Issue Brief 11-33, September 26, 2011

Final FY 2013 FMAPs

Trinity Tomsic • 202-624-8577 • ttomsic@ffis.org

Summary

On September 22, 2011, the Bureau of Economic Analysis (BEA) released state personal income and per capita personal income data for 2010 and revised data for prior years. The federal government uses state per capita personal income to calculate each state's reimbursement rate for Medicaid and other grant programs such as Title IV-E adoption assistance and foster care. This matching rate, calculated annually, is known as the Federal Medical Assistance Percentage (FMAP). The BEA release permits calculation of the final fiscal year (FY) 2013 FMAPs, which are based on per capita personal incomes for calendar years 2008-2010.

This *Issue Brief* summarizes the BEA data and provides FFIS's estimates of the final FY 2013 FMAPs. These FMAPs reflect both personal income changes and, for the first time, the impact of the 2010 decennial census. Based on the new data, only 11 states will receive increased FMAPs in FY 2013 while 25 states will see decreases.

Personal Income Data

Personal income data are produced by BEA as part of the national income and product accounts (NIPAs). State personal income rose by 3.7% in 2010 following a -4.3% decline in 2009. Nationally, the largest contribution to personal income growth in 2010 was from government (primarily the federal government), professional and technical assistance, followed by health care and social assistance. Construction, real estate, and certain transportation-related manufacturing continued to experience negative growth.

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Personal income, U.S. (\$ billions)	\$8,555	\$8,879	\$9,055	\$9,369	\$9,929	\$10,477	\$11,257	\$11,901	\$12,452	\$11,917	\$12,357
Percent change		3.8%	2.0%	3.5%	6.0%	5.5%	7.4%	5.7%	4.6%	-4.3%	3.7%

Table 1 shows personal income of the states and regions for 2000 and 2008-2010. Of the regions, the Great Lakes and New England experienced the slowest growth rates in 2010. Four regions—Southwest (4.9%), Mid-Atlantic (3.9%), Rocky Mountains (3.9%), and Far West (3.8%)—are doing better than the national average of 3.7%. State personal income growth in 2010 ranged from 1.7% in Maine to 9.4% in North Dakota. Unlike 2009, during which all states lost personal income, all states recorded personal income growth in 2010.

The jurisdictions with the largest increase in personal income in 2010 include North Dakota (9.4%), the District of Columbia (5.5%), Oklahoma (5.3%), Texas (5.3%), and Montana (4.8%). The performance of North Dakota, Oklahoma, and Montana is largely due to farm income, although these states also did well in other industries such as mining and government. The District of Columbia received a boost in government earnings, while Texas's increase is a result of large gains in government, health care and social services, and professional and technical support.

In contrast, the states with the slowest personal income growth in 2010 include Maine (1.7%), Nevada (1.8%), Kentucky (2.0%), Indiana (2.5%), and Missouri (2.6%). Maine saw slow growth in many industries as well as negative growth in real estate and wholesale trade. Nevada experienced negative growth in construction. Kentucky's performance is a result of a reduction in farm and manufacturing income. Indiana saw reductions in durable goods manufacturing and Missouri in construction and manufacturing. Kentucky and Missouri saw relatively large reductions in the areas noted above but also had significant growth in select industries.

Over the 2000-2010 period, Texas, Florida, and Virginia experienced the largest increase in their share of national personal income. Seventeen states saw a reduction, with Michigan, Ohio, and California losing the most. Interestingly, many wealthy states saw a reduction in their overall share, such as Connecticut, Massachusetts, New Jersey, New York, and New Hampshire. The extended economic difficulties of the Great Lakes region resulted in a -1.69 percentage-point reduction in its national share of total personal income during the last decade, followed by New England (-0.24 percentage points). The Southwest increased its share by more than one percentage point.

Per Capita Personal Income

Nationally, per capita personal income saw a 2.8% increase in 2010, compared to a -5.1% reduction in 2009, as shown on the table below. Table 2 provides the detail by state and region. Of the 50 states, Connecticut retained the highest state per capita income (\$54,877), followed by Massachusetts (\$51,302), and New Jersey (\$51,167). States with the lowest per capita incomes are Mississippi (\$31,046), Idaho (\$31,986), West Virginia (\$31,999), and Kentucky (\$32,376).

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Per capita income, U.S.	\$30,319	\$31,157	\$31,481	\$32,295	\$33,909	\$35,452	\$37,725	\$39,506	\$40,947	\$38,846	\$39,945
Percent change		2.8%	1.0%	2.6%	5.0%	4.6%	6.4%	4.7%	3.6%	-5.1%	2.8%

Every state saw an increase in per capita personal income in 2010, ranging from 1.1% in Nevada to 7.9% in North Dakota. States with the biggest gains in per capita income between 2009 and 2010 include: North Dakota (4.1%), Oklahoma (4.1%), Montana (4.0%), and Minnesota (3.9%). In contrast, Nevada, Kentucky (1.3%), and Arizona, Maine, and Utah (1.8% each) experienced the smallest increases.

Per capita income growth is affected both by income and population, and by adjustments in both data series.

Some states, such as Michigan and Rhode Island, had personal income growth below the national average in 2010, but a reduction in population resulted in high per capita growth rates. In contrast, Alaska and Utah had above-average personal income growth but per capita growth rates below the national average because of population increases. Minnesota, Montana, North Dakota, Oklahoma, South Dakota, and Texas ranked in the top 10 for growth in both personal income and per capita personal income.

