I am here to speak on bill 1512

I am in support of the bill because there needs to be more restriction on permitting wind projects to protect land owners.

I feel there should be an amendment for set backs from property line and residents for all land owners.

The setback from a property lines should be a minimum of 1400 feet or 3 times the height of the tower, reason being blades from a tribune are capable of throwing ice up to 1400 feet. Blade tip speed can go up to 190 mile an hour. Recommendation from most tribune manufactures.

The set back from a residents should be a minimum of 2500 feet. (Shadow flickering and noise)

And if the land owner choses to have it closer, they can sign a waver.

I feel there should be a rule of 60% participation from land owner just like other industry in the state. Because it lowers property values if you are in a wind project area.
