term need for increased appropriations associated with Grafton's closure to cover the temporary "dual costs"? 13

Question 9: What are some of the alternate uses to which a closed Grafton facility might be put? 15

Question 10: What can North Dakota learn from the extensive experience of other states in planning and implementing institutional closures? 16

CLOSING THE NORTH DAKOTA DEVELOPMENTAL CENTER: ISSUES, IMPLICATIONS, GUIDELINES

PURPOSE AND FOCUS OF THE PAPER

This paper has been prepared at the request of the Arc-Upper Valley Board of Directors. It is intended to stimulate discussion and further study by the Arc and other interested parties in North Dakota on the possible closure of the North Dakota Developmental Center at Grafton (hereafter "Grafton").

The primary focus of the paper is to identify and discuss 10 key issues, expressed as questions, associated with the potential closure of Grafton, North Dakota's remaining mental retardation and developmental disabilities (MR/DD) institution. The implications of closing Grafton are considered in light of other states' experiences in closing state-operated MR/DD institutions and in light of relevant research. The paper addresses the following ten questions:

1. How did state-operated institutions for persons with mental retardation and developmental disabilities evolve nationally?

2. What are residential and community services trends in North Dakota today and in two groups of "comparison states"?

3. How many states have closed state MR/DD institutions and how many are planning to do so in the near future?

4. What are today's institutional costs per resident in North Dakota and, based on previous trends, what can these costs be estimated to be in future years?

5. How well do persons with MR/DD typically adjust to relocation from institutions to community living environments?

6. How do parents of individuals relocated from state institutions to community settings respond to this process of change?

7. How might cost savings be achieved in North Dakota if Grafton were to be closed in the near future?

8. Should the State of North Dakota anticipate a need for increased appropriations associated with Grafton's closure, to cover the temporary "dual costs"?

9. What are some of the alternate uses to which a closed Grafton facility might be put?

10. What can North Dakota learn from the extensive experience of other states in planning and implementing institutional closures?

Question #1: How did state-operated institutions for persons with mental retardation and developmental disabilities (MR/DD) evolve nationally?

The first state-operated MR/DD institutions were opened in the Northeastern U.S. in the 1850s. They were developed to provide a temporary residential placement for individuals who, after a relatively brief period of education and training in these facilities, returned to community life. Early success at several schools led to the opening of additional state-operated MR/DD institutions across the U.S. (Braddock & Parish, 2003). The first state MR/DD institution in North Dakota was opened as the State Institute for Feeble-Minded in Grafton in 1904. In addition, the San Haven facility, opened originally as a tuberculosis hospital in 1922, was converted to MR/DD use in 1973, and closed in 1987 (Braddock & Hemp, 2004).

As the country industrialized and urbanized, state institution populations expanded much faster than facilities' capacities to provide appropriate training and educational services. By 1930, more than 100,000 persons with mental retardation were institutionalized across the U.S., and most residents received minimal custodial care. This trend toward custodial care and "warehousing" of persons with mental retardation increased after the Second World War and throughout the 1950s. Media exposés about deficient conditions were commonplace (Blatt & Kaplan, 1974).

In 1967, the nation's institutional census peaked at 195,000 residents in 240 state mental retardation facilities. Since 1968, the number of individuals with mental retardation served in state institutions has declined every year and, on average, four percent annually for 37 consecutive years. In 2004, the residential census of the nation's state institutions was 41,214 persons. If present trends continue, there will be fewer than 20,000 residents in state institutions in 10 years (2016). Costs for residential care, however, are climbing rapidly. Based on previous trends, in 10 years they are projected to reach an average of approximately $193,000 for each resident per annum ($530/day), in constant 2004 dollars. The per diem cost in the Grafton facility in 2004 was $392/day and $143,000 annually (Braddock, Hemp, Rizzolo, Coulter, Haffer, & Thompson, 2005).

Current trends promoting community services in the mental retardation field evolved out of the parent movement in the 1950s and 1960s. At that time, parents began insisting upon both a higher quality of institutional care and greater opportunities for community living. Federal legislation was enacted in 1963 (Pub. L. 88-156 and Pub. L. 88-164) that authorized the establishment of an initial, but incomplete, network of community centers and services across the country (Braddock, 1987). Segregating individuals with MR/DD in large, often remote institutions and providing substandard care became prominent civil rights issues in the 1970s and 1980s. Class action lawsuits (e.g., *Wyatt v. Stickney* in Alabama, *Ricci v. Okin* in Massachusetts, *New York State Arc v. Carey, Association for Retarded Citizens of North Dakota v. Olson*) were filed and such litigation continues in Federal District Courts throughout the U.S. (Braddock, 1998). By 1980, however, many states had begun implementing community services initiatives involving the development and funding of

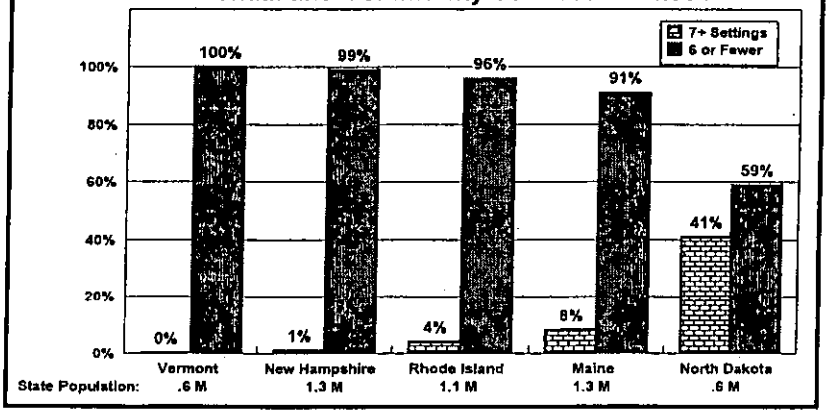
small group homes, supervised apartments, in-home family support programs, and supported employment.

Question #2: What are residential and community services trends in North Dakota today and in two groups of "comparison states"?

Today, institutional settings are being replaced by smaller, more individualized community placements and family support services. There are now more than 140,000 supervised living settings in the U.S. for six or fewer residents with MR/DD (Prouty, Smith, & Lakin, 2005). The total residential population of these small living environments was approximately 335,000 and this figure represented 68% of all out-of-home residential placements in 2004. In contrast, 86% of all persons with mental retardation in out-of-home residential placements nationally were living in large, 16 beds or more, publicly and privately-operated institutions in 1977 (Braddock et al., 2005).

North Dakota, however, significantly lags the dominant national trend in this regard. The State ranked 39th in 2004 in the percentage of persons with MR/DD living in smaller (six person or fewer), family-scale out-of-home environments, and 44th in the proportion of its total spending allocated to six-person or fewer settings. ***Figure 1*** compares North Dakota to four New England states with roughly the same state general population as North Dakota (Braddock et al., 2005).

Figure 1
Percentage of Total State Spending for 6-Person or Fewer Residential and Community Services: FY 2004



Another analytically useful comparison group of states includes South Dakota (.8 million population), Wyoming (.5 million), Montana (.9 million), and Idaho (1.4 million). Each of these "mountain west/plains states," like North Dakota, has one remaining institution. The 2004 MR/DD institutional censuses were 90 (MT), 92 (WY), 94 (ID) and 176 (SD), compared to 146 in North Dakota. Although South Dakota's census in 2004 was larger than North Dakota's, all four of these states had lower institutional utilization per capita rates (per 100,000 of the state general population).

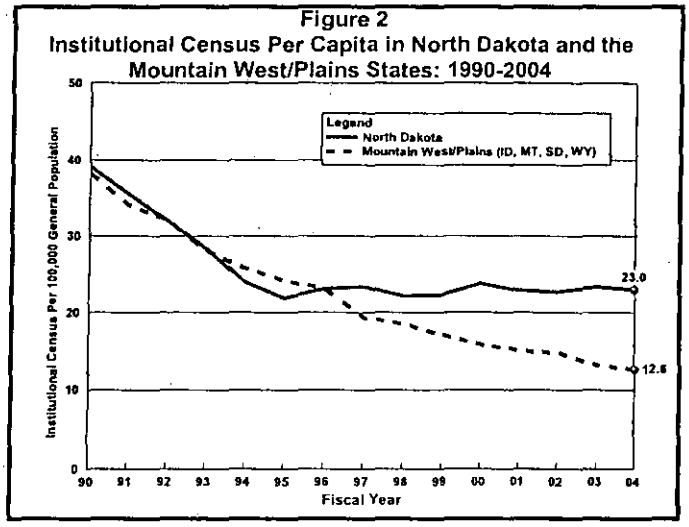


Figure 2 illustrates how the MR/DD institutional utilization per capita (of the state general population) for the four mountain west/plains comparison states began diverging from North Dakota in 1996. In 2004, North Dakota's institutional utilization exceeded the aggregate of the four comparison states by 83% (23.0 vs. 12.6). Moreover, South Dakota, Wyoming, Montana, and Idaho each committed a considerably larger share of total MR/DD spending to six-person or fewer residential and community services (70-77%) compared to only 59% in North Dakota. North Dakota's utilization rate for state-operated institutional care has been stable for the past 12 years, through 2006.

