

Chairman Weisz and Committee Members:

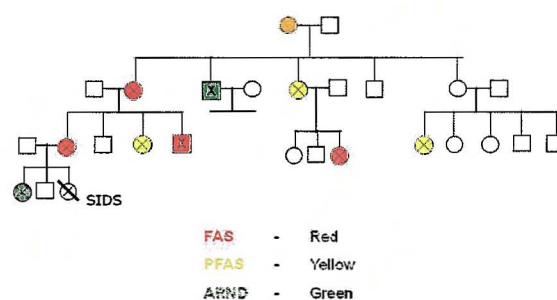

I am here today to provide an interim report on the status of the funding we were provided to improve detection of prenatal alcohol exposure and decrease the prevalence of fetal alcohol spectrum disorders in North Dakota.

In our previous testimony we presented the diagnostic criteria for fetal alcohol spectrum disorders, the number of cases by region in our FAS Registry and the familial and generational effects of these disorders.

Fetal Alcohol Spectrum Disorder

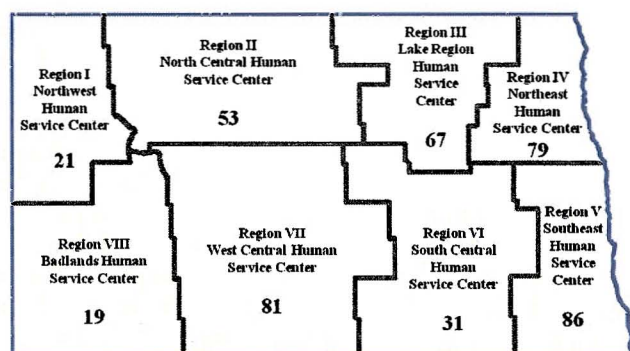

FASD – Familial and Generational

The distribution of cases by region for North Dakota is presented below.

FASD Cases By Region

Progress as of June 14, 2010:

We have identified 73 possible prenatal care providers in North Dakota.

As of June 14, 2010, we have personally visited 49 or 67% of the 73 prenatal clinics in North Dakota. Of the 49 sites we have visited 43 (87%) have agreed to change their prenatal care to include our questions. We are still working with 6 of the clinics. To date NO site has refused to adopt the tool. We are scheduled to visit 13 clinics in the month of June, and plan to have completed an initial visit to all 73 clinics by the end of July.

- Sites Visited as of June 14, 2010
- ✕ Sites Not Visited as of June 14, 2010

Total Prenatal Care Sites: 73
Sites visited as of June 14, 2010: 49
Confirmed Screening Sites: 43 (87%)
Sites Needing Follow Up: 6
Sites Remaining: 24 (33%)

