

My testimony is in support of HB1307. The bottom line is Vaccines are not a one size fits all approach to health and wellness. Everyone is different. Genetics are different. DNA is different. Businesses should never be allowed to discriminate a person that is not or chooses not to be Vaccinated for any reason.

I am sharing a story about a man that received a Tdap Vaccine in order to be able to work on August 19, 2019, and his life has not been the same since. I will copy and paste snippets from his website:

TDAP

I was administered a TDAP at my position at Darnall Army Hospital on August 19, 2019. Throughout the following week, my left leg began to feel like it was on fire, I had severe tinnitus in my right ear and I would be woken multiple times a night by my right foot cramping. Finally, I was admitted into the hospital on Friday August 23, 2019. That Sunday, I began to lose feeling and strength in my right arm. Shortly after, both legs went into severe spasms and cramps. The pain was excruciating. After this subsided, I was no longer able to lift either leg while laying. My right arm lost significant strength and sensation. I lost nearly all sensation to my penis and bladder spasms began. I also lost hearing in my right ear and had balance issues. Symptoms continued to progress. The spasms and cramping extended to most of my body. We continued to search for answers.

CLOSE CALL

As symptoms continued to progress, there came a time where I didn't believe I would make it. A few days prior to this event, I said goodbye to my children and wife. I truly didn't believe I was going to survive. I was in respiratory distress, at times only taking one breath per minute. My body would spasm, then lock, and I went unconscious many times.