Question #3: How many states have closed state MR/DD institutions and how many are planning to do so in the near future?

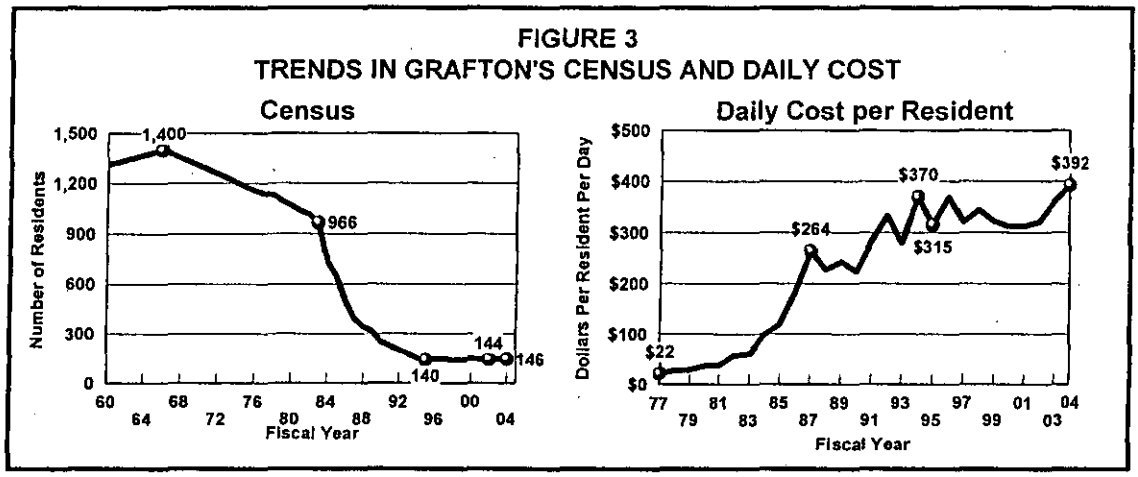
Since 1970, on a national basis, 39 states have closed, or are planning to close, 139 state-operated MR/DD institutions (*Appendix I*). This is more than one-half the 240

institutions that existed in 1970. (The average institutional census in 1970 was about 800 persons, compared to an average of 206 residents for the 200 facilities open in 2004.)

Sixty of the 139 completed and in-progress closures have occurred in the past 10 years. In January 1991, New Hampshire closed the Laconia State School and became the first contemporary American state to operate an institution-free service delivery system. The District of Columbia, Vermont, Rhode Island, New Mexico, West Virginia, Hawaii, and Maine became institution-free from 1991 to 1999. Michigan has closed 12 state institutions and in 2004, its only remaining facility, Mt. Pleasant, had a census of 162 persons. Minnesota has only one "institutional" program for persons with MR/DD. This is an intensive behavioral treatment program for seven consumers, located in a state psychiatric hospital.

Providing community-based services for persons with MR/DD and their families has gained considerable public support in recent years. Between 1977 and 2004, the annual growth of total community spending in the United States averaged 10% per year, after adjusting for inflation. Total state institution spending, however, actually declined 1% annually during 1977-04, and the average annual census of residents in institutions dropped by five percent per year.

The census of Grafton and San Haven in North Dakota (***Figure 3***) declined by an average of two percent per year from 1966 to 1983, one-half of the U.S. institutional rate over that period. Following the implementation of the consent decree in *Association for Retarded Citizens of North Dakota v. Olson* (1982), the North Dakota institutional census dropped by 15% per year from 1983 to 1995, from 966 to 140 persons. San Haven closed in 1987. In the past 12 years, through early 2006, there has been essentially no further decline in Grafton's institutional population. In fact, it has increased slightly since 1995.



Question #4: What are today's institutional costs per resident in North Dakota and, based on previous trends, what can these costs be estimated to be in future years?

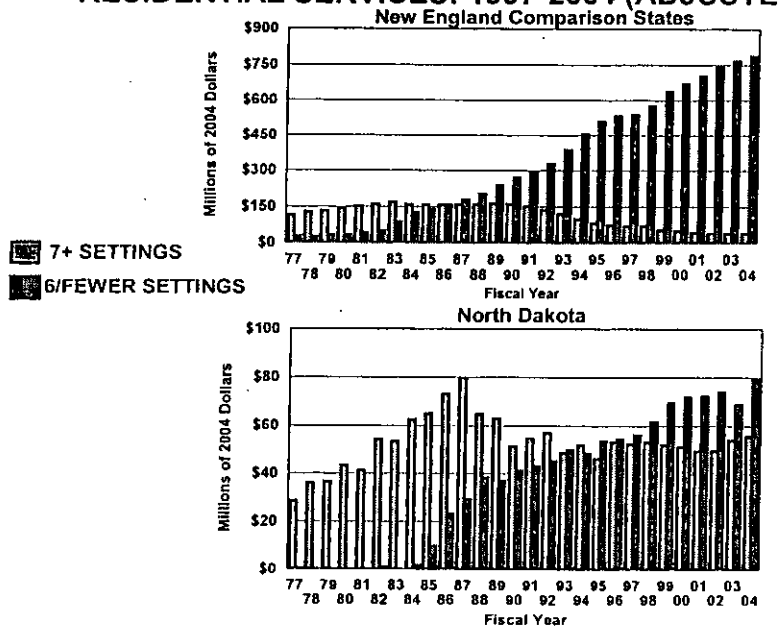
If present trends continue, an average of $193,000 per year, or $530 per day in constant 2004 dollars, is expected to be spent in the year 2016 for each institutional resident in the United States. From 1977 to 2004, average per diems grew nearly nine-fold, from $45/day to $400/day, and in 2004 per diems exceeded $500/day in 15 states, $400/day in 21 states, and $300/day in 35 states (Braddock et al., 2005).

Since 1995, the cost for each Grafton resident has advanced from $315 to $392 per day (***Figure 3***). The average cost of care in North Dakota's institution is now over $143,000 per year for each resident. Absent a decision to close Grafton, and given the stability of the Grafton census, the Grafton per diem for fiscal year 2016 in constant 2004 dollars may well surpass $600/day for approximately 146 residents. This amounts to $219,000 per year per resident, or $32.0 million per annum for the Grafton facility in 10 years.

An equally significant fiscal consequence of continuing to commit increasingly larger sums of money to institutional operations lies in the fact that, given current spending trends for Grafton, fewer "new" funds would be available to initiate additional or higher quality community services for consumers and families in the State. However, the New England

states of Maine, New Hampshire, Rhode Island and Vermont have all closed their remaining state MR/DD institutions, reallocated institutional funding, and greatly expanded their community services for thousands more individuals with MR/DD and their families (***Figure 4***). In contrast, North Dakota has continued to dedicate funding to persons in Grafton and to larger group living arrangements for seven or more persons. The New England states' decisions to close their MR/DD institutions lead to the development of a range of community housing and supported work options that subsequently received widespread political support (e.g., Covert, Macintosh & Shumway, 1994).

FIGURE 4
SPENDING FOR SIX PERSON OR FEWER RESIDENTIAL SERVICES: 1997-2004 (ADJUSTED)



Question #5: How well do persons with MR/DD typically adjust to relocation from institutions to community living environments?

Larson and Lakin (1989) of the University of Minnesota published a comprehensive review of research on changes in adaptive behavior associated with residents moving from state mental retardation institutions to smaller community living arrangements. Over 50

studies published between 1976 and 1988 were initially identified. After screening them according to six quality standards, 18 studies were subsequently analyzed. Results of the analysis indicated that institutions were "consistently less effective than community-based settings in promoting growth, particularly among individuals diagnosed as severely or profoundly retarded" (p. 330). The 18 studies reviewed involved 1,358 participants. The studies were conducted in 13 different states from all regions of the country. The authors concluded:

> ...it must be recognized that based on a substantial and remarkably consistent body of research, placing people from institutions into small, community-based facilities is a predictable way of increasing their capacity to adapt to the community and culture (p. 331).

In California, Brown, Fullerton, Conroy, & Hayden (2001) evaluated the well-being of more than 2,000 individuals with developmental disabilities who left state-operated California developmental centers from 1993 to 2001. The researchers assessed each individual at the state institution prior to the move, and, during 1994-2001, visited all 2,170 relocated individuals in their new homes in the community.

Data collected included measures of independence, behavioral challenges, choice-making, friendships, integration, person-centered planning, health, service intensity, earnings, and both consumer and family satisfaction. Brown et al. (2001) found that those relocated, compared to their lives in an institution in 1994, experienced improvement in "integrative activities," individualized treatment," "progress toward individual goals," "opportunities for choice-making," "reduced challenging behavior," and "perceived quality of life." Families were reported to be "unexpectedly and overwhelmingly happy with community living, even those who formerly opposed the change" (p. 3).