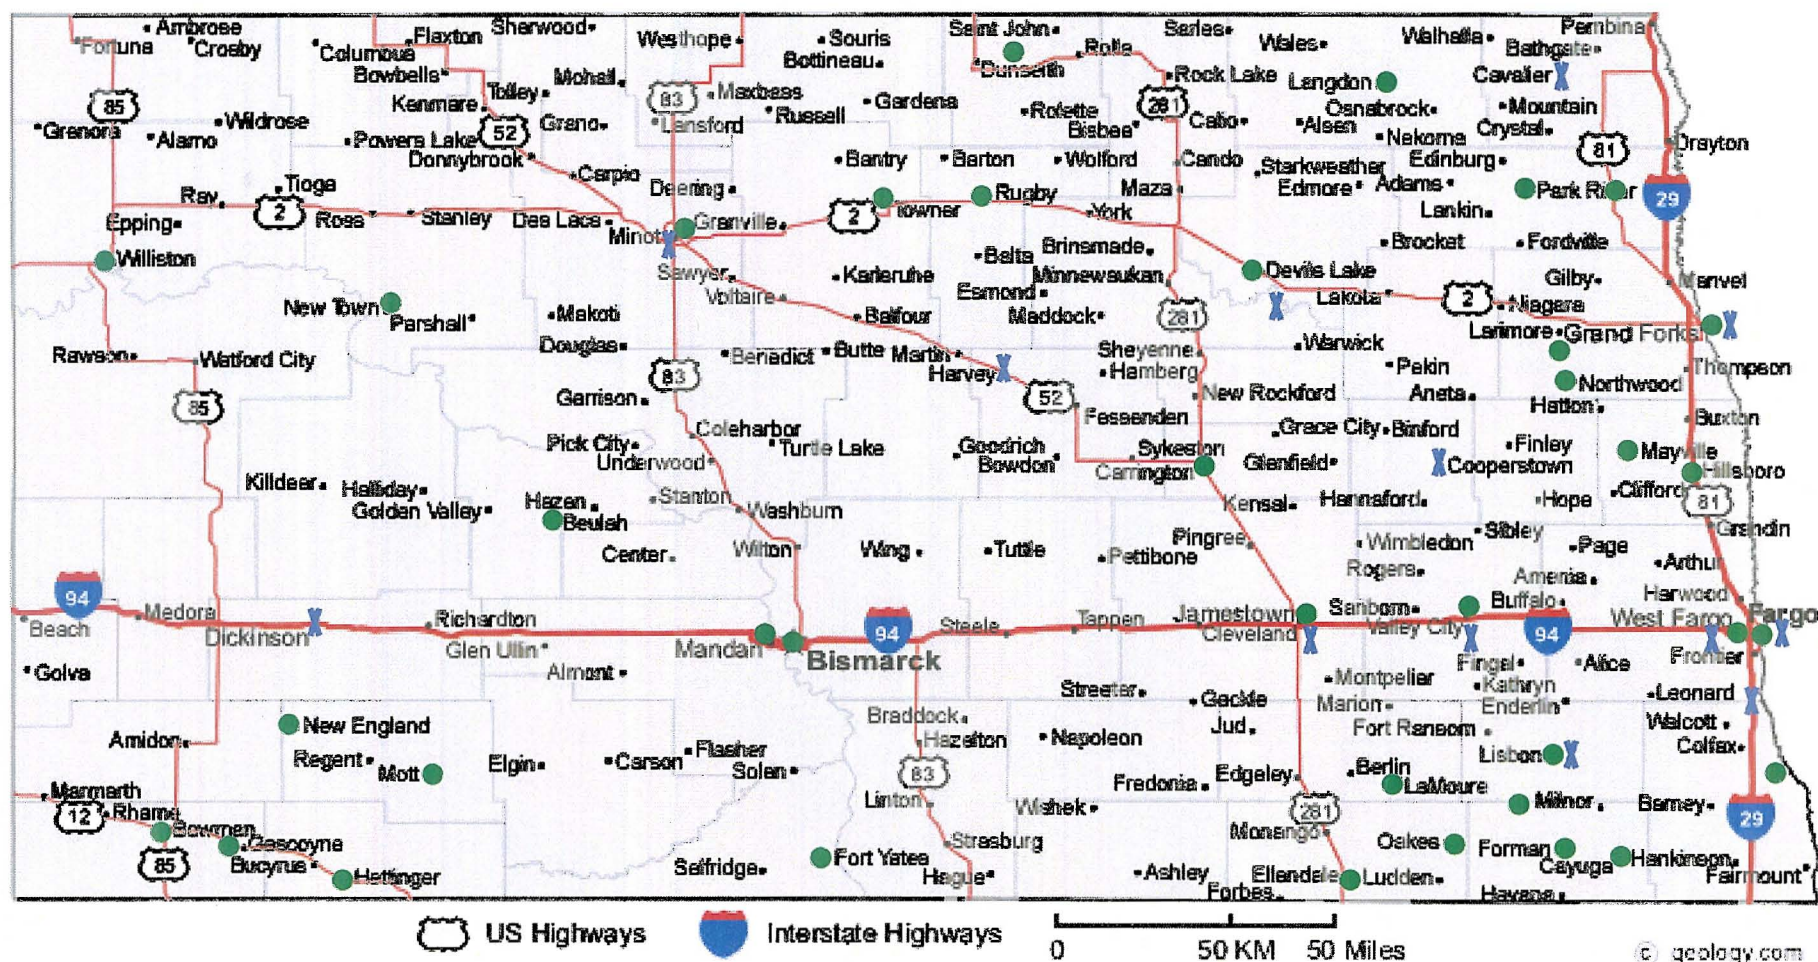

Lessons learned:

- 1) The change to electronic medical records has necessitated the development of an electronic version of the tool
- 2) In some clinics they are going to replace the current assessment tool with our recommended assessment strategy.

- 3) Several clinics have asked for resource information on referral sites. We have also developed a brief intervention strategy for the sites for use with women where alcohol use during pregnancy has been identified.
- 4) We have found that it will be necessary to continue to visit many of the sites due to staff turnover and to improve the referral of women.

Conclusion:

The uptake of the assessment tool by North Dakota prenatal care providers has exceeded our expectations.
