House Bill 1323: Support

Re: Relating to limitations on mask wearing requirements.

Dear Committee Members,

Through researching the efficacy of masks I support this House Bill 1323. I've done research regarding pathogens most of my life. Pathogens are spread via air, touch and vectors. You can may *somewhat limit* this air borne pathogen with a mask but the *efficacy diminishes quickly* when one is touching their mask. Now the pathogen resides on your hands if it were caught on the outside of your mask or if you beheld the pathogen, it now resides your hands from you. The touch factor of the mask wearer cancels out any merit of masks effectiveness. As we observe shoppers, friends and family wearing masks we clearly see them touching the mask countless times an hour. It feels like a political control tactics which infringes on our freedom.

Thank you and God Bless,
Sincerely,