Brown et al. (2001) acknowledged that individuals relocated lost some of those gains between 2000 and 2001, stating that a plausible explanation was that "low salaries and high turnover rates translate into poorly motivated and poorly trained staff" in the community, an issue confirmed by family members who stressed the "poor quality and the short tenure of direct care staff" (p. 50). The State of California spent only 55% of the previous institutional cost per person, compared to community spending levels in New Hampshire, Pennsylvania, and Connecticut ranging from 80% to 86% of their states' institutional costs (Brown et al., 2001; Conroy, 1996).

Many people with levels of impairment once believed to be manageable only in institutional settings now live satisfactorily in community settings. This includes individuals with health problems (Gaylord, Abery, Cady, Simunds, & Palsbo, 2005; Hayden, Kim, & DePaepe, 2005; Larson, Anderson, & Doljanac, in press) and with challenging behaviors (Hanson, Wiesler, & Lakin, 2002; Kim, Larson, & Lakin, 2001; Stancliffe, Hayden, Larson, & Lakin, 2002). Undeniably, anecdotal reports of instances in which community placements did not work out are occasionally cited by proponents of continuing institutionalization of persons with MR/DD. However, the institutionalization of persons who have committed no wrong against society can only be justified by demonstrating clear benefits accruing to these persons from living in an institution. *Research literature noted above clearly indicates that state institutions do not provide a superior level of care for people with mental retardation.*

Question #6: How do parents of individuals relocated from state institutions to community settings respond to this process of change?

Families often initially oppose the transfer of their relatives from institutions to community settings, but after transfer occurs, the great majority of parents become strong

supporters of community placement (Heller, Bond, & Braddock, 1988). Since the late 1970s several studies have addressed the reactions of parents of institutionalized persons to the community placement of their relative with mental retardation. The studies demonstrated that, after community placement, parents consistently reported lower levels of satisfaction with the earlier institutional placement and higher levels of satisfaction with community placement (Brown et al., 2001; Larson & Lakin, 1991).

Initial family dissatisfaction with closure often bears little relationship to family attitudes toward closure a year later. The relative's medical status and the family's worry over "transfer trauma" have often both played significant roles initially upon the announcement of the closure, but not in determining longer-term parent reactions. The primary variables affecting both parent satisfaction with closure and parent stress levels is the family's current appraisal of the quality of the new community placement. Frequent staff consultation with the family members during the closure process was related to higher parent satisfaction with closure one year later (Heller et al., 1988).

Given that some families might resist institutional closure and the relocation of their relative, it is important to assure families that increased consumer health and adjustment problems are now uncommon during and following institutional closures. This is due to implementing the relocation process with sensitivity to the consumer's needs and preferences and involving families directly in the process. The literature on family reaction to institutional closure and relocation may be summed up as follows:

> ...the clearest message in these studies is that the overwhelming majority of parents become satisfied with community settings once their son or daughter has moved from the institution, despite general predisposition to the contrary (Larson & Lakin, 1991, p. 36).

Question #7: How might cost savings be achieved in North Dakota if Grafton were to be closed in the near future?

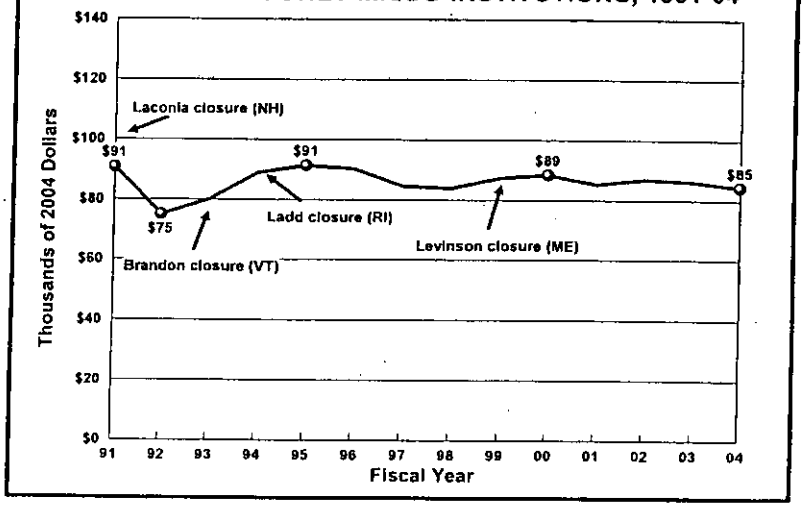
The closure of a state institution can generate savings for state government over time because it: 1) eliminates the high fixed cost of operating a state-owned facility, usually built for many more residents than live there at the time of closure; 2) shifts some fiscal responsibilities from state government tax revenues to federal Supplemental Security Income (SSI) and, in some cases, to local government sources; 3) increases the likelihood that individuals will engage in productive employment in a local community because they now live there; 4) utilizes less costly social, educational, religious, and recreational resources in the community rather than the relatively expensive, specialized services provided in the institution; and, 5) by renting/leasing residences it avoids the expensive institutional capital construction and remodeling costs necessary for most older institutions to remain open and certified for receipt of federal reimbursement (Braddock, 1991a, 1991b).

In a relevant study of closure costs and savings, the New York State Office of Mental Retardation and Developmental Disabilities (OMRDD) retained the services of an independent consulting firm to study the cost implications of its decision to close multiple mental retardation institutions. The study, authored by the Grant-Thornton accounting firm, concluded that the average post-closure per diem operating costs for each client "were approximately 9% lower than the pre-closure costs" (New York OMRDD, 1990). The study found that closure had little effect on state employee levels. Conversion of a state school campus to an alternate use such as a prison or juvenile facility provided substantial new employment opportunities and absorbed much of the economic impact of the state institution closure.

Another perspective on pre- and post-closure costs is afforded by the four New England states (Maine, New Hampshire, Rhode Island, and Vermont). These states, upon the closures of their last remaining institutions during 1991-99, became "institution-free"--like North Dakota would with the closure of Grafton. New Hampshire closed Laconia in 1991, Vermont closed Brandon in 1993, Rhode Island closed Ladd in 1994, and Maine closed Levinson in 1999 (Braddock et al., 2005).

An analysis of pre- and post-closure costs per residential recipient across 1991-2004 was completed. From the dates of the first closure (Laconia in 1991) through 2004, in inflation-adjusted terms, annual spending per statewide residential recipient in the four New England states declined from $91,000 to $85,000 (***Figure 5***). In addition, the number of aggregate MR/DD recipients served in the four states increased by 44% from 1991 to 2004. The number of recipients post-closure increased by 76% in New Hampshire, 50% in Rhode Island, 41% in Vermont and 30% in Maine.

FIGURE 5
AVERAGE ANNUAL RESIDENTIAL SERVICES SPENDING FOR MR/DD RECIPIENTS IN FOUR NEW ENGLAND STATES CLOSING THEIR ONLY MR/DD INSTITUTIONS, 1991-04



Question #8: ***Should the State of North Dakota anticipate a short-term need for increased appropriations associated with Grafton's closure, to cover the temporary "dual costs"?***

Without specific knowledge as to how a closure process might be implemented in North Dakota, including the nature of the phase-down of the physical plant and the duration

of the closure's implementation, it is difficult to provide an accurate estimate of "dual" costs associated with the closure. However, the state should anticipate some temporary dual costs. Assuming closure takes three years to implement (i.e., 2007-09), and that approximately 50 residents move to the community each of the three years, "dual" costs were estimated to be $3.1 million in the first year, $5.7 million in the second year, and $1.9 million in the third year. These estimates, totaling $10.7 million for the three year implementation period are based on the following two additional assumptions:

- The annual cost per relocated consumer in the new community settings in FY 2007 was assumed to be equivalent to the projected per diem cost at Grafton in FY 2007. This assumption permitted community direct support staff wages in 2007, the first year of closure implementation, to be comparable with Grafton's wages. Community direct support staff wage costs for FYs 2008 and 2009 were projected to increase at the average annual rate of increase in Grafton's per diem rates during FYs 1977-04 (2.6% per year on an inflation-adjusted basis).[1]
- Consumer per diems for those residents remaining at Grafton during the closure process will increase significantly in the second and third years, due to fixed costs being spread over fewer residents. We estimated the increased Grafton per diem rates based on the average increases in per diems in the New England comparison states to be 17% in year one, 51% in year two and 57% in year three.

However, as noted in the previous discussion for ***Question 7***, average inflation-adjusted statewide costs per resident receiving services in the consolidated four New England comparison states actually declined from 1995 to 2004. This was due to the fact that additional community recipients with lower average support needs were able to be served as well. North Dakota may experience a similar trend in average overall community costs in the long-term as well.

