

One unvaccinated person affects those around them. Many people are unable to get vaccines, because of medical issues. Allowing healthy people to opt out of vaccines would put others at risk. If this bill passes it will likely result in deaths. Note the measles outbreaks that have been happening in recent years. The real tragedy of this idea is that it is more likely to be a person with a health condition who is negatively impacted by this than the likely healthy person refusing the vaccine. No one has a right to endanger someone else's life.

Voting for his law would indicate that you do not value human life. Our constitution says we should have the right to "Life, Liberty, and the Pursuit of Happiness," and this law would threaten the first of those.
