

I support HB1511 at its core and also want to see it strengthened to protect the citizens of North Dakota. To protect it from Federal and private entities that wish to force vaccinations onto unwanted individuals. This should be an easy thing. Forcing an individual to take anything against their will that would change their bodies or health is unethical.

Without this bill and protections to citizens of North Dakota I could lose my job because of my vaccination status. Health is a personal right and should not be able to compromise by an employer or any other entity.

I strongly urge the legislature to take up this bill and pass it.