---

[1] Some studies, however, have indicated that community costs for individuals with MRDD who had comparable needs were only 55-86% of those in institutions (Brown et al., 2002; Conroy, 1996). These lower community cost estimates were not used to generate the community per diem estimates in favor of emphasizing the conservative assumption of equalizing FY 2007 direct support staff wages in community settings with Grafton's projected FY 2007 staffing costs.

Question #9: What are some of the alternate uses to which a closed Grafton facility might be put?

Alternate uses possible for the Grafton physical plant depend upon the facility's proximity to projected population growth areas, the adaptability of the facility to alternate public or private use (e.g., prison, factory, state or industrial warehouse, etc.), and other factors. ***Table 1*** presents a summary of the various alternate uses for 130 developmental disabilities institutional closures in the U.S. See ***Appendix I*** for additional detail on each of the facilities that closed.

TABLE 1: ALTERNATE USES FOR INSTITUTIONAL CLOSURES IN THE U.S.

Alternate Use	Number[1]	Alternate Use	Number[1]
Corrections (including federal corrections)	22	New MR facilities	2
DD or other state/local administrative offices	15	Unoccupied (asbestos)	2
Alternate use not yet known	9	Private institutions	2
Universities/junior colleges	9	Historic preservation	1
Property vacant	9	Housing	1
Various community uses	6	Public health infirmary	1
Community DD programs	5	Retirement program	1
To be sold (including realty, public auction)	5	Reverting to U.S. Department of Defense	1
Commercial uses	4	Veterans' medical center	1
MI facilities	4	Water survey office	1
Demolished	3	Women's prison	1
Juvenile facilities	3	Undetermined	29

[1]Total is 137--7 institutions had two alternate uses

The four New England closures demonstrate the range of possible alternate uses displayed in ***Table 1***. The Laconia State School in New Hampshire was quickly reopened in 1991 as the Lakes Region Adult Correctional Facility. The town of Laconia (population 16,411) is 30 miles from Concord (population, 40,687). Brandon Center in Vermont, closed in 1993, is near Rutland (population 17,292) which is 85 miles from Colonie, New York (population 79,258). The closed facility is currently under development as a manufacturing site, with both private and state ownership.

The Ladd Center in Rhode Island, closed in 1994, was located in Exeter (population

6,045), 13 miles from Warwick (population 85,808) and was also proximal to Providence, a large city. A $6.4 million state fire academy and new state police headquarters is being developed on the Ladd Center site. The Elizabeth Levinson Center in Maine closed as a state institution in 1999 and now operates as a state-run short-term residential and health program for medically fragile children. Levinson, in Bangor (population 31,473) is 129 miles from Portland (population 64,249). Like North Dakota, the institutions in New Hampshire and Vermont were located in small towns, somewhat distant from a larger city. Grafton, a town of 4,516, is located 38 miles from Grand Forks.

Question #10: What can North Dakota learn from the extensive experience of other states in planning and implementing institutional closures?

In 1983, Illinois successfully relocated the 820 residents of the Dixon State School within a single calendar year. More than 90% of the parents were satisfied with the closure process and outcomes. Resident friendship patterns were kept intact by moving small groups of individuals together and by closing down one residential unit at a time (Braddock, Heller, & Zashin, 1983; Heller, Factor, & Braddock, 1986).

Guidelines based on state experiences in MR/DD institutional closures are summarized in ***Appendix II.*** They are presented from five perspectives: 1) general guidelines; 2) the individuals with developmental disabilities who are being relocated; 3) their families; 4) the community programs receiving residents from the closing facility; and 5) the staff of the closing facility. The guidelines were revised from Braddock et al. (1983) and Heller, et al. (1986).

CONCLUSION

In three previous analyses of the structure, financing and quality assurance of residential and community services in North Dakota, Braddock & Hemp (2004, 2000) and Braddock, Hemp, & Rizzolo (2002) suggested service and funding priorities for the State. For example, it was noted that North Dakota had fared better than most states fiscally in the recent national economic downturn during 2003-2005, and North Dakota was one of 10 states with the strongest financial outlook for fiscal year 2005. Priority needs for MR/DD services identified in the most recent North Dakota study included: 1) continuing the expansion of the Medicaid Home and Community-Based Services (HCBS) Waiver; 2) reducing reliance on Intermediate Care Facility/Mental Retardation (ICF/MR) programs for 16+ person public and private institutional facilities; 3) increasing family support, supported employment and supported living; and, 4) enhancing direct support staff wages and benefits (Braddock & Hemp, 2004, p. 50).

Nationwide, there are over nine times more individuals with mental retardation and developmental disabilities living in supervised out-of-home community settings than in state-operated institutions. The number of families and persons with disabilities benefiting from community services and supports nationally is growing as well. State-operated institutions are being closed in many states across the country and few families prefer such programs. Thus, given the trends outlined in this paper, the long-term future of services to persons with mental retardation and developmental disabilities in North Dakota is in community settings.

It therefore seems appropriate for North Dakotans to seriously consider expanding community residential services and support programs for people with MR/DD and their families, and subsequently closing the North Dakota Developmental Center at Grafton.

However, if Grafton is slated for closure, the implementation of that closure needs to be planned and executed in a manner sensitive to the needs of Grafton's consumers and their families and considerate of the employees of the facility as well. As previously noted, suggested guidelines specifically addressing closure implementation issues are presented in ***Appendix II.***

APPENDIX II
SUGGESTED PRELIMINARY GUIDELINES FOR INSTITUTIONAL CLOSURES

Institutional closure affects "sending" facility staff (staff at the institution that is closing), the "receiving" community staff and their agencies, and, of course, the individuals with disabilities and their families who are most affected. These guidelines were primarily adapted from closures at the Dixon and Galesburg Centers in Illinois (Braddock, Heller, & Zashin, 1983; Heller, Factor, & Braddock, 1986)

There are five sections in the Guidelines:

I. General Guidelines
II. Individuals Moving from the Institution
III. Families and Guardians
IV. Community Programs
V. Personnel of the Closing Facility

I. GENERAL GUIDELINES

1. Evaluate the Closure Systematically and Longitudinally

Develop a plan to evaluate (study) the closure of Grafton, first from the standpoints of the residents and their families but also from the standpoint of the impacted staff and the local community in which Grafton is situated. Use this evaluative information to help increase the likelihood of positive long-term impacts on consumers, employees, and communities. Announce the study at the same time the closure is announced. It should continue for at least two years after the last resident is moved to the community.

2. Seek Out Knowledge From Other States' Experiences with Institutional Closure

Many states have a great deal of experience with closing institutions for people with MR/DD. Seek out that experience if you choose to close Grafton.

II. GUIDELINES FOR INDIVIDUALS MOVING FROM THE INSTITUTION

1. Minimize Resident Transfer Trauma by Implementing an "Anticipatory Coping Strategy"

- Close Down Institutional Cottages or Units One at a Time;
- Keep Resident Groups and Friends Intact;
- Minimize Internal Transfer of Residents and Staff in the Closing Facility;

- Conduct Preparatory Programs for Consumers. This should include site visits to the new residential settings, as desired by the individuals, and in respect to any support needed based on their level of functioning; and,
- Involve Consumers Personally in Choosing Their Roommate(s) and Their New Community Home and Support Network.

2. Transfer Staff with Those Moving From the Institution

Determine whether institutional staff can be employed at community programs with individuals with developmental disabilities who know them and who are relocating to those programs.

3. Adopt a Relocation Assessment Process with an Appeal Mechanism

- Level One: Identification of an Alternative Plan

  The sending facility and state agency staff recommend a receiving program in the community for each resident based on service and support needs, preferences of the individual and/or the legally responsible persons, and availability of community resources.

- Level Two: Development of an Individual Services Plan

  A service plan is developed by the receiving program staff in collaboration with the sending facility staff. Minimizing internal transfers at the sending facility will improve the quality of information transmitted, as staff most familiar with the individuals moving would be available to provide the necessary input into the plans. The community agency staff has the final discretion in writing the plan.

- Level Three: Conference with Legally Responsible Person

  Prior to relocation, a meeting is offered at the community program with the legally responsible family member or guardian, if desired, to review with the community program staff the individual service plan. Closing facility staff may also participate in the meeting.

- Level Four: Appeal Process Available to Legally Responsible Person

  The legally responsible parent or guardian can object to the transfer plan if he or she believes it does not meet the individual's habilitation, support or medical needs. An appeal process is a necessary "relief mechanism."

III. FAMILY AND GUARDIAN GUIDELINES

1. Consultation with Closing Facility's Parents' Association

If a closure is decided upon, the state agency should promptly request permission to address the facility's parents' association. Meetings should be held, as necessary, to explain the closure process and to deal with problems that might arise during the relocation process. It is wise to acknowledge upfront to parents at both the sending facility, and to the community programs, that the relocations may temporarily disrupt routines at the institution and the community programs and in the lives of the individuals being relocated and their families. Every attempt to minimize this disruption should be made.

