

HB 1469:

The public is bombarded with NDDOH biased advertising everywhere. It is on billboards, in social media, on the news, all over the schools, etc. Vaccination and inoculation should be a discussion between individuals and their medical providers who are knowledgeable about the benefits and the risks. Schools are responsible for educating children on FACTS and not OPINIONS and PROPAGANDA. Society is being damaged by these advertisements and NDDOH, there is absolutely no need to force individuals to be “re-educate” individuals. First because the video will only be presenting the reasons why NDDOH wants individuals to be vaccinated and it will not address all the risks and will not fully disclose the exemption options. The video is indoctrination and not education if it is not presenting ALL aspects.
