

Senator,

What we need is a in depth study on what people really died from.

We need to study the testing. The false positives. The false negative and so much more!

Was it cancer with covid etc. or was it specifically Covid!

I have heard so many sick stories from people in the hospitals and those who could not see family or friends in homes or hospitals violating our rights.

This study should show where all the Covid money went and for specific reasons.