The state agency representative should convey to parents her or his willingness to work out solutions. It is also important for community program parents to be engaged to help provide a receptive environment for the relocated individuals and their families.

2. Involve Parents Who Have Been Through the Process

Parents involved in a successful institutional closure from a nearby state with such experience may be invited to the initial closure discussions with state agency representatives and with the closing facility parents' association. This can help reduce family anxiety and build support for the positive opportunities that a well-planned relocation can bring to their relatives.

3. Family/Guardian Notification

Individualized notification of families and guardians can serve to reduce anxiety and build support for individuals' planned relocations. Immediately upon the announcement of closure or phase-down, notification letters are sent to family members or guardians providing the following information.

- A rationale for the closure;
- The approximate time-frame;
- Anticipated positive aspects of the change;
- Types of community programs that will be available;
- Family and guardian options for alternative community programs;
- Reaffirmation of the state's commitment to serve the individual throughout relocation;
- Description of the four-level relocation assessment process--what will happen next; and,

- Name and phone number of a contact person designated by the state agency.

  Follow-up is continued through telephone contact reiterating essential information that was in the letter of notification and soliciting family or guardian participation in the individual's relocation to the community program.

4. Encourage Family Involvement

The following six steps can be employed to involve the families meaningfully in the process:

- Hold Informational Sessions at the Sending Facility

  Invite families to informational sessions at the sending (closing) facility. Representatives of the receiving community programs should also make presentations about their programs for the families.

- Open House at Community Programs

  Most community agencies operate a range of residential, day, work, and other support services. Invite families to an open-house at each receiving agency so that they have access to the appropriate information about the programs their family member is likely to be involved in.

- Parents at the Receiving Community Agencies. Contact families at the sending institution to offer assistance, inviting them for individualized or small group visits.

- Set Up a Family Buddy System at the Community Agency

  This system connects community agency families with the new families before, during and after the relocation.

- Family and Guardians Should be Present During the Actual Relocation if Desired

- The Community Agency Should Contact Families and Guardians to Inform Them When the Relocation is Scheduled and Invite Them to be Present. (The community agency parent buddy should also be present if possible.)

IV. COMMUNITY PROGRAMS RECEIVING RESIDENTS FROM THE CLOSING FACILITY

1. Develop Consistent Entry Criteria

Develop systematic criteria for accepting residents at each receiving program and communicate these clearly with sending facilities and family/guardians. Encourage pre-placement visits to the receiving programs by staff, consumers with disabilities, and families to enable them to evaluate the program's appropriateness.

2. Provide Staff Training

Prepare incumbent staff and personally orient new staff to the consumers who will be moving in. Often the persons coming from closing facilities are lower functioning, medically fragile, or have challenging behaviors. Without sufficient training, staff may lack the specific knowledge and skills to properly support some of the individuals moving.

3. Involve Receiving Programs in Planning

Once closure has been scheduled, involve receiving program representatives early in the planning process and keep them involved and well-informed.

4. Establish Mental Health Back-Up Supports

Mental health back-up supports to community residences should take the form of a troubleshooting group of trained and experienced professionals drawn from the state facility and community agencies. A "behavioral unit" at one of the community programs or at a state mental health center could function as a temporary placement until appropriate, permanent back-up programs are established in the community and/or state mental health center.

5. Develop Public Relations and Education Programs for Communities

Community providers and state agency personnel can enlist community support by attending meetings with persons and groups in the receiving communities. These meetings could be held at churches, schools, or informally with immediate neighbors, to educate and reassure.

6. Establish Relationships with Local Resources

Some new community residences may need to establish relationships with such local resources as the fire department, health providers, and public safety offices. Specific recommendations for local resources include the following topics:

- Testing, counseling and behavioral support for community mental health providers;
- Updated treatment and medication training for physicians and hospitals on topics such as challenging behavior, seizures, and motor problems;

- Dental monitoring and treatment techniques for neighborhood dentists; and,
- General orientation to developmental disabilities for firemen, police, recreation facilities.

7. Provide Financial Incentives for Community Residential Development

Community placements will be greatly facilitated by financial incentives for community programs. The Medicaid Home and Community-Based Services (HCBS) Waiver has been used successfully in most states.

8. Facilitate Development of Needed Support Services in the Community

Closure affords the opportunity for the development of necessary community services "infrastructure." For example, expanded supported living and supported employment programs for individuals moving from the institution will be needed.

V. PERSONNEL GUIDELINES

1. Plan Ahead Beginning Early in the Process

Develop a plan for future staffing patterns as individuals are relocated, conduct surveys of employee desires for transfer, and determine clear personnel policies early in the closure process. Do not promise employees what cannot be delivered.

2. Terminate One Unit at a Time and Minimize Internal Transfers

Close down one unit, wing, ward, or cottage at a time when possible and determine the schedule ahead of time, not during implementation. Closing down one component at a time keeps groups of individuals with developmental disabilities and familiar staff together, and can also result in increased administrative efficiency and cost savings.

3. Minimize Employee "Bumping"

"Bumping" (whereby staff working elsewhere in a state agency have more seniority and can replace less senior employees) should be avoided or at least minimized during the closure process. Bumping destroys program continuity in the closing facility at precisely the moment individuals being relocated need it most, with a deleterious effect on individuals who have developed interdependent relationships with staff over a long period of time.

4. Establish Employee Counseling Service

Establish an employee counseling and job placement service at the closing facility as soon as the closure is announced and becomes evident to staff. This service

would include individual counseling, workshop training, job relocation and transfer planning, job fairs, resume writing, and retirement planning.

5. Conduct Early and Continuing Briefings for Staff

Have a representative of the state agency or the state's personnel department present comprehensive briefings to facility staff when closure is announced. The briefings should announce the initiation of the employee counseling service, and fully discuss employee rights, benefits, and realistic expectations concerning layoffs, employee transfers, and retirement.

6. Develop an Open Door Policy

Develop clear lines of communication between management and all levels of staff at the closing facility.

7. Establish Liaison with Other Departments and Facilities

Establish positive working relationships with the other major employers in the closing facility's community, and in neighboring municipalities.

8. Adopt as Many Staff Incentives as Possible

Consider using one or more of the following incentives for staff in the closing facility:

- Early Retirement Inducements
- Staff Retraining

  In particular, develop staff retraining programs for community-based services employment.

- Extended Health Coverage

  Temporarily extend health insurance benefits for laid-off workers and their families throughout the first year if the workers remain unemployed.

- Adopt a Priority Interviewing Policy at Community Agencies

  Implement a priority for community agencies to interview staff from the closing facility, but give the community agency complete latitude to judge an employee's potential for working at the agency.

- Payment of Moving Expenses

Consider paying a pre-designated sum of money for moving expenses for employees transferring to MR/DD community agencies or to other MR/DD-related employment in North Dakota that is beyond 30 miles from Grafton.

9. Develop/Distribute Newsletter

Develop a periodic newsletter, perhaps monthly, and distribute it to staff at the closing facility and at the community agencies receiving individuals from the closing institution. A newsletter is useful in dispelling rumors and improving communication between the supervisory staff at the closing facility and employees affected by the closure. Rumors breed anxiety in staff and this can be transmitted to individuals who are undergoing the relocation to community agencies. The newsletters should include time tables, administrative policies including changes in policy, information about employees receiving new positions, job search information, and where to obtain counseling or other services.

10. Use a Participatory Management Approach

Involve top management and employee unions (if applicable) in the initial and ongoing planning for the closure. Make it clear to them that they cannot change the fact that closure is going to happen, but that they can and should influence and help make the decisions about the best way to carry out the closure and implement the relocation process.

Submitted to Senate Approriations Committee by Tim Mathern, 3.9.09

Family HealthCare Center (FHC) is a nonprofit Federally Qualified Health Center. The program reflects a collaborative model to address identified barriers to health care access within Cass County in North Dakota, and Clay County in Minnesota. FHC offers comprehensive primary care services, including medical, dental, lab, radiology, and pharmacy services. Services are provided regardless of ability to pay. Patients can access affordable services through a sliding fee scale (SFS). FHC also operates the Homeless Health Service clinic which provides a medical home to the homeless population in the service area.

In 2008, FHC provided care to over 12,400 unique patients; a 12% increase compared to 2007. 40% of patients were eligible for the SFS, 87.2% had incomes below 200% FPG and 44% were uninsured. 37% of patients received Medicaid. 40% of patients belong to a racial or ethnic minority. Most FHC uninsured patients belong to working families.

FHC is currently in need to increase its medical, dental, pharmacy, and homeless services capacity to be able to better respond to the increase in demand for services. It is estimated that over 22,000 people in our community do not have access to health insurance and do not have a medical home. Increasing physical capacity at FHC will directly benefit the most vulnerable populations in our service area.