Each September, BEA releases revised quarterly and annual state personal income to incorporate source data that are more complete than previously available. Table 3 shows the revisions to annual personal income. Overall, personal income was revised upward in 2008 by 0.6% and downward in both 2009 and 2010 by -2.1% and -1.4%, respectively. Hawaii had the largest positive percent revision in 2009 (0.4%) and North Dakota in 2010 (5.6%). In contrast, Wyoming and Texas had significant downward revisions in both years. Wyoming's personal income was revised by -7.4% in 2009 and -6.1% in 2010. In Texas, personal income was revised -5.5% in 2009 and -4.1% in 2010.

In addition, the per capita personal income data for 2010 are based on July 2010 population estimates, which are calculating by "aging" the April 2010 counts from the 2010 decennial census. For 2001-2009, the Census Bureau re-estimated annual population data to produce a smooth curve between the two decennial years. Table 3 also shows the July 2008-July 2010 population estimates. For 2008 and 2009, the table shows the percentage change between the new estimates and those released prior to the 2010 decennial census. The original figures overestimated population growth in states such as Arizona, Georgia, and Utah. Conversely, the intercensal numbers underestimated growth in Hawaii, Nevada, North Dakota, and Wyoming, among others.

FY 2013 FMAPs

The FMAP is the share of state Medicaid benefit costs paid by the federal government. It also represents the federal share of Title IV-E foster care and adoption assistance maintenance payments. The FMAP is calculated based on a three-year average of state per capita personal income compared to the national average. A state with average per capita income receives an FMAP of 55%; no state can receive less than 50% or more than 83%.

The personal income data just released permit calculation of FY 2013 FMAPs. FMAPs for FY 2013 are based on per capita personal incomes for calendar years 2008-2010. The FY 2013 FMAPs will become final once published by the Department of Health and Human Services (HHS) in the *Federal Register*.

Table 4 displays the final FMAPs for FYs 2007-2013. The table shows base FMAPs and does not include the FMAP increases contained in the American Recovery and Reinvestment Act of 2009 (ARRA, P.L. 111-5) and its extension (P.L. 111-226) for FY 2009, FY 2010, and the first three quarters of FY 2011. Quarterly FMAPs under ARRA and the six-month extension are available in *FFIS Issue Briefs 11-09* and *10-47*.

In FY 2013, the number of states receiving the minimum 50.00 FMAP remains at 14. Mississippi maintains the highest FMAP, although its FMAP will drop by 0.75 percentage points to 73.43, continuing its downward trend.

Only 11 states will see an increase in their FMAPs in FY 2013. To receive an increase in the FMAP, a state must experience a decline in its share of U.S. average per capita income. The largest FMAP gains are in Nevada (3.54), Florida (2.04), Delaware (1.50), Hawaii (1.38), and Texas (1.08). Of these states, Hawaii and Texas have reversed their recent trends of ongoing FMAP declines.

In contrast, 25 states will experience decreases in their FY 2013 FMAPs, with the largest reductions in Louisiana (-8.54), North Dakota (-3.13), South Dakota (-2.94), Missouri (-2.08), and Arizona (-1.62). Louisiana was the only state to qualify for the disaster-recovery FMAP increase included in the Affordable Care Act in FY 2011 and FY 2012. HHS has indicated that the state will not qualify in FY 2013.

In addition to per capita personal income shifts, the FMAPs are affected by other factors. First, the slower personal income growth experienced by some large wealthy states over time (California, Massachusetts, New Jersey, and New York) is making other states look relatively wealthier (by reducing the national average), thereby decreasing their FMAPs. At the same time, this has no effect on the 50.00 FMAP minimum experienced by those wealthy states. In addition, states such as Texas, Florida, and North Carolina, whose relative share of the U.S. population increased as a result of the 2010 census count saw reductions in their per capita income estimates and resulting increases in their FMAPs for FY 2013. However, in some instances, this result was tempered by above-average personal income growth. Finally, BEAs revisions to prior-year data as well as over and under estimates in intercensal population estimates influence the results (see Table 3).

Table 5 displays Medicaid spending in FY 2012 and FY 2013 based on the FMAP levels shown on Table 4 and state spending levels projected for FY 2012 included in the May 2011 CMS-37 report that states provide to the federal government. Because of the uncertainties around future Medicaid spending and enrollment, FFIS assumes FY 2012 spending levels for FY 2013. Moreover, this assumption isolates the impact of FMAP shifts. As shown on the table, FFIS estimates that Medicaid grants to states could decrease by \$712 million (-0.3%) in FY 2013 because of the FMAP changes. Increases totaling \$949 million for 11 states—primarily Florida and Texas—partially offset decreases of \$1.7 billion for 25 states. Based on the estimates, four states could see federal Medicaid reductions of more than \$100 million: Arizona, Louisiana, Missouri, and Pennsylvania.

Enhanced FMAPs

The Children's Health Insurance Program (CHIP) uses an enhanced FMAP. The match is calculated by reducing each state's Medicaid share by 30%. FY 2013 enhanced FMAPs are displayed in Table 6 and are compared to prior-year rates. The minimum rate is 65.00 and the maximum for FY 2013 is for Mississippi (81.40).

Next Steps

As previously mentioned, the FMAPs for FY 2013 will be final once published in the Federal Register, usually in November. FFIS will calculate projected FMAPs for FY 2014 in the Spring 2012, when preliminary per capita personal income data for 2011 are released.

Notes: ARRA FMAP increases are not reflected here.

1/ The District of Columbia's FMAP is frozen at 70% as part of the city's federal financing structure. Alaska's FY 2006-2007 FMAPs were frozen at the FY 2005 level. Texas's FY 2008 FMAP was increased 0.03 to adjust for data issues related to Hurricane Katrina (this increase only applies to the Medicaid program).

2/ Louisiana's FY 2011 and FY 2012 FMAPs reflect the disaster-recovery adjustment as included in section 2006 of the Affordable Care Act.
