

Bill HB1151 is very important to get passed for many reasons. As many of you probably heard Ted Nugent and Keith Mark say on KFVR 550 radio, baiting deer does not affect the CWD disease at all. What it DOES affect is the success of the hunt, getting the youth and new hunters involved in the sport. This also allows for clean ethical shots for bow and gun deer hunters. Deer congregate in large herds and lick each other with or without the baiting law. A deer baiting band like is in place now isn't helping the health of deer at all. It is also very difficult to enforce the baiting law. An imaginary line (deer units) or (state lines) that does not matter to the deer we hunt, so having different rules for one unit vs. another unit is very silly. Please consider putting back our baiting law the way it was, This is very important to thousands of hunters across the state of North Dakota.