FHC is requesting that the State of North Dakota considers supporting our need for a bigger facility. FHC has identified a building that meets our needs for space. It is estimated that the total cost of the construction and renovation project will be $7.7 millon. FHC is requesting the State to support our project in the amount of $3 million. FHC expects to be able to raise $2 million through a capital capaign and grant writing. Research indicates that our project can be financed partially through tax credits in an amount of $2.7 million.

The State's funding will support improving the wellness of vulnerable populations by providing a medical home where patients will have access to a primary care provider who will manage all the health care needs of the patient.

Respectfully,

Patricia Patron
Executive Director
Family Health Care Center

R

Jan 27, 2009 – Testimony in support of the DHS Budget 1012 - provided to the Appropriations Human Resources Division committee of the 61st Legislative Assemble of North Dakota

From: Lynn Fundingsland, Executive Director, Fargo Housing & Redevelopment Authority

Chairman Pollert and members of the committee, thank you for the opportunity to speak today.

My remarks will be confined to that portion of the budget that deals with 24 hour staffing for the Cooper House supportive housing for the homeless project proposed to be built in Fargo this spring. This project is one of the outcomes of both Fargo's and the States' (Governor's) 10 year plans to

end homelessness. Fargo's plan calls for a supportive housing project as a part of the continuum of care for the homeless. The Governor's plan calls for 50 units per year of supportive housing in the state for the next 10 years.

Fargo's homeless population was at something over 600 persons at the last count. From our position at the housing authority we anticipate that this number will be considerable higher at the next census, I say this because in the past 3 years the number of persons on our waiting list for housing assistance has nearly doubled – we now have nearly 2,000 income qualified households on a waiting list for assistance. Most of those households we won't be able to receive housing assistance for at least a year or more. At least some of those households or individuals are at risk of and likely to experience homelessness.

The persons this project is designed to serve are the chronic homeless who are among the hardest to house and, too, are

in that group which uses the bulk of the services which are provided to the homeless population: they are regularly in and out of our social services offices, rehabilitation, detox, police custody and the local hospital emergency rooms. Providing permanent housing to this population and getting them healthy makes great economic sense as well as being the humane thing to do.

Fargo is actively responding to the homeless issue. Last year the city sponsored the construction of and is staffing a homeless shelter which will be one of the primary sources of referral for persons who can benefit from the permanent supportive housing environment that Cooper House will offer. Fargo has stepped up for Cooper House too and is acquiring the land to be used for the project, and has paid for the demolition of an existing dilapidated warehouse on the site and is contributing to construction costs. The combined cost of the acquisition, demolition and new construction support is approximately $478,000. The City

has also committed to a construction loan guarantee for a Fannie Mae loan of $2.4 million for the project and, is anticipated to grant a payment in-lieu-of property tax to the project with a value of over $1 million for a 15 year period.

These committed city resources have helped to leverage private investment of over $2.7 million through the Low Income Housing Tax Credit program, a $493,500 grant from the Federal Home Loan Bank, a $50,000 grant from the Otto Bremer Foundation and numerous local contributions from church groups and individuals and – beds for the building being built by a local high-school shop class. The Fargo Housing Authority and its non-profit housing development affiliate "Beyond Shelter Inc." are both making significant cash donations to the project to complete the financing.

As a part of the planning process for Cooper House several local housing and service providers visited existing similar facilities in operation elsewhere. The most important lesson

we came away with from those visits was that 24 hour staffing is essential and critical to the success of this type of project. We learned in our process too, that this is the most difficult piece to get funded as it isn't something that any of our traditional sources of affordable housing capital will, or can, get involved with.

The 24 hour staffing is essential for the support and care of the population to be served, is essential for the security and piece of mind for neighborhood in which the facility is located, and for the larger community. 24 hour staffing allows for a "gatekeeper" who will monitor everyone coming into and going out of the facility and helps enormously to create a calm "home" environment that is needed both for tenant and building security and, to be responsible to the larger community. Many of the homeless in Fargo have arrived from other parts of the state for various reasons; we feel this is not just a Fargo problem but is a state and national issue and trust you see that too and will support

this important piece of the DHS budget. Thank you again for the opportunity to testify.

Rep. Mary Ekstrom
1450 River Road, S
Fargo ND 58103-4325

Dear Representative Ekstrom;

RE: HB 1012 – DHS Budget

On Monday January 27th the Appropriations – Human Resources Division Committee heard testimony on the DHS Budget. I was one of the individuals invited to testify and addressed that portion of the budget which provided staffing for the Cooper House supportive housing for the homeless project in Fargo. The need for the facility and the importance of having a 24 hour staff presence were addressed. That this type of response to a growing homelessness problem has been shown to be far more economical than the current system of repeated intakes to detox, emergency services etc. was addressed by presenter Michael Carbone of the homeless coalition. It was noted too, that North Dakota's 10 year plan to end homelessness calls for 50 units per year of supportive housing and, that this project is the first of it's kind in the state - which is called for in the Governor's plan. It was noted too, that this is a statewide issue and not just a Fargo issue.

Permanent housing, by definition, ends a person's homelessness. Every study that has been done on successful intervention has stated that housing is a necessary component of a person's ability to maintain stability. Most also note that it must be the first component of any sustainable strategy. Once a person (or family) has obtained decent, safe housing, they are better able to begin addressing some of the factors that ultimately contributed to their homelessness in the first place (mental health, physical health, substance abuse, personal economics).

I am writing today to further address a follow-up question to my testimony on Monday, which asked about the financing of the project.

To begin, we have a design-build contract for the project which gives us a turn-key building as designed so; the potential of a cost overrun is off the table. We have a fixed cost construction contract.

HB 1012 – DHS Budget

Total development costs for the project -		$4,136,607
Sources of Funds committed to the project:		
Low Income Housing Tax Credit Equity (WNC & Associates)	$2,780,849	
Federal Home Loan Bank (Affordable Housing Program grant)	493,500	
Otto Bremer Foundation	50,000	
Fargo Housing Authority	85,000	
City of Fargo (acquisition & demo cost incurred)	278,000	
City of Fargo HOME funds	200,000	
Beyond Shelter Inc.	200,000	
U.S. Bank grant	1,000	
Federal Continuum of Care funds	48,258	
Total Committed Sources		$4,136,607

Enclosed are commitment letters from the major funders listed. Obviously the project couldn't proceed without the private funding commitment from the LIHTC investor - WNC & Associates, Inc. The Fargo HRA and its affiliated non-profit housing developer Beyond Shelter Inc. have a very successful ongoing relationship with WNC – they have invested in three other local affordable housing projects with us in the past 4 years, with a combined capital investment of over $10,000,000 - they are a trusted partner.

In short: we are ready to proceed with this project but cannot do so without a committed revenue source which will ensure that the building will have the 24 hour staffing which is essential to this type of project, and which is a part of HB 1012.

Thank you for the consideration of this most valuable and needed project.

Sincerely,

Lynn Fundingsland
Executive Director, Fargo HRA

Subsidy Awarded: $493,500.00
Member Name: Wells Fargo Bank, National Association
Project Sponsor: Beyond Shelter Inc
Project Owner: Beyond Shelter, Inc.

Dear Peter:

Congratulations! FHLB Des Moines has approved your above referenced application for funding in the 2008A Round of the Affordable Housing Program (AHP) grants. The 2008A Round was very competitive. There were 82 applications for $24.1 million submitted and 25 approved for $7.3 million. For a complete listing of all the 2008A Round awarded projects, please go to our website at www.fhlbdm.com.

You will soon be receiving the appropriate agreements for signature as well as information on funding procedures. The funding for your application is subject to several conditions. As an example, there are various project-related agreements that outline compliance with the Bank's AHP guidelines as well as the rules and regulations of the Federal Housing Finance Board (FHFB). The agreements also cover on going compliance with the AHP guidelines and the projects continued feasibility.

In the next few weeks, FHLB Des Moines will distribute a press release announcing the 2008A Round AHP recipients to state and local media throughout our District. We believe recognition of your and our efforts to help meet critical housing needs is very important. As a part of our recognition efforts, we expect you to acknowledge the Bank's funding in any materials you prepare about your project. We will provide our logo for printed materials or construction signage.

Additionally, the Bank has a cooperative advertising program that can assist you with up to $150 for publicizing your project. We are also interested in attending and assisting in anyway possible with ground breaking or other events you may be planning in conjunction with your AHP project. For more information, please contact Angie Richards at 800-544-3452, ext 1014 or arichards@fhlbdm.com.

We look forward to working with you and your community co-sponsor on your AHP project. As mentioned, you will soon be receiving further documentation regarding your AHP award. In the meantime, if you have any questions, please contact Richard Bloxham at 800-544-3452, ext. 1198 or rbloxham@fhlbdm.com regarding Homeownership Projects and Stacy Snyder at ext. 1042 or ssnyder@fhlbdm.com for Rental Projects.

WNC & ASSOCIATES, INC.

