Hello, my name is Sarah Lepp and I am in favor of HB 1301. I believe that there should be no fault to the employer if an employee would contract a communicable disease as it is hard to trace where something like that could have been contracted. I also believe that there should be no mandatory vaccination from the employer to obtain or retain employment regardless of where the employment or position even though this does say in a medical profession, they can require them, I understand the want to have said vaccinations due to dealing with compromised people on a daily basis however, I agree they should be able to claim their religious or philosophical exemptions without hassle. Thank you for your time and again I ask for a DO PASS on this bill.