October 31, 2008

Ms. Lisa Rotvold
Beyond Shelter, Inc.
325 Broadway
Fargo, ND 58107

Re: Cooper House Apartments
Fargo, North Dakota

Dear Ms. Rotvold:

Thank you for giving us the opportunity to present this offer to provide equity financing for Cooper House Apartments. WNC & Associates, Inc. has been investing in affordable housing for over 37 consecutive years and has capital to invest in quality tax credit properties. We have acquired over 3.3 billion dollars of real estate assets representing more than 1000 properties nationwide.

This Letter of Understanding is designed to address the basic business terms under which WNC, on behalf of an affiliate (the "Investment Partnership") and WNC Housing, L.P., as the special limited partner (the "SLP"), will acquire limited partnership interests in Cooper House Limited Partnership (the "Project Partnership") which owns Cooper House Apartments. Based on the terms specified below, the Investment Partnership and the SLP agree to make a capital contribution payment to the Project Partnership in the amount of $2,780,849 ("Capital Contribution") (includes the SLP's Capital Contribution) based on a price of $0.74 for each dollar of Tax Credits allocated to the Investment Partnership over the Tax Credit Period. The Capital Contribution will be payable in installments based upon the schedule and conditions set forth below:

1. $139,137 will be payable upon the Investment Partnership's admittance into the Partnership.

2. $2,363,637 will be payable upon the Investment Partnership's receipt and approval of the following: (a) documents substantiating lien free construction completion; (b) the issuance of a permanent certificate of occupancy; (c) payoff letter from the contractor; and (d) insurance required during operations.

3. $253,075 will be payable upon the later of the Investment Partnership's receipt and approval of the following: (a) verification that all the conditions referenced above have been met; (b) fully signed permanent mortgage documents; (c) verification the Project Partnership has maintained a debt service coverage of 1.15 for 90 consecutive days; (d) an updated title insurance policy; (e) 90% tax credit qualified occupancy and 90% actual occupancy for 90 consecutive days; (f) construction cost certification; (g) an as-built survey; (h) tenant files to determine that 100% of the tax credit apartment units in the Apartment Complex qualify under Section 42 of the Internal Revenue Code; (i) a fully executed IRS Form 8609; (j) the first year tax return in which Tax Credits are taken; and (k) a copy of the Project Partnership's property audited financial statement, or October 10, 2010.

4. $25,000 will be payable upon the SLP receipt and approval of initial tenant files.

would be of benefit to the Project Partnership or the Apartment Complex. If such Voluntary Funding is provided in the form of a loan, the terms of such loan shall be mutually satisfactory to the General Partner and the Investment Partnership and shall be evidenced by a written agreement.

G. DUE DILIGENCE REVIEW

1. Commencing upon the receipt in our offices of this executed Letter of Understanding and terminating 45 days after the date WNC has received the Project Documents listed in The Due Diligence and Document Checklist of Exhibit A ("Document Review Term"), WNC shall have the exclusive right to acquire the interests in the Project Partnership. Accordingly, by executing this Letter of Understanding, you agree on your own behalf and on behalf of any persons associated with or employed by you or the Project Partnership, not to disclose any of the terms or provisions in this letter to any other person or entity other than to those with the state tax credit agency.

2. The acquisition of the limited partnership interests in the Project Partnership is subject to the satisfactory review and approval of the Project Documents and is based on the Investment Partnership's admittance into the Partnership in a 90 day period from the execution date of this letter. If such admittance does not occur within this time frame, the Capital Contributions set forth in this Letter of Understanding may be recalculated based on the market conditions at the time of admittance.

Again, thank you for considering WNC as your equity partner for Cooper House Apartments. If this Letter of Understanding meets with your approval, please execute and return via fax or e-mail.

Very truly yours,

Darrick Metz

Dear Lisa,

I am writing to let you know that the City of Fargo can assist with $200,000 construction financing for property located at 414 11th Street North, Fargo, to be used for the Cooper House apartments.

This amount includes $100,000 that has already been allocated to the Fargo Housing and Redevelopment Authority for the project. The remaining balance of $100,000 will be allocated from the City's 2009 HOME allocation, contingent on approval from the Fargo City Commission.

Thanks again for your good work on this project. If you have questions or would like more information, please contact me at 476-4144 or dmahli@cityoffargo.com.

Sincerely,

Dan Mahli

Update on Central Office Addition Project
The roof is installed but still needs to be sealed around the edges. The building has experienced more leaks due to the heavy rains. The offices upstairs are sheet rocked and taped. Construction is on schedule and the front lobby renovation will begin next month.

Progress Report on Cooper House
Demolition of the house located at 1111 4th Avenue North is to be completed by June 11th. The grant application for the cultural market will be submitted next week by the consultants. Due to an error of the legal description for the property located at 414 11th Street North; Mr. Fundingsland asks that the Board amend the option to purchase agreement to reduce the dimension by five (5) feet on the north/south axis.

M/S/P	Leier/Jefferson	To amend the option to purchase agreement to reduce the dimension by five (5) feet on the north/south axis of the property located at 414 11th Street North.

A Sources and Uses form on Cooper House was included in the Board packet by Ms. Rotvold. Mr. Fundingsland informed the Board that on June 19th Beyond Shelter, Inc. will be notified if they are awarded the $493,500 AHP grant. Otto Bremer has scheduled a visit within the next week to review the project and discuss the projects' request for a $200,000 grant. There is currently a $262,368 gap in funding which may be partially obtained in donations from the City of Fargo, a fundraising drive for the furnishings, and by possibly reducing the building cost. A McKinney grant has been submitted which would cover $150,000 a year in operations.

Beyond Shelter, Inc. is seeking a letter of commitment from the FHRA for a soft loan in the amount of $85,000 for construction of Cooper House. BSI needs to have a letter of commitment for all funding sources by October in order to secure the tax credits.

M/S/P	Jefferson/Hanson	To authorize a letter of commitment to Beyond Shelter, Inc. for a soft loan in the amount of $85,000 for construction of Cooper House.

NEW BUSINESS
Report on PHADA Conference
Mr. Fundingsland gave a brief report of his attendance at the conference where he visited with the Chicago Special Applications Center (SAC). The SAC reviews, processes, and approves non-funded, non-competitive applications related to demolition/disposition of public housing. He also attended a workshop held on voluntary conversion from public housing to vouchers. Mr. Fundingsland stated that the FHRA will need to hire a consultant to assist in evaluating which route would be better financially for the public housing properties.

Term Life Insurance Offer
The FHRA's property insurance group is offering a $5,000 no-cost life insurance benefit to all full-time staff members and Board Commissioners.

Lynn Fundingsland
Beyond Shelter, Inc.
325 Broadway
Fargo, ND 58102

Dear Ms. ~~Fundingsland~~ Lynn:

At the most recent meeting of the Trustees of the Otto Bremer Foundation, consideration was given to the request from Beyond Shelter, Inc. for funding for Cooper House, a supportive housing project for homeless individuals. This is to advise that the Trustees have approved a grant in the amount of $50,000 to be used toward this project.

The Trustees request that the accompanying Donee Agreement be signed by the appropriate administrative officer indicating acceptance of the grant and the conditions stipulated therein. Please retain one copy for your file and return one to our office. Upon timely receipt of signed donee agreement, grant payment will be scheduled within several weeks.

Regarding publicity, the Foundation will issue a press release to several media contacts announcing all authorized grants, shortly after the completion of a grants round. To leverage local coverage, you may want to issue a press release yourself or host a press event. If you need assistance with this, please feel free to contact me.

Both Trustees and staff of the Foundation are pleased that the Foundation can participate in the support of this program.

Sincerely,

OTTO BREMER FOUNDATION

Appropriations Committee HB 1012

Chairman Pollert, committee members, thank you for the opportunity to testify in support of HB 1012.

My name is Michael Carbone and I am the Executive Director of the North Dakota Coalition for Homeless People. We are a state-wide group of service providers who work to mitigate the devastating effects of homelessness on individuals and families in North Dakota. Our members include local homeless coalitions, homeless shelters, housing providers, supportive service providers, and entities of government including law enforcement and planning departments.

I would like to discuss the cost of benign neglect—the cost of the status quo when it comes to supportive services for the homeless. Currently we are combating a chronic problem, homelessness, primarily through emergency services. This is both expensive and ineffective.

There is a story of a man nicknamed "Million Dollar Murray" who was a subject of a Reno Nevada study that was reported in the *New Yorker* magazine. After tracking the cost of emergency services used by "Murray" over a year's time, it was determined that Murray used a million dollars in services and was still homeless.

While Murray is an outlier, studies in Portland Oregon and in New York City have shown that people who are long-term homeless use an average of over $42,000 and $40,000 in emergency services per year respectively. These services include emergency shelter, emergency rooms, detox, incarceration and outpatient care. In contrast, long-term homeless people who were placed into housing with supportive services used less than $26,000 per year including the cost of housing. This represents a savings of $16,000 per unit of supportive housing.

A similar study is being conducted in the Fargo-Moorhead area by the FM Coalition for Homeless Persons, Centre, Inc. and Dr. Mark Hansel of MSUM. While the study is not ready for publication, preliminary results indicate similar findings.

A HUD study published in 2006 shows that chronically homeless people placed in housing first programs with supportive services have an 86% tenure rate after one year. Some of these people had been homeless for a decade or more.

It is clear that placing long-term homeless people into housing with supportive services is less expensive than providing them with an endless stream of emergency services. This option also frees up emergency services for those who are experiencing episodic homelessness—people who are most often able to recover through the use of emergency services alone.

While providing housing with supportive services represents significant cost savings, it also provides the long-term homeless with greater opportunities for recovery. They no longer receive mental health and chemical dependency services intermittently as they do when on the street. Instead, their treatment has continuity and is more effective. Housing with supportive services enables them to develop a sense of security, stability and community. Many eventually become employed, contributing to society.

North Dakota's 10-Year Plan to End Long-Term Homelessness developed by the North Dakota Interagency Council on Homelessness recognizes this type of supportive housing as an effective means of solving this finite problem. The 10-Year Plans developed by many of the state's major communities also call for such supportive housing opportunities.

Clearly, providing housing together with supportive services for the hardest to house is both the smart thing to do, and the right thing to do. The North Dakota Coalition for Homeless Persons strongly urges passage of HB 1012.

March 4, 2009 – Testimony in support of the DHA Budget HB 1012 – provided to the Senate Appropriations committee of the 61st Legislative Assembly of North Dakota

From: Lynn Fundingsland, Executive Director, Fargo Housing and Redevelopment Authority

Chairman Holmberg and members of the committee, thank you for the opportunity to speak today.

My remarks will be confined to that portion of the budget that deals with 24-hour staffing for the Cooper House supportive housing for the homeless project proposed to be built in Fargo this spring. This project is one of the outcomes of both Fargo's and the States' (Governor's) 10-year plans to end homelessness. Fargo's plan calls for a supportive housing project as a part of the continuum of care for the homeless. The Governor's plan concurs with that need.

Fargo's homeless population was a something over 600 persons at the last count. From our position at the Housing Authority we anticipate that this number will be considerably higher at the next census, I say this because in the past 3 years the number of persons on our waiting list for housing assistance has nearly doubled – we now have nearly 2,000 income qualified households on a waiting list for

assistance. Most of those households won't be able to receive housing assistance for at least a year or more. At least some of those households or individuals are at risk of and likely to experience homelessness.

The persons this project is designed to serve are the chronic homeless who are among the hardest to house and, too, are in that group which uses the bulk of the services which are provided to the homeless population: they are regularly in and out of our social services offices, rehabilitation, detox, police custody and the local hospital emergency rooms. It is a very expensive proposition to provide service to this population as we do now. Providing permanent housing to this population and getting them healthy makes great economic sense as well as being the humane thing to do.

Fargo is actively responding to the homeless issue. Last year the City sponsored the construction of and is staffing a homeless shelter which will be one of the primary sources of referral for persons who can benefit from the permanent supportive housing environment that Cooper House will offer. Fargo has stepped up for Cooper House too and is acquiring the land to be used for the project, and has paid for the demolition of an existing dilapidated warehouse on the site and is contributing to construction costs. The combined cost of the acquisition, demolition and new construction support is approximately $478,000. The City has also committed to a construction loan guarantee for a Fannie Mae loan of $2.4

million for the project and, is anticipated to grant a payment in-lieu-of property tax to the project with a value of over $1 million for a 15 year period.

These committed City resources have helped to leverage private investment of over $2.7 million through the Low Income Housing Tax Credit program, a $493,500 grant from the Federal Home Loan Bank, a $50,000 grant from the Otto Bremer Foundation and numerous local contributions from church groups and individuals and beds for the building being built by a local high school shop class. The Fargo Housing Authority and its non-profit housing development affiliate "Beyond Shelter, Inc." are both making significant cash donations to the project to complete the financing.

As a part of the planning process for Cooper House several local housing and service providers visited existing similar facilities in operation elsewhere. The most important lesson we came away with from those visits was the 24-hour staffing is essential and critical to the success of this type of project. We learned in our process too, that this is the most difficult piece to get funded as it isn't something that any of our traditional sources of affordable housing capital will, or can, get involved with.

The 24-hour staffing is essential for the support and care of the population to be served, is essential for the security and peace of mind for the neighborhood in

which the facility is located, and for the larger community. 24-hour staffing allows for a "gatekeeper" who will monitor everyone coming into and going out of the facility and helps enormously to create a calm "home" environment that is needed both for tenant and building security and, again, to be responsible to the larger community. Many of the homeless in Fargo have arrived from other parts of the state for various reasons; often we hear they come because they heard there was work. We feel this is not just a Fargo problem but is a state and national issue and trust you see that too and will support this important piece of the DHS budget. Thank you again for the opportunity to testify.

Testimony on HB 1012
Senate Appropriations Committee
Chairman Ray Holmberg
March 9, 2009

Submitted by: Cass County's Jail Intervention Coordinating Committee

Chairman Holmberg and members of the Committee, thank you for the opportunity to speak on behalf of Cass County's Jail Intervention Coordinating Committee (JICC). My name is Sheree Spear, grant manager for the Program developed by this committee: the Cass County Justice & Mental Health Collaboration Project which was awarded a Department of Justice grant, and is managed by the Cass County Sheriff's Office. (A list of members and advisors is attached for you.) First, we want to thank you and the other legislators who made 8 additional crisis beds in our region possible last session. That was a great investment; those beds are never empty. They provide a safe place for people to stabilize when they don't need the full range of care provided by an in-patient hospital stay.

Our Committee is respectfully asking today that you re-instate funding for the Cooper Apartments project which was cut on the House side. This project rolls up into state objectives including: finding alternatives to incarceration, and the State's 10 year plan to end homelessness. Often, finding the most effective solutions to those issues occurs when people from a variety of disciplines come together at a community level to identify gaps and extensively research options. That happened with the Cooper Project, which, with your support, will provide stable supportive housing to 42 individuals. The target population are individuals who will continue to frequent the emergency room – at a high cost to the state, and will continue to frequent the County Jail without the Cooper Apartment Project.

Lynn Fundingsland, Director of the Fargo Housing Authority, is a master at building funding packages utilizing federal funds and private investors. When he retires in a few years he will leave a legacy of finding innovate ways to not only address the needs of under-served persons, but also of re-vitalizing the downtown and other areas in the community. Not only has he applied his skills to bring together the funding for the Cooper facility to address the concerns of the police department, human services, the local hospitals and others who regularly interact with the target population. He has also researched and visited models that are working in other states. This project is as solid as it gets, and we believe that the Senate can feel very confident endorsing it. The piece that we need your help with is the staffing, which I believe Lynn and the Department of Human Services has outlined.

Second, we ask for your support in addressing the shortage of psychiatric beds in the state, and the need for access to medical care by indigent persons. Two items in DHS's original budget spoke to those: re-basing and increasing funds for local hospitals when they provide care, and the FTE's that would allow the State Hospital to operate at full capacity. We see people who need hospitalization and cannot access it. Too often beds are full or, hospitals are not willing to admit people or keep them for an appropriate amount of time.

The National Association of State Mental Health Program Directors (NASMHPD) published a report in 2006 entitled "The Crisis in Acute Psychiatric Care." It notes the collateral effects that the dramatic decrease in hospital level psychiatric beds is having on hospital emergency departments and on the increased number of mentally ill individuals in the nation's jails and prisons. The report summarizes steps taken by

some states to increase in-patient capacity, including modestly increasing state hospital bed capacity, expanding contracts with private and community hospitals, and developing residential and non-hospital crisis services for pre- and post-hospital services. While some of us believe the original budget put forward by the N.D. Dept. of Human Services may not have gone far enough, we ask that you support funding those items the Department did included that move us toward closing this gap.

Finally, we would like you to be aware that there is a waiting list of very ill individuals who are in need of case management services. Our case managers are carrying case loads that are nearly double what best practices recommends, leaving them often only time to "put out fires" as they are spread so thin. Intensive Case Management, where there is a ratio of 10 clients per 1 case manager, is an Evidence-Based Practice – shown to play a role in recovery and reduced recidivism. But Intensive Case Management services are not available in our state.

Thank you very much Chairman Holmberg and members of the Committee, we appreciate your time today and your willingness to take time out of your lives to come here each session and serve the people of North Dakota.

Cass County

Development & Oversight

Jail Intervention Coordinating Committee

Cass County Commission	Commissioner Scott Wagner; *former members:* Commissioners Vern Bennett and Darryl Vanyo
Cass County Sheriff's Office	Lt. Colonel Glenn Ellingsberg, Capt. Carlos Perez, Mary Geller, Lynette Tastad
